Kipper thrust his hands deep into his pockets; Snipey, somewhat older, watched the dock-keeper with an anxious eye. There were previous convictions.

"That will do!" said his worship, severely. "You are evidently incorrigible. Such fellows are the weeds of society. It's a pity you can't be—er—plucked out. You will be removed to the house of correction for three months." * * *

A raw-footed and broken detachment of a British infantry regiment was stumbling gamely along a dreary ravine in the interior of China. The regiment helped make up a relief force which was hurrying to the rescue of a missionary station. Two smart companies had mustered in the gray light of early morning and had set out to reconnoiter in the hills. Through a child-like faith in the efficiency of the information supplied by a so-called intelligence department, the major commanding the detachment had got hopelessly out of his reckoning. The intelligence department of the Chinese had not misled them, and by the late afternoon the British had fallen into an ambush. From the rock ridges flanking the ravine the Chinese showed now and then the gleam of a scimitar to their prey. Little puffs of smoke appeared more frequently still, and were sometimes followed by sickening little "plops," when the bullet met flesh and bone in the valley. The dead lay sprinkled in the wake of the British in dabs of scarlet, as if they were playing a weird game of hare-and-hounds with death.

The end of their endurance came when the shadows of the rapidly approaching night closed in upon them. The word to halt was given and obeyed, although its mellow note killed all hope. Rations of flour and water were passed round, and, with the sentries posted, the little body of British soldiers sat or lay at ease, rifle in hand, waiting for night and—death.

Two hours passed; then the commanding officer was startled from a doze by a hoarse whisper.

"Majer! majer!"

"Hallo!" he snapped. "Who the devil's that?"

"Me, majer—Privit 'Arrison. I've bin a-talkin' the persition over with a mate—friend, beggin' yer pard'n, sir—o' mine, an' we thinks theers a charnce o' savin' the detachment."

There were a few expletives in the darkness.

"Who told the privates the detachment wanted any saving?"

Then there was a sound like a suppressed chuckle, and the whisper reasserted itself. By and by the expletives melted into answering whispers, then followed silence.

Ten minutes after there slipped into the silence the rustle of gently moving men.

"Snipey, ole man!"

"Kipper!"

Two hands groped ridiculously in the inky night until they found each other. A few answering cracks from the hills were followed by the hum of wasted ammunition.

"Majer said as it was a five-ter-one charnce," replied Snipey, with something of importance creeping into his tone.

"Wot else did 'e say, mate, when yer axed 'im?"

"Say? Why, a few bloomin' 'air-lifters at fust, as it's 'is nature to. Then says I, 'Me an' my pal, majer, reckons as these pigtails wun't want ter tackle in the darkness, a-cause they might get cut up a bit, so they'll wait an' pot us comferable in the mornin'.' 'Right y' are, ole chap,' says 'e. Then I says, 'But if we tried to do a guy, majer, ole pal, they'd smell a rat, an' be down on us like a lot o' winter sparrers on a midden.' 'Considerable powers o' penetration,' 'e says. 'Then,' says I, 'majer, here's our plan. Let one or two stop behind an' keep a-firin' from different places, an' they'll think we're all 'ere; then the rest o' the detachment can creep off foxy.' The majer swears, an' says it wos a five-to-one chance. Then 'e thinks a bit. Then 'e says 'e'll try it. Then I volunteers for you an' me to stop, a-cause it wos us wot formerlated the invention. 'Couple of damn scamps afore you joined, eh?' 'e says. 'Certin'l, majer,' I says, soothin'-like. Then I feels summat a-foolin' about me in the darkness, an' when I grabbed it I found it wos the majer's hand."

"Snipey," said Kipper, reproachfully, "you're a blisterin' liar!"

"That's the kernel of it, mate. It's true about the hand, though, Kip."

II.

Crack, crack! Unceasingly the pitiless rifles told the lurking Chinese that their British pigeons were safe in the nest below.

"Kipper!"

"Ole pal!"

"We gotter remember one thing There must be no bloomin' surrenderin'."

"Not a bit o' surrenderin'." There was a decided quaver in the tone now.

"There wun't be no takin' prisoners! We've took a great responsibility on fer the regiment. There's a lot o' clarse about the regiment, Kip, an' we ain't a-goin' to disgrace it. See?"

"Snipey!"

"Kipper, ole man!" There was the same funny groping of hands in the dark, the same tight, lingering grip when they found each other.

Crack, crack!

"Curse this rifle!" said Snipey. "How she bumps!"

It was nearly 4 o'clock when Kipper spoke again. The blackness was diluted a little over the eastern ridge.

"Snipey," he said, with a weary little sob, "I'm a-gettin' 'ill!" Then after a pause: "Snipey, d'yer remember what that Crucified Chap said when 'Ee got tired—when 'E was weary o' waitin', I mean?"

"Don't give yer neck, mate!"

"Him wot the missh'nary told us about when we wos kids," went on Kipper, pathetically. "Wot was it?"

Snipey sighed.

"I know, chummy. I was just a-thinking of it meself. ''Ow long, O Lord, 'ow long?'"

"That's it!" said Kipper, through his chattering teeth. ''Ow long, O Lord—"

* * * * * * * *

The eastern sky was a golden sea. The rocky ridges and hills beneath seemed blacker than ever, and from that black smudge on the glory of the dawn came half a dozen little puffs of flame, and Kipper's rifle clattered down upon the rocks. Snipey groped about in the gloom, and found his comrade on his knees, gasping and spitting mouthfuls of warm liquid.

"Wot yer doin', Kip?" he said, anxiously.

He stood for a minute, still as the rocks around, then stumbled forward with a sobbing cry of rage and misery. In the dim light he saw Kipper lying on his side, trying in vain to raise himself upon his elbow.

"Kipper!" he whispered softly, falling on his knees beside his chum.

Kipper groaned, and pressed his hand to his right breast.

"Through—the lungs!" he said, in an awed whisper, between the fits of coughing that wrenched him. Snipey pressed his hand, with a sob.

"For the regiment, Snipey!" He raised himself on his elbow, and his chum flung an arm around his neck to support him. "There's a bit 'o clarse about—the—reg——"

A fresh bit of coughing brought intense agony; after it was over his head fell back.

Snipey pulled out his handkerchief to wipe the blood from the dead lips. It was a miniature copy of the British flag. He remembered how the handkerchiefs had taken the fancy of the soldiers just before they left England, and how the regiment had bought up the whole stock.

He stared stolidly at the quiet face for a minute, then spread the little flag over it.

When Snipey turned once more to face the east the day had broken gloriously. His rifle was empty, and he slipped a fresh cartridge into the breech. Then, with a sudden thought, he fetched Kipper's rifle and loaded that, too.

When the Chinese closed round in the growing light they found their pot-shot prey had flown. A solitary British soldier, with hands and chin resting on the muzzle of his gun, stood awaiting their vengeance.

The weapon sprang to the aching shoulder, and one yellow foe lay a corpse. With the report of Kipper's gun another pressed his hand to a mortal wound, and the affair was finished.

But that morning, in the mess-tents of the rescued regiment, the story of how a couple of weeds had been plucked from the garden of society was told with misty eyes and glowing hearts.

Sure Proof.

"This won't do," exclaimed Mr. Phamliman; "here it's after midnight and that young man and Maude are still in the parlor."

"How do you know?" inquired Mrs. Phamliman.

"Because I don't hear a sound down there."—Philadelphia Press.

Italian and German Navies.

In fifteen years—1885 to 1900—Italy spent on her fleet $300,000,000, and yet the Italian navy does not come up to half the strength and efficiency of the German fleet, on which during the same period of years $298,000,000 was expended.

Don't talk at random. Make everything you say hit the mark or save your ammunition.

The widow's favorite novel—"Put Yourself in His Place."

GUARDED BY NATURE

PROTECTION THROWN AROUND LIVING CREATURES.

Beneficient Provision Made for Comfort and Defense of Man, the Animals, and Even the Tiny, Inconspicuous Beings of the Deep Sea.

Mother Nature is most impartial in protecting her creatures, giving each single bird or fish or animal the weapons best fitted to its surroundings and habits, without regard to size or apparent importance in the beast scale. She has no favorites. Man's chief safeguard, next to his mind, is hearing. His ears are always open, and even when he sleeps the brain is listening for the slightest note of warning.

Mother Nature has exquisite devices, too, for fitting his body to the work he has in hand. When a boy with soft white hands begins to dig the garden in spring, she takes an interest in him at once. As he hoes and spades she marks the spots upon his palms and fingers that need extra covering, and blisters rise upon these places in an hour. The boy generally thinks it a painful process and a wholly needless one, but Nature knows what she is about. Presently the hands are plastered with callouses and he is prepared to dig as long as he wishes with perfect comfort. These hard little pads are merely loans, however. When the garden is made and the spade and hoe put by, Nature carefully peels off the pads and takes them back into her laboratory, to be given to some other gardener.

She is very watchful, and keeps an account with every living creature in the same way. This protective bureau of hers is one of the best places to begin learning her methods. As soon as one has found out what means a frog or a turtle has for dealing with enemies, further ways of studying the creature will suggest themselves. The sculpin, for instances, is a humble member of the world of sea fishes. Many people consider it not worth eating. Yet upon Nature's books it has as good a credit balance as an elephant or an eagle.

Charles F. Holder tells in the Scientific American of some experiments recently with sculpins taken from the Pacific ocean. When he lifted them from their briny home they were mottled in white and gray, black and brown, matching their surroundings so exactly that they could be distinguished only by their gemlike eyes. These were their glory, lighting up like topaz when the sunlight touched them. Mr. Holder put his captives into a tank with a bottom of white sand. There was nothing whatever for the sculpins to hide behind and they became uneasy at once. For some minutes they swam about restlessly, hunting shelter, and seeming well aware that they were in danger. When they found how bare the tank was a beautiful change took place. Gradually they faded, the dark spots becoming first brown, then gray, then very light gray. At length they seemed to melt into the sand, becoming less visible, until an hour or so after they had been placed in the tank they were so indistinct as to be mistaken for stones at a distance of a few feet. They were unable to match the pure white of the sand, getting no nearer than a dirty gray, but their disguise was a perfect success. When they were placed upon black bottom they changed to the new hue in the same time, and with bottoms of still other colors it was the same.

Mr. Holder found through observation and reading that the fish had no more to do with its transformation than our gardening boy had to do with his callouses. Nature was looking after her own. The sculpin's skin is made up of layer upon layer of different colors. Our friends the scientists—who have been here with long names—call it "chromatic function." They have not been able to sound all of its mysteries, but they have learned that the sculpin's jeweled eye plays an important part in the matter. A blind sculpin remains one unchanging color wherever it lives, but those that have eyesight, being capable of seeing their surroundings, can change to suit them. The alert eye telegraphs its latest news along the nerves to the sensitive skin layers—"chromatophores," the scientists call them—and these delicate mechanisms soon paint the sculpin a hue that will give it protection. Their grotesque forms and fantastic horns and "feelers" are of further aid in imitating the seaweed in their ocean home.

The sculpins of the Atlantic seaboard are seldom eaten, for they are most repulsive at first sight. The sculpin of the Pacific is in better favor, however, and as a consequence is caught and used for food by thousands of people—a rather undesirable social standing at best.—Chicago Record.

NOT SUITED FOR FARMERS.

Few of the Present Day Immigrants Capable of Doing Farm Work.

Between the years 1830 and 1890 10,000,000 of the 13,000,000 immigrants who came into the United States were natives of Great Britain or of Germany, and the number of Scandinavians was nearly 1,000,000. The great majority of these newcomers, especially those from Germany, Norway and Sweden, were farmers whose destination was the west. The term the west, as understood by immigrants, meant at one time the western countries of New York and Pennsylvania, later the states of what is now called the middle west, Ohio, Indiana and Illinois; then the trans-Mississippi states of Iowa, Nebraska and Kansas and, finally, the northwestern states, to which, prior to 1895, most of the new immigrants went.

In the last few years, notwithstanding the prosperous condition of American manufactures, the large harvests and liberal prices for cereals and live stocks, there has been a marked falling off in the immigration of farmers to the United States and a decided increase in the number of immigrants seeking homes in the large cities and manufacturing towns. The official figures of the calendar year of 1900 have not yet made their appearance, but the total number of immigrants will not be far from 475,000, and of this number more than 100,000 were from Austria-Hungary, another 100,000 from Italy and another 100,000 from Russia and the Polish provinces of Germany, while Geat Britain furnished less than 50,000, of which number 40,000 were from Ireland. These new immigrants seek homes and employment in the large cities.

The fertility and productiveness of American farms are as great as and in some cases greater than they were many years ago. The means of transportation have been vastly improved and the market of demand is decidedly larger than it ever was before. But the conditions for the purchase of land are no longer so favorable. The most eligible government lands for free homesteads have been disposed of. The railroad grants which included alternate parcels along the line of the roads have been sold and in most cases occupied. No state, except in the southwest, where the climate conditions are not generally such as to attract European farmers, is under the necessity of offering inducements to immigants, and the latter, no longer recruited from the farming class on the European continent and in Ireland, come chiefly from large European cities in which the population has become congested or in which the rate of pay to mechanics has been forced down by competition or the use of new mechanical appliances.

There is a constant and increasing demand for mill hands and artisans thoroughout the United States, and it is to some extent supplied by new immigration. The three countries which now furnish the largest share of immigration, Austria, Russia and Italy, have comparatively little in common with the United States in the way of language, customs, historical tradition or the forms of government. There are no longer in Russia or Austria persecutions which would explain a wholesale exodus of the inhabitants of various districts, as was the case ten and fifteen years ago. The economic condition of Italy is rather better now than it was at the time when Italian immigation to the United States began to be large, and the increase of the immigration from these countries can, therefore, be explained only upon the ground that the demand for such labor as their immigrants have to offer is growing in the United States. The falling off of German immigration is explained by the fact that Germany is ceasing to be an agricultural and is becoming a manufacturing country. The total immigration to the United States last year was larger than in any previous year since 1893.—New York Sun.

Experience in a Bog.

While traveling in Cornwall, in 1891, the Rev. S. Baring-Gould came near being overwhelmed in a bog. He and his companion got lost, and at dusk found themselves in a bog called Redmire. Six bullocks had already been lost there that year. Mr. Baring-Gould's adventure is related in his "Book of the West."

"All at once I sank above my waist, and was being sucked father down. I cried to my companion, but in the darkness he could not see me, and had he seen me he could have done nothing for me. The water finally reached my armpits.

"Happily I had a stout bamboo, some six feet long, and I placed this athwart the surface and held it with my arms as far expanded as possible. By jerks I succeded in gradually lifting myself and throwing my body forward, till finally I was able to cast myself at full length on the surface. The suction had been so great as to tear my leather gaiters off my legs.

"I lay at full length, gasping for nearly a quarter of an hour before I had breath and strength to advance, and then wormed myself along on my breast till I reached dry land. My companion, it turned out, had had a similar experience."—Youth's Companion.

Where His Test Failed.

Sir William Harcourt has pleaded guilty to absent-mindedness and tells a story against himself. He suspected a man servant of stealing money and at last resolved to set a trap. Taking a handful of gold coins, he laid them down on his writing desk and went out Presently he sent this servant to the room to fetch some article. When John had returned he promptly went to his room to see if the coins had been touched. On the table, in the place where he had left them, were gold coins. But were there as many as he had left? He did not know, for he had neglected to count them before he had laid them down. "By this incident, you see," said Sir William, in telling the story, "that I was born to be chancellor of the exchequer."

Weight of Honey Bees.

Five thousand honey bees as they leave the hive, weigh about one pound, but when the insects return from their visits to the flowers, freighted with honey, they weigh nearly twice as much.

Bad for the Hotels.

Owing to the absence of British tourists. Belgain hotel-keepers have had the worst year they have known.

Most people have the church instinct in their blood.

ALUM BAKING POWDER.

Declared by the Court to Be Unwholesome, and Its Sale In Violation of the Pure Food Laws.

A case in the courts of Davenport, Iowa, the other day, appears to have fixed the status of the alum baking powders as an illicit article of trade.

It seems that The Pure Food Co., of Chicago, sold to a firm of grocers in Davenport a quantityof baking powder called "Pure Food Baking Powder." The grocers sold some of it, ascertained that it was an alum powder, returned the powder unsold to the manufacturers and refused to pay for it. The manufacturers sued to collect.

The case was tried before Judge Bollinger and a jury. Attorneys Neal & Neal, and S. A. Finger defended the grocers. It was shown that the powder contained alum. The defense claimed, consequently, that it was injurious to health and that traffic in it was against public policy. Expert testimony was introduced to show that alum when taken into the stomach would influence the gastric juices to the detriment of the person using it.

The jury rendered a verdict for the defendants, which means that alum baking powders are deleterious to health, their sale illegal in the state. The pure food laws of the state are upheld.

A Failure In Coopering.

A certain man who was once a prominent Kentucky politician was more a demagogue than a statesman. He was, according to Short Stories, in the habit of boasting that his father was a cooper in an obscure town in the state—that he was "one of the people" and didn't belong to the "kid gloved aristocracy."

The "general's" great failing being his fondness for liquor, it will surprise no one to be told that the more he drank the more loudly he declaimed his political sentiments and the prouder of being the son of a cooper he became. During a political campaign, where his opponent was the southern orator, Tom Marshall, he had been unusually noisy and offensive in his boasting regarding his obscure origin. In replying, Marshall said, looking hard at the general:

"Fellow citizens, my opponent's father may have been a very good cooper. I don't deny that; but I do say, gentlemen, that he put a mighty poor head into that whisky barrel."

An Advertising Scheme.

Several old acquaintances of the late D. H. McAlpin, the tobacco manufacturer, were discussing his business success in an up town club, and one of them told the following story as illustrating the farreaching effect of comparatively insignificant things sometimes.

"It was after Mr. McAlpin was well started in the tobacco business," he said, "that an enterprising rival began to cut into his business by advertising that he placed a dime in every tenth package of tobacco put up in his factory. One day a foreman of the packing room went to Mr. McAlpin and said:

"'I have a suggestion to make that promises to knock out this dime in every tenth package scheme of your rival. Will you hear it?'

"'Yes; go ahead.'

"'Well, then, just put a dime in every package of tobacco put up in our shop and don't advertise it. It will advertise itself quickly enough.'

"Mr. McAlpin saw that the suggestion was good, and he accepted it. It cost him a good deal of money, but its success warranted it. Within a few weeks farmers were buying McAlpin tobacco, knowing that they would find money in each package, and if they had found diamonds it would not have surprised them."—New York Sun.

All on Account of the Boots.

As a sergeant was bawling out his orders in a barracks in Dublin and watching the line of feet as the raw recruits endeavored to obey the word of command he found, to his astonishment, that one pair of feet, more noticeable on account of their extra large size, never turned.

Without taking his eyes off those feet the sergeant bawled out a second order:

"About face!"

He could see that all the feet except those he watched turned in obedience.

Rushing up to the owner, a little fellow, he seized him by the shoulder, shouting:

"Why don't you turn with the rest?"

"I did!" replied the trembling recruit.

"You did, eh? Well, I watched your feet, and they never moved."

"It's the boots they gave me, sir," said the poor fellow. "They're so large that when I turn my feet turns inside of them."—London Answers.

The Disadvantage of Delicacy.

The editor sent her little story back, with a polite note praising its delicacy, but saying it was unsuitable to his magazine. Again she sent it forth. Once more it was returned with kind words for its delicate touches and regrets that it was unavailable. When a third time the little story had been praised for its delicacy, but rejected, the authoress was in despair.

"It looks to me," she said, "as if my story was so delicate that it had gone into a decline."—New York Mail and Express.

They Raised Pears.

While Bishop Potter of the Episcopal church was traveling through Louisiana some years ago he addressed inquiries to his fellow passengers with a view of obtaining knowledge regarding the orchards and fruit interests of the state.

"Do you raise pears in Louisiana?" inquired the bishop.

"We do," responded the Louisianian, "if we have threes or better."—San Francisco Call.

TAKING THE ARTERIAL BLOOD FROM A GOAT.

HOW LYMPH IS MADE.

THE GLANDS AND DUCTS TAKEN FROM LIVING GOATS.

Process of Manufacturing the Liquid Conducted with Extreme Care—Living Cells Injected Into Human Body—Chicago Has Only Laboratory.

The method of securing Dr. Roberts' goat lymph, which is being used to restore to physical vigor persons suffering from paralysis and various other ailments, was a few days ago partially demonstrated for the press at the laboratory of Dr. Joseph R. Hawley in Chicago, the only place where the lymph is made.

The material used in the making of the lymph are the lymphatic glands, ducts and reservoir, the spinal cord, the medulla oblongata, the pons varolii and the gray matter of the brain of a goat and certain fluids secured from the bull. The goat has the largest lymphatic system by far of any animal in existence. Reasoning by a process of exclusion it has been figured out that very likely the very large lymphatic system is responsible for the goat's healthiness and immunity from certain forms of diseases. The fluids from the bull are also used for their great strength, tenacity of life and virility.

To the Hawley laboratory at least half a dozen kids six or eight months old are brought every morning. The parts of the bull used are secured from animals at the stock yards just after they have been struck, but before they are yet dead. The time of the messenger's departure from the stock yards is timed to such a nicety that he arrives at the laboratory at the minute when the material which he brings is needed. This is arranged for the same reason the lymph glands are taken from the kid while it is still alive—in order that the vital principles may be obtained while they are still in the condition in which they exist in the living bodies.

A kid is brought into the laboratory and operating room. Everything in the apartment is perfectly sterilized, even the walls being covered with sterilized muslin. Close to the operating table stands a large glass jar. In the center of this jar is a tall, narrow vessel and the space between the walls of the two is filled with cracked ice. At the head of the operating table is the case of knives, scissors and other surgical instruments. In one corner a sprightly messenger boy restrains the kid until the doctor, his assistant and a trained nurse are ready for the operation.

A cup-shaped arrangement is soaked with chloroform and placed over the nose of the goat. When the influence of the drug is perfect and the kid is past all feeling the surgeon rapidly splits the skin on the neck and cuts away until he brings the carotid artery into view. The double vessel packed with ice is then brought close to the opening and all of the neck except the part opened is covered with a sterilized towel. The artery is then cut and the blood allowed to spurt into the inner vessel that is surrounded by ice. Serum from this blood is for use later on in the process of manufacture of the elixir. All of the good blood from the artery is caught in this way, but when venous blood appears, as it does in a few minutes, the vessel is taken away and the flow of blood stopped.

The jar of blood is then set aside and the surgeon goes to work removing the entire lymphatic system of the subject. This necessitates the dissection of almost the entire body, for glands and ducts are located from the neck down through nearly every part of the body. In all, there are seventy or eighty glands and ducts to be removed. To the eye of a layman these parts look like so much fat and can scarcely be distinguished from the latter, in which they are embedded. After they have been cut out and secluded from the air the doctor opens the head of the animal and takes out the gray matter of the brain, the medulla and the pons, and then with tweezers the operator seizes the spinal cord and draws it out of the spinal column.

After all these parts have been secured the carcass of the goat is removed and the surgeon proceeds to extract the lymph and the juices by simple pressure. Meanwhile there have arrived from the stock yards the animal parts which are used in the mixture. From these the fluids are first extracted by hand pressure. Then the remains, in which much liquid still exists, are placed in a retort, together with the goat products, from which the fluids have been partially squeezed. The operator turns to the jar containing the goat's blood. The corpuscles of the blood have settled to the bottom of the vessel, leaving the serum at the top. This serum is drawn off and with it is mixed a quantity of carbon water. The mixture is poured over the contents of the retort and the whole is thoroughly macerated and reduced to a soft pulp. The pulp is filtered and the liquid obtained is mixed with the fluids which were previously gotten out of all the substances. This liquid is subjected to a 200 or 300 pound pressure and one or two other processes which are still secret. The product is then poured into colored bottles and sealed perfectly air tight. Light has a deleterious effect upon the substance, so it is put up in colored bottles, much darker than the lymph, which is a dark cream color. The liquid is administered to patients by hypodermic injections given twice a day during treatment. From six to twenty drops are given at each injection, according to the condition of the patient.

DISSECTING FOR LYMPH GLANDS.

"This invention of Dr. Roberts is not claimed to be a cure-all or a remedy which will turn old men into boys," said Dr. Hawley, "but it is a food which will greatly benefit diseased or exhausted cells. It will not restore dead cells to life, but it can do remarkable things for the old, the infirm and diseased. It is simply cell food. For the degenerated, the atrophic and the diseased or infected cells we inject this lymph as a remedy and the results speak for themselves. If I should say that in 10 per cent of the cases treated the lymph failed to do any good I would be making a large estimate on the failures. In 50 per cent of the cases treated there have been perfect cures and in the other forty there has been all the way from a little to very great benefit."

What St. Paul Would Have Said.

Blomfield, bishop of London, was once asked to preside at a meeting of the debating society of a certain theological college, where the students were all young men deadly in earnest. One of these gentlemen in the course of the debate, with strong indignation evident in his voice, addressed the chair, inquired, oratorically: "What sir, would the Apostle Paul have said could he have seen the life of luxury led by our present race of prelates and church dignitaries, riding about in their carriages and living in their palaces? What, sir, I repeat, would he have said?" "I think," said the bishop, interrupting the speaker in a meek and mild voice, "that he would have said: 'Things in the church must be looking up!'"—London St. James' Budget.

FRIDAY, MAY 3.....1901

Great will be the glory of the West when she shall have attained to her full stature through the reclamation of her arid domain. It is now very generally conceded that a national irrigation policy is the only means by which such a result can be effected. The growth of this movement throughout the country has been a phenomenal one during the past few years.

The national movement is now of such magnitude that it is gaining strength of its own impetus. We failed to get our appropriations from the recent Congess, but that is not as much our fault as it is due to insufficient time afforded by the short session of Congress. Notwithstanding, we have taken a long step forward and I am confident that at the next session there will be enacted a great part of the legislation we require.

The best evidence of this feeling is that only two years ago Congress laughed at the idea of a national irrigation law, but during the session just closed it was conceded to be a mere question of time. I have talked with many Congressmen who will not say they are in favor of the movement, and with many who are openly opposed to it as it stands now, and they have told me flatly that if we would seek direct legislation and appropriation instead of pursuing the course of tacking our measures on the general appropriation bill in the form of amendments, they would stand with us. They one and all admit that it is a question of a short time when an irrigation act will be put through. The bills favorable to us, which were returned from committee this winter, came before the House two days before adjournment and consequently too late.

My own conclusion and judgment is that our absolute success is merely a matter of organization. If well organized now I am convinced that our policy will be fully inaugurated at the next session. If we are apathetic we may lose all we have gained. Our strongest opponents are eastern agriculturists, who believe erroneously that western development will result in disastrous competition, and an even stronger class that believes the Government domain should be ceded to the States and the States forced to stand the expense of reclamation—something few States, if any, could afford to do.

Untiring work and effort must be the keynote of the work.—GEORGE H. MAXWELL in National Irrigation for May.

The plaintiff in a local divorce case asks a separation on the ground that his wife "gets mad" five days in the week. Isn't there any satisfying him? Does he want her to be mad all the time?—San Francisco Bulletin.

FORFEITURE NOTICE.

TO FRED ZOLLER:

You are hereby notified that we have expended one hundred (100) dollars in labor and improvements upon the Uleda Mining Claim, situated in Ubehebe Mining District, Inyo County, California, in order to hold said premises under the provisions of section 2324 Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1898, and if within ninety days from the service of this notice (or within ninety days after this notice by publication,) you fail or refuse to contribute your proportion of such expenditures as a co-owner your interest in said claims will become the property of the subscribers under section 2324.

W. L. HUNTER,
R. C. SPEAR.

Ordinance No. 71.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. It shall be unlawful for any person to hunt, pursue, take or kill or have in his possession within the two years next after the Twenty-third day of January, A. D. 1901, any Japanese or Mongolian Pheasant, within the County of Inyo.

SECTION 2. Every person who, in the County of Inyo of the State of California, within two years next after said 23d day of January, 1901, hunts, pursues, takes, kills or destroys or has in his possession any Japanese or Mongolian Pheasant is guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the county jail not exceeding fifty days or by a fine of not more than fifty dollars, or by both such fine and imprisonment.

SECTION 3. This ordinance shall take effect fifteen days from and after its passage, and all ordinances and parts of ordinances of said Board of Supervisors of the said County of Inyo in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week, said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo State of California.
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 71 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 8th day of January, A. D. 1901, by the following vote:
Ayes: N. J. Cooley, T. C. Boland, J. A. McKenzie, W. P. Yaney, James Jones.
Noes:——

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo, State of California.

Ordinance No. 72.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male person over the age of twenty-one and under fifty-five years of age, found in each Road District in the County of Inyo, State of California, between the first day of March, 1901, and the thirty first day of December, 1901, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time between the first day of April, in the year A. D. 1861, and the first day of September, A. D. 1865, and who have not paid the same in some other road district, must pay to the said County of Inyo, a Road Poll Tax of Two Dollars provided the same be paid before the first Monday in July, 1901, but if not paid prior to the first Monday in July then it shall be Three Dollars.

SECTION 2. Said Road Poll Tax shall be collected by the Assessor of the said County of Inyo, in the same manner that State Poll Taxes are collected, and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the several Road Districts of the said County of Inyo from which said Road Poll Tax was collected.

SECTION 3. This ordinance shall take effect and be in force from and after fifteen days from its passage, and all Ordinances and parts of ordinances of said Board of Supervisors in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo, State of California.
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance, No. 72, was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board on the 10th day of January, A. D. 1901, by the following vote:

Ordinance No. 73.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male inhabitant of the County of Inyo, State of California, over the age of twenty-one years and under sixty years of age, except paupers, insane persons and Indians not taxed, and who have not paid the same in another County of this State, must annually pay to the said County of Inyo a Hospital Tax of Two Dollars; provided, the same be paid between the first Monday in March and the first Monday in July, but if not paid prior to the first Monday in July, then it shall be Three Dollars.

SECTION 2 Said Hospital Poll Tax shall be collected and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the Hospital Fund of the said County of Inyo for the care and maintenance of the Indigent sick or otherwise dependent poor of the said County of Inyo.

SECTION. 3. This ordinance shall take effect and be in force on and after fifteen days from and after its passage and all ordinances and parts of ordinances of the said Board of Supervisors, of the said County of Inyo in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time, and before the expiration of said fifteen days.

DIED.

ASHMORE—At Fort Independence, April 29, 1901, James Y. Ashmore, a native of Illinois, aged 74 years, 9 months and 9 days.

STEWARD—Near Big Pine, April 29, 1901, Charles C. Steward, a native of Maine, aged about 65 years.

Supt. Squire came down from Mazourka canyon yesterday.

District Attorney Dehy left for Bishop yesterday morning.

Henry Mettler came in from Ballarat Thursday morning, returning this afternoon.

There will be a Social Hop at Mairs Hall to-morrow (Saturday) night. All are invited. The Cruz Band, of Lone Pine, will furnish the music.

The Ball last Friday night was not as well attended as it merited, although all those who were fortunate to be present enjoyed themselves to their heart's content.

This week has been a boisterous one as a whole. Heavy winds from the southeast Monday and Tuesday with a light sprinkle of rain. Wednesday night there was a light trost which injured tender vegetation slightly.

Geo. W. Emerson, special agent for agent for the Mutual Life Insurance Company, is in Independence interviewing our citizens with regard to life insurance. The Mutual Life has been in business since 1843 and has assetts amounting to over $325,000,000, and have paid out to policy holders, since its establishment $514,000,000. All the prominent capitalists of the United States are insured in this company.

Mr. J. L. Bourland, of Bishop, was in town Wednesday evening conferring with our merchants in regard to the establishment of a traction line between the Owens Valley towns and Mojave. The Los Angeles Merchant & Manufacturers Association have, by their representative Mr. Fred A. Hines, who was here last week, promised to meet our people more than half way in this matter. If all our merchants and business men generally will unite on this question and co-operate with the Merchants & Manufacturers Association, there is no doubt in our mind that a traction line will soon be established, and will prove a great benefit to all the residents of the valley.

ABOUT TONAPAH.

Eveaything is going along nicely here. The weather has moderated so as to allow miners to work, and strings of men climb the hill to work morning and evening. The roar of the blasts sound like an artillery duel between two armies. When some fellow jumps out of a hole and halloes "Fire two holes!" forty or fifty others make a dash for cover, while little puffs of dust raise down the hillside where the flying rocks strike. It's like being on a skirmish line. However, there has been only two men knocked out as yet, so the loss is no greater than in some of the battles reported in the papers. Every shot throws out good ore, which makes it pleasant for the boys. Anybody would rather be killed with a chunk of good ore than to have a leg broken with a chunk of country rock that doesn't show a trace.

We were all scared to death a few days ago, when some people tried to bond these mines, but fortunately its "all off." No one can get them without going down into his sack and digging up lawful money enough to make half a dozen men rich. There are many tons of ore on the dumps ready for shipment and more ready for sorting. Returns show the ore to be rich and we hope to have it improve.

Mistakes of a serious nature happen too often to suit the average miner. Two of them made shipments and on getting returns abandoned their leases. Yesterday came a check for $340.28 as a rebate on 6¼ tons of ore, which made things look different to them. It seems strange how these mistakes occur, but they do and nothing but a strong "kick" ever gets them rectified, all of which shows that competition is necessary to fair dealing.

The "cracker line" is not well established yet, for spuds and beef are scarce as humming birds in Alaska. However, the roads are good, and we will be able to send East for supplies. The average granger never has anything to sell when he has a market and howls like a gray wolf when he has none. About all the horse and man feed we can get come from Mason and Owens valley by rail to Soda thence by team—60 miles to Tonapah. Its Spring now in some places (latter end of Winter here) and the fellows who are in the warm ought to plant onions and potatoes to feed us while we dig up the money to pay for them.

Since my letter of April 20th things have changed. There was talk of a sale and stoppage of work by the leasers, making every one feel blue. To-day I was informed that the owners intend to work them, and do not look for any outside assistance. The mines look better in the lower levels than on top.

A strike of good ore in the Good Enough mine, half a mile south, proves the existence of mines outside the belt which has been considered to contain the only mines of the camp, has prompted the owners to work the mines themselves. So confidence is restored and everybody is going down now to develop the mines, while heretofore the leasers were digging out the rich surface deposits. This information comes from headquarters and is authentic.—Volcano in Walker Lake Bulletin of May 1.

Methodist Church.

There will be service in the Church as usual Sunday evening. Dr. Van Deventer will preach at 7:30 Tuesday evening. He will preach at Lone Pine Sunday morning and evening.

The Barnes & Anderson mine is reported to have been sold to Supt. Steele, of the Reward mine. A portion of the purchase money was paid a few days ago, and the balance of the money will be paid to-morrow, Saturday. The new owner will take possession immediately.

Forest Supervisor Price returned to Independence on Monday evening last, after an absence of four months to his home in Berkeley. Any inquiries pertaining to the Sierra Forest Reserve will be cheerfully answered by communicating with him.

A. F. Mairs, Geo. McConnell and Thomas Kehoe returned from the Coso Springs Wednesday. They report having been cured of all their ailments and say that the baths and water of these springs dissipate all aches and pains from mortals suffer.

Hon. T. B. Rickey, of Carson, came down on last Friday's train. Mr. Rickey is on his semi-annual trip to this section looking after his large stock and land interests. He will return to his home to-morrow morning.

Recent arrivals from Tonapah report that the denizens of the new camp are scratching away at a lively rate. A cargo of blue ointment has been ordered.—Walker Lake Bulletin.

A telegram from Denver reports two deaths in that city caused by Easter eggs. Fortunately for mankind, only the pocket is affected by the Easter hat.—San Francisco Post.

The contract for sinking the Eclipse incline 150 feet has been completed. The ore body in bottom of incline is about 4 feet wide and is of excellent quality.

R. S. Miner, Esq., who has been rusticating at Lone Pine, was a visitor here on Monday and Tuesday.

Jesus Carrasco, of Lone Pine, has been appointed a Forest Reserve Ranger by Supervisor Price.

E. H. Edwards, the Lone Pine merchant, was in town for a day or two during the week.

Supervisor Boland was up from Keeler Saturday to attend a meeting of the F. & A. M.

Charles Houle came in from the Anderson & Nibecker mine on Tuesday.

Clair Tyler and Joe Travis came in from the Eclipse mine Tuesday.

It is reported that an inch of rain fell at Big Pine last Monday night.

THE AMERICAN GIRL.

Kipling Says Nice Things About Her and All Agree He Is Right.

"Sweet and comely are the maidens of Devonshire; delicate and of gracious seeming those who live in the pleasant places of London; fascinating for all their demureness, the damsels of France clinging closely to their mothers and with large eyes wondering at the wicked world; excellent in their own place and to those who understand her is the Anglo-Saxon in her first season, but the girls of America are above and beyond them all.

"They are clever; they can talk. Yes, it is said they can think. Certainly they have an appearance of so doing. They are original, and look you between the brows with unabashed eyes, as a sister might look at her brother. They are instructed in the folly and vanity of the male mind, for they have associated with 'the boys' from babyhood, and can discerningly minister to both vices or pleasantly snub the possessor.

"They possess, moreover, a life among themselves, independent of masculine associations. They have societies and clubs and unlimited tea fights, where all the guests are girls. They are self-possessed, without parting with any tenderness that is their sex right; they understand; they can take care of themselves; they are superbly independent. When you ask them what makes them so charming they say: 'It is because we are better educated than your girls—and we are more sensible in regard to men. We have good times all around, but we aren't taught to regard every man as a possible husband. Nor is he expected to marry the first girl he calls on regularly.'

"But the freedom of the young girl has its drawbacks. She is—I say it with all reluctance—irreverent, from her $40 bonnet to the buckles on her $18 shoes. She talks flippantly to her parents and men old enough to be her grandfather."—Boston Globe.

Instructions Relative to Free Timber.

INDEPENDENCE, Cal., May 1, 1901.

1. No timber, even in small quantities, is to removed without application and permit.

2. The amount of wood in EACH CONDITION is to be indicated (i.e. live, down, etc., see blank).

3. No live wood is to be sacrificed if dead wood is available; and there is to be no wasteful cutting.

4. The officer in charge is to know "personally" that the applicant has no suitable wood on his own land, and that he takes the timber only as authorized in the permit.

5. The officer in charge should indicate fully in his report the progress of each case, with final statement when all conditions have been filled and the case is closed.

6. Each officer in forwarding an application should carefully O. K. it with his initials in the upper left corner.

Respectfully,
ANDREW PRICE,
Supervisor Eastern Division Sierra Forest Reserve.

Another Pioneer Gone.

One by one the grim harvester Death claims his victims, and is making rapid inroad on the ranks of the sturdy pioneers and the early time settlers of the west. The last of these in our immediate neighborhood to pass away was James Y. Ashmore, who died at the Hospital at Fort Independence last Monday night. Where he had come for treatment some weeks since. Born at Oakland, Coles county, Illinois, on July 20th, 1826, and was therefore nearly 75 years of age at the time of his death. For more than 30 years last past he has been a resident of this County, the greater part of the time keeping the Deep Spring valley toll road, leading east from Big Pine. An honest, upright man in all his dealings, with his generous nature so typical of the old-timer, he was honored and respected by all who knew him. So far as we are informed by an intimate friend of Mr. Ashmore's, he has no relatives in the west.

'Twas Different in Missouri.

Salutary and beneficent as are the laws of the great State of California, yet some that adorn the statute books of that State need fixin'—at any rate so think the Coroner's jury who sat upon the bleached remains of Chatto Arambula. When called upon for their verdict last week, a large percentage of that body resolutely refused to give up their secrets, unless a reasonable amount of spondulacs was first placed in the hand of their foreman. After considerable parley and expounding of the law to them, accompanied by promises that next time things would be better, they were induced to sign. Some of them still feel that they were buncoed, and propose to make a test case of this, relying upon the precedent "that down in Missouri Coroner's juries always got paid."

Death of Charles C. Steward.

After a short illness Charles C. Steward died at his residence near Big Pine last Monday. Mr. Steward had been a resident of that locality for more than twenty years, having come to that place from Skowhegan, Maine, his old home and birthplace. Mr. Steward was a brother of Joseph J. Steward, who died at Big Pine last January, and a brother of James B. Steward who also died at Big Pine some six years ago. He was well and favorably known in this County.

Up With The Procession.

The Sunday edition of the Los Angeles Herald keeps well up with, if not a little ahead, of the Sunday paper procession. Nothing in the west equals it in the quality of its reading matter and, considering the short space of time that The Herald has maintained an art department of its own, its illustrations are remarkable. The Sunday Herald has obtained an enormous circulation within the last few months we learn; and it deserves it.

DANGERS OF COCAINE.

In a lecture last week before the New York School of Clinical Medicine, Dr. Thomas D. Crothers, of Hartford, Conn., characterized cocainism as one of the three great scourges of the world, alcoholism and morphinism being the other two. Custom house reports, the lecturer said, show an enormous increase recently in the importation of this drug, and not more than the one-sixtieth part of what is now sold is used for legitimate purposes. The vice of cocainism is spreading alarmingly among the poor, as well as the rich, as the drug is becoming cheaper all the time. A one ounce package, which less than five years ago cost about $6, can now be purchased for 75 cents. One result of this cheapening is the cocaine habit is becoming common among tramps and paupers as well as business and professional men. It is no longer an aristocratic vice, if it ever was. In New Orleans and other parts of the south and west the drug is freely bought in 5 cent packages.

Dr. Crothers regards the use of the drug, even as a local anaesthetic for surgical purposes, as exceedingly dangerous, especially in cases where the subsequent reaction is characterized by headache, lassitude and depression. Yet its use in surgery is becoming very common. The lecturer also deprecated the fact that many popular proprietary remedies contain cocaine in large quantities. It is almost a specific for catarrhal troubles, and through using it as a remedial agent unconsciously many persons, charmed with its speedy and delightful results, become addicted to it habitually, and finally become slaves to its use.

Its first effects in small doses are to create a feeling of elation, of greatly increased mental and physical superiority and of freedom from care and anxiety. The morphinist finds in it a substitute to relieve the sense of depression following the use of that narcotic. The hard drinker is charmed with its effects, as his depression yields to a sense of elation and abnormal exaltation. But in the use of cocaine there follows a sure reaction. In a short time there are developed characteristic svptoms of the habitual cocainist. If he be a lawyer, a writer or a clergyman he shows marvelous fluency and prolixity of speech. He has a rare fecundity of words, but they betray a tendency toward circumlocution and irrelevancy. In letter writing he betrays his secret vice by his diffuseness without directness.

"There are novels which are highly popular today," said the lecturer, "which show almost conclusive evidence of having been written under the influence of cocaine, and several poems characterized by marvelous rhythm and smoothness, have had their inspiration in this drug. Habitual use of it impairs the judgment and results in the grandiose ideas often associated with paretic diseases. One's sense of right and wrong becomes impaired. A man formerly open and frank, becomes secretive, selfish and dishonest. A Wall street authority told me that he knew of three of the most reckless operators of recent years whose losses of fortunes of recent years whose losses of fortunes are directly due to impairment of their judgment through the use of cocaine.

"After the abnormal sense of elation and power come delusions. The victim fears sudden attack. He sits up at night watching for burglars. He is fearful of accident and abnormally suspicious of imaginary persecutors. Most victims in this stage carry revolvers. One of them once came to me in this condition. He was a physician, who had lost his wife and family in the Johnstown flood, and had taken to cocaine to soothe him in his great affliction. He had two revolvers when he told me of his secret. He was rational enough in most matters, but thought he had hidden enemies. I finally persuaded him to surrender his firearms and the first night he compromised on a stout baseball bat under his pillow. He finally conquered the appetite, but it required years of hard struggling."—Public Opinion.

For Sale or Rent.

House of six large rooms on the Main street, Independence, furnished or unfurnished, Three lots, fruits and berries of all kinds. Hot and cold water in house. Bath room, pantry and closet.

Will rent for a long period or sell on the installment plan. Terms, reasonable.

The Pinkham Remedies

For disorders of the feminine organs have gained their great renown and enormous sale because of the permanent good they have done and are doing for the women of this country.

If all ailing or suffering women could be made to understand how absolutely true are the statements about Lydia E. Pinkham's Vegetable Compound, their sufferings would end.

Mrs. Pinkham counsels women free of charge. Her address is Lynn, Mass. The advice she gives is practical and honest. You can write freely to her; she is a woman.

A Sympathetic Memory.

In a western Massachusetts town lives a young woman who is blessed with both discrimination and tact.

The first of these admirable qualities she has displayed by her two marriages. Her first husband was a minister, a most delightful man. He died, and after a lapse of five or six years she was united to his only brother, who was a successful lawyer in New York.

On her library desk stands a picture of the first partner of her joys and sorrows, and one day a curious caller asked whom the photograph represented.

"That," said the hostess, with evident emotion, "is a picture of my husband's brother, who died eight years ago and who was very dear to us both."—Youth's Companion.

E. W. Grove

This signature is on every box of the genuine **Laxative Bromo-Quinine** Tablets the remedy that cures a cold in one day

CATARRH CANNOT BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarrh. Send for testimonials free.

The Best Preparation for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

French Bakers.

Bakers in France are subject to restrictions and regulations undreamed of in England. In the fortified towns along the frontier they are bound by law to have a certain stock of flour always on hand in case of emergencies. The bakery not only has to be kept clean, but the baker has to deposit with the local authorities a certain sum of money as a surety for the proper conduct of his business.

The law also looks after his weights and measures, which circumstance places him in the same position as the British baker, but in addition the law regulates the price at which bread can be sold.

Napoleon III ordered on one occasion that a loaf about equal to our quartern should be sold for not more than sixpence, and this at a time when we were paying eightpence and ninepence.

Generous.

"What's your fare?" asked old Flintskin of his cabby the other day and was met with the stereotyped reply:

"Well, sir, I will leave that to you."

"Thank you; you're very kind," said old F., buttoning up his pockets and walking off. "You're the first person who ever left me anything yet."—London Fun.

THE COST'S THE THING.

Not the Maxim that Was Impressed on One Small Girl.

Once upon a time a long while ago when the writer was young and vainglorious and occasionally expatiated to some of her small companions upon the cost of her wearing apparel or the number of teaspoons her mamma possessed, she was reprimanded severely for these indiscretions. "Little ladies do not boast," she was told sententiously.

After awhile she came firmly to believe this because of its endless repetitions and so she was often surprised when quondam friends confided in her the enormous amount they spent annually in dress or the size of the turkey they had for their Christmas dinned.

Times, as the dogmeat man so aptly remarked, are changed now, however, and ostentation is the order of the day, says a writer in the Baltimore News. Perhaps this is the fault of the newspapers. Perhaps some hungry reporter searching for available "copy" and finding it in the florist's bills for a big wedding may be primarily to blame, but at all events the marriage of two young people of wealth is nowadays made a ceremony of such ostentation as to amount to vulgarity.

The charms of face or character of the bride, the good qualities of the groom are passed over lightly in order that there may be plenty of space to estimate the cost of the various details.

The amount of money that the presents represent, the capital represented by those who are invited, the cost of the trousseau, of the carriages, of the flowers and the supper are all set down with great accuracy and added with much precision. When the total reaches into the millions the nuptials are announced to be a success and the young couple are supposed to have entered the matrimonial state under the happiest auspices.

There is no effort made to conceal the fact that money is the most interesting thing about the pair and the occasion.

Perhaps these people are to be pitied Perhaps, as was said before, thieving newspaper men break in and steal information about special trains and orchids and trifles of that sort that the families yearn to keep secret. But, however that may be, the writer never reads that Miss So-and-so received twelve ropes of pearls, valued at $500,000, that she doesn't think of the old maxim of the nursery days, "Little ladies do not boast," and wish that it could be handed on to the feminine young and old of American society.

SON COMMANDS FATHER.

Unique Condition of Affairs in a Colorado Volunteer Regiment.

A unique position in the United States army service is that occupied by Benjamin Lear, Sr., and his son, former residents of Cripple Creek, who are members of the First Colorado Volunteer Regiment, which has been doing duty in the Philippines. The father is a private in C Company of the regiment and his son is captain of the same company, a condition believed to be without parallel in the Government service.

When the First Colorado Regiment was raised Benjamin Lear, Jr., was

FATHER AND SON.

acting as sergeant in a company and volunteered with his comrades. The father was foreman of the composing-room of a Cripple Creek, Colo., newspaper, but concluded to follow his son to the Philippines and joined the regiment. Arriving at Manila he was transferred to the company of which his son was sergeant. As time passed, the father saw himself still further outranked by his son, who, through meritorious service, won several promotions and reached a captaincy. The father is 50 years old and the son 20.

Mashed a "Masher."

Two of the young women, pretty ones and well dressed, playing at one of the theaters boarded a car last night for the theater and sat quietly talking. A pretty young thing opposite began to stare, smile, make eyes and try his best to make a hit. Suddenly the older girl began in a loud "Oh, did I tell you about the man on the car last night? He sat opposite me, and tried all kinds of ways to make my acquaintance, and was such a nuisance I wished his mother was there to take him away." Everybody in the car, who had watched things for some time, grinned appreciatively, and the would-be gallant blushed, looked very uncomfortable and got out at the next stop. The two girls laughed, then resumed their personal talk, and when they reached the theater got out quietly. Everybody in the car wanted to cheer them.—Boston Herald.

A Royal Chair.

An interesting chair in the newly restored church called the Garrison church, at Berlin, has been ordered by the Kaiser to be placed in his pew there. It is a simple wooden affair, and bears the following inscription: "King Frederick William I. once sat on this chair during divine services."

Bad for the Hotels.

Owing to the absence of British tourists. Belgain hotel-keepers have had the worst year they have known.

Deafness isn't the affliction to age that it is to youth; a deaf aged person doesn't miss hearing many nice things.

Most people have the church instinct in their blood.

AFTER TWENTY YEARS.

WONDERFUL CURE IN A STUBBORN CASE OF RHEUMATISM.

The Evidence is Furnished by the Secretary of the Board of Trade of Wellsburg, New York, and Cannot be Doubted.

The popular secretary of the Wellsburg, N. Y., Board of Trade is Mr. W. J. Dalton, and his statement to a reporter regarding one of the most important events of his life carries with it the greatest weight. It is unusual for a person to be afflicted from childhood with rheumatism, but it is even wonderful that there is a remedy so exactly suited to the treatment of this stubborn disease that one hundred doses were sufficient to eradicate it in a case of twenty years' standing. The proof that such a remedy is within the reach of all rheumatic sufferers is found in Mr. Dalton's own words. He says:

"I had been troubled with rheumatism all my life, even when a boy. It attacked me in the legs, arms and shoulders. The pain in the latter was particularly severe. I, of course, took medicine for it, but did not obtain permanent relief. One day, about three years ago, while reading a newspaper, I saw an advertisement of Dr. Williams' Pink Pills for Pale People and determined to give them a trial. I had taken but three boxes of the pills when the trouble, which had been my affliction from childhood, entirely disappeared.

"About a year later, I had another attack of rheumatism which was brought on by working in a damp place. I remembered well what Dr. Williams' Pink Pills for Pale People had done for me, so I immediately purchased some. Strangely enough, just three boxes again cured me, and I have been entirely free from rheumatism ever since. I have told a number of people about Dr. Williams' Pink Pills for Pale People, and they have taken them with the most beneficial results."

(Signed) W. J. DALTON.

Dr. Williams' Pink Pills for Pale People are sold by all dealers, or will be sent postpaid on receipt of price, 50 cents a box, or six boxes for $2.50, by Dr. Williams Medicine Co., Schenectady, N. Y. Be sure you get the genuine; substitutes never cured anybody. Look for the full name on every package.

A fascinator is a head covering for women, but why it is so called no man knoweth.

A BALD NEWSPAPER MAN.

Getting a New Crop of Hair, and Has No More Dandruff.

Everybody in the Northwest knows Col. Daniel Searles, the veteran journalist and publicist of Butte. Jan. 10, 1900, the Colonel writes: "I used a couple of bottles of Newbro's Herpicide with marvelous results. The dandruff disappeared; a new crop of hair has taken root, and the bald spot is rapidly being covered." Herpicide is the only hair preparation that kills the dandruff germ that digs up the scalp in scales as it burrows its way to the root of the hair, where it destroys the vitality of the hair, causing the hair to fall out. Kill the dandruff germ with Herpicide.

An old bachelor says the man who marries gives to nothing a habitation and a name.

CASTORIA

For Infants and Children.

The Kind You Have Always Bought

Bears the Signature of Chas. H. Fletcher.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

The Best Shorthand College.

If you wish to succeed as stenographers and book-keepers, follow the advice of all the Official Reporters of S. F., and attend the GALLAGHER-MARSH COLLEGE, Parrott Building, S. F., Cal. Graduates have no trouble obtaining positions, as none but *incompetent* stenographers are out of employment, and graduates of this College are qualified to fill any amanuensis' position very creditably. Board and lodging to be had for $15 per month. Life scholarship, $50; by month, $10. Send for catalogue.

In the Spring, take Garfield Tea. This wonderful Herb Medicicine purifies the blood and gives new and vigorous life to systems depleted by the trying winter season.

If you have never tasted Gilt Edge Whiskey, try it at once and be convinced that it is the best Whiskey in the State. Wichman, Lutgen & Co., San Francisco, Cal., sole proprietors for U. S. A.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE $2.00** trial bottle and treatise. DR. R. H. KLINE, Ltd., 931 Arch St., Philadelphia, Pa.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

STOMACH TROUBLE? You need not suffer from it another day. "QRU" gives prompt and continuous relief and speedy cure. No dieting. Trial package free. C. ESTERLY, 420 Parrott Building, San Francisco, Cal.

A young man seldom believes that a girl enjoys a kiss unless he has it from her own lips.

You Dread Pneumonia.

Then why don't you stop the cough that leads to it and to Consumption? Be prudent. Get

Acker's English Remedy

the great cough and consumption cure; stop the hacking cough; heal your sore lungs. ACKER'S cures a cold and cough in a day.

"I had a hard cough over a year and a half. Raised blood. Doctor and friends said I had quick consumption. Two bottles of ACKER'S ENGLISH REMEDY completely cured me." FRANK S. HALL, U. S. Senate, Washington, D. C.

Sold at 25c, 50c and $1.00 a bottle. If you are not satisfied return the bottle to your druggist, and get your money back. W. H. Hooker & Co., Proprs., Buffalo, N. Y.

LITERARY LITTLEBITS

Henry James calls his new novel "The Sacred Fount."

The life of William Black, the novelist, is to be written by one of his oldest friends, Sir Wemyss-Reid.

Seventy-five thousand copies of F. Marion Crawford's new novel, "In the Palace of the King," have been sold.

"George Egerton," who, owing to illness, has not brought out anything for two years, is at work on a novel to be entitled "Rosa Amorosa."

Thackeray's daughter is writing again—a series of essays this time, dealing with charming but forgotten books. She calls them "Blackstick Papers," after the good fairy in her father's inimitable little tale, "The Rose and the Ring."

Among the new books seemingly destined for a big sale appears 'The Queens of England," published by R. S. Wasson & Co. The work is the production of Mary Howitt, revised by Geneva Armstrong, and is a concise and masterfully written story of the lives of England's Queens from the Norman conquest to the close of Victoria's reign. The book contains over 500 pages, is profusely illustrated, and would appear to be issued at a most opportune time.

Cyril Goldthwaite, in a long article in the New York Times Saturday Review, entitled "Deserting Old Book Friends," says some good things about constancy in book friends as well as human friends. His closing paragraph is worth quoting: "Much that is good in life is linked to the finer sentiments that our books create and keep alive in us. Shall we neglect them in their old age? Nay, let us rather keep them by us, and, having chosen, love them to the end. We may live by their precepts and die, aided by the strength that philosophy and virtue impart to even the humblest mind."

Mrs. Virginia Frazer Boyle's book, "Devil Tales," has attracted the attention of the American Folk Lore Society on account of the accuracy with which she reproduces the negro hoodoos, charms and stories. She says that the stories are just as they were given by her negro mammy. Mrs. Boyle is from Memphis, and these stories were preserved by oral tradition and spread all over the South. A prominent negro lawyer of Memphis came to Mrs. Boyle's husband to thank her for preserving these legends on account of their probable early disappearance from the traditions of his race.

"Woolngs and Weddings," by Mrs. Louise Jordan, is presented by H. S. Stone & Co. It is of interest to readers to note that here is one woman who believes that it is better to be married unhappily than not to be married at all. Naturally this statement has aroused hot discussion. "The marriage question," she says, "has no personal interest for me. I have nothing to gain or lose through it, but because of my children it interests me gravely. I have tried to watch wedlock in many lands, and it is my conviction that those peoples are the happiest who believe not in the ugly equality, but in the beautiful inequality of the sexes."

MAIL CARRIER A CYCLIST.

O. J. Murphy Makes Record Time on an Iowa Rural Route.

The champion rural letter carrier of Iowa, and perhaps of the nation also, seems to be O. J. Murphy of rural free delivery route No. 1, from New London, Iowa. His route is twenty-six miles long, the service supplying 140 families, representing a population of some 600. When the roads are smooth he uses his bicycle, the fleetest made, for traveling through the county.

Recently Mr. Murphy left the post-

O. J. MURPHY.

office at New London at 9 a. m., made the trip of twenty-six miles, delivered 144 pieces of mail, collected ten pieces and returned to the office at 11:20 a. m., being on the road just two hours and twenty minutes. He says: "I always use my wheel when possible, and my average time is two and one-half to two and three-quarters hours. My average time with my pony is four to five hours."

Victoria's Stores of Gold.

The colony of Victoria, the smallest division of the continent of Australia, has produced, during the last half century, more gold than any other country in the world, with the exception of California, says the Youth's Companion. James Stirling recently informed an audience at the Imperial institute in London that there is a gold mine at Bendigo in Victoria which has reached a depth of 3,434 feet, and that deep leads of gold exist over an area of about 400 miles. Victoria also possesses extensive coal fields.

She Stuttered.

"I'm afraid me daughter Moya is gettin' so she stutters," said Mr. Dolan. "She do be recitin' too much Latin an' geometry at the high school."

"Whin did yez notice it first?" inquired Mrs. Rafferty.

"This mornin', when she got a letter, I interrogated her concernin' it, an' she said something about 'Billy Doo.' I known bether. It wor 'Billy Dooley,"—Washington Star

THE DRUMHEAD BUSINESS.

A Huge Long Island Industry Which Prospers by War.

Few people know that more than half the banjo and drum heads sold in the United States are made on Long Island. Near the railroad station at Cold Spring is a little red building surrounded by frames, in which skins are stretched for drying, while near by is an artificial pond, with wooden sides and bottom, filled with a chemical mixture. It is an unpretentious establishment, but in our two wars and in the peace between it has fathered a great deal of noise. The business was established in 1860, and success was almost immediate. Competition was strong after the rush of war orders was over, but the business has advanced in importance until now there are but three factories in this country whose opposition can be felt. Two of these are in Brooklyn and the other at High View, N. Y.

New York markets furnish the salted raw skins from which the drumheads are made. The hair is removed from the skins by a chemical bath in the artificial pond, and the skins are then stretched on the racks and dried. A thorough scraping removes any particles of fat or flesh that may have adhered to the dried skin, which is then the thickness of parchment. The skins are thoroughly bleached in the drying process and are then ready for cutting into heads. During the Spanish-American war the factory was fairly swamped with orders for drumheads, 500 dozen heads often being ordered at one time. The principal demand was for the "tenor" drum, on which a loud accompaniment to the fife or bass instrument can be produced.

Kangaroo skins make the costliest drumheads. When dressed, they are showy, but beyond their appearance and name they are of no greater value than heads made from calfskin. Sheepskin is used for cheap toy drums.—New York Post.

QUAINT COLONIAL NAMES.

How the Offspring of Our First Colonists Were Christened.

It is an interesting study to trace the underlying reason for many of the curious names which are given to the offspring of the first colonists. Parents searched for names of deep significance—for names appropriate to conditions, for those of profound influence presumably on the child's life.

The Rev. Richard Buck, one of the early parsons in Virginia, in days of deep depression, named his first child Mara. This text indicates the reason for his choice: "Call me Mara, for the Almighty has dealt very bitterly with me. I went out full, and the Lord has brought me home empty." His second child was christened Gershom—for Moses' wife "bare him a son and called his name Gershom, for he said I have been in a strange land."

Many names have a pathos and sadness which can be felt down through the centuries. Dame Dinely, widow of a doctor, or barber surgeon, who had died in the snow while striving to visit a distant patient, named her poor babe Fathergone.

The children of Roger Clapp were named Experience, Waitstill, Preserved, Hopestill, Wait, Thanks, Decide, Unite and Supply. Madam Austin, an early settler of old Narragansett, had 15 children. Their names were Parvis, Picus, Piersus, Prisemus, Polybius, Lois, Lettice, Avis, Anstice, Eunice, Mary, John, Elizabeth, Ruth, Freelove. All lived to be threescore and ten, one to be 102 years old. Edward Bendall's children were named Truegrace, Reform, Hoped For, More Mercy and Restore. Richard Gridley's offspring were Return, Believe and Tremble.—"Child Life In Colonial Days."

Passing of Yellowstone Park.

It is said that the geysers which have made this park famous, are gradually declining. This brings to mind the fact that decline is the law of the world. Health is the most precious possession in the world, and too great care cannot be given to it. In the spring you should renew your strength, revitalize your blood and nerves with the best of all medicines, Hostetter's Stomach Bitters. It also cures stomach disorders. Try it.

It is an easy task to convert the average man to any theory that promises to benefit him financially.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Many great men have been poor spellers. Orthography does not make the man.—New York World.

There Are 2400

Disorders incident to the human frame, of which a majority are caused or promoted by impure blood.

The remedy is simple.

Take Hood's Sarsaparilla.

That this medicine radically and effectively purifies the blood is known to every druggist, known to hundreds of thousands of people who themselves or by their friends have experienced its curative powers.

The worst cases of scrofula, the most agonizing sufferings from salt rheum and other virulent blood diseases, are conquered by it, while those cured of boils, pimples, dyspeptic and bilious symptoms and that tired feeling are numbered by millions.

Hood's Sarsaparilla

Will do you good. Begin to take it today.

CATARRH THIRTY YEARS.

A Remarkable Experience of a Prominent Statesman.

CONGRESSMAN MEEKISON GIVES PE-RU-NA A HIGH ENDORSEMENT.

CONGRESSMAN MEEKISON, OF OHIO.

Hon. David Meekison is well known, not only in his own State, but throughout America. He began his political career by serving four consecutive terms as Mayor of the town in which he lives, during which time he became widely known as the founder of the Meekison Bank of Napoleon, Ohio. He was elected to the Fifty-fifth Congress by a very large majority, and is the acknowledged leader of his party in his section of the State.

Only one flaw marred the otherwise complete success of this rising statesman. Catarrh, with its insidious approach and tenacious grasp, was his only unconquered foe. For thirty years he waged unsuccessful warfare against this personal enemy. At last Pe-ru-na came to the rescue, and he dictated the following letter to Dr. Hartman as the result:

"I have used several bottles of Peru-na and feel greatly benefited thereby from my cattarrh of the head. I feel encouraged to believe that if I use it a short time longer I will be able to fully eradicate the disease of thirty years' standing. Yours truly,

"David Meekison."

Many people can tolerate slight catarrhal affections. A little hoarseness, a slight cough, a cold in the head, or a trifling derangement of the digestive organs, do not much disturb the average person in his business. But this is not true of the public speaker or stage artist. His voice must always be clear, lungs perfect, digestion undisturbed. Hence the popularity of Peru-na among the leading actors and actresses of this country. They have come to regard Peru-na as indispensable to their success. Their profession is so exacting that it requires perfect health in every particular. They regard Pe-ru-na as their friend and safeguard. Many letters are received from this class of people. Miss Carrie Thomas, in speaking of Pe-ru-na, says: "I have used Pe-ru-na with splendid results. Would not be without it. No money would hire me to have a settled cold or chronic cough, or hoarseness. Catarrh is the most dreadful thing that could happen to one of my profession. Pe-ru-na is my shield and protector against this most undesirable disease."—Carrie Thomas.

Miss Carrie Thomas.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, O.

Lopped It Off.

Towne—Has he sent you a check for your services?

Browne—Yes, but it isn't for the amount I expected, although I sent him a bill.

Towne—Your writing's bad. Maybe he didn't decipher the amount.

Browne—I'm afraid he did de-cipher it. I wrote $100 very plainly, and he sent $10.—Philadelphia Press.

Yard was once any stick, rod or pole. The expression is still used with this meaning when applied to various parts of a ship's equipment, as yardarm, sailyard and the like.

A wise man thinks before he speaks, but a fool speaks and then thinks of what he has been saying.

Are you looking for trouble?

No? Then you had better get ready to irrigate your land right now. You've lost several crops by not doing it—do you want to lose another? Our pumping plants are fully guaranteed. Send full particulars.

THE APPLE-BARREL.

It stood in the cellar low and dim,
Where the cobwebs swept and swayed,
Holding the store from bough and limb
At the feet of autumn laid.
And oft, when the days were short and drear,
And the north wind shrieked and roared,
We children sought in the corner, here,
And drew on the toothsome hoard.

For thus through the long, long winter-time
It answered our every call
With wine of the summer's golden prime
Sealed by the hand of fall.
The best there was of the earth and air,
Of rain and sun and breeze,
Changed to a pippin sweet and rare
By the art of the faithful trees.

A wonderful barrel was this, had we
Its message but rightly heard,
Filled with the tales of wind and bee,
Of cricket and moth and bird;
Rife with the bliss of the fragrant June
When skies were soft and blue;
Thronged with the dreams of a harvest moon
O'er fields drenched deep with dew.

Oh, homely barrel, I'd fain essay
Your marvelous skill again;
Take me back to the past, I pray,
As willingly now as then;
Back to the tender morns and eves,
The noontides warm and still,
The fleecy clouds and the spangled leaves
Of the orchard over the hill.
—"New" Lippincott.

A FALSE LOVER

I AM sure we do love each other, and will be very happy together," she said, laying her hand on his arm and looking straight into his eyes.

"Of course we will, little trembler," he exclaimed in reply, playfully dropping his hand over those guileless blue orbs, for their searching gaze made him uneasy. "Miss Hargrave need not fret or fume, for we will show her yet what a cosy couple we will make." And Kitty felt perfectly satisfied with her handsome lover, and wondered how she had ever been so foolish as to doubt the genuineness of her attachment for him.

When she saw Edward Wyndham, a little later, and he had asked in his earnest, sincere way if the "matter was all settled and she was to marry Hal Burton," she had replied with considerable warmth that she was, and that ended it between the former lovers.

And so the days sped on, much faster than Kitty liked, though they were even hastening on her wedding day. One night Hal had been to visit Kitty, and had remained later than usual. When the girl saw how late it was getting she told him he must go, but they stood in the passageway some moments afterward, Kitty swinging the night key carelessly in her hand. Hal suddenly caught it away from her, darting through the back door and carefully locking it behind him; he then called out playfully:

"Good-night, pretty Miss Kitty! I am locked out, but you are locked in. Nobody will run away with you before morning, I'll be bound."

For a reply Kitty had only laughingly entreated him to restore the key and go home, at which he had thrown a mocking defiance at her and darted down the street.

On his next visit Kitty asked once more for the key, but he now declared that he had lost it, probably on returning home that night, and had not the remotest idea where to look for it. And so the unsuspecting girl was compelled to report to her mistress—though she was very careful to conceal who the loser had been—and another key was purchased.

And so the time sped on until it was within one week of the time appointed for the wedding.

Kitty was sewing on some of the wedding finery and Miss Hargrave relaxed gradually from the usual severity of her manner to such a degree that she had finally taken up a needle to assist her maid in the work.

They sat rather late over their work, and Kitty finally retired, feeling very much flattered and pleased over Miss Hargrave's graciousness. And so she gradually sank into an uneasy slumber.

She could not tell how long she had slept, but she finally woke with a sudden start and a suppressed cry. She had been troubled with an unpleasant dream and awoke restless and ill at ease. A presentiment of coming evil seemed to weigh upon her mind, so that sleep was entirely banished, and she could not close her eyes again.

The rain was over and the moon just struggling feebly through the breaking clouds. She did not light the lamp, for it was not dark enough to require it, but crept out upon the landing and down the stairs with only the moon to guide her way. The back door opened into a passage-way leading to the kitchen, and into this she glided, pausing for a moment, her heart beating fast, for she suddenly thought she heard a step just outside. In another moment a key was pushed into the lock, and the bolt snapped cautiously and almost noiselessly back. Suppressing a scream of surprise and alarm at this confirmation of her worst fears, Kitty turned to arouse the house when a voice from the outside fell upon her ear, whispering the words: "All right."

In another moment the back door was carefully opened. Two men entered the passage, as Kitty knew at once, for her hearing seemed awfully acute just then.

"A woman, by all that's lovely!" exclaimed one, springing forward. "Quick, my pal, stop her mouth, or she will alarm the house."

She quickly exclaimed: "You here, Hal Burton?"

"Be quiet, Dick," said the young man, for it was indeed he, suppressing an oath, as she pulled at his companion's sleeve.

"Yet, I am here, Kitty. But what are you doing up at this time of night?"

"Let me report the question to you, Hal?" was the reply, spoken with some bitterness. "I find that I have need to be up, if I would not see my mistress robbed and murdered in her own bed!"

"Don't be squeamish, my dear," returned the man, with a gesture of impatience. "You are altogether too severe upon us. You know, Kitty"—here his tone became rather more tender—"that I would not harm a hair of your head for the whole world. I love you too well for that."

"Then why are you here to-night? Answer me that question?"

"Believe me, Kitty, it is for your sake alone that I have come," said Hal, earnestly. "I am a poor man, you know, and I could not bear to have my bride endure the miseries of poverty with me. Miss Hargrave is a stupid old maid, and could spare money enough to make us both happy and never miss it. We mean no harm to anybody, only we must have the money."

"And to think, Hal," she broke out again, "that I should have let you have that key by which you have broken into the house! You said you had lost it. How could you have deceived me so?"

He only laughed. But his companion, who had been a quiet witness of this scene, now stepped forward.

"This foolishness has gone quite far enough, Hal," he said, resolutely. "We did not come here to parley all night, but for business. What shall we do with this girl, while we search the house?"

"O, Kitty will be quiet. She will never peach on us. Go ahead, and never mind her, Dick."

"But I shall mind her," Dick returned, drawing a pistol from the breast pocket of his coat. "The least sign of treachery or attempt to betray us, and I will not answer for the consequence. So show us the way to your mistress' room."

He placed the muzzle of the pistol close to her temple, and she dared do nothing else but obey. They paused on the landing just outside the door.

"Miss Hargrave received five hundred dollars one day last week, and it is still in the house," said the man, Dick, in a hoarse whisper. "Tell us where it is to be found."

Kitty hesitated.

"How can I?" she returned. "You must think my mistress has abundant confidence in me. Of course she would not entrust such a secret to a servant."

"Not another subterfuge," interrupted the man; "we are bound to have this information."

"It is in a safe which is kept in the cellar," said Kitty, reluctantly.

"And where is the key?"

"My mistress always sleeps with it under her pillow."

"You must get it for us, and bring us her watch and purse. But attempt to play us false, and your life and hers shall pay the forfeit."

Miss Hargrave was still sleeping soundly, as she knew by her deep and regular breathing, therefore she performed her errand as soon as possible, securing the purse, watch and key, and then hastened out again, weak and trembling from emotion.

Dick took them without a word.

Kitty longed unutterably to cry out, or make some noise that would alarm the house, but she dared not. She could only perform their bidding in silence, hating Hal with an intense hatred for all this shame and mortification that he was bringing upon her. O, if Edward were only there!

After whispering a moment apart, they gave her the lantern and made her descend the cellar stairs first, lighting the way for them to follow. The safe stood against the wall, and the two robbers hastened eagerly forward to unlock it and secure their prize, for the moment utterly forgetful of the girl's presence.

A sudden thought flashed like lightning on Kitty's brain—a thought that God himself must have sent. The iron door on the safe was furnished with a spring lock—a sure, careful movement, and she might yet save them all! She was still carrying the lantern, and, lifting it higher in her hands, as if to afford them better light, she suddenly dashed it at Dick's head, who was nearest to her, and sprang through the door, closing it with a loud clang and a snap, as the bolt shoved into its socket behind her!

The lantern must have been extinguished when it fell, for Kitty heard them groping for the door, at first cursing and threatening.

But Kitty only remained long enough to recover from her giddiness, and then sped up stairs, and had soon succeeded in alarming the house. The police were called in and the would-be robbers secured, Hal Burton entreating the young girl to save him to the very last.

Edward Wyndham heard the news early the next morning, and came immediately to the house. At first he seemed at a loss how to address Kitty, and she, observing his embarrassment, went straight to him and laid her little hand in his broad palm.

"I can read my own heart as it is today," she said, earnestly, "and, Edward, I am very glad that all this has happened, for it has saved me from a lifetime of misery. I honestly believe that your little finger is more precious to me than all Hal Burton's pretended love!"

Thus it came about that a wedding really did take place on the day first appointed, though Edward, and not Hal, was the bridegroom.

GREAT RAIL RECORDS MADE.

Fast Runs on the Steel Highway, Here and Abroad, but America Is in the Lead.

SINCE the invention of the railway locomotive, since the day when the first train went shrieking over the iron rails to the intense consternation of the natives there has always existed the greatest popular interest in fast runs. Time and again records have been made only to be smashed until it would be difficult to pick out a run and make the unconditional statement that it was the greatest run ever made by a railroad train. A disagreement sometimes arises even as to what is a railroad train, for some great examples of speed are to credit locomotives to which were attached single coaches, and some authorities decline to admit that such combinations are trains. Americans and Englishmen have always been and probably always will be the leaders of the world in all matters pertaining to railways and the speed of trains. Between the two countries there has always existed more or less rivalry over the speed accomplishments of their respective locomotives, and the rivalry will likely continue as long as it is possible to make improvements of any character. Perhaps Americans as a whole give the subject greater attention than do the British, for we seem to be interested in all things of the superlative degree much more deeply than our cousins. Every now and then friendly rivalry—sometimes, however, it is not extremely friendly—breaks out between the various great railways of the country, and every time there is a contest one great record or more is completely smashed.

One of the greatest, if not the greatest, runs ever made in the world was accomplished on the Lake Shore and Michigan Southern Railroad between Chicago and Buffalo on Oct. 24, 1895. It seems that one cause of this race against time was a desire to eclipse an English record made on the twenty-second of the preceding August between London and Aberdeen. The distance between these two towns is 540 miles, and a train on the London and Northwestern made the trip at an average speed of 63.93 miles per hour. The English public was quite jubilant over the fact that this trip broke all previous records and that the world's record was once more held in England. But the very next month a train on the New York Central road ran from New York to East Buffalo, a distance of a little over 436 miles, at an average speed of 64.26 miles per hour. Of course, this beat the English record, but it seems that there was objection to it from across the water on the ground the trip was not long enough to be classed as a long-distance run, which should be at least 500 miles in length. So the record for a run of 500 miles and over was still in England. There are few stretches of railroad 500 miles in length in this country which are perfectly adapted for remarkable runs. There are hills to mount or curves to cut around which interfere more or less with efforts to break records. One of the stretches of road having no such impediments is on the Lake Shore and Michigan Southern line between Chicago and Buffalo. The officers of the road concluded that they would try to beat the long-distance record over this bit of track.

ENGINEER ON A FAST RUN.

Over Ninety Miles an Hour.

Arrangements for the speed test were quietly made, for in view of the possibility of a failure the officials did not care for any premature advertisement. At 3:30 o'clock in the morning of Oct. 24 the train pulled away from the starting point, which was at 100th street, Chicago, and plunged into the darkness on what was to be a remarkable and a record-breaking trip. It goes without saying that the fewest possible number of stops and the fewest possible changes of engines were arranged for. The train stopped about five times, at four of which engines were changed. In less than eight hours the train shot into Buffalo with the English record hanging in tatters on the cowcatcher of the engine. The distance of 510.1 miles had been covered at an average speed of 65.07 miles per hour. During one burst of speed the train flew over the tracks at the rate of 92.3 miles per hour. Although great records for single miles had been previously made, it is said, that never before did a train reach a speed of eighty miles an hour and maintain it for half an hour, eighty-five miles an hour and hold it for ten minutes or ninety miles an hour and hold it for three or four consecutive miles. Every one who was in Chicago or most anywhere else in the country two years ago will well remember the great races which took place for several days between the Burlington and Chicago and Northwestern roads over their routes between Chicago and Omaha. The distance between the two cities is 500 miles in round numbers. The Northwestern route is 489.9 miles long, while the Burlington is 500.2 miles. The Northwestern train was due to leave Chicago at 10 o'clock at night and to arrive in Omaha the next morning at 8:15. The Burlington left at 9:30 in the morning and arrived in the Nebraska city at 7:55 the next morning. Thus the two trains ran practically the same rate of speed.

Very Close Competition.

The Burlington train had a little over ten miles more than the Northwestern to run, and she used ten minutes more than the latter to make Omaha, so it would be splitting hairs to say which road operated the fastest train. In the contests which took place the trains of both roads did such remarkable work that the government mail contract, for which they were contending, was divided between the two lines. It is said that no trains on earth ever made such remarkable runs daily and kept up the pace as these trains. These runs of about fifty miles an hour are made without making any allowance whatever for stoppages, slow down and delays of any kind. This means that the trains necessarily attain a speed in some parts of the routes of eighty or ninety, or perhaps even a hundred miles an hour. Some have made the claim that the trains occasionally reached a speed of 120 miles per hour.

Less than three years ago another great run was made which attracted much attenion, especially in Chicago and the West. The Rock Island road had concluded to increase its service between Chicago and Denver by the addition of four new trains. Two of these trains were sent out to Denver and two were kept in Chicago, so that the new service could be properly inaugurated in both cities at the same time. It was decided by the officials that one of the trains going should attempt to break the record time to Denver. This was a magnificently equipped train, with a full complement of sleepers, dining car, buffet smoker, etc. The passengers were composed of Rock Island officials and a large party of newspaper men from Chicago, Denver and a number of other cities along the route, all of those from a distance having come to Chicago especially to accompany the party.

Threw a Drive Wheel.

At exactly 2:30 in the afternoon on May 5, 1898, the train pulled out of the Rock Island station on its way to Denver. In a few seconds the train was well under way and making great time through the city. When once beyond the suburbs full steam was turned on and the train was soon going at the rate of a mile a minute. Everything indicated that Rock Island would be reached in record-breaking time. The passengers began to wonder what was the matter after the train had been stopping for several minutes near the little station of Green River. Shortly the train backed up the tracks and several of the party became aware of the nature of the trouble for the first time when they looked out of the window and saw a great three ton and a half driving wheel lying on its side in a wheat field. The journal of the rear drive wheel on the left side had broken squarely off, having been overheated in a hot box, and the momentum of the train had hurled the wheel down the track as if it were a buggy wheel. For some time the wheel had remained on edge like a boy's hoop. It hopped over to a side track and then gradually veered to the outer edge, where it crossed the outside rail and ran off into a field, where it soon went down in the soft earth. This accident, of course, caused a most serious delay. The railroad officials telegraphed to Rock Island for another engine, but it did not arrive for over an hour. Finally, however, the relief locomotive came and the train was a few seconds afterward speeding on its way. Nearly all of the rest of the way to Denver the train was pushed to record-breaking time. It arrived at the Denver station the next afternoon, after starting at 1:32, exactly twenty-four hours and two minutes after it left Chicago, breaking the record for a full train going from this city to the Rocky Mountain city.

Dash for Mail Connection.

In November, 1897, a very remarkable run was made between Cheyenne and Omaah, over the Union Pacific railroad. It is still maintained by many that this was the fastest long-distance run ever made, for the running time was not properly reduced to the correct figure by deducting time for stops. The distance between the two cities is 519 miles and the mail train on Nov. 29 made the distance in 520 minutes, including stops as was stated. This run was not made in any vainglorious desire to smash records, but for the purpose of avoiding a heavy government fine which would have been imposed if the train had missed connections for the East at Omaha. When the discovery was made at Cheyenne that unless an extraordinary run was made the mail connection would be missed the two mail cars were cut loose from the rest of the train and started with the engine and tender alone on the fast trip. Six stops of from three to five minutes were made for coal and water, and the train had to be slowed down for ten minutes in passing through South Omaha and the yards of Omaha. So there can be no doubt that this was one of the swiftest runs ever made on rails. In April, 1899, a remarkable run was made by a train on the Burlington road between Creston, Iowa, and Omaha. When the train arrived at the former town it was an hour and six minutes late. When the flyer arrived at Omaha it was only 29 minutes late, having covered the intervening distance of 104 miles in 113 minutes, or, deducting stops, in the actual running time of 103 minutes. The Burlington considers this section between these two cities its poorest division for making fast time, on account of hills and curves, so all things considered, the burst of speed made on April 5, 1899, was most remarkable.

THOSE TERRIBLE EYES.

Senator Cass Could Annihilate a Man with a Look.

Giant heads, bodies and brains were Webster and Cass. All the strength of New Hampshire granite was concentrated in those two sons. To look upon them made the ordinary man feel small. One removed to Massachusetts, the other to Michigan, and never were two states more highly honored. When these men met in the United States senate they were the cynosure of all eyes, for they were as imposing as Mount Washington, under whose shadow they were reared. Wonderful eyes they possessed, and men have been known to shiver with dread when one or the other allowed his glance to fall upon them. Cass could look through a stranger in a way to make his brain burn and his knees knock together. One searching stare seemed to destroy all mentality and fill the victim with paralytic emotions.

The other day I saw a man slap Senator Hanna on the back, cry "Hello, senator!" and receive a pleasant salute in reply. No man dared take liberties with Cass. In 1846 the proprietor of the National hotel in Washington was a man who so closely resembled the great senator from Michigan that he was often mistaken for him. An old friend, returning from a journey, entered the lobby, and, seeing him leaning against the desk, slipped up behind and hit him a terrific whack on the shoulder, saying cheerily and simultaneously, "Hello, old man; here I am, back again! How are you?" Senator Cass straightened up his six feet three, and, turning upon the assailant, his terrible bloodshotten eyes almost annihilated him with a look. Not a word was spoken. That look was ample. The stranger was so "rattled" that he could not even apologize, but slunk dejectedly out of the hotel.

Later in the day, when congress was supposed to be in session, the stranger returned to the hotel to shake hands with the proprietor and tell him all about the Cass incident. Walking bravely up he laid his hand down on his friend's shoulder, and without waiting for a greeting, surprised him with: "See here, old fellow, you got me in a deuce of a scrape this morning. Why you know I took old Cass for you; slapped him on the back, nearly taking off a shoulder, and the old fool looked at me as if he wanted to commit murder. The darned old lunatic—why doesn't he stay out of here? He knows——" Again the great senator from Michigan straightened up his six feet three, again he turned his blood-shotten eyes, again he looked and again the victim fled. Two mistakes of that kind in one day.—New York Press.

It can usually be depended upon that those who stay home after the marriage could have well afforded a wedding trip.

Some people are so foolish and easily worked that an agent could sell them a contagious disease.

Children's Corner

The Naughty Owls.

Flossy and Fluffy were two little owls who lived with their mamma in a hollow tree. They had splendid times flying about the branches and hooting every moonlight night, only in the middle of the fun their mamma always wanted them to go to bed.

"Come, my dears," she said one morning, "it is getting late. The firefly children have put out their lamps, and the little bats have hung themselves up to sleep."

Then the little owls began to cry, "Oo-oo! Hoothoo!" so loud that the man in the moon was quite startled.

"O mamma," sobbed Fluffy, "let us sit up a little longer!"

"Just till the sun rises!" begged Flossy. "I never have seen the sun in all my life."

"Now, children, I am going to bed," said Mrs. Owl, firmly, "and if you do not come in immediately, I shall leave you all alone here in the daylight."

But her children never stirred a step.

So she flew down into the old oak, and was soon fast asleep; but Fluffy and Flossy sat on the tree-top and stared about.

It was very pleasant at first. A great yellow star played peek-aboo with them through the rustling leaves, and the sky turned all sorts of lovely colors. But at last the little owls began to feel afraid.

"It is getting dreadfully light!" said Flossy.

"I can hardly see a thing!" said Fluffy.

They winked and blinked and rubbed their sleepy eyes with their little white wings. All of a sudden they saw a shining spark in the eastern sky. It grew larger and brighter, and at last turned into a dreadful ball of fire.

In less than a minute two frightened little owls came tumbling into the hollow tree with the biggest and roundest eyes that you ever saw.

"O mamma," they cried, "we never will tease to sit up and see the sun again!"

And ever since they have always gone to bed by starlight.

Rules in the Dreamy East.

The handsome and self-possessed little boy in the turban is one of the rulers in the dreamy East that are made so fascinating in the "Arabian Nights." He is the Ticca Sahib, and he has succeeded his father Rajendra Singh Mahendra Bahadur as Maharajah of Patiala. He is an active little

AN EAST INDIAN PRINCE.

fellow of 10, plays cricket well and is a fine rifle shot, inheriting the sporting instincts of his father, who was a skillful wild bear hunter, polo player and cricketer. Less than a month before his death, his Highness, the late Maharajah, made 21 runs in 8½ minutes against the Parsee team from Bombay. It is quite likely that the young Prince will be educated in England.

The Three Tailors.

The three Trenton tailors toiled together, turning trousers, trimming tunics, talking tirelessly. Tall Ted Tupper told trite, trifling things that tickled the two tiny tailors, till Trueman Trippet teasingly took the talker to task.

"Tut, tut, Ted! Tell truer tales than that."

"Tell tales thyself, Trueman. Tell thy Texas tiger tales."

"Twaddle! twaddle!" tittered the third tailor, Tom Torrey.

Trueman's touchy temper threatened trouble.

"Tom, thy thoughtless tongue tempts trouble."

Tactfully Ted Tupper then turned the talk to taffeta trimming, thankful thus to terminate the tiff. Two teamsters, tramping thither to take tea, turned the talk thoroughly. They told tales, they tied Ted's terrier to the tea table, teaching tricks till the tailors turned tired tittering.

Thus thoughtlessly the teamsters tormented the tiny terrier, till Tessa Trueman tearfully terminated the tricks. The tailors then teased Tessa till the terrier threatened to take teeth to them. The tailors then took their tea, the teamsters tranquilly tasting, too. Tessa tidied the table, telling town topics. The terrier, tiny tired thing, timidly tweedled the tailors to toss titbits. Thus the trouble terminated.—Youth's Companion.

A Good Game.

An amusing and more or less instructive game has been devised by a young woman, who once a week takes it upon herself to entertain a company of boys and girls for the afternoon.

She writes on sheets of paper several stanzas of good poetry, leaving a wide space between the lines. She then cuts up the sheets, leaving one line of poetry on each strip.

After that she hides the strips in many different places in the two rooms in which she is to entertain her guests, reserving the first line of each verse.

These reserved strips she distributes among the girls and boys, and each one proceeds to hunt for the rest of his stanza.

The hostess usually selects stanzas from different poems, so that the variations in rhythm and meter may help her young guests to select the lines that belong to them; but sometimes, to make the test more difficult, she chooses several stanzas from the same poem.

The number of lines in a stanza is indicated on the slips reserved for distribution.

Sometimes amusing misplacements of lines are made, but the hostess is pleased to notice that as the weeks go on, her guests are growing more and more clever in seizing upon what belongs to them.

When all the lines have been collected each one reads his stanza, and to her delight the hostess finds that the interest of the search, and the constant repetition of a line to see what will fit next to it, has often made a boy or girl so familiar with the stanza that it can be recited without a glance at the slips.

MAN'S GROWING UNIMPORTANCE

His Influence at a Wedding Is at a Distressing Minimum.

There is one place where a man counts for very little, where his personality is hardly a factor, and where his influence is at a distressing minimum, and that is at a wedding. This has long been so, but now matters are growing rapidly worse, and the presence of men at a marriage ceremony is becoming less and less necessary. In fact, they are being almost entirely eliminated in recent weddings in ultra-fashionable circles. At a marriage a few days ago, the bridegroom, clergyman and best man were the only males present, while there was a most impressive array of maids of honor, bridesmaids, ribbon girls, flower maidens and other feminine attendants, says the New York Herald.

That wedding was followed by another, in which a woman preacher officiated, showing that a male clergyman is not indispensable, and there has been suggested an innovation that is likely to put a "best woman" in place of the "best man." That will draw the sex line down to the bridegroom—who never has been anything but an awkward figure at a wedding. Though there has as yet been no move to dispense with him, even that is not impossible, if we can credit the story of a negro "wedding" that comes from Virginia, as told by one of the lady guests.

"It was a lovely wedding. The elite was all there in such gorgeous dresses, the music was fine, and the refreshments were just superb," she said.

"And the bride?"

"Oh, she was just too lovely for anything. You should have seen that dress and veil, and those orange blossoms."

"and the bridegroom?"

"Don't ask about him. That miserable, good for nothing, low down man never came near the wedding."

Not Pretty but Smart.

A married couple were walking down one of the main thoroughfares of a North Country town, and the husband noting the attention other women obtained from passers-by, remarked to his better half:

"Folks nivver look at thee. I wish I'd married some one better looking."

The woman tartly replied:

"It's thy fault. Dusta think a man'll stare at me when you're walking wi' me? Thee step behind, and thah'll see whether folk don't look at me."

He hung back about a dozen yards, and for the length of the street was surprised to see every man his wife passed stare hard at her, and turn round and look after her when she had passed.

"Sal, lass!" he exclaimed, "I was wrang, an' tak' it back. I'll nivver say owt about thy face again."

His wily spouse had accomplished the trick by putting out her tongue at every man she met.

What He Said.

"My wealthy uncle spoke very nicely of you, Henrietta," said Mr. Meekton; "very nicely, indeed. I'm sure you would have been flattered if you could have heard him."

"Indeed!"

"Yes. His tribute to your personal charms was most graceful, and at the same time his recognition of your store of information, such as most people need a lifetime to acquire, was convincingly sincere."

"I should like to know precisely what he said."

"I can recall his exact language," Mr. Meekton went on, in gentle innocence. "He said you looked like 25 and talked like 60."—Washington Star.

They Misuse Two Words.

A Frenchwoman said a few days ago: "How strangely English and American fashion writers misuse the word 'modiste.' They almost always apply it to a dressmaker, while it really is a milliner, a maker of hats and bonnets." It is true that originally it was correct, but custom has so restricted its use that no Parisienne would speak of a dressmaker as a modiste. The term used is invariably for a dressmaker, couturiere, or if a man, couturier.

When you see a storm brewing don't expect the downfall to take the form of beer.

A full purse is the best pocket companion.

Forest Preservation and Reservoir Construction.

Capt. Hiram Chittenden, Corps of Engineers, clearly shows in his report the analogy between forest preservation and reservoir construction, both Government duties and both for the purpose of water conservation. He says:

"There seems to be a well-nigh universal concensus of opinion that the preservation of the forests of the arid regions is distinctly a Government duty. Considerable appropriations have been made for surveys of proposed reservations, and ways and means for their preservation are being considered. Now, one of the great arguments always advanced in favor of forest preservation is the influence which forests are supposed to have in conserving the flow of the streams. Inasmuch as the commercial value of these forests is practically insignificant, except for furnishing fuel and rough timber, the water question is really the more important one. If it is properly a Government function to execute works which will conserve that flow even more positively and directly. Granting all that can be said of forests in this connection, they certainly can never prevent the June rise, and it is precisely this waste flow which reservoirs will help to save. The forests ought unquestionably to be preserved, and the Government is the proper agency to do it, but the principal arguments, therefor, apply with accentuated force to the construction of reservoir."

Effective Flood Preventive.

It will take one or two more great floods of the Mississippi and the destruction of a few million dollars' worth of levees and ripraps and farm and town property to bring the people and Congress to a consideration of the fact that these floods could be prevented, according to the War Department surveys, by the building of great storage dams at the headwaters of the Missouri.

The philosopher Confucius, writing of the great Chinese Emperor Yu, said that all his efforts could be summarized in the creation of canals. They were an effective means of diminishing the destructive action of torrents and avoiding inundations. Yet the people of the United States, several thousand years later, neglect to benefit by such obvious remedy, adopted by the ancient inhabitants of the Flowery Kingdom.

In almost every country in the world where irrigation is practiced at all, the water supply is subject to Government control. It is recognized that where the water is of more worth and importance than the land itself—the land being useless without the water—its control and use is a question of vital importance to the community at large. The United States is a notable exception, but in the nature of things it cannot long remain so. In the older countries it is realized that water should not be used as a speculative commodity, its value inuring to the supposed benefit of one class to the detriment of another. The sooner a system of public supervision of the irrigation question is adopted in this country, the sooner will come a general reclamation which will round out into perfect development this empire of the West.

Congress is Expected to Act.

That staunch agricultural journal, the Epitomist of Indiana, says editorially that "from present indications, the United States Government will soon settle upon a policy of national irrigation of arid lands."

"Under the Constitution," the Epitomist continues, "Congress may do what it deems wise and expedient to further the general welfare of the country, and there is no public work productive of more good and of more benefit to the country at large than the reclaiming of vast areas of public land now a barren waste. It looks now as if the establishment of such a policy would be made very soon, perhaps at the next session of Congress."

The idea that the earth is fast becoming settled up and that there can be no extension to its agricultural area is true only in a theoretical sense. The ability of scientific agriculture to enlarge its capacity has not yet begun to come to realization. When it is realized that there are whole empires of rich land only awaiting the application of the water at hand to make them break into bloom and great productiveness, it can be seen that instead of the world's acreage being incapable of expansion, the end of its expansion in productivity has not yet come into sight.

It will be a surprise to some people to know how many public men are taking a deep interest in the problem of the reclamation of the arid West, which, if the waters which now run into waste were stored by the Government and used for irrigation, would be transformed into tens of thousands of small but highly productive farms.—Cedar Rapids (Iowa) Republic.

The United States still owns about a million square miles of arid land, much of which is capable of cultivation if irrigated.—Sparta (Wis.) Democrat.

The whole country ought to join in the movement to "annex the arid West."—Leslie's Weekly.

Ordinance No. 71.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. It shall be unlawful for any person to hunt, pursue, take or kill or have in his possession within the two years next after the Twenty-third day of January, A. D. 1901, any Japanese or Mongolian Pheasant, within the County of Inyo.

SECTION 2. Every person who, in the County of Inyo of the State of California, within two years next after said 23d day of January, 1901, hunts, pursues, takes, kills or destroys or has in his possession any Japanese or Mongolian Pheasant is guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the county jail not exceeding fifty days or by a fine of not more than fifty dollars, or by both such fine and imprisonment.

SECTION 3. This ordinance shall take effect fifteen days from and after its passage, and all ordinances and parts of ordinances of said Board of Supervisors of the said County of Inyo in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the member of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week, said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo State of California.
(SEAL)
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 71 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 8th day of January, A. D. 1901, by the following vote:

Aves: N. J. Cooley, T. C. Boland, J. A. McKenzie, W. P. Yaney, James Jones.
Noes:——

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.
(SEAL)
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

(Endorsed;
ORDINANCE No. 71.
Filed Jan. 8, 1901.
J. E. MERONEY.

Ordinance No. 72.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male person over the age of twenty-one and under fifty-five years of age, found in each Road District in the County of Inyo, State of California, between the first day of March, 1901, and the thirty first day of December, 1901, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time between the first day of April, in the year A. D. 1861, and the first day of September, A. D. 1865, and who have not paid the same in some other road district, must pay to the said County of Inyo, a Road Poll Tax of Two Dollars provided the same be paid before the first Monday in July, 1901, but if not paid prior to the first Monday in July then it shall be Three Dollars.

SECTION 2. Said Road Poll Tax shall be collected by the Assessor of the said County of Inyo, in the same manner that State Poll Taxes are collected, and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the several Road Districts of the said County of Inyo from which said Road Poll Tax was collected.

SECTION 3. This ordinance shall take effect and be in force from and after fifteen days from its passage, and all Ordinances and parts of ordinances of said Board of Supervisors in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.
(SEAL)
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance, No. 72, was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board on the 10th day of January, A. D. 1901, by the following vote:

Ayes: W. P. Yaney, N. J. Cooley, T. C. Boland, J. A. McKenzie, James Jones.
Noes: None.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.

Ordinance No. 73.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male inhabitant of the County of Inyo, State of California, over the age of twenty-one years and under sixty years of age, except paupers, insane persons and Indians not taxed, and who have not paid the same in another County of this State, must annually pay to the said County of Inyo a Hospital Tax of Two Dollars; provided, the same be paid between the first Monday in March and the first Monday in July, but if not paid prior to the first Monday in July, then it shall be Three Dollars.

SECTION 2. Said Hospital Poll Tax shall be collected and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the Hospital Fund of the said County of Inyo for the care and maintenance of the Indigent sick or otherwise dependent poor of the said County of Inyo.

SECTION. 3. This ordinance shall take effect and be in force on and after fifteen days from and after its passage and all ordinances and parts of ordinances of the said Board of Supervisors, of the said County of Inyo in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time, and before the expiration of said fifteen days.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.

Real Estate Transfers.

J. Y. Ashmore to A. A. Ridlle—¼ undivided interest in Deep Spring toll road. —$10.

Lenora and J. L. Darrah to T. H. Woodworth—Tract 10 of Keough addition to Bishop—$10.

W. H Adams to Wm. Tracy—20 acres oil land near Olancha—$1.

W. H. Adams to T. A. Tracy—20 acres oil land near Olancha—$1.

J. B. Hicks to A. J. Hare—20 acres oil land near Olancha—$10.

J. B. Hicks to Chas. A. Hare—20 acres of oil land near Olancha—$10.

J. B. Hicks to B. F. Ellis—20 acres oil land near Olancha—$10.

J. B. Hicks to Geo. A. Gordon—20 acres oil land near Olancha—$10.

Wm. A. Burton to John Black and John Underwood—320 acres o l land near Olancha—$10.

Lester Laird has gone to the Coso Springs.

Mr. E. T. Anderson came in from his mine last Monday.

O. I. Mairs left for Los Angeles last Monday morning.

J. C. Unthank, of Bishop, was in town on Tuesday last.

S. F. Vermilyer, of Bishop, is in town on Superior Court business.

Henry P. Cartier left for San Francisco last Tuesday morning.

Mr. J. J. Gunn came in from his Minnietta mine on Tuesday last.

Mrs. Leora B. Rhine and children will arrive from San Francisco this evening.

Ventura experienced a short, sharp earthquake shock last Friday afternoon.

P. W. Forbes is in San Francisco as a delegate to the Grand Lodge of I. O. O. F.

Assessor Yandell came down from Bishop on Monday last, returning Wednesday.

Miss Nettie Irwin, who was quite ill during the early part of the week, is improving rapidly.

Occupants of the County Jail complain of hilarious noises in the back streets after bedtime.

Col. Smith and sister, of Big Pine, have been in town for several days during the past week.

Coroner I. P. Yaney, of Bishop, was a visitor in Independence for a day or so during the week.

John Jenkins, the genial host of the Keeler Hotel, was in town for a couple of days during the week.

Mr. A. W. Eibeshutz returned Wednesday evening from a visit of over two months in San Francisco.

Clair Tyler and Julian Eibeshutz are strictly in it when it comes to breaking horses. Ask Julian about it?

Man is like a chunk of ice and woman is like the sun. When her soft smiles beam upon him, if he don't melt he gets mighty soft.

Chris Crohn and wife of Cerro Gordo have been in town for the past week. Mr. Crohn is far from well, and is here for medical treatment.

Mrs. Willett, Mrs. Roeper and her daughter, Mrs. Fausel, started last Saturday for Woody, Kern county, on a visit to relatives. They expect to return in about six weeks.

Miss Birdie Levy left for San Francisco last Tuesday morning. Miss Levy will represent the Independence Lodge of Rebekahs in the General Assembly which meets in that city May 15.

An exchange suggests a new use for women. It says. If a man is out late at night it is a good protection to have a woman along. A woman has a way of screaming that curdles the blood of a highwayman.

Wm. Arcularius passed through town yesterday on his return from Tonapah, where he had been to investigate the teaming business. He reports good roads for teaming and fair pay, but no guarantee of sufficient hauling to justify fitting up his team and going there.

District Attorney Dehy left for San Francisco on Tuesday morning last. It is his purpose while in the city is to view the launching of the ship Ohio and see President McKinley. He will return in about three weeks. Ben H. Yandell, Esq., will attend to the duties of the District Attorney's office during Mr. Dehy's absence.

Tonapah

The liveliest and newest mining camp in the State of Nevada, is about 145 miles from Independence by direct wagon road. The route traveled from here is by way of Big Pine, a distance of 28 miles; thence to Gilbert's in Deep Spring Valley, 28 miles; thence to Piper's in Fish Lake Valley, 14 miles; thence to Silver Peak over a dry road, 30 miles; thence to Tonapah, over a dry road, 40 miles.

Quite an exodus of men from all points of this valley to that camp has taken place, this town sending its quota. From Tom Ferguson, who has just returned from there, we learn that the Owens' valley boys are all at work and doing well. Clarence Johnson is working in the mines. Walter Ober is waiting on table. Andy Ramsey and Addie McAfee are sinking a well. Hay is $7 per bale; grain $4.65 per sack; meals 50 cents; board $1 per day. There is an abundance of bunch grass around camp for burros, but no water for them to drink.

Several of the boys from this vicinity are going to the camp in the next few days.

Uncle Sam Wants Horses

Col. Atwood, chief quartermaster of the Depaatment of the Lakes, has been ordered to purchase nearly 1000 horses for the United States army. He has placed one order with a Chicago firm for 630 specially selected cavalry horses, and Col. D. D. Wheeler has been assigned to the duty of inspecting the animals. Two hundred of these horses are wanted for the Fourteenth Cavalry regiment, now being recruited at Fort Leavenworth, Kan. The rest of the animals included in this order will in all probability be shipped to Cuba for the use of the troops on the Island. An order for 290 cavalry horses was received at headquarters in the Pullman building, Chicago, recently. Twenty-five heavy draft horses are also desired for siege guns.—Breeder and Sportsman.

Notice to Cattlemen!

The following notice from Forest Superintendent Newhall to Supervisor Price will be of interest to cattlemen.

The Secretary of the Interior has decided to issue permits for grazing cattle on the Reserve.

In case the permits are not in hand at the date desired, resident cattlemen whose applications have been received and approved by the Superintendent may take their stock to the Reserve, subject to any later instructions that may be received from the Department.

C. S. NEWALL,
Forest Superintendent.

Left the Right Man

A Missouri editor, going away, left a minister in charge of his paper. A day or two later a letter from a "way-back" subscriber came, which read: "You know d—— well I paid my subscription the last time I was in Lexington. If I get any more such letters I will come down and maul h—— out of you." The minister answered: "I have been trying to maul that thing out of the editor for ten years, and if you really come down and maul it out of him, then, my dear sir, I have twenty members of my church you can operate on."

Among the rumors that are floating around is one that the Southern Pacific is going to go ahead with its cut-off line between Mojave and Keeler, the latter the terminus of its Carson and Colorado line. There is also some talk of cutting slices off San Bernardino and Kern counties and make a new county, of which Randsburg will be the county seat. This may be a little premature, but it is in the air, just the same.—L. A. Mining Review.

Tom Ferguson got back from Tonapah last Friday and started again for that camp Tuesday morning, says there is no doubt but Tonapah will be one of the richest mining camps in the west, and will be a second Virginia City. The ore is all very high grade, and the ledges are from 4 to 6 feet wide and improve in size as depth is attained and have every appearance of permanency.

Mr. F. A. Hines returned to Los Angeles this week from a visit to the placer mines of the Mazourka Mining Company, near Citrus, Inyo county, Cal., in which company he is a stockholder. He brought back with him a bottle of gold nuggets, worth about $250, which he washed out himself from the gravel.—Los Angeles Mining Review.

It is proposed on the electric railway between Berlin and Hamburg to obtain speeds of 125 to 150 miles an hour for passenger trains, but freight trains will be moved by steam as before. The passenger cars will be dispatched singly at intervals of ten minutes and will make the journey in a little over an hour.

Take a piece of paper and write upon it the number representing your age in years, multiply by two, add 3,800, divide by two, then subtract the number representing your age, and you will have something before your eyes that you will never see again.

"Whisky has killed more men than bullets," shrieked the temperance orator.

"That may be," remarked the man on the rear bench; "but I'd rather be filled with whisky than filled with bullets."

A woman is not so much interested in knowing where her husband is of nights as in knowing where he isn't, said the Cornfed Philosopher, by way of closing the discussion.

Summer weather has been the order of the week.

SUPERIOR COURT PROCEEDINGS.

Hon. Walter A. Lamar, Judge.

CIVIL.

WEDNESDAY, May 8th, 1901.

Lena T. Given, plaintiff, vs. A. M. Given, defendant—Plaintiff granted divorce and custody of minor child.

SPEED OF AN EARTHQUAKE.

Preliminary Tremors Travel at Rate of 345 Miles a Minute.

Speaking of the Indian earthquakes of 1897, a London scientist says the vibrations traveled to Europe, where they were recorded at very many stations, and no doubt would have been equally well recorded at any other places on the surface of our world had there been provided suitable instruments.

The preliminary tremors, which are probably waves of compression, traveled through the world to reach Italy and other countries with an average rate of 345 miles a minute, or nine kilometers a second—a rate which, it will be observed, is higher than that at which similar movements can be transmitted through glass or steel. The large waves, which are probably quasi-elastic gravitation waves, by traveling over the surface of the earth, reached Europe at the rate of 113 miles a minute, or 2.98 kilometers a second.

It is likely that these latter disturbances reached stations in Europe by traveling from their origin in two directions round the world.

As an indication of this, we are told that at several European stations slight undulations are to be seen on the seismograms, at times we should expect to find such markings had they traveled from India to Europe by the longest possible route.

From the period of these waves, which is taken at twenty-two seconds, and their velocity, their length may be inferred, an estimate of which is thirty-four miles; while their height, as deduced from their length, and the maximum angle of tilting, is estimated at twenty inches.

The slowness of the movement was such that it could not be felt, while the magnitude was such that the unaided eye of an observer would not be able to recognize any differential movements in his surroundings. The largeness of these disturbances and their great duration, extending over several hours, preclude them from the category of tremors, or vibrations.—Pittsburg Dispatch.

Horseflesh for Food.

The trade in horseflesh for food is so little known in this part of the world that when the authorities of Hempstead, Long Island, the other day prosecuted a butcher for selling horseflesh to his customers it was considered an incident of sufficient general interest to occupy a paragraph in the New York papers. In countries less abundantly blessed with food materials this would hardly have been the case. As everybody knows, horse meat is commonly sold for human food in the poorer quarters of Paris, for instance, the municipal authorities only taking care to enforce the rule that this particular viand shall be sold separately and not on the same counter with beef or any of the more highly favored kinds of meat. In New York the case is quite otherwise. The sanitary code altogether forbids the slaughter of horses for human food.

The reason of this sweeping prohibition, as an officer of the health department explains it, is to be found in the extreme improbability that healthy horses would be handed over to the butcher. When a horse is being sold in sections the presumption is that he was not hygienically whole at the time of his decease. The task of distinguishing the sound from the unsound horse meat is one which the healthy authorities could hardly hope to perform with invariable success, and so horseflesh as food is forbidden altogether.

However difficult it might be to enforce this ordinance if meat were less plentiful here, there is in reality no difficulty about it. Even the French colony on the west side of Manhatten borough does not, as many native Americans are inclined to think, hanker after horse meat; the French cook regards "fille de cheval" as a "pis aller," not as a treat. The cat's meat man, who in London goes his daily rounds with repulsive-looking scraps for sale, to feed the "harmless necessary" felines in the basements of well-to-do houses, is not a New York institution, and therefore no purveyor of human food here is tempted to buy horseflesh ostensibly slaughtered for the cats.

"It is an easy law to enforce," said the health officer. "No one tries to slaughter horses in the regular abattoir, and that would be the only way to get the meat on the market. Anyone who tried to pass off horse meat for food would have to take his horse to some out-of-way place and slaughter him there, and it would be easy for the police to trace him. It would not be worth while to try."

All this is reassuring for the dweller in New York. However, should automobiles and the like mechanical advances so far discount the efforts of the horse as to make it commercially profitable to the owners of healthy animals to palm them off as beef, it might be well to remember that horseflesh, cooked or uncooked, never looks exactly like beef. Anyone with an eye for color can easily distinguish the lighter and cruder red of the equine article.—New York Tribune.

The San Francisco girl who took a shot at her faithless lover a few weeks ago has married him. She has revenge.

For Sale or Rent.

House of six large rooms on the Main street, Independence, furnished or unfurnished, Three lots, fruits and berries of all kinds. Hot and cold water in house. Bath room, pantry and closet.

Will rent for a long period or sell on the installment plan. Terms, reasonable.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland train Central Pacific Railroad are respectfully not that during the excursion season, commen May 1st and closing October 1st, a delig trip to LAKE TAHOE can be enjoyed (losing one day in their journey) by taking the Exp train of the Virginia & Truckee Railroad, l ing Reno at 7:10 a m, arriving at Carson C 8:25 a m, where well-equipped stages l promptly for Glenbrook, Lake Tahoe, con ing with Lake Tahoe steamer for Tahoe there connecting with Moody & Co.'s stage Truckee, arriving same evening where co tion is made with west-bound passenger tr Central Pacific Railroad. Through tickets to Truckee, by above route, for sale at Office, Reno, $6 00. East-bound passenger leave Truckee early in the morning (Th Tickets for sale at Stage Office in Truckee) the trip over the above described route, ar at Reno same evening.

VIRGINIA CITY & THE COMST

Passengers may also take train mention Reno for Virginia City, 52 miles, where tire day may be pleasantly and profitabl examining the famous Comstock Mine being worked to a perpendicular depth of feet) with their massive hoisting and pu machinery. Returning, see Time-Table Round Trip Tickets for sale at Ticke Reno.

Blood Humors

It doesn't make any difference whether you believe in the modern theory and speak of the causes of diseases as referable to germs, microbes or bacilli, or whether you use the older and better understood terms of "humors" and "blood diseases"—Hood's Sarsaparilla cures them all.

It cures scrofula, salt rheum or eczema, catarrh, rheumatism, malaria and all other blood poisons; nervous troubles, debility and that tired feeling.

This is not merely modern theory; it is solid up-to-date fact.

"Salt rheum on my hands so severe I had to wear gloves most of the time, and could not shut my thumb and finger together, was cured by Hood's Sarsaparilla." MRS. A. O. SPAULDING, North Searsport, Me.

"My three months old boy was cured of a very bad case of scrofula by Hood's Sarsaparilla." WM. H. GARNER, West Earl, Pa.

Hood's Sarsaparilla

Promises to cure and keeps the promise. No substitute for Hood's acts like Hood's—be sure to get Hood's.

A Love Letter of Prince Bismarck.

"On my window sill, among all sorts of crocuses and hyacinths, stand two camellias which always inspire me with strange thoughts. One of them, slender and pretty, with its ornamental crown (top) and soft, pale—very pale—pink blossoms, but little foliage and only two buds, transports me to Reddetin, holds itself rather stiffly and lisps English. The other makes far less impression of beauty as you look at it, and its stalk betrays in its gnarled twisting lack of care in its pruning. From the midst of the foliage looks out a dead branch, but the crown is rich in leaves, and the foliage is greener than that of its neighbor. It gives promise of abundant blossoming in its eight buds, and its color is deep dark red and white in irregular gay variegation. Do you take the comparison amiss? It is a lame comparison, moreover, for I do not love camellias, because they are without odor, and you I love precisely on account of the fragrance of the flower of your spirit, which is white, dark red and black."

Here is a picture of the Man of Iron with his armor doffed.—Harper's Magazine.

MAKING NEWS.

Arthur Brisbane Gets John L. to Spar Before the Prince of Wales.

"The layman who is unacquainted with newspaper methods may be interested in knowing just how one goes about making a piece of news. The best illustration of this, perhaps, is Arthur Brisbane's arrangement for John L. Sullivan to box before the Prince of Wales. At this time Mr. Brisbane was London correspondent for the New York Sun. It should be understood that the competition among the London representatives is just as keen as though they were serving their separate papers on Park Row, and, though living in an atmosphere of less aggressive journalism, they never, for a moment, forget their American education. In this matter Mr. Brisbane was actuated by no other motive than to triumph over his rivals with a legitimate beat, and he found the great American bruiser but too glad to second the idea on the percentage of free advertisement. The Sun man worked quietly, quickly, and so successfully that the night for the preformance came without any one knowing of it excepting the Prince, his friends and the members of the fashionable club that sheltered the twelve-foot ring.

"At the moment when the referee stepped out to announce the fighters the Prince's equerry discovered that there was present an untitled person, and, what was more deplorable, a newspaper man. As the result of this discovery, Mr. Brisbane was ordered to leave the club instantly.

"'But,' he objected, 'I am responsible for this whole thing. You are not going to put me out?'

"The equerry would not hear him, and Mr. Brisbane, desperate and angry, played his last card. 'Well, John', he said turning to where the champion stood toying with one huge pickled paw, 'I've got to go. What'll you do?'

"'That's what I'll do,' replied the champion of the world, picking up his coat and glaring savagely at the equerry. 'If that young feller goes, then I'll go, understan'?' and the audience was dismayed to see fighter and reporter abandon the ringside. It would not do, however, to disappoint His Royal Highness so disgracefully, and the equerry and Mr. Brisbane finally compromised by the latter promising to write the account only for the American press. The Sun, of course, had a great beat next day, and every newspaper in America and England quoted the anecdote of John L.'s reception by Albert Edward.

"Mr. Sullivan's speech at that period had extreme limitations, and when introduced to a distinguished person he invariably used the same set phrase. To the present King of England, after shaking hands, he observed with dignity and cheerfulness, 'Prince, I'm glad to meet you. I've often heard of you.'"—Ainslee's.

QUEER STORIES

Two hundred and twenty-four gallons of fresh water weigh a ton.

Potatoes brought into Russia first in 1769 caused fearful riots, being called devil's apples.

Holland has nine miles of canal for every one hundred square miles of surface, 2,700 miles in all.

More steel is used in the manufacture of pens than in all the sword and gun factories in the world. A ton of steel produces about 10,000 gross of pens.

When the smoke bells are suspended over gas burners to shield the ceiling, it is better to have them come as low as possible, but not closer than twelve or fifteen inches to the flame.

Various beautiful colors are of animal origin—for example, Indian yellow, which is derived from the camel. Sepia is the inky secretion of the cuttlefish, carmine is derived from the cochineal insect, Prussian blue is obtained from horses' hoofs, and ivory black is made by burning ivory chips.

The American coal fields are thirty-seven times as great as the English. Coal is profitably and somewhat largely mined in twenty-eight States of the Union: Alabama, Arkansas, California, Colorado, Georgia, Illinois, Indiana, Indian Territory, Iowa, Kansas, Kentucky, Maryland, Michigan, Missouri, Montana, New Mexico, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, Tennessee, Texas, Utah, Virginia, West Virginia, Wyoming. Though our coal fields are thirty-seven times as extensive as those of England, she produces more coal than we, 180,000,000 tons, but we are very close to this.

Not Unusual.

Are women given more to superstition than men? Truly they have their full share of it. There's one woman known to the writer who never dreams of a young child without shivering and shaking for days after, in fear of some dreadful thing happening to her. She has not consulted a dream book on the subject, and she doesn't know how infant and bad luck became connected in her mind, but nevertheless, after she's had a visitant of this sort while sleeping, she says prayers of unusual length and then makes up her mind to be patient under afflictions sore.

She's an intelligent woman, mind you, but she doesn't attempt to explain the terror that besets her at this particular dream. She doesn't call herself superstitious—of course, no woman does, not even the one who won't walk under a ladder—but her friends laugh at her until she exposes some fetich of theirs, when the subject is carefully avoided afterward.

Work.

"What's de matter?" asked Plodding Pete.

"Nightmare," answered Meandering Mike, rubbing his eyes. "I t'ought somebody handed me $1,000,000."

"An' you was kicking'?"

"Pete, did you ever try to count $1,000,000? De work is somethin' fearful!"—Washington Star.

A man feels a strange pang when reminded of an acquaintance, who is dead, but the pang is not because he is missed so much but that he is missed so little.

The easiest note to write is the hardest to pay.

His Method.

The bell in the private office rang three times, and the man at the desk hastily reached for a flannel bandage, which he put around his neck. Then he arranged a sling in which to put one arm, mussed up his hair, drew down the corners of his mouth, got out of his chair and painfully limped toward the door.

"Mr. Smithkins?" inquired the well dressed man who opened it just at that moment.

The man with the bandage gave a half suppressed groan and answered: "Yes; that's my name. What can I do for you?"

"You seem to be suffering," suggested the caller.

"Suffering!" returned the other. "Do you think I'm doing this for fun? Do you suppose I bandage my throat for amusement, tie up my arm for sport and limp because I think it's graceful? And I've been in this way for six months. But what can I do for you?"

"Pardon me," said the caller, backing out. "I'll call again some other time."

"It's some trouble," soliloquized the man with the bandage as he removed the harness and returned to his desk, "but experience has taught me that it is really the quickest way to discourage a life insurance agent and keep him discouraged. That fellow never will come back."—Chicago Post.

Appendicitis.

"Appendicitis," said Dr. Abbe in an address before the New York Academy of Medicine, "has few rivals in the surgical field and takes rank today with typhoid, pneumonia and rheumatism in medical thought. Surely when the active surgeon of today can number 100 operations for diseased appendices yearly—and there are a dozen such men in New York and in other cities in the same proportion—we begin to grasp the importance of the subject and its menace to the community.

"The public continues to ask the physician what was appendicitis formerly, and he answers, 'Probably it passed under the description of "inflammation of the bowels" or "peritonitis."' It is true that less than a generation ago numberless people in the course of summer travel were stricken with so called inflammation of the bowels or peritonitis and died.

"Now we hear of no one so reported, but it is said, 'He had an attack of appendicitis, was beyond the reach of a surgeon and died,' or, 'So-and-so had an attack of appendicitis, was operated upon and recovered.' Hospital statistics show the same changes of tabulated diseases. It is merely a new name, not a new disease."

Nobody Paid Her Fare.

A young woman got aboard a West Broad street car and discovered, to her humiliation, that her fare was missing when the conductor called. In a gruff manner the custodian of the car said he'd have to get the fare at once or the woman would have to walk. This declaration added to her embarrassment. The car was crowded. On her right sat a genial Irishman and on her left a well known bookkeeper. The bookkeeper and Irishman exchanged several meaning glances. The conductor was about to pull the bell rope. The bookkeeper said he'd pay the fare as the young woman looked perfectly honest. The conductor repeated that he'd put the woman off. This aroused the Irishman, who said, "If you put the woman off, your funeral'll be tomorrow." Seeing a slight nervousness on the part of the conductor, he continued:

"How many people on this car want to attend the funeral of this conductor?" Several answered in the affirmative. The conductor grew excited and in the altercation that followed walked to the platform without securing the woman's fare.—Columbus Dispatch.

What Will Become of China?

None can foresee the outcome of the quarrel between foreign powers over the division of China. It is interesting to watch the going to pieces of this ancient but unprogressive race. Many people in America are also going to pieces because of dyspepsia, constipation, blood, liver and stomach diseases. We are living too fast, but strength, vigor and good health can be retained if we keep off and cure the above diseases with Hostetter's Stomach Bitters.

You notice that the fellow who is always going around with a chip on his shoulder is a powerful sprinter.

The Best Preparation for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

As the dying grain of corn gives life to itself multiplied, so the death of a hope gives life to new ambition.

FAKE HAIR PREPARATIONS

Do Hair No Good, But Often Cause It to Fall Out.

Many hair preparations are "fake" because they are merely scalp irritants. They often cause a dryness, making the hair brittle, and, finally, lifeless. Dandruff is the cause of all trouble with hair. It is a germ disease. The germ makes cuticle scales as it digs to the root of the hair, where it destroys the hair's vitality, causing the hair to fall out. To cure dandruff, the germ must be killed. "Destroy the cause, you remove the effect." Newbro's Herpicide is the only hair preparation that kills the dandruff germ, thereby leaving the hair to grow luxuriantly.

All diseased conditions of the blood and skin are benefited by the well known remedy, Garfield Tea; it purifies the blood and clears the complexion.

A Household Necessity.

Every home should have handy for use a little box of Cascarets Candy Cathartic, as a perfect guardian of the family health. All druggists, 10c, 25c 50c.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Reaching an Understanding.

The young man was visibly annoyed at the questions which the heiress' father insisted on putting. At last he could endure it no longer. His ancestral pride flamed up into his cheeks, and he exclaimed:

"I would have you understand that I am no ordinary fortune hunter."

"That's all right," was the stern rejoinder. "I am just as particular as you are. I'd have you understand that I am no plain, everyday duke chaser either."—Washington Star.

A Remarkable Liniment.

The humorist of the Cynthiana (Ky.) Democrat remarks: "One of the surgeons of Cynthiana has discovered a valuable liniment. The other day he used it on the leg of a politician who had scarcely been able to walk for several years. Now the politician is running for office. Another trial was on a friend's arm. The friend immediately struck him for ten."

SAW DARK SPOTS.

A Victim of Biliousness and Inflammatory Rheumatism Tells How He Became Free From Disease.

A recommendation that is not based upon experience is without value, but in the following interview the reader will at once recognize the force of advice that is the result of personal knowledge.

Mr. Ned Yerkes Hawley is a traveling man whose home is at 1926 W. Boone Ave., Spokane, Wash. He has recently had an experience of more than general interest and in an interview with a representative of the Spokesman-Review of Spokane, he said:

"In June 1899, I became bilious and subject to dizzy spells. I had no appetite, my heart seemed to flutter at times and beat irregularly, and dark spots seemed to float before my eyes. This continued for about six months. During that time I was troubled with lameness in my back and pains over my kidneys. I was under a physician's care and he told me that my trouble was biliousness and inflammatory rheumatism. I was in bed for over four weeks and did not seem to be getting any better.

"One day I saw an advertisement in which it was stated that a case similar to mine had been cured by Dr. Williams' Pink Pills for Pale People. I procured some of the pills and within two weeks the inflammatory rheumatism, which had become very acute and caused me the most intense suffering, was entirely cured.

"You will therefore realize that I am a firm believer in Dr. Williams' Pink Pills. They cured me and I am so sure that they will prove equally valuable in other cases that I have recommended them to a great many people.

NED YERKES HAWLEY.

Dr. Williams' Pink Pills for Pale People are an unfailing specific for such diseases as locomotor ataxia, partial paralyis, St. Vitus dance, sciatica, neuralgia, rheumatism, nervous headache, after-effects of the grip, palpitation of the heart, pale and sallow complexions and all forms of weakness either in male or female. Sold by all dealers, or sent direct from Dr. Williams Medicine Co., Schenectady, N. Y., 50 cents per box, or six boxes for $2.50.

Don't fear the chap who tells you what he is going to do to you, but look out for the one who does it and tells you later.

E. W. Grove

The Best Shorthand College.

If you wish to succeed as stenographers and book-keepers, follow the advice of all the Official Reporters of S. F., and attend the GALLAGHER-MARSH COLLEGE, Parrott Building, S. F., Cal. Graduates have no trouble obtaining positions, as none but *incompetent* stenographers are out of employment, and graduates of this College are qualified to fill any amanuensis' position very creditably. Board and lodging to be had for $15 per month. Life scholarship, $50; by month, $10. Send for catalogue.

Notice.

When you need whiskey, always ask for the best quality, Kentucky Favorite, of Spruance, Stanley & Co., San Francisco.

Carter's Ink

best for school, home and office. It costs no more than poor ink. Always ask for Carter's.

Garfield Tea is an excellent medicine to take in the Spring; it produces a healthy action of the liver; it cleanses the system and purifies the blood.

CATARRH CANNOT BE CURED

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years, and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarrh. Send for testimonials free.

The Conductor's Ready Answer.

The Metropolitan Street Railway company has in its employ a philosopher in the person of a Broadway conductor. It was late in the evening, and his car on its up town trip had reached the vicinity of the city hall. As it passed one of the taller office buildings a stout woman, clutching him by the arm, exclaimed:

"Oh, conductor, how many stories high is that building?"

"'Leven," laconically replied the conductor, without so much as an upward glance. The woman sank back with a sigh of satisfaction.

Just then a small man with a large traveling bag rushed in almost out of breath.

"I say, conductor," he gasped, "what time can I get to the Grand Central depot?"

"'Leven," was the quiet reply.

"That's good," commented the small man, evidently relieved.

At this juncture another man climbed aboard that wanted to know about what time the car would reach the Gilsey House.

"'Leven," again replied the conductor, with a weary look.

When questioned as to the uniformity of his answers, he replied:

"Yes. You see, if you hesitate about answering 'em, they git worried, but if you have an answer ready they're satisfied. Now, about this time of night, I always say 'Leven.' It's a good, handy number, easy to say. Other times I use other numbers. I allus have a lot of stock answers on hand. It saves time and trouble."—New York Sun.

The Queen and Jenny Lind.

There is a pretty story told of Queen Victoria and Jenny Lind which shows how the modesty of two women, the queen of England and the queen of song, caused a momentary awkwardness which the gentle tact of the singer overcame.

It was on a night when Jenny Lind was to sing at Her Majesty's Opera House that the queen made her first public appearance after the memorable Chartist day.

For the great artist, too, this was a first appearance, for it was the beginning of her season at a place where the year before she had won unparalleled fame. It happened that the queen entered the royal box at the same moment that the prima donna stepped upon the stage. Instantly a tumult of acclamation burst forth.

Jenny Lind modestly retired to the back of the stage, waiting till the demonstration of loyalty to the sovereign should subside. The queen, refusing to appropriate to herself that which she imagined to be intended for the artist, made no acknowledgment.

At length, when the situation became embarrassing, Jenny Lind, with ready tact, ran forward to the footlights and sang "God Save the Queen," which was caught up at the end of the solo by the orchestra, chorus and audience. The queen then came to the front of her box and bowed, and the opera was resumed.

Sentimentalists who would fly on wings of love might find them rather unstable supports.

Rheumatism

Rheumatic pains are the cries of protest and distress from tortured muscles, aching joints and excited nerves. The blood has been poisoned by the accumulation of waste matter in the system, and can no longer supply the pure and health sustaining food they require. The whole system feels the effect of this acid poison; and not until the blood has been purified and brought back to a healthy condition will the aches and pains cease.

Mrs. James Keil, of 707 Ninth street, N. E., Washington, D. C., writes as follows: "A few months ago I had an attack of Sciatic Rheumatism in its worst form. The pain was so intense that I became completely prostrated. The attack was an unusually severe one, and my condition was regarded as being very dangerous. I was attended by one of the most able doctors in Washington, who is also a member of the faculty of a leading medical college here. He told me to continue his prescriptions and I would get well. After having it filled twelve times without receiving the slightest benefit, I declined to continue his treatment any longer. Having heard of S. S. S. (Swift's Specific) recommended for Rheumatism, I decided, almost in despair however, to give the medicine a trial, and after I had taken a few bottles I was able to hobble around on crutches, and very soon thereafter had no use for them at all. S. S. S. having cured me sound and well. All the distressing pains have left me, my appetite has returned, and I am happy to be again restored to perfect health.

SSS the great vegetable purifier and tonic, is the ideal remedy in all rheumatic troubles. There are no opiates or minerals in it to disturb the digestion and lead to ruinous habits.

We have prepared a special book on Rheumatism which every sufferer from this painful disease should read. It is the most complete and interesting book of the kind in existence. It will be sent free to any one desiring it. Write our physicians fully and freely about your case. We make no charge for medical advice.

AFTER-EFFECTS OF LA GRIPPE.

THE after-effects of the grip are often disastrous. It is commonly known to the medical fraternity that the numerous ailments and complications which follow the grip are apt to be more serious than the acute stage of the disease.

Some people have the grip very lightly. They may be confined to the house only a day or two and yet a long train of disagreeable, disabling symptoms follow. All sorts of tonics and stimulating remedies have been devised to meet this condition. None of them can compare in results with Peruna.

Every one who has had the grip ought to take a short course of Peruna. Read what the following people have to say about it:

WASHINGTON, Feb. 4, 1899.

The Peruna Medicine Co., Columbus, O.:

Congressman Howard.

Gentlemen—"I have taken Peruna now for two weeks, and find I am very much relieved. I feel that my cure will be permanent. I have also taken it for la grippe, and take pleasure in recommending Peruna as an excellent remedy to all fellow-sufferers."—M. W. Howard.

Congressman Howard's home address is Fort Payne, Ala.

Grip Produces Catarrh.

Henry Distin, the inventor and maker of all the band instruments for the Henry Distin Mfg. Co., at Williamport, Pa., writes:

1441 South Ninth Street,
Philadelphia, Pa., May 6, 1899.

Dr. S. B. Hartman, Dear Sir:—"I write to inform you that I had a bad attack of la grippe last December which lasted more than three months and which left me with catarrh, when several of my friends advised me to try your wonderful medicine, Peruna. I began with a bottle the first week in March and it certainly did me a great deal of good. I was so well satisfied that I purhchased another bottle and followed your directions, which you furnish with every bottle, and I am glad to say that it has cured me. I shall certainly recommend the Peruna to all my friends."

GRIP CAUSED NERVOUS DYSPEPSIA.

D. D. Wallace, a charter member of the International Barbers' Union, writes from 15 Western avenue, Minneapolis, Minn.:

"Following a severe attack of la grippe I seemed to be affected badly all over. I suffered with a severe backache, indigestion and numerous ills, so I could neither eat nor sleep, and I thought I would give up my work, which I could not afford to do.

"One of my customers who was greatly helped by Peruna advised me to try it, and I procured a bottle the same day. I used it faithfully and felt a marked improvement. During the next two months I took five bottles, and then felt splendid. Now my head is clear, my nerves are steady, I enjoy food, and rest well. Peruna has been worth a dollar a dose to me."—D. L. Wallace.

WASHINGTON, April 24, 1900.

The Peruna Medicine Co., Columbus, O.:

Frances M Anderson.

Gentlemen—"About two months ago I was taken very ill with la grippe and was obliged to go to bed. I took three bottles of Peruna with very beneficial results and was able to leave my bed in a week, and regained my usual strength very soon. I have nothing but the highest praise for Peruna and recommend it to those similarly afflicted wherever I can."—Frances M. Anderson.

Grip Poisoned Her Blood.

Mrs. T. W. Collins, Treasurer of the Independent Order of Good Templars of Everett, Wash., writes:

"After having a severe attack of la grippe I continued in a feeble condition even after the doctor called me cured. My blood seemed poisoned.

"I also suffered with dyspepsia, and had either to starve or suffer from what I was eating. A neighbor who was using Peruna praised it so highly that she induced me to try it, and I soon found this was what I really needed.

"I could soon eat my regular meals with relish, my system was built up, my health returned, and I have remained in excellent strength and vigor now for over two years."—Mrs. T. W. Collins.

GRIP LEFT HER BROKEN DOWN.

Miss Alice Dressler, of 1313 N. Bryant avenue, Minneapolis, Minn., writes as follows concerning Peruna:

"Last spring I suffered from la grippe and was partially cured, but the bad after-effects remained through the summer and somehow I did not get as strong as I was before.

"In the fall I caught cold after getting my feet wet and attending a lecture in a cold hall, and suffered a relapse. Catarrh of the throat and head followed, and as I was in a weak condition physically previous to this, it took but little to break me down completely. One of my college friends, who was visiting me, asked me to try Peruna and I did so and found it all and more than I had expected. It not only cured me of the catarrh, but restored me to perfect health."—Alice Dressler.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of the Hartman Sanitarium, Columbus, Ohio.

A Modern Polonius.

"My son," said the fond but wise parent, "you are leaving me to go out into the world. I have nothing to give you but advice. Never tell a lie. If you wish to put one in circulation, get it published. A lie cannot live, but it takes one a blamed long time to fade out of print.

"Always read your contract. A man might consider he was getting a sinecure if he were offered a position picking blossoms off a century plant; but, you see, he wouldn't have a remunerative occupation if he were paid on piecework.

"Be not overcritical. Even the most ordinary sort of a genius can tell when the other fellow is making a fool of himself.

"Remember that the young man, like the angler's worm, is rather better for being visibly alive.

"Be careful in the choice of your surroundings. Environment will do a great deal for a man. For example, flour and water in a china jug is cream sauce. In a pail on the sidewalk it is billsticker's paste.

"Don't forget that there's a time for everything and that everything should be done in its proper time. Never hunt for bargains in umbrellas on a rainy day.

"You may make enemies. If you know who they are, don't mention them. Silence is golden. It saves the money that might otherwise be spent in defending a libel suit. If you don't know who they are—well, abuse lavished on a concealed enemy is like charity indiscriminately bestowed; it's a good thing wasted."—New York Commercial Advertiser.

More In Sorrow Than Anger.

"Judge," said the lady who was accused of battering her husband, "it is true that I struck him, but the weapon I used proves that I did so more in sorrow than in anger."

"What did you hit him with?"

"A sadiron, your honor."—Baltimore American.

INTERPRETATION.

We long for a peace that is lasting,
We plead for a rapture that's rare,
Like fishermen ceaselessly casting
Their nets in the gulf of despair.
We draw from deep waters of sorrow
Dark wrecks of old failure and fear,
And out of sea silence we borrow
The storm that will never come near.

Faith speeds past the footsteps of Duty,
And halts at the door of a tomb;
Thought pierces the source of all beauty
And returns unto dust—'tis the doom
Of each man-child to strive and to wonder;
To plan for some positive gain;
And only find mysteries under
All life, be it pleasure or pain.

Lo, in realms of the mind there is treasure
For toilers who dwell in content;
There is truth that no science can measure,
And the fearless are never forspent;
There is light when earth shadows are falling,
There's reward for the deeds that are done—
Where envy crowned virtues are calling:
"Through faith is thy victory won!"

A Regular Proposal.

IT was a drizzling May morning, a left-over April day, and the hurrying crowds at the Grand Central Station were redolent of wet rubber and woolen.

One only in the crowd seemed indifferent to the weather—a man who walked listlessly along the platform, back and forth, heedless whether the roof sheltered him or not.

Now and then he glanced at his watch and then tapped impatiently with his umbrella. Already he had smoked three cigars and tried in vain to sit in the waiting room reading. Nothing eased his impatience like this steady tramping.

Once he encountered a familiar face and raised his hat with a hurried "How d'ye do?"

"That's young Averill, old Tom Averill's son," explained his acquaintance to a companion, and the two

JUST ONE WORD, DEAR.

turned and looked after the young man as he continued: "Immensely rich, but an odd stick."

The impatient man was Tom Averill, Jr., and his behavior during the ensuing half hour was certainly odd. The Chicago train pulled in and Tom Averill stopped his walk and hurried down to the train shed to meet it and stood watching the passengers with a quick eye, running from car to car till it fell on a party of three—a young man, a middle-aged woman and a very pretty girl. His eyes brightened, his color rose and—he bolted into the station, out at the front door and nearly annihilated a small street urchin in his violent haste to reach a cab.

Giving cabby an address and stepping quickly in, he turned and threw a fresh-lighted cigar at the feet of the street urchin. The boy grasped the prize and remarked sententiously, "Wheels!"

The cab stopped before the door of some luxurious bachelor apartments and Tom Averill hurried to the elevator, rushing out at the second landing and quite startled his man, who was sponging an overcoat.

"Take that evil smell into the bathroom, will you, Martin?" he cried, and hustled his servant out, slamming the door behind him.

"Well," he remarked smilingly to his shaving mirror, "the Uptons came, and to-morrow night I shall call on—her brother. Now how shall I manage it?" he mused; "make a clean breast of what I am and all about me and wind up with a declaration of love? Tell Dick first, I suppose, and get him to ask her downstairs and leave us alone. Then when we are alone, h'm—guess I'll get up a regular proposal and see how it sounds."

He examined the doors, to make sure they were both shut and locked, sat down and addressed an imaginary person by his side.

"Dear Miss Upton (guess I won't say Marguerite), I want to tell you all about my life, if you care to listen. I was born thirty-two years ago, and as nearly as I can guess no one was glad to see me. My mother died at my birth, and I am told that my father would not even see me till I was six months old.

"Very little time or attention he gave me after that, or so it appeared to me. I was left to the care of servants during my babyhood, and hustled off to a boarding school as soon as I was old enough. At home the old housekeeper called me the 'oddest child she ever labored with,' and the maids all shunned me. The only childhood friends I remember with any pleasure are the stable boy and a three-legged terrier dog.

"From boarding school I went to college, where I stayed three years. My allowance was so scant that I would not have been able to cut much of a swell if I had wished to. I believe my sole ambition was to get through college so as to see what life had for me beyond.

"Near the end of my junior year I received a telegram saying my father was dying. I went home at once, but too late to find him alive. As I looked on his dead face I realized for the first time that I had utterly missed being a son.

"Then I heard my father talked of, and knew that I was the son of a good man, and grieved to think that I had never really known him. The family resemblance between us came out strong and came to me as a new and startling thing, for with the lines smoothed out and with the youthful look death sometimes brings, the dead face was almost like my own.

"The day after father's funeral I met his attorney and learned from him that I was a rich man, rich beyond anything I ever dreamed of, and I blamed my father for keeping me so scant when he had so much money; but in looking over some of his papers I found some notes that were very precious to me. They were his rules of life, and among them was this: 'Keep the boy short of money. He is safer. There will be time to learn of his wealth and how to use it during our trip abroad together.'

"Well, I went abroad soon after that and lived a wandering life for ten years. I had not learned how to use money and I wasted a good deal 'learning,' but there was so much it hardly mattered.

"I lived fairly simply and studied some, but I was restless always. The only thing that kept me from going wrong was a natural distaste for boorish pleasures. No woman attracted me, though I met many that are called beautiful. I didn't gamble or drink because I wasn't a 'good fellow' enough to have invitations to carousals. I heard one fellow say that 'my nose went up too easy.'

"Two years ago my lawyer called me home to decide some important business and asked me to dinner at his home. It was that night that I found my lawyer was your father, and that you were, well, what you are, and that I liked to be as near you as possible.

"I don't think I really fell in love with you that night, but I was anxious to see you again soon. I decided to live in New York, and fitted up bachelor apartments and settled down. I had no idea that I ever should tell you I loved you, but I wanted to be near at hand. So I cultivated Dick's acquaintance. You needn't tell Dick I made use of him, because his friendship is one of the best things in my life.

"But just at first, before I knew him much, I played on his love of fine pictures to get him over here to my rooms, and offered to help him with his photographic prints in order that I might be up in his dark room when you were sitting in the next room. We used to hear your voice there while we worked, and nearly always you came to see the prints, and help pin them up to dry.

"I was very happy in those days, and if I could get Dick to tell me anything about you I did. He always thought you a frightful flirt, and always enjoyed relating your escapades with the High School boys, but he always wound up by saying: 'But she don't care a rap for any one of them. Marguerite will marry a steady old chap some day, and a dandy little wife she'll make him.' Then Dick would slap me on the back, and I would get red in the face. Dick must have seen that I cared for you.

"I suppose I should have let things slip along this way forever if you hadn't gone West, but when Dick told me you and he and your mother were going West for the winter I knew that I must act some time. I must have you for my own, so that people couldn't carry you off whenever and wherever they pleased. I tried to ask you then, but I was always tongue-tied whenever Dick left us alone, as he often did those last few weeks.

"I finally let you go with that one whisper at the station, 'Good-by, dear.' You blushed, but you didn't take your hand away, and though your lips said good-by to all in the little group that came to see you off, your eyes said good-by to me alone.

"So I have waited and hoped all these months, and Dick has kept up my courage with his letters. He has told me many stories of young ranchmen who have fallen a victim to your charms, but always wound up the same way. 'She don't care a pin for any of them and will marry old steady, after all.'

"So now I have come to claim you, dear (good place to take her hand), and ask you to be my wife. She ought to say something by this time, either yes or no, and then I sha'n't know what to do——"

And Tom fell into a haze of dreaming till Martin timidly announced dinner.

The next evening Tom dressed carefully, and walked slowly to the Uptons'. He walked by the house once, but, coming back, he spied Dick at an upper window, and with a long-drawn breath and a tightening of the whole nervous system he ran up the steps and rang the bell.

The man ushered him in and he asked for Miss Upton. He had not meant to ask for her, but was rehearsing his proposal, and that was the way it began. The man was gone, anyhow, and so it couldn't be helped. Dick would probably come down when he saw the card, even if he hadn't seen him from the window, so "it" would be delayed for an hour.

Perhaps he wouldn't ask her to-night. It might be too soon; he would see how she received him. There was no hurry; she wouldn't be going West again soon.

He had never asked for her alone before. What would she think? There was only one interpretation—that he wanted to see her alone. Well, so he did, and he would ask her to-day.

He walked restlessly up and down the little reception room, conning the speech till a rustle of skirts made him stop abruptly in the middle of the room, with his eyes fixed on the door. It opened in an instant, and a dainty little maid stood framed in the doorway. Her brown eyes met Tom's bravely and happily, and before he knew what he was doing he had opened his arms and she had come straight to him.

"Hello, dear," she whispered, laughing saucily. "Is that all the love-making you know? Just one word—dear. And you never wrote even that one all these months. How do you expect a girl to know you love her when you act so? I shouldn't have if I hadn't read all Dick's letters. Dear old Dick! He told me all you had said about me, and of course I knew."

An hour later Tom was sitting on the divan holding Marguerite's hand. Dick sat on the other side, and Mr. and Mrs. Upton had chairs drawn near, and all formed a happy family group, but not one word had Tom uttered of his proposal.—Utica Globe.

MONACO AND MONTE CARLO.

How the Gaming Capital of the World Begun.

Monaco and Monte Carlo were always more or less confused in my mind until I came here, and possibly they may be in yours. Monaco is the name of the kingdom as well as of the capital and chief town, and Monte Carlo is a separate town, lying also on the coast of the Mediterranean. The two places were originally about a mile apart, but the single street along the shore which connects them has been so built up that now they are practically one, and it is hard to tell when you are in Monte Carlo and when you cross the line into Monaco. Monaco is the old town, with dwellings and shops and castles and dirt and a market place like any other small European city, but Monte Carlo is new, and lives entirely upon the Casino. There are few dwelling houses in it, few shops, few permanent residents beyond the hotel and Casino employes, and even the Casino men live mostly in Monaco, where rents are cheaper. Monte Carlo consists chiefly of the Casino and its appurtenances, a group of hotels, a railway station and a very handsome arched stone railway bridge.

Here are the Maritime Alps, rising almost out of the back yards of both places, the sea in front, no bits of arable land bigger than flower beds, no manufactures, no chance for any industries beyond fishing and retailing groceries, if you take away the gaming tables. It was a strong temptation, no doubt, to their little majesties of Monaco to go in for anything that promised to bring money into the country. And the winter climate was the best in Europe, and therefore suitable for a great winter resort. The gambling industry was begun here in 1856, but only in a small way. Then, four years later, a person named Blanc, who had been expelled from Homburg, came here and developed it. At present the gaming tables support everything. The Casino Company pays the prince $256,000 a year for the concession. This is a stock company of the ordinary kind, like any mining or insurance company, with shares that can be bought in the market and that pay such handsome dividends that they command always a high premium. So, if you are a millionaire, as I hope you are, and would like to be in a position to dictate to a real prince, you need only come over to Monaco and buy enough shares in this company. They are $100 shares, and sell at present at about $300, I believe. —Wm. Drysdale in New York Times.

The Strength of Ice.

Two-inch ice will sustain a man or properly spaced infantry; four-inch ice will carry a man on horseback, or cavalry, or light guns; six-inch ice, heavy field guns, such as eighty-pounders; eight-inch ice, a battery of artillery, with carriages and horses, but not over 1,000 pounds per square foot on sledges; and ten-inch ice sustains an army or an inumerable multitude. On fifteen-inch ice, a railway could be built, and two-foot thick ice will withstand the impact of a loaded railway carriage, after a a sixty-foot fall (or, perhaps 1,500 foot tons). Trautwine gives the crushing strength of firm ice as 167 to 250 pounds per square inch.

Colonel Ludlow, in his experiments in 1881, on six to twelve-inch cubes, found 292 to 889 pounds for pure hard ice, and 222 to 820 pounds for inferior grades, and on an American river 700 pounds for clear ice and 400 pounds or less for the ice near the mouth, where it is more or less disintegrated by the action of salt water, etc. Experiments of Gzowski gave 208 pounds; those of others, 310 to 320 pounds. The tensile strength was found by German experiments to be 142 to 223 pounds per square inch. The average specific gravity of ice is 0.92. In freezing, water increases in volume from 1-9 to 1-18, or an average of 1-11; when floating, 11-12 is immersed.

River of Ink.

In Algeria a river of ink is formed by the conjuction of two streams, one of which is impregnated with iron, and the other, which drains a peat bog, with gallic acid. The mixture of the iron and the acid results in ink.

The success of a jest often depends upon the digestion of your audience.

AN ARCTIC JOURNEY.

SWEDE'S SUCCESSFUL VOYAGE TO ICE-BOUND REGIONS.

Naturalists Make a Northern Trip of Unusual Length—Find an Archipelago Never Before Explored—Summer on the East Coast of Greenland.

A party of Swedish naturalists under the lead of Gustave Kolthoff made a northern voyage of more than usual length last summer for the purpose of studying the fauna in arctic waters and lands. They started in a little vessel from the northern coast of Norway on June 4, and four days later they arrived at the icy coast of Spitzbergen, where they visited some of the deep fiords and clusters of islands. Then they steamed far northeast to the waters between Spitzbergen and Franz Josef Land, where they reached the southwest coast of Prince Charles island, which, it will be remembered, was visited for the first time two years ago. They found there an archipelago of considerable extent which had never been explored. They procured a great deal of information about this almost unknown region, and the account of it which they will publish is expected to be very interesting. They were disappointed, however, in not finding any more relics of the lost arctic aeronaut, Andree. One of his buoys had been picked up in the neighborhood of King Charles island, and this was believed to be the likeliest place to find other objects that might throw light upon the fate of the explorer.

Then the party steamed on their way to the coast of East Greenland along the edge of the polar ice. They found the great ice pack impenetrable, but they kept on westward, close to the ice edge, as far as the island of Jan Mayen. This is the bleak arctic land that will always be famous as the place where in the seventeenth century a large party of whalers spending the polar winter perished to a man of scurvy. The record they left of the tragedy was nearly complete, for it was brought down to within a day or two of the time when the last survivor probably died.

Here the explorers found the pack ice stretching away to the west as well as to the north. They were able, however, to push into it and slowly pick their was westward. Here and there were great hills of ice, where the pressure had piled the pieces high. The ice was everywhere covered with a thick layer of snow, and their description of it shows that it was old polar ice that perhaps had been slowly drifting southward for many months.

The expedition finally reached the East Greenland coast at Mackenzie bay on July 31. They found the ground entirely free from snow, and under the summer sun a good deal of vegetation had developed. On Aug. 14, after studying animal life on sea and land for some days, the vessel entered Franz Josef fiord, though seven days before it had been completely blocked by ice. In a week all the ice had entirely disappeared. They remained in the fiord until Aug. 23, and secured the unusual prize of two young musk oxen, which they took home with them to Sweden. This is probably the first time that live specimens of the musk ox have been carried to civilized lands, though the attempt has several times been made.

Mr. Kolthoff says that last season was a bad ice year in the neighborhood of Spitzbergen and Baer islands. On the other hand, the east coast of Greenland, which is frequently locked with ice all through the summer, was almost free from this impediment to exploration.

VALUABLE SECRET.

One Family Has Furnished Stamp Cancelers for Sixty-five Years.

Since 1835 all the machines by which postage stamps are cancelled and envelopes marked with the name of the postoffice, the date, etc., have been made by one family. In the year named the Postmaster General entered into a contract with Benjamin Chambers, a citizen of Washington, to furnish a device by which postage stamps might be canceled so that they could not be used again, and, although there have been a multitude of competitors on several occasions, that contract has been renewed year after year for sixty-five years with Mr. Chambers, his son, and his grandson, who have a secret process by which the dies are made of malleable iron and carbonized into steel at a cost of from 50 cents to $2.75 each. It is certainly the only government contract, and probably the only contract in the United States, that has been renewed so often and continued so long. The department buys about $25,000 worth of new cancelers every year. Bids are advertised for annually, and every now and then some ambitious manufacturer who thinks he has a good thing offers a proposal, but the Chambers family are invincible. They have improved the device until it is now almost perfect.

The stamper is a circular cast-steel box (with a screw thread), one end of which is closed, and is provided on the outside with a square shank to secure it to the hardwood handle. The cover of the box is a disk of steel. A portion of its thickness enters the box by means of a screw thread around its periphery of almost twenty threads to the inch. This permits of a space between the inner face of the die and the bottom of the box, while the remaining thickness of the disk forms a flange with the edge, which is coarse milled, so that the disk may be turned with the hand or a wrench. On the outer face of the disk are characters of the body of the cylindrical die. These combine the marking and the canceling devices, one being on one side of the disk, inclosing the name of the postoffice in a circle. There are three slots for removable type, for months, dates, hour, and half-hour. Diametrically opposite the circle is the canceling device, the side of which is parallel with the edge of the disk. Any required number or letter is cut in relief in the center, while three grooves are cut intaglio. The removable types are of steel, and have on the ends opposite their faces projections from their outer edges, so that when inserted in the slots the projections can be clamped and held in place.

Until 1880 Captain Chambers manufactured the cancelers here in Washington, and he is still required to maintain a repair shop in the neighborhood of the Postoffice Department, but he moved his factory to Northumberland county, Virginia, on a leg of land at the mouth of the Potomac, where he has a little village composed exclusively of employes and their families. No one can enter his grounds without permission, and those who have been there say it is quite an ideal little village, safe from spies of competitors who would like to get the contract away from him.—Washington Correspondence New York Tribune.

THOMAS KEARNS.

The Latest Silver King to Enter the United States Senate.

Though he represents a comparatively unimportant State, Thomas Kearns, the new Senator from Utah, will be one of the most conspicuous figures in the upper house of the Fifty-seventh Congress. His great wealth is responsible for his election to the Senate. Like his colleague, Clark, of Montana, he has wrested a fabulous fortune from the mines of the West, after tasting the bitter cup of toil and privation for many years.

Born in New York in 1862 he went to Nebraska as a young man and worked on a farm. He dug potatoes and drove a freight wagon. It occurred to him that in the Black Hills of Dakota he

SENATOR THOMAS KEARNS.

might find a fortune and thither he went. But he failed to strike it rich and went to Utah in 1883. In the famous Ontario mine in Park City he went to work with pick and shovel. From the savings out of his weekly wages he accumulated enough to buy himself a copartnership, with several others, in a claim near the Ontario mine. They met with success. Other claims on adjoining land was purchased and the whole combined into the Silver King mine. Its product of silver, gold, copper and lead last year amounted to an even $1,000,000, of which one-fourth went to Senator Kearns. He is now worth about $5,000,000.

Kearns is exceedingly geenrous. Not long ago he gave $50,000 for the establishment of an orphanage in Salt Lake City and he also gave $10,000 toward the building of a new Catholic cathedral in the same city. He is now building a marble palace in Salt Lake City, which will be one of the finest in the country, in marked contrast to the dugout which was his first Nebraska home and the humble cabin which sheltered him during his early career in Utah.

Walled In.

While excavating for a cellar in Marietta, O., a few hundred feet from the famous Mound Cemetery, the workmen dug into a mound builder's grave, which was supposed to be two thousand years old. The grave was covered with three layers of heavy stones with three inches of fine white sand between each layer. When the third stone was raised, the bones of a large man were discovered. In the bones of each hand were solid copper axes. The bones crumbled on exposure for an hour. Large bits of charcoal were found in the grave, as were the bones of wild animals supposed to have been deer. The grave was walled in on all sides, and also the top and bottom, with heavy stones. The body of the mound builder sat in an upright position. with the hands in a position as if supporting the body. The grave was two and a half feet wide by two and a half feet long and five feet deep, and the stones surrounding it were easily broken with the fingers, as they were very soft.

Not There.

A farmer once wrote to a distinguished scientific agriculturalist, to whom he felt under obligation for introducing a new variety of swine:—

"Respected Sir:—I went yesterday to the cattle fair; I found several pigs of your species. There was a great variety of beasts, and I was very much astonished at not seeing you there."

The people who have plenty to eat and drink and wear, and who are comfortably housed, do a terrible lot of grumbling when a pin scratches them.

TOPICS OF TIMES

Men do evil when there is no use for it. One of the wealthiest merchants in Berlin has been indicted for forgery.

A man in Dayton, Ohio, got in trouble with Uncle Sam by forgetting that it is unlawful to send a dun on a postal card.

River transportation is now possible between Parkersburg, W. Va., and Chattanooga, Tenn. But it is a good, long way around.

Mrs. Hortense Adams, of Boise, Idaho, has disposed of the little gold mine she discovered near that city for $250,000 to New York capitalists.

Duke Lac of China was a pretty bad Chinaman last summer, cutting off heads without any reason for the acts. He is only to get a sentence of banishment.

In praise of Tammany it is said that its administration was always liberal to the schools. Money was spent lavishly on them. That placated many to its rule.

It appears now that some of the poetry which once appeared in Eugene Field's column of "Sharps and Flats" in the Chicago News was written by Dr. Frank W. Gunsaulus.

Judge Strope, of St. Joseph, has bought a 2,000-acre farm in southwest Missouri, for which he paid $80,000. He will stock it with Hereford cattle worth not less than $110,000.

Cincinnati Enquirer: "There is a railroad down South which has been operated for thirty years without killing a passenger. It has been absorbed by a larger enterprise, and the trains over it will now probably run faster."

Radium, the new metal, is an illuminal of great power. Half a pound of it will make an ordinary-sized room light as day for a million years. At present the price of the metal is too high for general use. One ounce is worth $1,000.

Official encouragement of scientists and inventors is a European custom which this country might well imitate. For the month of January alone the British Royal Society was granted $20,000 to expend in prizes for discoveries and inventions.

Gen. B. M. Prentiss, who died at Bethany, Mo., a few weeks since, was one of the most resolute and daring men produced by the Civil War. He was careful of his men, but an utter stranger to fear. His title of "The Hero of Shiloh" was well deserved. After he came out of the war the flag was his idol.

Here is an organization that might be imitated in other cities: Nearly a hundred actors, clergymen and laymen organized recently the Boston Chapter of the Actors' Church Alliance. It already has 129 members, twenty of them clergymen, and its object is declared to be a common effort on the part of stage folk and church people to help one another and humanity.

In an address before the Young Women's Christian Association of New York, Bishop Potter said the crusade for better physical and moral conditions was not confined to New York City, but was going on the world over. "I should, perhaps, except Boston," said the Bishop, "which seems to exist in such an atmosphere of lofty virtue that it has no need for a John the Baptist crying in the wilderness."

The Celtic steamship, to be finished and launched this summer, will be the largest vessel on the oceans. It will have a displacement of 33,000 tons, nearly 5,000 tons greater than the largest steamship now afloat; a half-dozen long railway trains can be carried by her, and she will be able to provide for nearly 2,500 passengers, almost an army brigade, and Capt. Ismay expects to see an even greater than the Celtic built within a year or two.

When ex-Congressman Culberson, of Texas, was in Detroit, Mich., he was out of sorts and took a Turkish bath, to no good purpose, and then confided the following to the hotel clerk: "Now, if I were at home, my wife would get out a piece of flannel, and my mother-in-law—who is an angel—would make me a horrible mixture of vinegar, onion, suet and mullen. I would be put to bed, and when I woke up I would be well. It is a horrible mixture, but I wish I was at home."

Judge Baldwin of Iowa, in closing his oration at Des Moines on John Marshall, said: "Marshall was as good, if not as great, a patriot as Washington; wiser, if not as talented, as Hamilton; nobler, if not as clever, as Jefferson; and for purity, truth and justice his star glitters the brightest in that constellation. I venture this sentiment for this day and occasion—the Constitution of the United States. It was a growth rather than a creation, and not the work of any one man, but Marshall was its Expounder, Webster its Defender, Lincoln Its Preserver, and Eternity its Keeper."

ALL ABOUT CAMPHOR.

Whence It Comes and How It Is Produced.

"Where does this come from?" asked Sandy McLaurin, picking a block of camphor out of a jar that stood on the counter.

The druggist at the corner near Sandy's home was a good friend to all the boys, and they liked to ask him questions.

"Camphor? That's a long story." The speaker and questioner sat down behind the prescription counter. "Have you ever noticed that row of lindens down on Fourth Street, near the grammar school? Well, the tree that produces camphor looks very much like any one of those. It grows in China, Japan, and other parts of eastern Asia. Occasionally a camphor-tree becomes so old and so large that it is a veritable landmark. In 1691, for instance, a traveler in Japan described a tree which he found that was thirty-six feet about the trunk. Almost a century and a half later the same tree was said by another traveler to be fifty feet around.

"Did your grandmother ever make you take a few drops of spirit of camphor? You know what a fiery taste it has, then. You wouldn't think that camphor and the cinnamon sticks that you like so well are first cousins; but they belong to the same botanical family.

"If you take one of the shiny green leaves from a camphor-tree and rub it gently between two stones, you smell the same odor as comes to you when you take the lid off a camphor-jar. Every part of the tree contains its part of the gum, but the bulk of it comes from the root, trunk, and branches. The first step is to reduce a tree to chips, and these are put into iron vessels having a cone-shaped cover lined with rice straw. Then the vessels are heated, and the camphor is driven out of the chips. Do you know what I mean when I use the word 'volatile'? No? Well, a thing is volatile that seems to fly off in the air. Now, camphor is volatile; it is capable of being changed into vapor. When heat is applied to the iron vessels the camphor is volatilized, but it condenses almost at once; that is, it is changed to a multitude of tiny little lumps of solid camphor, which fasten themselves on the straw that lines the cover. It is then scraped from the straw, refined and pressed into blocks."

"Is camphor used for anything but medicine and to keep off moths?" asked Sandy.

"I was just coming to that. Strange as it may seem, we can get a substance from it that looks almost like ivory—hard and beautifully white. Go out to the first show-case on the left, and bring me a white comb and one of those hand-mirrors with a white back."

Sandy looked puzzled as he obeyed.

"This material," tapping the back of the mirror, "is called celluloid, and it is made from camphor and cotton. It is used for hair-brushes, soap-boxes, knife-handles, and many other articles. In another field we find that it plays its part in changing the map of the world or shaping the destiny of a nation. Camphor is used in making smokeless gunpowder. Our country certainly learned the value of it in the summer of '98."

"Why," Sandy ventured, "I should think, with all the big armies everywhere, that most of the camphor would be used for powder."

"A great deal of it is. That is why camphor has been so dear for a number of years past."

"Couldn't tar camphor be used?"

"Oh, no! Tar camphor is really not camphor at all, though somebody discovered, about twelve years ago, that it would take the place of camphor in preventing the ravages of moths. For many years it was thrown away; it was a puzzle to get rid of it. It comes, in a roundabout way, from bituminous coal. When this kind of coal is heated in a certain way it is split up into gas (used for lighting), a heavy, black liquid (coal-tar), and coke; and it is from the coal-tar that tar camphor is made. I couldn't begin to tell you all about coal-tar in one night, Sandy. Some other time we'll talk about it again."—St. Nicholas.

Disposing of Hearts by Will.

It was a common thing in olden days for a testator to dispose of his heart by will. Edward I., of England, left directions for the burial of his heart in the Holy Land; the famous Earl of Millent and Leicester, who flourished in the early part of the twelfth century, bequeathed his heart to an hospital at Brockley, where he desired it to be preserved in salt; a sister-in-law of Henry III., who died at Berkhampstead in 1239, ordered her heart to be sent in a silver cup to the Abbot of Tewkesbury, who was enjoined to bury it before the high altar. In modern times such testamentary directions have been extremely rare. The late Marquis of Bute, whose relatives have gone to Palestine to fulfil his desire for the interment of his heart on the Mount of Olives, is the only testator in recent years who has expressed such a wish. An English gentleman of the name of Whitehead, who died towards the close of the last century, bequeathed his heart to Lord Le Despencer, "to be deposited in his mausoleum at West Wycombe," and his strange bequest was carried out with much solemnity.

Jay Gould's Timely Hint.

"I called upon Jay Gould once to ask him for a rule that would bring me success in my work," said Edward Boyer, principal of one of the finest grammar schools in New York city. "Every one who knew Jay Gould knew that he was a preoccupied man—that his thoughts were usually far away from the present scene. I was introduced to him by a friend, but I felt that he was scarcely conscious of my presence. We had planned to make some startling remark to attract his attention; and, as I did so, the great financier looked at me for a second as if he saw me for the first time. Then I put my important question. 'What is your business?' he asked, as quick as a flash. 'I am a schoolmaster,' I replied. 'Then let other people do the work.' The advice was to the point, and has proved itself invaluable."—Success.

Longevity in Scotland.

Three score and ten years is the Psalmist's measure of life, but in Caithness, Scotland, a man of 70, unless married, is described as a lad, or by his brother of 90 as a boy.

THE GREATEST ENGINEERING FEAT OF MODERN TIMES.

The irrigation works of the Nile, whereby it is hoped to transform thousands of miles of Egyptian desert into smiling pasture land, are rapidly nearing completion. Sir John Aird, the contractor for this vast undertaking—unsurpassed in magnitude and difficulty by any similar engineering feat of modern times—has the distinction of being the first man to walk dry shod across the historic river.

The object of this, Britain's greatest enterprise is, briefly, the better irrigation of Middle and Upper Egypt. At present the cultivated soil consists of a belt of land on either side of the river extending as far as, and not farther than, the land reached by the waters at High Nile. The rest is arid, unproductive sand.

Now, the Nile waters are peculiarly rich in a sediment invaluable for agricultural purposes, and yet every year enough Nile water and soil to create several Egypts are allowed to run into the Meditterranean. It is to impound this water that a great wall of granite is being built on the southern side of the first cataract. The wall stretches from the right bank of the Nile to the left, a distance of a mile and a quarter, and when completed, will rise 90 feet above the level of the river at low water. The top of it will be as wide as Fleet street, and will accommodate as much traffic. The wall is pierced by 180 sluices. The great steel doors with which they are provided will be worked by machinery, at once enormously powerful and yet so delicate that a child could let loose millions of gallons of this water which is to be Egypt's salvation. At some periods of the year 900,000 tons of water will rush through the sluices every minute.

The dam will bottle up 1,000,000,000 tons of water; but the effect of the wall will be apparent over 144 miles of the river; in other words, a lake 144 miles long be formed—a lake that would stretch from London to Nottingham, and then leave enough water to make a second Windermere.

The cost of the scheme has been fixed at £5,000,000; but the Egyptian government will not be asked to pay a cent until the work has been completed. The settling of this little bill will extend over a period of thirty years, so that Egypt is getting her colossal dam on the deferred payment system. It will prove a good bargain for Egypt, for it is calculated that England is virtually making the land of the Pharoahs a present of something like £80,000,000.

In addition to the great wall at Assuan, a subsidiary dam is being built at Assiut. On the former 12,000 men are employed, the vast majority natives. The stone for the great wall is being obtained from the quarries of which the temples of Philae are believed to have been built—the unhappy Philae which, when the dam is completed, will be submerged and partly disappear from sight for the first time in its three thousand years of existence. The granite blocks that are being quarried bear the marks of wedges used thirty centuries ago.

It may be that Britain's domination in this oldest of lands will go the way that the Pharoahs [and Persians, the Ptolemies and Romans, went in the long ago; but there will be left behind an enduring monument to the enterprise, the wisdom, and the beneficence of the British occupation.—British Californian.

We should not be at all surprised were it to transpire that a second Barnum is at the bottom of the alleged discovery in the Philippines of the original Garden of Eden. It is extremely likely that some fellow will come along on the next boat bearing relics of old Adam and Eve. That such a show would "take," if properly boomed in the press, goes without saying. Few of us but what would cheerfully part with a dollar for the privilege of shaking our fist at the bones of the old sinner who was the author of all our troubles; while our better-halves would not grudge half-a-dollar, say, for the opportunity of telling the mummy of their ancient parent just what they thought of her. The skin of the serpent in which Old Nick embodied himself when on his errand of mischief, and any old fig leaf, might be thrown in gratis to sustain interest and give the thing versimilitude.

We hesitate to say that the authorities at Washington countenance the scheme, but it does look suspicious that a government official should discover anything—beyond pay-day. And we know Washington is aware that the people are ripe for something remarkable to turn up in return for the vast outlay of money on our new possessions.

Still, after all, our conjectures may be wrong, and the design may only be a new application of an old-time real estate dodge. Some persons are going to make money out of the Philippines, and real estate men are not usually the last. Be this the intent, we would warn the enterprising speculators in Luzon lots that the Garden of Eden trick is played out. The Garden of Eden has been discovered seven times in California, and in as many different sections, four times in Arizona, twice in Oregon, and, since their annexation, eleven times in the Hawaaiian group. The American public, credulous though it be, will not stand another Paradise in Luzon.—Ex.

Ordinance No. 71.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. It shall be unlawful for any person to hunt, pursue, take or kill or have in his possession within the two years next after the Twenty-third day of January, A. D. 1901, any Japanese or Mongolian Pheasant, within the County of Inyo.

SECTION 2. Every person who, in the County of Inyo of the State of California, within two years next after said 23d day of January, 1901, hunts, pursues, takes, kills or destroys or has in his possession any Japanese or Mongolian Pheasant is guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the county jail not exceeding fifty days or by a fine of not more than fifty dollars, or by both such fine and imprisonment.

SECTION 3. This ordinance shall take effect fifteen days from and after its passage, and all ordinances and parts of ordinances of said Board of Supervisors of the said County of Inyo in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week, said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
(SEAL) Chairman of the Board of Supervisors of the County of Inyo State of California.

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 71 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 8th day of January, A. D. 1901, by the following vote:

Aves: N. J. Cooley, T. C. Boland, J. A. McKenzie, W. P. Yaney, James Jones.
Noes:——

JAMES JONES,
(SEAL) Chairman of the Board of Supervisors of the County of Inyo, State of California.

Attest: J. E MERONEY.
Clerk of said Board of Supervisors.

(Endorsed;

Ordinance No. 72.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male person over the age of twenty-one and under fifty-five years of age, found in each Road District in the County of Inyo, State of California, between the first day of March, 1901, and the thirty first day of December, 1901, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time between the first day of April, in the year A. D. 1861, and the first day of September, A. D. 1865, and who have not paid the same in some other road district, must pay to the said County of Inyo, a Road Poll Tax of Two Dollars provided the same be paid before the first Monday in July, 1901, but if not paid prior to the first Monday in July then it shall be Three Dollars.

SECTION 2. Said Road Poll Tax shall be collected by the Assessor of the said County of Inyo, in the same manner that State Poll Taxes are collected, and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the several Road Districts of the said County of Inyo from which said Road Poll Tax was collected.

SECTION 3. This ordinance shall take effect and be in force from and after fifteen days from its passage, and all Ordinances and parts of ordinances of said Board of Supervisors in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days

JAMES JONES,
(SEAL) Chairman of the Board of Supervisors of the County of Inyo, State of California.

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance, No. 72, was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board on the 10th day of January, A. D. 1901, by the following vote:

Ayes: W. P. Yaney, N. J. Cooley, T. C. Boland, J. A. McKenzie, James Jones.

MARRIED.

RICHEL—PRESTON—In Independence, May 11, 1901, by Rev. G. M. Bigelow, Charles Richel, of Los Angeles, Miss Jessie Adella Preston, of Philadelphia.

The INDEPENDENT extends its congratulations to the newly wedded couple and wishes them a long, happy and prosperous voyage on the sea of matrimony.

DEARBORN—PETTENATI—In Lone Pine, May 12, 1901, by Rev. G. M. Bigelow, Ollie F. Dearborn and Charlotte Pettenati, both of Lone Pine.

DIED.

DUFFEY.—At the County Hospitah, May 13, Edward Duffey, a native of Ireland aged about 56 years.

E. L. Fletcher came up from Keeler yesterday.

Ice Cream at Inyo Mercantile Co's store next Sunday.

Supt. Squire was down from Mazourka canyon yesterday.

W. O. Meroney came down from Bishop Wednesday evening.

Ben. H. Yandell, Esq., has been visiting Bishop during the past week.

Joe Travis, Owen Jones, J. W. and George Ramsey, started for Tonapah last Wednesday.

Don't forget the Ice Cream on Sunday at Inyo Mercantile Co's.

Mrs. J. E. Meroney and children returned from a visit to relatives and friends at Bishop on Monday last.

S. W. Austin, Register of the Land Office, has commenced the erection of a new dwelling house on his lots on Edwards street.

Dr. Dorrance, of Bishop, made a professional visit to Independence in the interest of the Mutual Life Insurance Co., on Monday last.

Forest Supervisor Price left last Tuesday on a tour of inspection of the southern portion of his district, which extends nearly to Indian Wells.

Miss Lenore Hallengren, who has lately completed a successful term as Principal of the Lone Pine school, left for her home in Sonoma county on Monday last.

Crom Harper and wife arrived last Saturday from Darwin, where they had been for the past few months. They will remain in Independence for the summer.

Mrs. John Baxter, who has been in San Francisco for the past six months under medical treatment, will return home next Monday evening, having entirely recovered from her illness. She will be accompanied by her son, Clifford, who has lately graduated from the College of Dentistry of the University of California with high honors.

Major Nolan and brother, of Los Angeles, paid Independence a flying visit last week. These gentlemen, accompanied by Mr. George Thorpe, left on Saturday last to inspect machinery at Palmetto and other points. The machinery purchased by them with the aid of a new Standard concentrator will be put in at the Montezuma mine near Fish Springs, Inyo county, and the concentrates shipped to San Francisco.

This office was the recipient of an elegant present this week from Mrs. Alice Hession, of Independence, in the shape of several baskets of luscious strawberries. The editor, assistant editor, city editor, county correspondents, stereotypers, compositors, business manager and devils partook therefrom with abnormal glee and yelled enough. One and all regret that the strawberry season does not last the year round, and that there are not more people with the generous nature of the donor in this cruel, unsympathetic and mercenary world.

Decoration Day at Big Pine.

The G. A. R. will observe Decorotion Day, Thursday May 30th, at Big Pine. All the old soldiers and the public generally are cordially invited to be present on this occasion and take part in the exercises of the day. The following is the programme:

Procession will form at 10 o'clock under command of A. O. Collins, Grand Marshall, and march from Main street to the graveyard.

Decoration of Graves.

Procession will reform and return to Hall and be dismissed for dinner.

Literary exercises in Educational Hall at 2 o'clock p. m.

America, by the assembly, led by Choir
Music.....Band

Wedding at Lone Pine.

The marriage of Miss Lottie Pettenati and Mr. Ollie Dearborn took place at Lone Pine, May 12. On Tuesday, May 14, a reception was given to the young couple at Lone Pine, and about forty people were present to congratulate the popular newly wedded pair. About six o'clock p. m., the guests were ushered into a beautifully decorated room where the most appetizing refreshments were served. A partial list of the wedding presents were: One dozen silver tea spoons, silver sugar shell, butter knife, lace pillow shams, bed coverlet, table cloths, silver knives and forks, glass fruit set, silver coffee pot, tea service, butter dish, etc., etc. A very pleasant evening was spent with music, etc., and the guests departed with hearty congratulations to the young couple and with best wishes for a long and happy married life. The INDEPENDENT received a liberal supply of wedding cake and extends its congratulations to the happy couple.

The Point Was Dropped.

It happened in the superior court last week. Judge Osborne was cross-examining a man by the name of Hawkins.

The cross-examination, for certain reasons, was a warm one.

"Are you not a lawyer, sir?" asked Judge Osborne.

"No, sir," was the reply.

"Were you not educated for the bar?"

"Yes, sir."

"And still you say you are not a lawyer. Will you please explain to the court how you figure that out?"

"Well," replied Mr. Hawkins, slowly, "as I understand it, some people who are educated for the bar are not practicing, and some who are practicing are not educated for it.

The cross-examination on that point was dropped.—Seattle Argus.

Spasmodic Reform.

Another spasmodic crusade is under way in San Francisco against the slavery of Chinese girls. The movement is inspired by the best of motives no doubt, but it seems strange that people should be so frantic to free Chinese girls, most of whom are indifferent about their fate, while hundreds of girls and women of their own enlightened race are through unequal social and industrial conditions forced unwilling victims into a thralldom just as degrading as that suffered by the Chinese women but more adroitly hidden than the brutal methods of the Chinese. The good ladies who display so much mawkish sentiment over Chinese women are the very ones who would turn the shoulder of scorn against the unfortunates of their own race. There is plenty of rescue work to be done in San Francisco, but it should not be confined to Chinatown.

The Fourth

Fourth of July is approaching and our people, if they intend to observe the day in a fitting manner, should be making a move in the matter and not wait until it is too late to get up an interesting and entertaining programme. A meeting of our citizens should be held at once and committees appointed to attend to the details of the day. All those taking part in the exercises should be given ample time to prepare themselves, that they may do credit to themselves, and make it entertaining for our visitors and friends.

Lets

"'Twas there by the brooklet
The birdlets were singing,"

Hummed the young man, as he leaned on the gate.

"And I suppose the flowerets were blooming," said the young lady roughly. And then she pointed to some cattle in the pasture and added, "See those little cowlets."

"Pardon me," said the young man gravely, "them's bullets."

We acknowledge the receipt of an invitation by the Faculty and the Class of 1901 of the College of Dentistry, University of California, to the Commencement Exercises at Berkeley, on Wednesday morning, May 15. Among the names in the graduating class, we notice that of John Clifford Baxter, son of our esteemed townsman, John Baxter. Clifford has studied hard and conscientiously and returns to us a full-fledged Doctor Dental Surgery. His many friends here will be pleased to welcome him home, and predict for him a prosperous future.

Miss Clara Reynolds, who has been teaching school at Oxnard, Ventura Co., arrived last Tuesday morning on a visit to her parents, Mr. and Mrs. E. J. Reynolds, of Georges Creek.

E. T. Anderson left for Los Angeles last Friday evening. He expects to return to-morrow morning.

THE RESERVES.

The Private Property of the Government.

Judge Wellborn Renders an Important Decision.

Forest Rangers Will Now Have Authority to Keep Sheep Out of the Mountains.

The Federal Court at Fresno, Judge Wellborn presiding, on Tuesday of last week, rendered an important opinion concerning the power of the government to keep sheep out of the forest reserves. It is reported by the Fresno Republican as follows:

"Judge Wellborn, sitting yesterday morning in the United States district court, rendered a most important decision, with regard to the control that the executive officers of the United States have over the forest domains.

"It will be remembered that under the direction of the secretary of the interior, Charles S. Newhall, superintendent of the forest reserves, last year had a number of sheepmen arrested for poaching on the Sierra reserve. At the same time civil suits were instituted against them to recover damages.

"At the fall term of the federal court in Fresno last November, the prisoners were brought before the court here and at once turned loose, the court maintaining that the department had no right to make encroachment on the reserve a penal offense without act of congress.

"Hearing in the civil cases came up yesterday. The attorneys for the sheep men in four cases, two against L. A. Blasingame and others and two against John Shipp and others, had entered demurrers to the complaints on two grounds; first, that the state law gave stock men the right to pasture on the public domain unless the owners of the land took action to shut them off by fencing; second, that the privilege to pasture on public lands has been conceded so long by the United States that it has become a right, and cannot be taken away without special act of congress.

"Judge Wellborn gave an oral opinion on both these points in overruling the demurrer. In first commenting on the claims that the state law permitted the pasturing of the public lands unless it was fenced, he declared that this would not hold, as he construed the term 'public lands' to signify the federal lands lying open on the market for pre-emption, or homestead, and that when the government had reserved certain holdings from pre-emption that they ceased to be 'public lands.' On this ground the state would hold that the forest reserves were the private property of the national government in the same way that other land is held privately, and could be defended from trespass.

"Secondly, the judge held that it could never be considered whatever, the state law might be with regard to the holding of public land and the right of pasture, that the federal government could be deprived of its control of the land or of the right to protect it in the federal courts.

"As to the claim that the grazers had a right from long presence to go upon the federal domain until congress should decree otherwise, the court held that congress had never given any such right; that it had been exercised through many years through the suffrance of the executive deparment of the government, and the executive department could take it away at any time, should the public interest and the purpose of forming the reserve require it. The court therefore overruled the demurrer, and gave the defendants thirty days in which to answer the complaints.

"District Attorney Flint, in speaking about Judge Wellborn's decision afterward, stated that this decided the law fully and that all that would be required now would be to show the facts in each case.

"He said that this would give the federal authorities absolute control of the situation. Not only could suits be brought to recover damages in case of trespass, but if any stock men threaten to go upon the reserves or indicate their intention in any way, he will injunction proceedings to prevent damage.

"Superintendent Newhall stated yesterday that this ruling gave him his first substantial ground to stand upon, in working under the direction of the secretary of the interior. He said that the forest rangers, who will soon be sent out, will have strict instructions as to trespassers, and will be given power to employ force in keeping out the sheep. The importance of doing this to prevent damage to the forest growth becomes more apparent every year, and it may also be necessary to restrict the use of the ranges for other stock as well as sheep."

SUPERIOR COURT PROCEEDINGS.

Hon. Walter A. Lamar, Judge.

CIVIL.

Eliza A. Mudget, plaintiff, vs. Elvin Mudget, defendant—Plaintiff granted divorce.

In re estate T. J. Richards—Entire estate set aside to widow.

Dr. Coffin, of Whittier, and Messrs. Williams and Pyle, of Pasadena, are looking over and examining the property of the Eastside Canal Company. They will remain here for several days.

Connects at MOUND HOUSE with

CARSON & COLORADO RAILROAD.

TO LAKE TAHOE.

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing only one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City 8:25 a m, where well-equipped stages connect promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers leave Truckee early in the morning (Tuesday). Tickets for sale at Stage Office in Truckee; the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK.

Passengers may also take train mentioned Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines, many being worked to a perpendicular depth of 2000 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table for Round Trip Tickets for sale at Ticket Office, Reno.

ABSOLUTELY PURE

ROYAL

BAKING POWDER

No other article used in the domestic economy of the household has so many enthusiastic friends among the housekeepers of America.

No other article of food has received such emphatic commendation for purity and wholesomeness from the most eminent authorities.

The great popularity and general use of the Royal Baking Powder attest its superiority.

The "Royal Baker and Pastry Cook"—containing over 800 most practical and valuable cooking receipts—free to every patron. Send postal card with your full address.

Avoid the imitation powders. They are sold cheap because they are made from alum. But alum is a poison dangerous to use in food

ROYAL BAKING POWDER CO., 100 WILLIAM STREET, NEW YORK.

ENGLISH MONARCHS.

Death Often Unkind In the Manner of Their Taking Off.

Of the monarchs who have reigned over England since the days of the Norman conquest nearly one-quarter of the number have met violent death. William I was killed by a fall from his horse, William II was shot while hunting, whether by accident or design is still one of the unsolved problems of history; Richard I was killed by a shaft from a crossbow while besieging the city of Chaluz, in France; Richard II was murdered in Pontefract castle, Edward II was murdered in Berkley castle, and Edward V in the Tower of London, Richard III was killed on the battlefield of Bosworth and Charles I had his head cut off in London.

Elizabeth's death was hastened by remorse that she had ordered the execution of Essex, and her sister Mary sickened and died soon after the loss of Calais, declaring that the name of the city would be found after death written on her heart. The death of Edward III's son, the Black Prince, caused the aged monarch to die of grief. So, after the loss of his son in the White Ship, Henry I was never seen to smile again and lived only a short time. Henry VI and George III were insane during the latter years of their reigns and finally died from what in these days would be called paresis. Charles II, Henry VIII, Edward IV and George IV hastened their deaths by the dissipated and sensual lives they lived. Only two monarchs died of that great national scourge, consumption; they were Edward VI and Henry VII. Queen Anne's death was due as much as anything else to overfeeding. Only two monarchs, Henry VI and George III, died after long illnesses.

Olives.

The olive tree in its wild state is a thorny shrub or small tree, but when cultivated becomes a tree 20 to 40 feet high, with no thorns. It lives to a good age. The leaves resemble those of a willow, the flowers are small and white and grow in clusters as grapes do, and the fruit is greenish, whitish, violet or even black in color and generally oval in shape. It is produced in great profusion, so that an old olive tree becomes very valuable to its owner.

Among the Greeks the olive was sacred to Minerva, the goddess of wisdom. It was also the emblem of purity. A crown of olive twigs was the highest honor that could be bestowed upon a Greek citizen. An olive branch was also the symbol of peace, and the vanquished who came to beg for peace bore olive branches in their hands.

The American olive is remarkable for the hardness of its wood. It is found as far north as Virginia. Its fruit is fit for use, and its flowers are fragrant.

The fragrant olive of China and Japan has extremely fragrant flowers, which are used for flavoring tea.

Polite Erie Commuters.

A stranger who had an appointment to meet a friend in the Chambers street ferry house, which is used by Erie commuters, was greatly puzzled the other afternoon by the actions of the men who passed the ticket taker's window. Nearly three-fourths of them took their hats off to the ticket taker in the most polite style.

The stranger thought that possibly the ticket taker's wife was in the box with him, and he went back to look again. There was no one in the box save the ticket taker, who looked good natured, but not imposing. When his friend arrived, the stranger said:

"Is that the president of the Erie road in that box?"

"Certainly not. Why do you ask such a question?"

"Why, every man who passes him takes his hat off, gives him a marching salute and walks on."

The friend smiled pityingly at the stranger's ignorance and said it was a trick of the Erie commuters to carry their tickets in the crown of their hats. They took their hats off so that the agent might see the ticket.—New York Sun.

Early Silk Weavers.

Among the encouragements offered to silk weavers during the first century of the existence of this industry in Lyons was exemption from military service and taxation. So rapid was its development that in 1650 the weavers numbered 18,000, or 60,000 with affiliated pursuits.

A Legend of the Salty Sea.

There are hundreds of queer myths and traditions given to account for the fact that the sea is salt. The Arabs say that when the first pair sinned they were living in a beautiful garden on a tract of land joined to a mainland by a narrow neck or isthmus. When it became known to the Holy One that his people had sinned, he went to the garden for the purpose of driving them out and across the narrow neck of land into the patch of thorns and brambles on the other side. Anticipating what would be the consequence of their heinous crime, they had prepared to leave their beautiful garden and had actually gone so far as to send the children and goats across into the thicket.

When the Holy One appeared on the scene, the first pair started to run, but the woman looked back. For this the man cursed her and for such a crime was almost immediately turned into a block of salt. Compare with Genesis xix, 26. The woman, more forgiving than her husband, stooped to pick up the shapeless mass of salt, when immediately the narrow neck of land began to crack and break. As she touched what had once been her companion she, too, was turned to salt just as the neck of the land sank and the waters rushed through. From that day to this, the Arabs say, all the waters of the ocean have rushed through that narrow channel at least once a year, constantly wearing away the salt of what was once our first parents, yet the bulk of the two salty objects is not diminished in the least.

How General Butler Freed a Man.

General Butler's gift for springing out and taking advantage of every technicality was fully illustrated in the famous case of a respectably connected man in Boston, who, being affected with a mania for stealing, was brought to trial on four indictments. General Butler was the prisoner's counsel. If the prisoner was convicted on all four indictments, he would be liable to imprisonment for 60 years. As the court was assembling General Butler agreed with the counsel for the prosecution that three indictments should be quashed on condition that the prisoner should plead guilty to the one which charged the theft of the greatest amount.

The prisoner, to his amazement, was ordered by his counsel to plead guilty. "Say guilty, sir," said the general sternly. The man obeyed, and the other three indictments were not pressed. But when the counsel for the prosecution moved for sentence General Butler pointed out a fatal flaw, manifest to every one when attention was called to it. In ten minutes the astonished prisoner was a free man. It is said that the court laughed at the ruse, the cleverness of which it was impossible not to admire.

Slandering the Cook.

Here is something that a woman who knows says is a sure diagnosis of the status of the cook. If you have a good cook, you may be more or less sure that she will look too frequently upon the wine when it is red. It is an unfortunate fact, but if the cook is less than a $40 cook as little annoyance as possible may be expected from this weakness. Possibly it will never make itself manifest enough to be known above stairs. But if the cook has risen higher in the social scale of cooks than $40, then look out. A cook who is rated at over $40 may be expected to smash things.

If one chances to make a morning call at the house of a friend and discovers the servants crowded up stairs, frightened and trembling, while from below come the sounds of ironware skating across the kitchen and pottery crashing against the wall and between times the voice of the masculine head of the family gently expostulating or commanding in would be stern tones, then it may be known that that household has reached the dignity of a $50 or $60 cook.—New York Times.

The Rector's Prophecy.

A party of gentlemen, including Professor Bailey and Rector Roberts, a divine widely celebrated for his wit and the audacity of his puns, were crossing the campus of a well known university.

The reverend gentleman, commenting on the fact of his recent elevation to the greater dignity and the assumption of the more resounding title of a canon of the church, exclaimed, "And now that I am a canon I suppose I shall be a bigger bore than ever."

MICE QUICK TO LEARN.

So Says a Maine Man Who Finds Them Interesting Pets.

Out on Forest avenue is a mouse fancier whose residence, lest he lose caste with his neighbors, is withheld. In a pen he has half a dozen or so ordinary field mice.

"They are the most sociable pets I ever had," he remarked, "and any one of them will rise to attention as he hears my step approach the pen. I have had there young ones about six months. They don't live long when cooped up, and they will come freely to my hand to eat or drink. Some of them are so tame that they will climb to my shoulder and display not the slightest alarm at being touched. They haven't acquired so much faith in all humanity, however, and have refused to trust any one else so far.

"While mice eat a great deal for an animal so small when food is abundant, they can exist for a surprising long time with next to nothing. Any one whose house has been invested with mice and who had passed weary weeks when everything that possibly could serve as food was carefully under lock and key, finally calling to service an active ferret, will appreciate this fact. He is a mighty aggressive and tireless forager after food, not hesitating at walls or similar obstructions, through which he patiently gnaws a path. As a test of persistence in this line I hung a basket of food from the ceiling by a rope and after a week's fast placed a mouse at a hole in the ceiling above the basket. He descended some eight feet or more on a slender cord and safely reached his haven, later climbing up again.

"All of my mice I have taken from nests about the premises and notice that they invariably seek shelter below or behind something, never in so exposed a locality as almost any other animal would select. For a nest paper, cloth or any soft material seems to satisfy, and the exceeding fineness with which it is chopped suggests some mighty artistic work with their teeth."—Portland Express.

A VERY PARTICULAR BIRD.

If the Bathing Dish Didn't Suit Him, He Went Unwashed.

"Birds have as much character as human beings," said a specialist on birds. "Some are the most arrant little aristocrats, while others are regular little plebeians. I had a little fellow some time ago who, despite all my efforts, would not bathe. Each morning when, with his white porcelain tub in my hand, I approached his cage, he would resolve himself into the sulkiest, dreariest little ball of feathers you can possibly imagine. I coaxed and pleaded; I even bribed. Bathe he would not. So consistent was he in his determination not to bathe that I named him Tramp. One morning I broke the tub, and in its place I took a shallow blue and white dish of Japanese ware. Tramp eyed me for a moment with all his old hostility, and then as he caught sight of the pretty dish he flew down from his perch with chirps of joy and darted into the water before I could take my hand from the cage.

"I had found the way to his heart, and his morning bath now became a daily source of joy to both of us. But ont fatal morning I broke the blue and white dish. In an apologetic manner I brought to Tramp once more the regulation white bath dish, hoping that his cleanly habits were by this time so ingrained that he would overlook the prosaic appearance of his tub. Not so. An angry flutter of wings, a threatening little beak, a perfect tempest of shrill cheeps and twitterings and then sulky silence on the topmost perch.

"So it went on till I secured another blue and white dish and then peace and harmony and morning baths again."—New York Commercial Advertiser.

Better Than Making a Note.

"Just before Badmun was sent to prison he bought a set of books to be paid for in installments."

"What did he do that for?"

"He said it would make the time seem shorter."—Chicago Tribune.

The Twentieth Century.

The twentieth century began January 1st, 1901, and will end with 2000. People did not begin to reckon time from A. D. 1, but waited until about the 550th year of the Christian era. People who begin to take the great health restorative, Hostetter's Stomach Bitters, immediately after the first outbreak of dyspepsia, malaria, rheumatism, constipation, nervousness or kidney trouble will date their cure immediately from then.

After he has been married three years the average man can fool his wife as easily as he used to fool his mother.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Got Grip? Try Fryer's Abietene Cough Balsam.

The first export of cotton from this country was in 1785, in which year one bag was sent from Charleston to Liverpool, while 12 were sent from Philadelphia and one from New York

Spring Cleaning

You are made aware of the necessity for cleansing your blood in the spring by humors, eruptions and other outward signs of impurity.

Or that dull headache, bilious, nauseous, nervous condition and that tired feeling are due to the same cause—weak, thin, impure, tired blood.

America's Greatest Spring Medicine is Hood's Sarsaparilla.

It makes the blood rich and pure, cures scrofula and salt rheum, gives a clear, healthy complexion, good appetite, sweet sleep, sound health.

For cleansing the blood the best medicine money can buy is

Hood's Sarsaparilla

It is Peculiar to Itself.

25 CTS. PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION 25 CTS.

WAS TORTURED

An Indianapolis Woman's Sworn Statement of the Way In Which She Was Saved from Death.

From the Indianapolis News.

Mrs. Mary K. Burns, of 505 Hiawatha street, Indianapolis, Ind., is living evidence of the wonderful powers of Dr. Williams' Pink Pills for Pale People, the remedy that cures where all others fail. For years she endured all the tortures of indigestion, nervousness and female weakness, a complication of troubles that five physicians confessed their inability to cure. Her story is well worth the attention of every woman. She says:

"My illness commenced after my first child was born. I was so weak and nervous that it seemed I would never get strong. For twelve years I doctored for female trouble, complicated with nervousness and indigestion. My stomach was so weak that for days at a time I could eat nothing but bread and milk. I was also troubled with palpitation of the heart and was often so miserable that I could not lie down. Five doctors prescribed for me and I took many kinds of medicine without being benefited. One day I saw Dr. Williams' Pink Pills advertised in the papers and I decided to give them a trial. I did so and had not finished taking the first box when I knew that I was getting better.

"You can imagine the relief I felt when I found that after years of suffering I was being cured. I continued taking the pills and the female trouble entirely disappeared. Dr. Williams' Pink Pills for Pale People did more for me than it was claimed they would do. Since I first took the pills I have not needed a doctor nor any other medicine; they have restored my health, strength and happiness."

MRS. MARY K. BURNS.

Subscribed and sworn to before me this 19th day of October, 1900.

GEORGE H. SWAN,
[Seal Notary Public.

Dr. Williams' Pink Pills for Pale People are sold by all dealers, or will be sent postpaid on receipt of price, 50 cents a box, or six boxes for $2.50 (they are never sold in bulk or by the hundred), by addressing Dr. Williams Medicine Company, Schenectady, N.Y.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

For Consumption try Fryer's Abietene Cough Balsam.

Garfield Tea purifies the blood, regulates the digestive organs, and promotes good health. It is the herb medicine that has been used successfully for many years.

The famous old Gilt Edge Whiskey is recommended by physicians for family and medicinal use, because it is pure. Wichman, Lutgen & Co., San Francisco, Cal. Sole proprietors for U. S. A.

Just Her Way.

Jack—Well, then, since you have broken off the engagement suppose you give me back the ring.

Julia—Eh—you see, Jack—er—Mr. De Trow—I've become very much attached to this ring. It just suits me. So when Tom Getthere proposed last night I told him I didn't want a new ring, but that he could see you and pay you what this cost you.—Philadelphia Press.

GEORGE WASHINGTON'S QUEUE.

It Hid a Luxuriant Suit of Straight and Very Dark Hair.

The Father of his Country concealed a luxuriant suit of hair beneath his queue wig. Many now wish the old fashion were in vogue, to conceal thinned hair or baldness. Yet no one need have thin hair nor be bald, if he cure the dandruff that causes both. Dandruff cannot be cured by scouring the scalp, because it is a germ disease, and the germ has to be killed. Newbro's Herpicide kills the dandruff germ—no other hair preparation will. "Destroy the cause, you remove the effect." There's no cure for dandruff but to kill the germ.

That Cough needs Fryer's Abietene Cough Balsam.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE $2.00** trial bottle and treatise. DR. R. H. KLINE, Ltd., 931 Arch St., Philadelphia, Pa.

The Best Preparation for Malaria Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

Graphic.

After the fire in a Buffalo residence had been extinguished by the department and the family were preparing to settle down again for the night a little girl who had been awakened by the disturbance and had come down half dressed was asked by a neighbor if she had been much frightened.

"I should say I was," said the young lady. "When I first heard the alarm, I just chattered in every limb."—Buffalo Commercial.

Then He Hurried Up.

He was too modest to be a successful lover, and he had let 40 years of his life go by without ever coming to an emotional point.

He was in love with a fair being of suitable age, but he would not tell her so, and though she knew it she could not very well give him a hint about the situation.

She was willing because she had arrived at that time of life when a woman is not nearly so hard to please as she might have been at some other time, but he was stupid and went away without a word.

He was gone a long, long time, and when he came back he found her still ready.

"I have come back after many years," he said to her as he took her hand in greeting.

She had learned something in the years since she had seen him last.

"Well, for goodness' sake, Henry," she exclaimed fervidly, "why don't you take them? I'm 35 now. How many more years do you want?"

Then a great light shone upon him, and he did not wait for any more.—London Answers.

Simple Country Living.

A man may enjoy bounding health and know very little about the cause of his happiness, and, alas, a man may suffer all the woes of dyspepsia and have no certain knowledge as to the cause of his misery.

"I'm a confirmed dyspeptic. That's the reason I look so old," said Mr. Collander, gazing almost enviously at the red bronze face of his former chum at college, who had dropped down from the country into Mr. Collander's city office.

"What you need is simple country food, man," said his old friend, clapping him heartily on the shoulder. "Come and visit my wife and me on the farm for awhile, and we'll set you up. It's rich city living that's too much for you. Now, take breakfast, for instance. All I have is two good cups of coffee, a couple of fresh doughnuts, a bit of steak with a baked potato, some fresh biscuit or muffins and either griddle cakes or a piece of pie to top off with. What do you have?"

The city man looked at his red cheeked friend, who stood waiting for the confirmation of his idea.

"A cup of hot water and two slices of dry toast," he responded soberly. "But if you think a simple diet like yours would help me I will make one more attempt to be a healthy man."—Youth's Companion.

Joe Manton's Pistols.

Joe Manton, the famous gunmaker, was crossing Hounslow heath when he was stopped by a highwayman. On hearing the summons to "stand and deliver" Manton recognized a pistol of his own make leveled at his head. "Why, confound it, you rascal," cried the indignant gunmaker, "I'm Joe Manton, and that's one of my pistols you've got. How dare you try to rob me!" "Oh, you're Joe Manton, are you?" said the highwayman coolly. "Well, you charged me 10 guineas for this brace of pistols, which I call a confounded swindle, though I admit they're a good pair of barkers. Now I mean to be quits with you. Hand me over 10 guineas, and I'll let you go because you're Joe Manton, though I know you have got £50 at least about you."

Joseph swallowed his wrath and promptly paid the 10 guineas. But he never forgave the highwayman for getting a brace of his best pistols for nix, and he made himself a special double gun with barrels barely two feet long, which he always carried about with him afterward when traveling and christened "The Highwayman's Master." With this weapon I have heard that he subsequently shot a highwayman who stopped his chaise and mortally wounded him.—"Kings of the Rod, Rifle and Guns."

HOW'S THIS?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Props., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

Best for the Bowels

Bowel Troubles: Caused by over-work! Over-eating! Over-drinking! No part of the human body receives more ill treatment than the bowels. Load after load is imposed until the intestines become clogged, refuse to act, worn out. Then you must assist nature. Do it, and see how easily you will be cured by CASCARETS Candy Cathartic. Not a mass of mercurial and mineral poison, but a pure vegetable compound that acts directly upon the diseased and worn out intestinal canal, making it strong, and gently stimulating the liver and kidneys; a candy tablet, pleasant to take, easy and delightful in action. **Don't accept a substitute for CASCARETS.**

I'll bring a surgeon.—Jeweler's Weekly.

"I have gone **14 days** at a time **without movement of the bowels.** Chronic constipation for seven years placed me in this terrible condition; I did everything I heard of but never found any relief until I began using CASCARETS. I now have from one to three passages a day, and if I was rich I would give $100.00 for each movement; it is such a relief." AYLMER L. HUNT, 169 Russell St., Detroit, Mich.

CHARACTER BUILDING.

A tiny form, new breathing clay,
What does it mean?
An immortal soul has come this way,
Has come to earth, on earth will stay
Until the firm, calm voice doth say:
"Come home!"
Ours is the privilege to mold
This character,
Each one of us, the young, the old.
Great strength and beauty yet untold
This gift divine may soon unfold
To us.
Protect him from each impure thought,
This new-born babe!
The greatest blessing ever sought,
True manliness, may thus be wrought,
For what he thinks impure or not
He is.
The architects of man are we,
Each one of us.
And what false builders we should be
Is living that a child might see
That wickedness, that calumny
Is life.
The son of friend, the son of foe,
It matters not,
As builders we must strike the blow
To make or mar. Build high or low,
The day will come when we shall know
Our work.
"Reform the world!" has been the cry
For many years.
"With sin, unhappiness must die!"
We meet with small success, and why?
The reformation has passed by
Ourselves.
Before we seek to build a man—
A perfect one—
We must ourselves remove the ban
That crushes us; the gulf must span
Between the earthly and the plan
Of God. —Bartlett Warner.

A NOVEL EXECUTION.

"AND don't you find it very dull up here all alone?" I asked. "No," he answered; "not so dull as you might think, by any means. You see, there is plenty of game to be had, large and small, for the shooting; the scenery is delightful to me, who, like you, am a bit of an artist, and then the banditti usually provide a little additional excitement. "What!" I said, "are there banditti around here, then?" "Yes," he answered; "most certainly, though not in the direction from which you have come. But as you proceed into Bohemia you will find the mountains infested with them, and I shall send an escort down with you to-morrow. Indeed, in these piping times of peace it is chiefly for the purpose of escorting travelers through the mountains that we are here. You will have a specially strong escort to-morrow, though, as we have here at present confined in the fort a notorious bandit we captured but yesterday in a raid on his hiding place, and to-morrow I shall send him down to Robensburg for trial. There is no doubt what his fate will be. Two murders have been proved against him, and there are numerous unproved ones and hundreds of robberies down to his name. It is, as you say, a long way to send him, but Robensburg is our headquarters, and he will be tried by the military there. But you must be tired and glad to get to bed." Saying this, he showed me to a small bedroom and left me to my slumbers.

I was awakened early by the sound of a bugle, and was soon out to enjoy the fresh air and fine scenery. I was immediately struck by the strong position of the fort, the site on which it was built being admirably adapted for defense. The road, if road it could be called—perhaps pass would be a better word—here ran for a full mile in a kind of glen or gully, lined on either side by lofty and precipitous rocks, which, towering up high on either side, left only a narrow way in the middle. Standing in the center of this gully, you could look along the path about half a mile each way, at which distance it came to a stop, the road suddenly dipping down on one side to Robensburg and on the other toward a forest. It was in the middle of this valley, or rather cutting, that the fort had been built, stretching across the narrow way from one wall to the other, so that, if necessary, the road could be completely blocked and swept by the guns of the fort. In times of peace the fort had a gate left permanently open, allowing travelers to walk right through it and pursue their way to the other side.

My friend the lieutenant soon joined me, and I remarked on the strong position held by the fort. "Yes," said he, smiling, "I think we could give a good account of ourselves before an enemy could pass along the road from end to end," and he pointed to the three guns mounted on each side, commanding the two roads. A large one was in the middle and a smaller one was on each side of it, and very formidable they looked. He said I might leave them at noon, when the escort for the prisoner would be ready. Hardly had he finished speaking when a shout was heard in the fort, followed by the report of a rifle and a babel of cries. The officer rushed down to see what was the matter, I following him closely. Arrived at the square, we found a crowd of soldiers assembled around a man lying on the ground, bleeding profusely from a wound in the shoulder. The officer was quickly told the cause of the tumult. The bandit, while being led out of his cell, preparatory to being marched away had suddenly stabbed a soldier with a hidden knife, and, taking advantage of the surprise he created, had escaped from the fort, though a sentry had fired at him. He was soon descried flying down the road which led to the forest, and several men started in pursuit. The officer was about to follow them when a grizzled veteran touched his shoulder and said a few words to him.

"Are you quite sure you can do it, gunner?" asked the lieutenant. "Perfectly certain, sir," replied the old soldier. "I will lay my life on it she will not fail us at this moment."

"Very well, then," said the lieutenant, "recall the men."

The bugle rang out and the pursuers turned and slowly retraced their steps to the fort.

"After all," he went on, "it is our best chance, for they could never catch him. Just look at the pace he is going at! I would not lose that scoundrel for anything, and if we cannot take him alive we must anticipate his fate and take him dead."

Several men had been potting at the fugitive with their rifles, but without success, so he ordered them to desist, as it was only throwing away ammunition.

Lighting a cigarette, he sat down and calmly watched the ever-lessening form of the brigand. I now went up to him and asked the reason of this strange apathy on the part of the garrison.

"Don't be in a hurry, my friend," replied he, smiling; "we are not so lazy and foolish as doubtless you think. Listen to me." He then explained that just as he was also starting in pursuit of the fugitive the old gunner had told him that there was a far quicker and surer method of arresting him than that of pursuit. The big gun in the center of the rampart on that side had, by constant practice, been trained to throw its projectile exactly in the middle of the narrow path just before it dipped out of sight, and had been kept permanently in that position. "And," the lieutenant went on, "Gunner Muller is ready to swear that a ball or shell thrown from that gun will hit the exact spot, provided the gun has not been shifted. Now, in that case, all we have to do is to wait till our friend there gets on, or near, that spot, and there you are! You see it is impossible for him to turn to the right or left till he gets out of the pass, owing to the precipices on either side. You know, Muller," said he, turning to the gunner, who was standing by, "the right kind of shell for this case?"

"Yes, sir," said the soldier, saluting; "I know the very thing required, and if the rascal is within ten yards' radius of the bursting point he won't gain the end of that path.'

"Good," said the officer; "load!"

The heavy shell was hoisted into the breech, and everything was got ready for the shot. This all happened in much less time than it takes to describe it, and now the man was within eighty yards of the fatal spot. After finding that he was not pursued, he relaxed the speed at which he started from the fort, and was now trotting steadily on toward the desired goal, keeping in the middle of the path, and no doubt congratulating himself on his escape. When within thirty yards of the place he dropped to a leisurely walk, looking round continually to make sure that no one was after him. Once he stopped and, turning round, made what seemed a gesture of contempt at the fort, and, having thus relieved his feelings, walked on again.

Slowly he neared the fatal spot. All on the fort were breathless with suspense and doubt, for it seemed quite possible that the gun might somehow have got shifted since the last practice. Only the old gunner was calm and confident and lovingly eyed his great charge. I was standing with the lieutenant near the gun, and the wall was lined with every man in the fort, eagerly gazing at that small, dark spot moving so slowly on.

As the bandit neared the end of the path the old gunner handed the lanyard of the gun to a subordinate and bade him fire when he lifted his foot. Then, taking a telescope, he directed his gaze on the fugitive. A deadly silence reigned in the fort. I could hear my heart beating plainly, and I believe every man was in an equal tremor of excitement. I half hoped that the man, robber and murderer though he was, might escape.

When would the signal be given? The suspense was becoming unendurable. I looked at Muller—he was gazing through the telescope. Suddenly he kicked out his leg, still keeping his eye to the glass. A vivid flash followed, a deafening roar, which shook the fort, and then a cloud of white smoke obscured everything. When it had cleared away Muller was standing beside my companion, with a look of content on his face.

"I was right, sir," he cried; "he was hit fair."

True enough, nothing was to be seen where the bandit had been. A loud cheer followed the announcement, and the officer shook hands heartily with Muller, and retired to make a report of the matter, while a party was sent to collect the remains of the victim. A few hours later I left the fort with my escort, after a hearty farewell to the commandant. As we passed the fatal spot I shuddered to see unmistakable signs of the accuracy of the shot.—Chambers' Journal.

Not a "Broncho-Buster" from Choice.

Gov. Roosevelt, in speaking once of his experiences in the far West, made this confession: "You know I am not nearly so fond of 'broncho-busting' and riding wild horses as some persons might have you think. It wasn't because I liked that kind of work that I did it. But I always took just what came, and if it happened to be the wildest animal in the bunch I got on, and stayed on, too, for when I got on I made up my mind to stay, and I have yet to see the broncho that could make me give in."—Ladies' Home Journal.

Unawares.

"She came upon him unawares," read the teacher. "Can any little boy or girl tell me what 'unawares' means?" Up went the hand of the youngest pupil. "I know!" he cried, "it's what we wear next to our skins."

HERE'S A SINGLE-WHEEL LAWN MOWER.

Below is illustrated a new pattern of lawn mower, which the inventor claims will run easier than the two-wheeled rotary grass-cutter now in use. The wheel used is similar to the ordinary wheel, except that it is much larger, affording greater traction on the surface of the earth than was possible with the two small wheels, and therefore providing more power for the cutting mechanism. The latter feature consists of a cutter bar like that of a

RECIPROCATING CUTTER BAR.

large mowing machine, with the guards and reciprocating blades complete. By a simple gear arrangement the power is taken from near the center of the traction wheel and delivered to an eccentric, which in turn reciprocates the knife bar. The swath cut is about equal to that cut by the old mower, but the height of the cutter bar can be adjusted to cut the grass close to the ground or at any height desired. The mower has a clutch mechanism which enables the operator to draw it backward without operating the knives, and when not in use the cutter bar can be tilted into a vertical position to facilitate the removal of the machine from one place to another. Fritz Rauber and John A. Lentz, of Eldorado, Kan., have obtained a patent on the machine.

THE NEW FIRST READER

What is the mat-ter here?
The man is chang-ing his mind.

How do you mean?
His friend asked him what he thought of the signs of spring, and just as he said that he nev-er allowed him-him-self to be struck by signs one of them fell.

What have we here?
This is a busi-ness man en-joy-ing a mod-ern con-ven-ience.

Do you mean the tel-e-phone?
Yes.
If it is a con-ven-ience why does he scowl?
Oh, a small de-tail an-noys him.
What is it?
He has been try-ing for twen-ty minutes to get con-nect-ed with a man on the sec-ond floor a-bove.

What is happen-ing here?
The host-ess is serv-ing re-fresh-ments to her guests.

What are the re-freshments?
Lob-ster sal-ad, ca-viare sand-wiches, cof-fee, ice cream and cake.
Mer-cy. Does such food re-fresh any-body?
Oh, yes! It re-fresh-es the mem-o-ry of days when they used to eat green ap-ples, pea-nuts and Christ-mas can-dy.

What is the young man do-ing?
He is a-pol-o-giz-ing to the young la-dy.
What for?

He stepped on her gown and ru-ined it.
Will the a-pol-o-gy mend mat-ters?
O, no! It will cost $40 for an-oth-er skirt and the a-pol-o-gy is not worth a cent.—Chicago Daily News.

The Worm Will Turn.

"Ha! You laugh me to scorn, Reginald de Bugge, but it will be my turn next."

Such language, coming as it did from a humble caterpillar, at first merely amused the audience, until a bright beetle in the gallery recalled the fact that every worm has his turn, and started the applause.—Buffalo Express.

Money in Old Uniforms.

The worn-out uniforms of the British army when sold bring back into the war office treasury close upon $150,000 a year.

Guest, but Not a Customer.

Street—Hullo! Are you a guest here?
Beat—I am, but the hotelkeeper thinks I am a customer.—Indianapolis Press.

There's always room at the top of the greased pole of success.

Failure is one of the things that are spoiled by success.

CZAR'S SAFE REFUGE

SANCTUARY OF SAFETY FOR RUSSIA'S RULER.

Palace of Gatschina Is Kept Continually Under the Strictest of Guard and Protection — Restricted and Unattractive, but Convenient Domain.

The palace of Gatschina cannot be compared with such castles as Versailles, San-souci or Schoenbrun. It has nothing of the artistic embellishment of the one, the historical memories of the other, or the landscape beauty and comfort of the third. Situated in the middle of a wide and desert plain, it has no pretty surroundings, and built without luxury its exterior does not make an imposing impression. Gatschina lies between Tsarskoje-Selo and Krasnoje-Selo, and the roads from each of these places to the imperial palace, which have private court railway stations, are placed under particular supervision, and may not be used except by the court. A high wall incloses the park, in the center of which is the palace, and this wall is protected by patrols, which never leave the outer circle nor the park itself for one moment out of sight. Entrance is only permitted by special order. Though the superintendence is so strict, it is said that the inhabitants of the palace are not, and must not be, aware of it. Their pleasures and comforts are not impaired by it; and all the amusements that could be agreeable to the emperor and his family—drives, hunts, riding and rowing, evening parties, theatrical representations, etc.—can be partaken of. Adjoining the well-tended park is an extensive wood—like the park, surrounded by a wall and guarded. In the park itself are two lake-like basins of water; the palace contains splendid saloons, and two colonnades which afford agreeable promenades in bad weather; all this aids in preventing the inhabitants from feeling anything of the anxious and never-tiring supervision held over them, and the want of more charming surroundings.

Sometimes the royal family inhabit Peterhof, but always return to Gatschina. Peterhof is more magnificent, Oranienbaum prettier, but Gatschina is considered safer and quieter. For many years before the accession of Alexander III., the palace had been unused; he caused it to be restored and comfortably furnished. It has been seldom spoken of and scarcely more was known of it than that the imperial hounds were kept there. The Gatschina race was celebrated, and a dog from the imperial pack was very valuable, but people cared little for the castle and park.

Still Gatschina has its history. Peter the Great made a gift of it to his favorite sister, Natalie; Catherine II. gave it to her favorite Orloff, who furnished it at great expense, and built additional edifices, by which, after the plans of the Italian architect, Rinaldi, it received quite a different form. After Orloff's death the empress rebought it from his family, and gave it to the Archduke Paul, who inhabited it for some length of time. The palace forms a long square, at each corner of which is a stately tower. The dwelling rooms are in three stories. The colonnades run along the sides, and the pillars are of Finland marble. The rooms are not architecturally beautiful, but are adorned with valuable pictures and sculpture from the imperial hermitage in St. Petersburg, from the Anitschkow palace, and from the winter palace. The views are limited by the park and wood, which, however, have been beautifully laid out by the celebrated St. Petersburg landscape gardener.—London Daily News.

INDIAN MAGIC.

It Is Often Beyond the Power of the Wisest to Explain It.

One need not go to the realms of space, or time, or figures, to met with the incomprehensible, says the London Standard. Despite modern science and ingenuity, this word still remains the only applicable epithet for some of the achievements of Indian conjurers. We can smile at the luminous appearance of the beautiful face before which as the revelation of Osiris, the old Egyptians prostrated themselves in awe—for the marvels of the magic lantern are familiar to us; the early existence of gunpowder gives an easy explanation of the oracle's lightning and thunder; the weird harmony of Memnon was merely the result of an ingenious mechanical contrivance.

But shrewd travelers of later date, whose veracity is beyond dispute, tell of much more inexplicable things than these. One of the best known writers on occultism, Jacolliot, has left an account of certain things he saw during his official sojourn in India, which, as they seem to defy explanation, may fairly be classed among things incomprehensible. The performer whom he accidentally met, and who required some persuasion before he would exhibit feats which, he continually affirmed, were the work of other intelligences.

On some sticks fixed upright in flower pots were placed some leaves from a tree, with holes in each sufficiently large to make them fall to the level of the mold. Standing at a considerable distance, the fakir made a gesture with his hands. A slight breeze semed to pervade the room, then the leaves quivered and gradually worked upward on the sticks. Jacolliot placed himself between the flower pots and the operator, placed the sticks in the flooring, and adopted every means he could imagine to frustrate any trickery, but nothing he did made any difference to the movement of the leaves.

The more familiar feat of the seemingly supernatural growth of flowers was utterly eclipsed by another instance vouched for by the same narrator. His own servant brought him a score or so of seeds, from which he selected and marked one. The fakir planted it in a pot of earth muttered some words over it, and fell into a sort of trance, which lasted about thirty minutes. He then awoke, uncovered the pot and discovered a seedling two or three inches high. Jacolliot examined it and found it had sprung from the seed which he had marked. With a touch of a peacock's feather the fakir depressed a balance of a common weighing machine in daily use in the household, though in the other was a weight of twelve stone, and with a distant motion of his hand he made shavings of wood to sink or move in water. Still more marvelous is the description of the manner in which this veritable eastern wizard was able to set at defiance the law of gravity. On this occasion when leaving the room, he paused on the threshold, folding his arms, and, by a simple act of volition, raised himself from the floor and remained poised in the air for some minutes.

INSURANCE FOR DRUGGISTS.

Liability for Losses from Mistakes Is Now Provided For.

One of the latest things in the fidelity and casualty line is to insure druggists against what is called the wrong prescription man. For $15 or $25 a year several companies down town guarantee druggists against damages arising from mistakes in compounding drugs.

The idea of insuring druggists against loss from their own mistakes originated in the belief of a number of leading pharmacists that they were the victims of a gang of rogues who made a practice of pretending that wrong medicines had been given to some member of their families, sometimes with serious results. The gang was partly broken up by the fidelity company, which first assumed the responsibility of protecting druggists at $5 a year each. An officer of this company says that there are fully 1,000 mistakes a year in the compounding of drugs.

"While there are so many genuine mistakes," he continued, "there are many alleged errors in mixing medicines, and some of the complaints are invented for the sole purpose of extracting money from the retail druggists. Our company guarantees to protect druggists against themselves, but our main desire is to prevent fraud on the part of those who want to blackmail one of our clients for something he has not done.

"It is a serious matter to make a mistake in mixing drugs, but it is frequently even more serious to the druggist to have it noised about that such a mistake was made. I have known chemists to be forced out of business by the publicity given to the fact that they made a blunder. Dishonest persons have recognized the fear that druggists have of an exposure of this kind, and have taken advantage of the knowledge.

"Since we undertook to prevent them a number of druggists have confessed to paying big sums to persons who said mistakes were made. I have the names of half a dozen so-called doctors who have aided the gang that was engaged in the business of bleeding chemists.

"Still, there is nothing really remarkable in this protection of druggists. For instance, we have a special insurance for saloon-keepers, guaranteeing them against financial loss through being locked up for violation of the excise law."—Chicago Inter Ocean.

HIS PASSPORT WAS CORRECT.

Russian Police Arrested Tourist at Midnight to Congratulate Him.

A New York tourist writes to a friend in this country the following experience with the Russian police:

"I arrived in Moscow armed with a faultless passport, which I at once gave up to the police, according to regulations. On my third evening in Moscow, at 10 o'clock, a policeman in plain clothes summoned me from the family circle around the samovar.

"At the station we found the officials engaged with another case, which kept us waiting an hour and a half. Meanwhile I had been ransacking my conscience, but could remember no crime that would warrant this midnight arrest. Finally the official at the desk handed me my passport with a smile.

" 'It is quite correct, he said. I waited, wondering what was coming next.

" 'It is all right, I say. You may go,' the officer graciously repeated. Then my anger rose.

" 'Did you arrest me at midnight to tell me that?' I asked.

" 'Certainly. We were obliged to return the passport to you in person within three days. So we had to summon you to-night.'

" 'Good——'

" 'Now, just keep quiet, will you?' said the little official, severely.

" 'Congratulate yourself that your passport has been found correct.'

"I retired, gnashing my teeth. In the ante-chamber I found my policeman, who raised his cap and asked for a pourboire.

" 'What!' I yelled in angry amazement.

" 'But, little father, I took the trouble to conduct you here. Are you not going to give me the price of a glass?'

"I gave it!"

Missouri's Mule.

The St. Louis Globe-Democrat says: "The bray of Missouri's indispensable product, the mule, is now heard around the world from Cape Town to Iloilo, and frequently drowns the warring drum beat as it circles the globe."

When a married man goes to see his folks, his wife looks for signs upon his return that they have Poisoned His Mind.

JUDGE DISCREDITS WOMEN'S EVIDENCE

Chicago Jurist Sets Aside a Verdict Secured by Testimony of Fair Sex.

"I am averse to accepting the decision of the jury as final in this case, especially so as that decision was based largely upon the testimony of women. The testimony of one written document is of more weight as evidence than the oral testimony of a dozen witnesses, particularly when women are concerned as witnesses. Though women are undoubtedly upon a higher moral plane than are men they are not as reliable upon the witness stand. It seems that women are of a more imaginative nature than men, and, though it is no doubt unintentional, they come to believe as true what they at first only imagine and maintain their belief in spite of all evidence against it."

Upon the grounds cited in the foregoing statement of personal opinion Judge Arba N. Waterman, of Chicago, ignored the verdict of a jury and granted a new trial.

JUDGE ARBA N. WATERMAN.

Judge Waterman, reluctant to accept the finding of the jury as final, did not enter the judgment in accordance with the verdict at the time the latter was given and after some reflection decided that the defendant, having been denied justice, was entitled to a new trial before less susceptible jurors. The members of women's clubs and even his associates on the bench denounced Judge Waterman's slurs on the sex. The statement caused a sensation, and both women and men of national reputation assert that Judge Waterman has made a serious mistake.

SANTA TERESA,

The Wonderful Magnetic Healer and Heroine of Mexico.

Santa Teresa, the Mexican Yaqui heroine, now in Europe, is said to be possessed of remarkable healing power, by which she has performed miraculous cures on persons afflicted with all kinds of diseases. She was accused of exciting the Yaqui Indians against the Mexican government, but made her escape into the United States. She drifted to California, where she amazed many people by her wonderful healing power. Teresa is 28 years old. She was born at Sinaloa, of Spanish ancestry. She discovered her power to heal when a little girl. Her first cure was of an old woman, one of whose legs had been rendered useless by paralysis. Teresa rubbed the member a few times and every symptom of the malady disappeared. Soon after this she was attacked by an insane young man, whom she struck in the head in defending herself. The blow from her hand sobered the man, and a few gentle rubbings entirely cured him. At San Francisco Teresa met the family of Charles Owens, a wealthy merchant, to whom she was introduced by C. P. Rosencranz. The little son of Mr. Rosencranz had been suffering from blindness and partial paralysis, and it is alleged that he was completely cured by the hands of the Mexican senorita. When Mr. Owens and his family decided to go to Europe this spring they invited the young heroine-healer to accompany them. She will display her powers on the continent.

SANTA TERESA.

FIRST GAME OF CHESS.

Its Supposed Origin and Some of Its Famous Votaries.

Among the most antiquated of games is chess, which the oldest Persian and Arabic authorities state to be of Indian origin. We find the game specifically referred to in Sanskrit literature 200 years before the birth of Christ.

Enthusiasts to-day might deem the methods then in vogue somewhat primitive, the board usually called an "eight square" to distinguish it from the board on which parchisi or backgammon was played. In the earliest known attempt at romance in Indian literature the "Harsacarita," there is a punning passage, which reads: "Under this monarch * * * only bees: quarrel in collecting dews (dues); the only feet cut off are those in meter; only chess boards teach the position of the four members." That was written in the first half of the seventh century.

There is a Persian tradition to the effect that an Indian sovereign sent a Persian monarch the game of chess between 531 and 579 A. D. By way of returning the compliment the latter King sent the former the game of ward or backgammon.

The game was introduced to the Flowery land as comparatively recently as the sixth century (A. D.). It was probably first known in Spain in the tenth century, for in the eleventh we already find it a popular amusement.

At the beginning of the twelfth it began to be known in this country, as well as in France and Germany; and it unfortunately has to be recorded that at the close of the century it had become a favorite gambling game all over the continent of Europe. Many men who have figured prominently in the pages of the world's history were passionately fond of the game. Perhaps the most noted example of this was Louis XIII., who, though he hated games of chance so much that he would not allow them to be played at his court, was nevertheless so amazingly keen on chess that he played even while riding in his carriage.

It is interesting to record in this connection that each man was provided with a pin at its foot which, being stuck into a padded chess board, resisted the joltings of the royal vehicle.

John Frederick, Elector of Hanover, proved that the ruling passion was strong in death. He had been made prisoner in 1547 by Charles V., and was playing chess with Ernest of Brunswick, his fellow captive, when he got the news that he was condemned to die. He merely made a few remarks on the irregularity of the Emperor's proceedings and coolly went on with his game. On winning it he expressed his keen satisfaction; then he betook himself to the religious exercise befitting one in his unenviable situation.—London Express.

Beating an Avalanche.

One of the most exciting Alpine adventures on record was Mr. Tuckett's race with an avalanche on the Eiger Glacier in 1871. He was ascending the glacier with two friends and a guide. Says Travel:

The glacier sloped somewhat steeply, and on the upper part, above the climbers, a mass of loose, freshly fallen snow had collected. Suddenly the travelers heard a thundering noise, and perceived a huge mass of snow and ice sliding down toward them. They could only try to reach the rocks at the side of the glacier, hoping to do so before the avalanche should sweep them away. Through the knee-deep snow they ran for their lives.

"I remember," said Mr. Huckett, "being struck with the idea that it seemed as if the avalanche were sure of its prey, and wished to play with us for a while. At one moment it let us imagine that we had gained on it; and the next, with mere wantonness of vindictive power, it suddenly rolled out a vast volume of grinding blocks and whirling snow, as if to show us that it could outflank us any moment it chose.

"Nearer and nearer it came, its front a mighty wave about to break. It aimed straight at us, swift, deadly, implacable. The next instant we saw no more. A wild confusion of whirling snow and fragments of ice, a frozen cloud, swept over us, entirely concealing us from one another. But still we were untouched, and still we ran.

"Another half second, and the mist parted. There lay the body of the monster, whose head was still careering away at lightning speed far below us, motionless, rigid, harmless."

Powerful Guns for the British Navy.

Without any fuss or advertisement some of the most powerful guns of the time are being prepared for the British navy. The gun in question is the new 9.2-inch, which is to be carried by the armored cruisers now being built. A feature of the gun is that it is being placed in a hydraulic mounting, this in itself being a big advance over older methods. A big steel hood also encloses the gun's crew, who work in an impenetrable shell of armor. When mounted in the Cressy, for which the gun described is intended, no part below the bottom of the hood will be seen above deck. This hood is six inches thick in front and four inches thick in the rear. Admission to its interior is obtained through a narrow door, which closes an aperture only just wide enough for a man to squeeze through. The hood weighs about 50 tons, the gun is 31 feet long, has a range of 15 miles, and will also be used in coast defense.

Music Lovers.

Enthusiatic Admirer of Sig. Pazzamano (who has been pounding away for nearly half an hour)—"What an artist, isn't he? Such verve! Such finish!"

Fair American (bored)—"Well, I'll allow the verve's there all the time; and I'm just praying the finish'll come soon."—Punch.

IRRIGTION ITEMS.

THE PRESIDENT AND IRRIGATION.

The transition from barren alkali wastes to scenes of rich vegetation and luxuriant growth, the result of irrigation, must have impressed the President and his party with not only the great productivity of irrigated land, but with the significance of the word "irrigation" to the western country.

In viewing the fertile valleys of the southwest; rich from the fruits of the orchards and the crops from the fields, and dotted with prosperous homes and thriving towns, where a few years ago barren plains starved the cactus and the suge brush, did Mr. McKiuley realize that the reclamation of the arid West carries with it the creation of a great and populous empire within our own territory? The wonderful irrigated belts of West are but an earnest of the transformation of this region, which would follow the inauguration of a policy of national reclamation by which the flood-waters now wasted would be saved for the use of the farmer.

It is hoped that the President, on his trip, has arrived at an appreciation of the question which of all others is most vital to the people of the arid region, namely, water.

DESTITUTE INDIANS.

Due to Lack of Water Supply.

A recent Arizona dispatch states that the Gila river on the Sacaton reservation is again dry, and this being the source of irrigation no grain will be harvested by the Pima Indians. Great destitution the dispatch states, will ensue, and Government aid will be required to relieve the situation.

This was the proposition which Congress was asked to take up last session but refused. For centuries—as far back as we have any record—these Indians had grown their irrigated crops, one of the few Indian tribes which had never cost the United States Government a moment of anxiety. Some years ago the white settlers began to divert the waters of the Gila river above the lands of the Pima Indians; they were even encouraged to do so by the Government. There has not been enough water for both, and as the Indians are not citizens but only wards of the Government, their rights have been totally neglected, and for several years past, as more and more water has been taken out above, their crops have been practically absolute failures.

Congress was asked at its recent session to make some permanent provision whereby the Pimas could be restored their birthright—given back the water stolen from them—through the construction of a storage reservoir along lines approved by Government experts, but no action could be secured. So the Indians are going on retrograding, being forced to become beggars, thieves, and Government paupers, where once they owned their own farms, reared their own families, and had their own tribal government. It is hoped by every one familiar with the subject that Congress will see the justice, wisdom, and absolute economy of making these Indians self-sustaining through substantial irrigation construction.

Large Irrigation Construction.

The government of India is undertaking some irrigation works which will add large areas of reclaimed land to the many millions of acres which the British government has already placed under irrigation. The total cost of this present development will be somewhat upwards of forty millions of dollars. The water used is the melted snows from the great Himalayan range.

Sugar From Water.

Henry Oxnard, who may be said to be the original beet sugar man in the United States, says National Irrigation for May states that sugar beets reach their highest degree of perfection, commercially, under irrigation. In sugar content, purity, and yield per acre the greatest excellence is produced by giving the crop the moisture needed at just the right time. The sugar-beet industry in this country is a young giant, and the irrigated beet area is rapidly increasing.

GUY ELLIOTT MITCHELL.

When a mine has become forfeit by reason of failure to do assessment work annually, all the improvements are forfeited with it, and the mining claim being relocated, the claimants have the right to the improvements. A mill would be an improvement that would become forfeit. If the mill which had been used in connection with the mine was built on a separate millsite location it would not become forfeit by failure to do assessment work on the mine, and could not be located or claimed with the mine. The mill on a millsite claim is the property of the builders till it is abandoned. The payment of taxes is evidence that it is not abandoned.—Mining and Scientific Press.

Ordinance No. 71.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. It shall be unlawful for any person to hunt, pursue, take or kill or have in his possession within the two years next after the Twenty-third day of January, A. D. 1901, any Japanese or Mongolian Pheasant, within the County of Inyo.

SECTION 2. Every person who, in the County of Inyo of the State of California, within two years next after said 23d day of January, 1901, hunts, pursues, takes, kills or destroys or has in his possession any Japanese or Mongolian Pheasant is guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the county jail not exceeding fifty days or by a fine of not more than fifty dollars, or by both such fine and imprisonment.

SECTION 3. This ordinance shall take effect fifteen days from and after its passage, and all ordinances and parts of ordinances of said board of Supervisors of the said County of Inyo in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo State of California.
{SEAL}
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 71 was duly passed enacted and ordained by the Board of Supervisors of the County of Inyo, State of California at a regular meeting of said Board on the 8th day of January, A. D. 1901, by the following vote:

Ayes: N. J. Cooley, T. C. Boland, J. A. McKenzie, W. P. Yaney, James Jones.
Noes:——

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.
{SEAL}
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

(Endorsed)
ORDINANCE No. 71
Filed Jan. 8, 1901.
J. E. MERONEY,
Clerk.
Entered in Ordinance Book "B" at page 154

Ordinance No. 72.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male person over the age of twenty-one and under fifty-five years of age, on the road district in the County of Inyo State of California between the first day of March 1901 and the thirty first day of December, 1901, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time between the first day of April in the year A. D. 1861 and the first day of September, A. D. 1865, and who have not paid the same in some other road district, must pay to the said County of Inyo, a Road Poll Tax of Two Dollars provided the same be paid before the first Monday in July 1901, but if not paid prior to the first Monday in July then it shall be Three Dollars.

SECTION 2. Said Road Poll Tax shall be collected by the assessor of the said County of Inyo, in the same manner that State Poll Taxes are collected, and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the Several Road Districts of the said County of Inyo from which said Road Poll Tax was collected.

SECTION 3. This ordinance shall take effect and be in force from and after fifteen days from its passage, and all ordinances and parts of ordinances in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.
{SEAL}
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance, No. 72, was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board on the 10th day of January, A. D. 1901, by the following vote:

Ayes: W. P. Yaney, N. J. Cooley, T. C. Boland, J. A. McKenzie, James Jones.
Noes: None.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.
{SEAL}
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

[Endorsed.]
ORDINANCE NO. 72.
Filed January 10, 1901.
J. E. MERONEY,
Clerk.

Ordinance No. 3.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male inhabitant of the County of Inyo, State of California, over the age of twenty-one years and under sixty years of age, except paupers, insane persons and Indians not taxed and who have not paid the same in another County of this State, must annually pay to the said County of Inyo a Hospital Tax of Two Dollars; provided the same be paid between the first Monday in March and the first Monday in July, but if not paid prior to the first Monday in July, then it shall be Three Dollars.

SECTION 2. Said Hospital Poll Tax shall be collected and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the Hospital Fund of the said County of Inyo for the care and maintenance of the indigent sick or otherwise dependent poor of the said County of Inyo.

SECTION 3. This ordinance shall take effect and be in force on and after fifteen days from and after its passage and all ordinances and parts of ordinances of the said Board of Supervisors, of the said County of Inyo in conflict therewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same in the Inyo Independent a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time, and before the expiration of said fifteen days.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.
{SEAL}
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 73 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 10th day of January, A. D. 1901, by the following vote:

Ayes: W. P. Yaney, N. J. Cooley, T. C. Boland, J. A. McKenzie, James Jones.

Real Estate Transfers.

Jas. P. Thomas to L. P Yandell 80 acres of land near Bishop—$10.

J. G. and F. A. Birchim to W. D. Roberts—80 acres of land in Round Valley—$10.

D A. Bradshaw and wife to Mabel G. Bradshaw—Tract 11 of Keough addition to Bishop—$10.

M. C. Hall and wife to R. M. Johnson—Lot 8 in Block E of Academy addition to Bishop—$75.

Rhoda L. Kelty and husband to J Walter Hanby—House and lot in Bishop—$500.

Tracy N. Stebbins to Mrs. Emily B. Flint—Group of mines near Ballarat—$80,000.

Hillside Water Co. to J. N Yandell—40 acres of land near Bishop—$10.

J. B Hicks to R A. Brown—20 acres of oil land near Olancha—$10.

J. B. Hicks to R P. Jones—20 acres oil land near Olancha—$10.

F. I. Syertson to D. J Smith—20 acres oil land near Olancha—$1.

F. M. Reynolds to C. W. Graves—60 acres oil land near Olanch—$20.

BORN.

MOORE—In Independence, May 20, 1901, to the wife of Walter B. Moore—a son.

CARRASCO—In Lone Pine, May 8, 1901, to the wife of Cristobal Carrasco—a daughter.

Skip Reynolds has been prospecting for a cayenne pepper tree.

Julian Fibeshuiz will leave to-morrow morning on a visit to San Francisco.

Mrs. McKinley is improving steadily and is now reported to be out of danger.

Mrs. A O Collins, of Black Canyon, is visiting her daughter, Mrs. Bertrand Rhine.

President Thompson, of the Reward mine, accompanied by Messrs. Parker and Lister were visitors in Independence Wednesday.

Wells Barnes came in from his mine a few days ago He reports having about 70 tons of good milling ore on the dump and plenty more in sight.

James Jenkins, of Georges Creek, has purchased a new buggy. The young ladies of that vicinity would do well to cultivate his acquaintance.

M Arton, of Keeler, is in this city, having come up from there yesterday morning. Mike is a little under the weather and comes for medical assistance.

J. J. Gunn, who has been operating his mine at Modoc for the past six months, is now at his home here. His brother, Tom Gunn, came in with him for a brief visit.

Miss Helen, daughter of Mr. and Mrs. J. J. Gunn, who has been attending a seminary in Santa Rosa during the past year, returned to her home in Independence on Monday evening last.

Arthur A. Shirley, of Bishop, visited Independence this week on business connected with his father's estate. His mother, Mrs. Amelia Shirley, has been appointed administratrix

There is inquiry being made by Los Angeles parties looking toward a telephone line from Independence, Bishop and other valley localities. We should like to see this accomplished.

Mr and Mrs. Fred Schabbell returned last Saturday morning from their visit to Los Angeles during the Fiesta and the visit of our President. Mr. Schabbell does not like the Los Angeles climate, he having suffered with rheumatism all the time he was there. No place like Inyo.

Deputy District Attorney Ben H. Yandell expects to leave for Ballarat on Saturday afternoon, being called there to prosecute two criminal cases which are set for May 28th. The exact nature of the cases is not known, but it is thought the arrests are the result of a "scrap" among the boys some five or six weeks ago.

This office received on Wednesday last a large bouquet of beautiful roses, sweet peas, pinks, pansies, and numerous other varieties of flowers that we do not know the name of, from Mrs Bertrand Rhine. Mrs. Rhine takes great interest in the culture of flowers of different kinds, having as many as 150 varieties in her flower garden. She takes delight in her work, and is always pleased to present people with flowers who appreciate them.

Are we going to celebate the Fourth of July?

S. E. Vermilyea, Esq., of Bishop, was attending Superior Court on Tuesday last.

Louis Joseph, a merchant of Big Pine, was here for a couple of days during the week.

Forest Supervisor Price returned from the southern portion of his district a few days ago.

Mrs P. W. Forbes and children returned from a visit to relatives at Bishop on Friday last.

A O and Charles Collins were down from Black Canyon on Monday on business at the Land Office.

It has been cloudy, cold and threatening rain for the past three days. Indications are favorable for rain to-night.

Elias and Robt. Blake, S. J. and Henry McMurry and George Reinhtckle were down from Big Pine on Monday last.

Robert O'Neal and J. White Smith, Esqs., were down from Bishop in the early part of the week on Superior Court business.

P. W. Forbes, Esq., returned from San Francisco Thursday morning, where he had been attending a meeting of the Grand Lodge of Odd Fellows.

Norman Mairs started this morning with a band of cattle for Long valley, Mono county, where they will be pastured during the summer months.

Sixty thousand machinists in the United States are out on a strike. Sixty-five hundred are out in San Francisco. They are asking for shorter hours and more pay.

Only land believed to be of a non-mineral character can be located and patented as mill site. But if, after patent, a vein is discovered upon it, the patent is not invalidated.—L. A. Mining Review.

Vernon Smith, of Big Pine, passed through here on Monday last on his way to Lone Pine after a county road-grader, which will be used to better the condition of the roads in the vicinity of Big Pine.

The rain storm on Monday last on the other side of the mountains did considerable damage to hay and cherries in the bay counties. The weather bureau notes that rain has fallen only five times on May 20, since 1852.

Wm. Rowan passed through here yesterday morning with 26 work horses, on his way from Bishop to Los Angeles. There were a fine looking lot of animals and will no doubt bring the owner handsome returns.

A habitue of the tenderloin district in Truckee, by the name of Devlin, who failed to heed the warning of the "601" of that place, was taken from the jail by sixty masked men, given a coat of tar and feathers, and put on the first train leaving the town.

The State Supreme Court last Monday handed down an opinion sustaining the judgment of the lower court in the case Angus vs. Craven. The decision is, in effect, that the deeds alleged to be held by Mrs. Nettie R. Craven to portions of the property of James G Fair are invalid.

William Arcularius will leave for Mason valley, Nevada, to-morrow morning, where he has secured a contract for hauling freight for the Excelsior and Bluestone Copper Companies. He will ship his six wagons and 30 head of mules by rail to Wabusba.

Rev. J. J. Pardee, who left here about eighteen months on account of ill health has lately gone to Virginia City to fill the Methodist pastorate there. Mr. Pardee will attend the Methodist Conference which meets at Big Pine in August next, and will then visit his many friends in this vicinity.

Miss Lucy Harper, who taught the Taboose school this year, will visit relatives here for a few weeks before departing for her home in Virginia City, Nev Miss Harper has taught the Taboose school for three successive terms and has given eminent satisfaction. She will return again next term.

The "O Be Joyful" group of mines in the Panamint mining district, near Ballarat, was sold by Tracy N. Stebbins to Mrs. Emily B. Flint of Los Angeles, for $80,000. Eighty dollars worth of revenue stamps were on the deed. This is the largest mining deal that has taken place in Inyo county for many moons.

The population of Los Angeles based upon the number of names in the new City Directory to be soon issued, is estimated at 119,000 for the year 1900. This estimate is made upon the very conservative allowance of two and one-half residents to each name in the directory. If that is not sufficiently conservative we would like to know what conservative means.—L. A. Mining Review.

Frank Golden and R T. Hofer returned from Tonopah on Thursday. They are enthusiastic in their reports of the new camp, and assert that most of the leasers are taking out ore richer than ever On Thursday of last week they saw that Henry Cutting took out ore valued at $3,000 Mr Cutting's shaft is 64 feet deep—the deepest in the camp—and his success gives additional vigor to his neighbors. Messrs Hofer and Golden bought an interest in several leases.—Walker Lake Bulletin.

Agatized and Petrified Woods

The Tombstone, Ariz., Prospector says: "It is stated that the Pan-American Exposition exhibit of agatized and petrified woods from the stone forests of Arizona will be the most extensive display of the kind ever attempted. Sections of large trees, sound and perfect from bark to heart, will be shown, the hardness of which is only three degrees from that of a diamond. Steel cannot scratch them nor ink stain them."

ORIGIN OF THE BUFFALO ORDER.

There has been considerable speculation as to the origin of the Order of Buffaloes. The whole scheme is of course, an advertisement for the Pan-American Exposition, which opened in Buffalo on May 1, but even this fact may be news to the public as well as to some members of the order.

But the great question of the hour is: "Who started the thing?"

The origin of the order is a matter of dispute. One story is that a number of citizens of Hamilton, Canada, who were forming a club to go to the Pan-American Exposition at Buffalo, hit upon the idea. Another is that the responsibility rests with a number of railroad passenger agents who thought it would be a good way to advertise the exposition. And there are others.

The question: "Are you a Buffalo?" is asked oftener than any other one just now. That is the question a Buffalo asks when he is looking for a victim to initiate.

The correct affirmative answer can only be given by a true Buffalo, one who has been invested with the secrets of the Order of Buffaloes and received into one of the numerous herds which roam the plains of the western continent. The initiation is humorous in the extreme and once a member you are anxious to get your friends to join.

This club, whose members are of all ages, sexes and conditions, has only been in existence a short time, but already boasts a membership of millions, and includes in its herds all grades of humanity, from ex-presidents to bootblacks—in fact everyone who has at any time had the sum of 11 cents.

This is the only requirement, and it is here that the joke comes in. For the prospective candidate seldom has the exact amount, and tenders anywhere from 20 cents to twenty dollars, when asked for his fee, with the result that he is out just that amount, being blandly told that "Buffaloes never give change." In an irrepressible spirit of emulation and retaliation the new made bison proceeds to work the same game, and thus countless additions are made to "The Buffalo Club."—Ex.

Hanged at San Quentin.

E. V. Methever, the man who murdered Miss Dorothy McKee at Long Beach in July, 1899, was hanged for the crime at San Quentin. While no one here seems to remember Methever, his family were residents of San Bernardino county and were well known. At the time the murder was committed, Methever was 61 years of age, and the killing was the outgrowth of an insanely jealous love for Miss McKee.

Miss McKee's parents owned a bakery at Long Beach, and Methever lived next door. The young girl naturally felt sorry for the old man, who was leading a lonely life, and was accustomed to chat with him occasionally when passing by. [illegible] violently in love with the girl, but could gain no sign of a return of affection from her, and it was this fact that induced the murder.

On the evening of July 25, 1899, Miss McKee was out bicycle riding with Mrs. A. C. Scudder and Isaiah Baker on the beach. On their way home after a short spin, Methever met them and deliberately knocking Miss McKee from her wheel, drew a revolver and shot her three times, after which he attempted to end his own life with a fourth shot, but succeeded only in causing an ugly wound.

He was tried for and convicted of the murder, the sentence being death, and although every effort has been made to induce the Governor to commute it, the only result was the postponement of the carrying out of the sentence from last October until last Thursday, when he was hanged.—Weekly Times-Index.

The Hassayampa Legend.

Here is how the Mining Reporter of Denver good humoredly presents the case:

"The most remarkable statements are appearing in all the mining journals of the country (Mining Reporter included) as to the recent discoveries of gold ore in the vicinity of Wickenburg, Arizona. In considering these the reader should not forget that this town is located on the shores of the ever dry Hassayampa River, a stream whose waters, when obtainable, are believed by many (even among Arizonians) to produce a very astonishing effect upon the moral nature of those who quench their thirst therein. To put the matter courteously, it is said that all who drink of the Hassayampa acquire at once and retain forever thereafter a distaste for the truth, and an inability to adhere to it even in the ordinary affairs of life The region is an arid and warm one, where the ice cream tree does not flourish nor the soda water tuber grow. Even empty beer bottles are scarce. As a consequence, practically everyone who has been there has become in due time thirsty, and has absorbed more or less of the subtile Hassayampa liquid. Thus Arizonans in general, and particularly citizens of Prescott and Phoenix (the two nearest cities to the dangerous locality), have become thoroughly inoculated with the virus of the waters and need watching. . . ."

SUPERIOR COURT PROCEEDINGS.

Hon. Walter A. Lamar, Judge.

CIVIL.

May 21, 1901.

E. H. Blake, plaintiff, vs. Henry Utter, defendant—Cause tried and taken under advisement by the Court.

PROBATE.

May 23, 1901.

In re estate Henry Shirley, deceased—Amelia Shirley appointed administratrix with bond fixed at $4,500.

In re estate C. B. Rawson, deceased—Petition to sell all of the personal property granted.

Lieu Lands.

Lieu lands are lands which may be taken in exchange for, or which are taken in exchange for, other lands to which for specified reasons the U. S. Government finds it desirable to regain its title after a private claim has attached by operation of law. In some cases a designated reservation has been made to provide lieu lands for possible exchangers who have land the government wants. This land—reserved to become "lieu" land—can only be agricultural land. Mining claims are located on it. It does not become "lieu" land till taken by some claimant in exchange. Until title is confirmed it is locatable if a mine be discovered on it. Generally one having the right to "lieu" land is granted the right to select it anywhere in the public domain not otherwise claimed or occupied. The selected land then becomes "lieu" land. It is subject to location if a discovery of mineral of value be made on it. The mere selection in exchange would not protect the exchanger in the ownership of a tract of land to which he could not get agricultural patent directly under the homestead laws.—Mining and Scientific Press.

For Sale or Rent.

House of six large rooms on the Main street, Independence, furnished or unfurnished, Three lots, fruits and berries of all kinds. Hot and cold water in house. Bath room, pantry and closet.

Will rent for a long period or sell on the installment plan. Terms, reasonable.

TO LAKE TAHOE

A TRIP OF RARE ITEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

The Change of Life

Is the most important period in a woman's existence. Owing to modern methods of living, not one woman in a thousand approaches this perfectly natural change without experiencing a train of very annoying and sometimes painful symptoms.

Those dreadful hot flashes, sending the blood surging to the heart until it seems ready to burst, and the faint feeling that follows, sometimes with chills, as if the heart were going to stop for good, are symptoms of a dan-

MRS. JENNIE NOBLE.

gerous, nervous trouble. Those hot flashes are just so many calls from nature for help. The nerves are crying out for assistance. The cry should be heeded in time. Lydia E. Pinkham's Vegetable Compound was prepared to meet the needs of woman's system at this trying period of her life.

It builds up the weakened nervous system, and enables a woman to pass that grand change triumphantly.

"I was a very sick woman, caused by Change of Life. I suffered with hot flushes, and fainting spells. I was afraid to go on the street, my head and back troubled me so. I was entirely cured by Lydia E. Pinkham's Vegetable Compound."—MRS. JENNIE NOBLE, 5010 Keyser St., Germantown, Pa.

Faults In Decoration.

"The great fault," says a decorator who has the courage of his art, "that I find in the average home is its conglomerateness. This begins with the walls, that ought to be flowered and spotty about one time in a hundred and which are so 99 times in the same count. A safe rule to be followed by the rank and file of furnishers is that of plain walls. The spotty effects are sure to creep in before the furnishings are done and are less inartistic if against a plain background.

"We still get too much in our houses, forgetting every day the important basic principle of successful furnishing—viz, the useful thing beautiful in its suggestion of service and the beautiful thing really artistically beautiful and then not interfered with. A bit of delicate ivory carving has no place against a massive vase of Egyptian pottery. Use one or the other and leave either to work out unmolested its work of pleasing effect. A jumble of woods and materials, too, in fittings and furniture is detestable. Oak, cherry, marble, onyx and wicker in designs of colonial, empire and half a dozen other periods mingled suggest discord and restlessness rather than the harmony and peace that should be in every room."—Buffalo Express.

GARFIELD TEA, the medicine that purifies the blood and cleanses the system, brings good health to all who use it. It is made from herbs. Druggists sell it.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

For Consumption try Fryer's Abietene Cough-Balsam.

The prompt use of a pure stimulant has saved many a human life. Old Gilt Edge Whiskey is pure. Sold by all first-class dealers. Wichman, Lutgen & Co., San Francisco, Cal., sole proprietors for U.S.A.

Really a man loves all women, but one at a time.

A Cough, Pneumonia, Weakened Lungs, Consumption.

It's a short story; but stop at the first chapter by using

Acker's English Remedy

It will cure your cough at once and prevent Pneumonia. It will heal your sore lungs and will positively cure Consumption. But what is the use of getting to that stage?

"I always reccommend ACKER'S ENGLISH REMEDY for coughs and lung trouble. It is the best medicine I have handled in my 14 years experience. It has cured every case where tried."

A. B. COOK, Druggist, Bellefontaine, O.

Write to us for testimonials and free illustrated book on Consumption.

Sold at 25c, 50c and $1.00 a bottle. If you are not satisfied return the bottle to your druggist, and get your money back. W. H. Hooker & Co., Proprs., Buffalo, N. Y

DANCED WITH THE QUEEN.

The Only American Who Ever Obtained that Coveted Honor.

"Richard, I am told thee has been dancing with the queen. I do hope, my son, thee will not marry out of meeting."

The good, old-fashioned quaker simplicity and distrust of royalty were never better exhibited than in these words of the mother of the late Richard Vaux. They were her first greeting to him on his return home from the court of St. James after his memorable exploit at the court ball in Buckingham palace, when he attained the distinction of being the only American who ever danced with Queen Victoria.

It was in 1837. Mr. Vaux's position as secretary to Mr. Stevenson, United States minister to the court of St. James, was in itself a noteworthy one, and brought him at once into social prominence in London, but his exceptional personal attributes, his brilliancy of conversation, charm of person, exquisite manners, elegance of diction and gallantry of carriage made him the beau ideal of a court cavalier and a welcome guest in the houses of the nobility, where he was received and welcomed with open arms, says the Philadelphia Press. No one, therefore was greatly surprised in court circles when it became known that the young queen had singled him out for a signal honor, and had commanded that he attend the court ball at Buckingham palace, which was to be given in honor of her coronation.

When, however, the night of the ball arrived, and the "queen's cotillon" set was formed, and the guests beheld Richard Vaux, arrayed in his brilliant court costume, take his place in it, a position that was supposed to be reserved for royalty alone, there was surprise and excitement indeed. Then the music struck up and the gallant young American threaded his way through the intricacies of the royal dance, bearing himself with an air of grace and confidence that was wonderful to behold. The queen was seen to smile in gracious approval as he took her hand and led her through the evolutions of the dance. And there was not a man present who would not have given a coronet to win so coveted a distinction.

After that Mr. Vaux's career was a series of brilliant social triumphs. In his candidacy for congress, in 1890, certain voters in his district resented his having danced with the queen of England, and used the fact against him as a reflection on his democracy.

"Four-Leaved Clover" is the title of the new novel on which the author of "The Silence of Dean Maitland" is at work.

Mrs. Voynich's novel," "Jack Raymond," will be ready for publication in England soon. The author of "The Gadfly" has preserved a long silence, and it is to be hoped that her second book will prove a worthy successor to the earlier work.

George Moore is trying a rather remarkable experiment. He has rewritten his novel, "Evelyn Innes," and that so thoroughly that it will be practically a new book. Thus altered, "Evelyn Innes" is to be published at the same time as Mr. Moore's wholly new novel, "Sister Theresa," which is in the nature of a sequel.

A new novel by Julien Gordon, under the title of "Mrs. Clyde," a story of a social career, has appeared. It is a novel of American life, containing glimpses of Boston, Washington and New York society, and while it is said that certain of the characters are susceptible of identification, there is no final authority for this.

Kindergarten in Cuba.

The second annual report of the Cuban Orphan society, of which General Francis V. Greene is President, has been made public. For the first year of its existence the work of the society was all in the direction of relief. Then, early in 1900, the government of the island took the relief work off its hands and left the society to take up educational work along kindergarten and manual training lines. At the present time the society maintains free kindergartens for destitute children and small manual training schools in Santa Maria del Rosario, Matanzas, Guantanamo, and Sagua la Grande. It is teaching 150 boys and 32 girls manual training; has 145 children in its kindergartens; has organized 100 poor widows into sewing clubs; has established English classes in some of the public schools, and is teaching 40 public school teachers the principles and methods of kindergarten work so that they may apply them in the public schools.

GEN. GREENE.

Called to Preach.

It is to be feared that some other men's "call" to preach is not more imperative than that of the negro referred to by Mr. Booker Washington in the Outloook.

The old negro was working in the cotton-field one hot day in July. Suddenly he stopped, and looking toward the sky, he exclaimed:

"O Lawd, de cotton am so grassy, de wuk am so hard, an' de sun am so hot, dat I b'lieve dis darky am called to preach!"

Considerable Difference.

Melton—Our minister impressed it upon his congregation that the world was consanguineous.

Fenwick—Our minister merely said all the world was kin. Is there any difference?

Melton—Most assuredly! Your minister only gets one thousand a year, but ours gets ten thousand.—Philadelphia Record.

In every married couple, one has the other bluffed.

EVERY WOMAN

Who Had the Grip This Winter Should Read This.

Mrs. Theophile Schmitt.

Mrs. Theophile Schmitt, wife of the Ex-Secretary of the German consulate, writes the following letter to Dr. Hartman, from 3417 Wabash ave., Chicago, Ill. Mrs. Schmitt says: "I suffered this winter with a severe attack of la grippe, and having repeatedly heard of the value of Peruna in such cases I thought I would try it. I used it faithfully and began to feel a change for the better the second day, and in the course of a week I was very much improved. After using three bottles I not only found that the grip had disappeared, but my general health was much better. I am satisfied that Peruna is a wonderful family remedy and gladly endorse it." Yours,

Mrs. Theophile Schmitt.

La grippe leaves the system saturated with catarrh. This condition is known as systemic catarrh. Peruna is the only remedy. Allow no one to persuade you that there is any other remedy just as good.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, O.

The fiery grid of remorse turns out many a saint—half baked.

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

Avoid Colds

By drinking Kentucky Favorite Whiskey. Spruance, Stanley & Co., San Francisco, proprietors.

Comprehensive and Explicit.

A party of ladies were recently doing Boston and suburbs. Their chaperon had graduated with honor from a high school, had a smattering of college life, but not of the Harvard annex, and was in all respects a young lady of the up to date period. The party relied on their guide for instruction. When they reached the big grain elevator between Chelsea and Charlestown, their escort drew special attention to its construction and in a very bland way of conveying her knowledge said: "Ladies, this is a grain elevator. This is where they put in all the grain, and it comes out all ready for use."

One of the visitors in a surprised tone asked: "How can that be? I see no signs of machinery."

"Well," said the chaperon, "I don't know how it is myself, but that's the way it's done anyway."—Boston Traveler.

CURE SICK HEADACHE

ANCIENT ENGLISH BRIDGES.

They Have Survived Time's Ravages and Remain Practically Intact.

The old Bow bridge built by Queen Matilda at Stratford-atte-Bow in the twelfth century, survived till lately in a much-restored condition; the charge of it was given by its builder to a religious house near by. It was a simple stone structure of three arches and was not only often in bad repair, but was used by its keepers to extort money from passengers.

From the frequency with which the prefix bridge occurs in the names of places one might imagine that many of our towns and villages have been named from their bridges, and such is indeed often the case, but in many other instances the prefix comes really from the name of St. Bride, or Bridget, one of the most popular of Celtic saints.

At another Stratford, that situated on the Avon and destined to world-wide fame, there was in Leland's time a poor bridge of timber, so insecure that "many poor folks and other refused to come to Stratford when Avon was up, or commynge thither, stood in jeopardye of lyfe." It remained for Sir Hugh of Clopton, once mayor of London, to erect the existing fine structure, which, says Leland "hath fourteen great arches of stone and a long causey made of stone, low-walled on each side, at the west end of the bridge." This was the bridge that Shakespeare knew and to all intents and purposes it is the bridge that still stands.

Another bridge existing is interesting in that we possess the original contract by which it was built. After giving minute particulars as to how this bridge of Chatterick should be built, the document ends: "And ye saides John, Tho. and Bob. schalle this forsaid brigge sufficiantly in masoncraft make and fully per-furnish in all partiez and holy endyd be ye Fest of Saint Michelle ye Archangelle quilk yt shalle fall in ye yere of our Lords Gode Mle. CCCCXXV." The price for this Yorkshire bridge is also stipulated.

Sometimes the maintenance of bridges was provided for by tolls, sometimes by alms, sometimes by the church's indulgences. Persons frequently contracted to keep a certain bridge in order in return for the toll, and in those days, it goes without saying, the exacting of the toll was more rigorously exercised than the reparation of the bridge. A form of application for such rights exists, whose date is probably the early fourteenth century. It is as follows: "To our lord the King prays his vassal, William of Laytmer, lord of Yarum, that he will grant him pontage for five years at the bridge of Yarm, which is broken down, where wont to pass with carts and with horses on the King's highway between the water of the Tees toward Scotland. May it please him to do this for the soul of Madame his consort, who is to God commended, and for the common profit of the people who pass." The application was granted — London Household Words.

GYPSIES ARE A NUISANCE.

Austro-Hungary Has Adopted Means for Their Suppression.

In every part of Europe bands of Hungarian gypsies are to be encountered. As a rule they travel in families, numbering from twenty-five to 100 souls and more, carrying along with them all their various and strange paraphernalia and domestic necessities. In most countries of Europe laws have been passed according to which these vagabonds are allowed to stay only a couple of days or a couple of hours in certain provinces or provincial districts, when they are escorted by "gensdarmes" over the border. Their principal business transactions consist of fortune-telling, begging and stealing. They are especially clever in the latter branch of business and take everything from a pin and needle to a horse and carriage.

The gypsies have been a real nuisance for Europe for centuries and the Austro-Hungarian government is now considering a plan to force this most peculiar vagabond race into settlement somewhere in the vast plains of Hungary. Most characteristic of the gypsies is the fact that they never work. This is one of their first principles. For more than 600 years they have been roaming over Europe, and the up-to-date gypsy is by all means the cleverest thief in the world. Where no cat gets through the little brown gypsy boy finds his way. They have no religion, no morals, no honor or no fatherland. But he is prouder, perhaps, than a Spanish grandee. He lies to perfection and is the greatest story-teller in the world. Many other efforts have been made from time to time to confine the gypsies to certain territories in Hungary, but always without any success.

A Wind That Blew.

"You call this a stiff March wind?" remarked my friend, Dan Weyrich, the other evening. "Why, this is nothing. This is a southern spring zephyr compared with what we used to get when I was a boy. We were living then over on the farm. Our house was set in a very exposed place on a small hill. When the March wind blew she rocked that house like a small skiff in a gale at sea. I slept then in a bed on rollers. Many a night in March I was awakened by the rolling of the bed all round the room. It would bang against all four walls, making such a noise that sleep was well nigh impossible."

"What did you do then?" I ventured to ask.

"What could I do," said Dan, "but sleep on the floor and hang on to the bed to keep it from rolling. It was sleeping under difficulties, I'll admit, but then we didn't have many nights like that."—Albany Journal.

Progress in Railroad Building.

In 1890 there were 161,000 miles of railroad in the United States; in 1900 there were 190,893 miles. The value of railroad securities in 1890 was $9,500,000,000; in 1900 it was $11,692,000,000. In 1890 31,300 locomotives pulled 1,000,000 cars; in 1900 37,000 locomotives pulled 1,300,000 cars of larger capacity. In 1890 the railroad earnings were $525,000,000; in 1900, $1,336,000,000, with a general reduction in freight and passenger rates.

It's a pretty tough proposition, whether you keep house or board.

There are always more early birds than worms.

A Strange Instance of Heredity.

Two young men were walking down Chestnut street, when one of them stumbled slightly. Instantly he covered his eyes with both hands as though some dreadful explosion were about to happen. It was an odd and needless gesture, and in answer to a question from his friend he said of it:

"Whenever I stumble I do that. All my life I have been doing it. My foot slips and at once it seems to me that a great noise is to burst forth and a great flame to shoot up into my eyes. I could no more break myself of this habit than I could stop breathing.

"It is, my father says, a freak of heredity. My father is blind. He fought in the civil war, and in a certain charge one day as he ran toward the enemy his foot slipped in a furrow, he stumbled, and a shell burst in his face, blinding him. He was a young man then, and I was not yet born. He has always ever since put his hands to his eyes on stumbling, and I developed the habit at the age of 4.

"It is strange, too, how in precisely the same way my father and I make our common gesture. We place the back of our left hand over our eyes horizontally and set the palm of our right hand upon this vertically, forming a kind of cross. My father will have the habit till he dies, and I suppose that I, too, will have it all my life, thanks to heredity."—Philadelphia Record.

Rules For Preserving Life.

Dr. D. K. Pearsons, the Chicago philanthropist, when celebrating his eightieth birthday gave these rules for long life:

No pies or cakes; no pains or aches.

Most men dig their graves with their teeth.

If you overwork your liver, it will soon tell on your brain.

Live like a farmer, and you will live like a prince.

Men can live ten days without eating. They can't do without pure air for five minutes.

Don't get angry and don't get excited. Every time you fret you lose a minute of life.

Let a man abuse his stomach, and he'll get fidgety and cross to his family.

Doctors say don't sleep on a full stomach. I take my after dinner nap just the same, and I'm 80 years old. You can't believe all the doctors say.

If you catch a cold, lose your quinine and eat an onion.

Give away your money. It's exhilarating and tends to longevity.

The idea of giving while one is alive will become epidemic as soon as men discover what fun it is.

Swallowed His False Teeth.

A man recently swallowed his false teeth and it drove him mad. Stomachs will stand a great deal, but not everything. If yours is weak try Hostetter's Stomach Bitters. It cures indigestion, constipation, kidney and liver troubles, as well as malaria and fever and ague. It is particularly effective in all nervous affections, and is strongly recommended at this season of the year when the system is run down and most susceptible to disease. All druggists keep it.

The scream of today is for self-realization, the prayer of tomorrow will be to escape from self.

Fryer's Abietene Cough Balsam guaranteed for Croup.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

KILL THE DANDRUFF GERM

Or Your Hair Will Fall Out Till You Become Bald.

Modern science has discovered that dandruff is caused by a germ that digs up the scalp in scales, as it burrows down to the roots of the hair, where it destroys the hair's vitality, causing falling hair, and, ultimately, baldness. After Prof. Unna, of Hamburg, Germany, discovered the dandruff germ, all efforts to find a remedy failed until the great laboratory discovery was made which resulted in Newbro's Herpicide. It alone of all other hair preparations kills the dandruff germ. Without dandruff, hair grows luxuriantly. "Destroy the cause you remove the effect."

Garfield Tea has long been recognized as the greatest remedy for bowel and liver troubles; it is made from simple herbs that cure chronic constipation.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

I am sure Piso's Cure for Consumption saved my life three years ago.—MRS. THOS. ROBBINS, Maple Street, Norwich, N. Y., Feb. 17, 1900.

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Got Grip? Try Fryer's Abietene Cough Balsam.

Taken by the Takers.

The women of Nantucket, where there are more stoves than in bigger cities, use holders to open doors and move stove tops and take special delight in doing so, for the holders they all call "takers." "Takers" was the name used on the island in the days when it was making big history for itself, and the lovers of antiquities take great delight in it. With this name a couple of squares of chintz bound at the edges become a relic. This feeling of veneration the islanders convey to their summer visitors to such an extent that the city people carry "takers" home with great delight and handle tongs and bellows with them. There is a great deal in a name.—New York Times.

The Spring Medicine

Is Hood's Sarsaparilla.

In thousands and thousands of homes — in cities, towns and villages —three doses a day of this great medicine are now being taken by every member of the family.

In some homes even the visitor is given a teaspoonful with every meal.

Why such wide and general use? Because

Hood's Sarsaparilla

Has proved itself by its wonderful effects in cleansing the system of all humors, overcoming that tired feeling, creating appetite, clearing the complexion, giving strength and animation, the best of all Spring Medicines, so that it is par excellence the Spring Medicine.

Accept No Substitute.

STUDEBAKERS MAKE A CHANGE.

The Big Firm Incorporates Under the Laws of California.

THE NEW OFFICERS AND DIRECTORS.

San Francisco House No Longer a Branch —Local Capital Is Interested.

Frederick S. Fish, one of the leading members of the great firm of Studebaker Bros. & Co., of South Bend, Ind., has been in San Francisco for several days, perfecting a new organization of the local house of Studebaker Bros., which occupies the large four-story building at the corner of Market and Tenth streets.

"The company has for some time had in contemplation the changing of its large and important branches to ordinary home offices, making them corporations in themselves," said Mr. Fish this morning. "The object is that what has erstwhile been a branch may be identified as a home concern, having a local management and with local capital invested. Another reason is that it makes it more convenient for our business, and, again, we desired to let some of our managers become proprietors, giving them an interest in the corporation on the profit-sharing basis.

"My trip West from the home office has been for the purpose of making these corporations in Salt Lake, Portland and San Francisco. These have all been completed. I have also inspected our branch houses at Seattle, Tacoma and Spokane.

"Our company here has been incorporated under the name of the 'Studebaker Bros. & Co. of California.' The Studebaker Bros. Manufacturing Company will own a controlling interest in the corporation, and will give the business the same oversight and attention that characterized the business when it was conducted as a branch.

"The San Francisco house will have as a board of directors Lloyd F. Weaver, George A. Newhall, Daniel W. Earll, Colonel George M. Studebaker (who, by the way, was the youngest colonel in the Spanish-American war, leading the One Hundred and Fifty-seventh Indiana Volunteers) and Frederick S. Fish.

"The officers of the company are: President, Frederick S. Fish; vice-president, treasurer and general manager, Lloyd F. Weaver; secretary, Chester N. Weaver.

"The new company takes over all the business and assets of this branch and will continue for the present at the same location, although we contemplate securing as soon as practicable a larger building, with a more central location. We have now four large stores, with 75,000 square feet of floor space, but this does not afford us sufficient room. The building at Tenth and Market streets was built by Studebaker Bros., but the firm has outgrown it.

"We intend to make this San Francisco house the carriage emporium, not merely of this city, but of the State of California. We recognize the growing importance of this locality and its magnificent prospects, and we want to be numbered among the home people. San Franciscans will be enabled by us to get anything in the line of vehicles that they may want. Our business here has shown a flattering increase each year. We employ at our factories in South Bend 2,300 workmen, and yet we are unable to keep abreast of our orders."

Mr. Fish, who is a delightful gentleman as well as a most able business man, departs tonight on the Owl train for the south, where he will spend a week at Hotel del Coronado. The manager of the new corporation, Lloyd F. Weaver, is one of the most prominent young business men in the city, and one who is exceedingly popular and universally respected for his sterling character and fine abilities.

No External Symptoms.

The blood may be in bad condition, yet with no external signs, no skin eruption or sores to indicate it. The symptoms in such cases being a variable appetite, poor digestion, an indescribable weakness and nervousness, loss of flesh and a general run-down condition of the system—clearly showing the blood has lost its nutritive qualities, has become thin and watery. It is in just such cases that S. S. S. has done some of its quickest and most effective work by building up the blood and supplying the elements lacking to make it strong and vigorous.

"My wife used several bottles of S. S. S. as a blood purifier and to tone up a weak and emaciated system, with very marked effect by way of improvement.

"We regard it a great tonic and blood purifier."—J. F. DUFF, Princeton, Mo.

SSS is the greatest of all tonics, and you will find the appetite improves at once, strength returns, and nervousness vanishes as new rich pure blood once more circulates through all parts of the system.

S. S. S. is the only purely vegetable blood purifier known. It contains no minerals whatever. Send for our free book on blood and skin diseases and write our physicians for any information or advice wanted. No charge for medical advice.

THE CENTAUR COMPANY, NEW YORK CITY.

To Live Long.

Among the rules given by a physician to promote longevity is one forbidding the placing of the bed against the wall. This is in accord with the advice of another scientist, who demonstrated some time ago that the layer of air within a few inches of the wall of the average bedroom, with no ventilator but the window, is not disturbed by that draft. The rule further advises sleeping on the right side and the placing of a mat at the bedroom door, upon which, presumably, the dust from the shoes may be left, thus reducing the danger from disease germs. Adults are advised to drink no milk, to avoid intoxicants, which destroy the cells that in their turn destroy disease germs, and to eat fat, which feeds these cells. A rule to eat little meat and to see that it is well cooked is rather surprising. Another is full of wisdom: Watch the three D's—drinking water, damp and drains. The last four relate to mental therapeutics: Have change of occupation; take frequent and short holidays; limit your ambition; keep your temper.—New York Post.

THE CYCLONE SEASON

Vagaries of the Monstrous Disturbances Are Unexplainable—Some of the Queer Things Cyclones Have Done.

The months of April and May usually cover the time when the cyclone has its inning in the central valleys of the country. The records of recent years show that at about the first of May the cyclone season is at its height, although some of the frightful storms have not occurred until a month later.

Scientists have struggled with the cyclone problem for many years, but much of the mystery surrounding its origin is unexplained; also the reasons of the prodigious power it exerts upon objects in its path. They agree, however, on one thing, and that is the name. Cyclone, they say, is a misnomer, the correct designation being tornado, but the people who have actually wrestled with the monster and have seen it tossing their residences about in midair call it a cyclone, and cyclone it will be. Scientifically the cyclone is the storm that sweeps over the South Atlantic Ocean, with a diameter of from 100 to 1,000 miles.

The tornado travels in much smaller form, but in its reduced dimensions it has all the concentrated energy of the ocean storm. The diameter of the tornado is seldom more than 100 yards and frequently much less than that. It has been known to travel straight along a country road for more than a mile, wrecking everything in its path, but not injuring the fences on either side. The diameter of this tornado could not have been more than 80 or 90 feet, but its power was almost beyond belief.

But the curious freaks worked by the cyclone of the Kansas variety command more attention than its tremendous force. On one occasion the roof of an eight-room house was lifted bodily, carried 200 yards, half way into a grove, where it seemed impossible that it could have passed between the trees, and left lying flat, but upside down, in a vacant spot just large enough to receive it. Occasionally the side of a house is carried away and converted into kindling wood, while the rest of the edifice is quite uninjured.

In one instance, in Iowa, half a double house was shattered to bits, while the other half and the hall were quite untouched, even the carpet on the hall floor remaining unsoiled, and the paper on the wall showed neither spot nor scratch.

In another, the porch of a Kansas house was cut away as neatly as though with an ax, a queer contract being seen in a third case, where the house was destroyed and the porch left standing intact.

In Nebraska the second story of an eight-room house was taken off and the first was left, so little shock being given to the building by the violent removal of the upper half that the clocks on the mantelpieces were not disturbed, and continued to tick as usual.

A still more curious freak was played by the wind in a Kansas dwelling. A double house, with a hall in the middle, stood facing the direction from which the cyclone was approaching. When the storm was seen the residents took refuge in their cave and listened to hear the fall of their home. A terrible crash was heard, and they, of course, supposed that the house had gone. On emerging they were surprised to see the house standing as before, but were almost paralyzed with astonishment to find the northeast wall of the dining-room, which was on the opposite side of the house from the direction the storm came, had been blown out, the furniture, tables, dishes and all other contents had been carried off and crushed to atoms, and no other damage had resulted to any part of the building.

The cyclone which devastated Sherman, Texas, stripped nearly all of the dead of clothing, and from the feet of every corpse the shoes had been wrenched. This is a common trick of cyclones, but scientists cannot fathom it. In many instances the shoes disappear, being either torn to fragments so as not to be recognizable as footwear or carried off to considerable distances and dropped in places where, if found at all, they excited little comment. In several instances, however, the shoes have been found close to the bodies of the dead and in a condition that indicated very powerful electrical action.

Some years ago a shoe was taken from the ruins caused by a Kansas cyclone, and its condition caused no little wonder. It had been ripped from the foot of a man who was killed. The strings were gone and the upper portions, from ankle to sole, were cut into tolerably regular strips from a quarter of half an inch in width. The sole seemed at first glance intact, but a closer examination showed that this portion was pierced by a number of small round holes. They were the holes where the metal nails or tacks had been; the latter had disappeared, melted by the electricity.

Sometimes these remarkable effects are produced without visible injury to the body or to the clothing that remains on it, a circumstance quite unexplainable with our present knowledge. When the clothing is removed it is generally not found, being probably rent into indistinguishable rags, but when it or portions of it are left the wind treats it in the most whimsical manner. In Iowa, in 1885, all the clothing but the coat was torn from the body of a man, this garment remaining almost intact; in Kansas a body was stripped of all save a collar and cravat.

A WESTERN CYCLONE AT WORK.

LOVE VAULTS FROM A CIRCUS MAN'S HOME.

Peter Sells is not the only circus man who has seen Cupid in his act of turning somersaults. Walter L. Main has sued his wife for divorce. He is one of Ohio's best-known showmen and lives in a magnificent home at Geneva, but Mrs. Main refuses to share it with him, and is in California. She was Florence Damon, a young school teacher of Trumbull, Ohio, which was also Main's home. At the time of their marriage, in 1887, Main was a poor country lad, whose natural bent was the training of animals, ponies and dogs. The year before he had been on the road giving performances in a small, round-top tent, and had met with enough success to encourage him to launch out again in a similar enterprise. His wife made and was in charge of the wardrobes, and took tickets at the tent entrance. Main made half a million in the business in fifteen years. Up to 1899 Mrs. Main traveled with her husband, who can not understand her present actions.

W. L. MAIN AND HIS WIFE.

Weather Wit.

"What makes your hands so cold this morning, dear?"

"Oh, I suppose I should call it 'winter's icy grip,' since I've been shaking with the cold."—Judge.

CHAP LOOKED GREEN.

HE PROVED NOT TO BE SO, HOWEVER.

Train Boy Short Changed Him, but He Had His Revenge Later—"Butcher's" Experience with a Well-Known Pinkerton Detective.

The "train butcher" will soon be like Othello, for the railroads are going to abolish him. As a matter of fact, his business has been growing beautifully less for several years, and his disappearance was only a matter of time, anyhow. The "train butcher" is a sharp trader, a most insinuating talker, and wonderfully clever in some things that are not looked upon with favor by those who demand exact justice—and change. But despite his cleverness the "train butcher" occasionally gets bitten instead of being the biter.

Old residents of Missouri well remember the old State warrants issued during the war. They were dangerously like the greenback issued by the Government, and were a source of considerable amusement as well as of trouble long after they ceased to be worth anything. One day a verdant-looking youth boarded a Hannibal and St. Joseph train in Central Missouri, and the "train butcher" at once marked him as easy prey. But the passenger refused to purchase for a long time, only succumbing when the "butcher" made tempting offers. He bought a "Life of Jesse James" and tendered in payment what appeared to be a $20 bill. Of course, the "butcher" was in a hurry to pocket the bill and short change the verdant youth, so he did not scan the bill closely. In making change he "held out" about $16.45, and then hurried away, carefully avoiding the verdant youth for several stations. But "Mr. Butcher" soon detected the Missouri State warrant and hurried back to the verdant youth.

"Say, you gave me a phony bill!" said the train boy.

"What is that?" asked the passenger.

"A counterfeit; spurious bill."

"I guess not," drawled the passenger. "Pap got it in a hos trade during the war, an' he's had it ever since until he gave it to me to go down to St. Loocy with."

"Well, you'll have to make it good," said the train boy.

"Is that so?" said the passenger, arising in his seat. "Well, how about the change you gave me? It was short about $3.30. You tried to beat me and got left. I'm willing to compromise with you, however. I'll give you all your change back except $3.30 and you give me back the bill. Instead of you working me for $3.30 I'll just work you for that amount."

The train boy tried to bluff the passenger, but it was no go, so he accepted the compromise. A week later a passenger stopped him and said:

"I'll buy another 'Life of Jesse James' if you'll accept this bill and give me the right change."

The train boy started, looked at the passenger, and then smiled a sickly smile. He recognized not only the verdant young man of the previous acquaintance, but also recognized one of the smoothest detectives that ever worked St. Joseph for Pinkerton.—Omaha World-Herald.

HEALTHY SELDOM HUNGRY.

Stomach's Pangs Said to Be Felt Because of Imperfect Digestion.

"A thoroughly healthy person is never hungry." Thus says Dr. William Henry Porter of the Strathmore, who is a recognized authority on dietetics. Up to this date a huge appetite has almost invariably been considered as evidence of a good physical condition. Many persons will realize, after weighing the doctor's remark, that their great desire for food at certain times is a warning that all is not well with them. Dr. Porter supports his startling statement by some interesting explanatory facts. The healthy person does not slight his meals, it must be understood, but does ample justice to them. Yet not until he tastes the food before him, says Dr. Porter, does he realize the need of it. He could go about and forget his meal times but for the force of circumstances. The pangs of hunger are felt as an effect of imperfect digestion.

Dr. Porter gives some valuable information on the question which and of what kind shall be the principal meal—morning, noon or night. In speaking of this he said:

"As in the running of an engine, the most intensive consumption of fuel must be just prior to and in accordance with the amount of work to be performed; so, in a man, the time for taking, and the quantity and quality of the meal ingested, or the determination of the 'principal meal,' must be in harmony with the work to be accomplished. If the individual is to begin his daily labors between 4 and 6 in the morning and terminate them between 5 and 6 o'clock in the evening it necessitates the taking of a good and liberal breakfast at an early hour in the morning, from a half hour to an hour before beginning active work, especially so if the last meal of the day previous has been a light one at 6 o'clock, as is the common habit of this class. Habits of this kind naturally call for the heaviest meal, which also may be called the principal meal, at noon, or near that hour.

"On the other hand, if the custom is to rise between 6 and 8 in the morning, and the largest amount of work is performed between 9 in the morning and the succeeding midnight, an entirely different arrangement of the meals must be followed. In this class a light breakfast is in order at about 8 in the morning; a stronger, more substantial meal at 1 o'clock in the afternoon and the heaviest and what justly deserves to be called the principal meal should be taken from 6 to 7 in the evening, because this is more nearly in the middle of the working hours. When the labors are continued until midnight and the hour of resting is after this time a light meal should be taken at 11 o'clock.

"In any of the instances cited, if the foodstuffs taken have been easy of digestion, rapidly absorbed and oxidized, the fires will naturally burn low after several hours' sleep and abstinence from food. On the other hand, if the foodstuffs taken require considerable time for their digestion and are slowly absorbed and oxidized, the heat-producing supply may not be exhausted completely during a somewhat prolonged abstinence from food, or during the hours usually spent for sleeping."—New York Herald.

KNIGHTED BY FRANZ JOSEF.

Cleveland Man Honored by the Ruler of Austro-Hungary.

Emperor Franz Josef, of Austria-Hungary, has made Theodor Kunditz, of Cleveland, a knight of the Order of Franz Josef, one of the highest nonhereditary honors it is in the power of any European monarch to bestow. The decoration is highly prized because of its rarity. There is said to be but one other in the United States, that having been conferred on Dr. Gerster, of New York, in 1893, for his work in assisting Hungarian immigrants who reached New York destitute.

The insignia of the knighthood is a medal or badge bearing the imperial crown of Austro-Hungary and the name of the order, together with the individual number of the person on whom it is conferred. The decoration is about two inches long and an inch and one-half wide, is made of gold, and is of the finest workmanship. In decorating him with the order of Franz Josef the Emperor gave to Mr. Kundtz the right to the use of the prefix "sir" as a title before his name, this being the European custom, but Mr. Kundtz says that he will not avail himself of this right. He will not call himself "Sir Theodor Kundtz."

THEODOR KUNDTZ.

Some years ago, when Count Hagenmuller, Austro-Hungarian Minister to the United States, was in Cleveland for a visit he was entertained very lavishly by Mr. Kundtz, and it is thought Mr. Kundtz's knighthood may have been solicited by the Minister. The decoration was sent through the Austro-Hungarian consul at Pittsburg. With it was merely a formal letter announcing that the honor had been conferred by Emperor Franz Josef.

During all the years that Mr. Kundtz has been a prominent and successful manufacturer in Cleveland he has done a great deal to assist his less fortunate fellow countrymen. He has given much money to hospitals and other charitable works. Last summer he made a business and pleasure trip to his native land, and it is thought he contributed to some of the charities there. The decoration is one that is not given to those who seek it.

Farm Names Have Value.

"It is a wonder to me," remarked the dairyman as he sold a lot of eggs that came from a farm whose name is known all about this section for the excellence of its products, "that farmers do not name their farms more frequently and so establish a sort of trademark for their produce. They would do it, I am sure, if they only knew how much it adds to the value of the stuff they send to the markets. I have scores of customers who will buy only milk, eggs, chickens or other produce they want that comes from a certain farm and is so stamped.

"There are a score or more of gentlemen farmers who appreciate this, and who have given fanciful names to their places and so at once added to the value of their produce. It also adds at once to the value of their property, for the name very quickly becomes known, and people who are looking to buy country places are willing to pay more for one that has an established name and reputation. Now, Jones' farm or Smith's farm does not mean anything to the average buyer, but call it 'Edgewood,' 'Ivanhoe,' 'Lookout' or any other fanciful name and it at once obtains a market value it never had before and without the expenditure of a penny. It is a queer short-sightedness that has led farmers to overlook this, for they are usually shrewd enough in other respects. If they would name their farms and furnish good stuff from it for a couple of years they would find that the value of their property had doubled in that period."—New York Times.

A dog has to have a fight about so often to be healthy.

CHILD LOVE.

Two little arms were clinging,
And a little head was pressed
(The rosy face all hidden)
Closely against my breast.

"What is it, dear?" I questioned,
Caressing the golden head.
Whispering sweetly and shyly,
"I love you!" the darling said.

What had I given to win it—
This offering pure and sweet?
A story told in the twilight,
A merry word when we meet?

Oh, child love, so gladly offered,
So easily won, I pray
Through life I may find this treasure
Mine, as it is today!

There are trials to meet and vanquish
And sorrows crowned with the years,
And lips curve less to smiling,
And eyes fill oft with tears,

But the heavy heart grows lighter,
Half of its grief beguiled,
When love, with a heaven born impulse,
Speaks from the lips of a child!

—Home Notes.

ALUM IN FOOD.

How Can the Danger Be Avoided?

The reported cases of poisoning from the use of alum baking powder have awakened the public to the serious danger which menaces the health of the people of this country in the numerous alum powders which are urged upon consumers.

Generally, alum powders may be known from the price at which they are sold, or from the fact that they are accompanied by a gift, or are disposed of under some scheme. The alum powder costs but a few cents a pound to make, and is often sold at twenty or twenty-five cents a pound; sometimes as low as ten cents.

It is impossible to name all the alum powders in the market, but any baking powder sold at a low price or advertised as costing much less than the well-known, high-class powders, or accompanied by a present, or disposed of under any scheme, is of this class, detrimental to health and to be avoided.

These facts should incline consumers to turn a deaf ear to all importunities to buy the inferior powders. The wise housekeeper will decline in all cases to take them.

Fished For Its Dinner.

"Looking over my neighbor's fence one day," says a lover of animals, "I was surprised to see on his doorstep these queer companions: A beautiful white sea gull and my neighbor's pet cat sitting quietly together.

"Becoming interested, I jumped the fence and asked Jones about his feathered pet. He told me that some boys had shot the gull a few days before and broken its wing, and as they were passing his house he noticed the poor, suffering thing and bought it. He bandaged the broken wing, and the gull, seeming to understand his kind intentions, became quite tame and nestled its pretty head against his hand.

"Jones entertained me by showing how the gull usually took his meals. Bringing a plate of oysters and a fork, he called 'Goosey, goosey, goosey!' and the bird came running to him. Then he held out an oyster on the fork and the gull seized it quickly with its yellow bill and ate it as demurely as if oysters had been served to it in this way all of its days.

"The oddest thing occurred one day when my neighbor gave the gull some small pieces of meat for dinner. He placed the meat on the ground near the gull, but the gull, espying a pan of water near by, took the meat piece by piece and, walking over, dropped it into the water. Then, true to its nature, it began fishing for its dinner."—Christian Advocate.

George III and the Wigmakers.

When George III ascended the throne of England, his wealthy subjects were beginning to leave off wigs and to appear in their own hair, "if they had any." As the sovereign was himself one of the offenders, the peruke makers, who feared a serious loss of trade, prepared a petition, in which they prayed his majesty to be graciously pleased to "shave his head" for the good of distressed workmen and wear a wig, as his father had done before him.

When the petitioners walked to the royal palace, however, it was noticed that they wore no wigs themselves. As this seemed unfair to the onlookers, they seized several of the leading processionists and cut their hair with any implement that came most readily to hand.

From this incident arose a host of curious caricatures. The wooden leg makers were said to have especial claims on the king's consideration, inasmuch as the conclusion of peace had deprived them of a profitable source of employment; hence the suggestion that his majesty should not only wear a wooden leg himself, but enjoin the people to follow his laudable example.

Victoria's Proposal.

It was at Windsor castle that Queen Victoria, then only a girl of 20, did what she described as "the most nervous thing a woman was ever called on to do"—when she summoned the young Prince Albert of Saxe-Coburg Gotha to a private interview and "proposed" to him. She had first met him when as a boy of 17 he came with his father to England, and when, three years later, he "made no secret" of his love for his fair cousin "no one was surprised and every one was delighted."—London Tit-Bits.

Japanese Story Tellers.

Professional story tellers roam from house to house in Japan to spin their yarns. In the city of Tokyo there are about 600 of these professional romancers. Their pay averages 20 cents an hour. When the story teller discovers that his romances are becoming dull from frequent repetition, he moves into a new district.

THE AWAY-FROM-HOME GIRL.

"WRITE your home letters regularly and keep in touch with your parents and old friends by weekly correspondence," writes Margaret E. Sangster in the Ladies' Home Journal, addressing girls who have gone from home into the world to seek their livelihood. "Never let a Sunday afternoon drift out without your hour spent in an intimate and loving letter to the dear mother. This is a good occupation for Sunday, and I can hardly tell you how minute and confidential and affectionate this writing should be. But there is no need. You know what you like to hear from home, and what mother and father most long for, when your letters come. I follow those letters. Mother is in the kitchen, washing the dishes. She wipes her hands and sits down in the low rocking-chair by the window, where the lilac is beginning to bud. Father stands between the table and the door, waiting to hear what you have said, and aware that he must wait until mother has satisfied her heart with the first reading. Then it will be his turn. To them both you are, and you will always be, just their own little girl, and you can never send them a line which they will not scan with eagerness. So never put off your family at home with a scrappy, hurried scrawl; take time, and tell them everything."

Value of the Disciplined Mind.

The world needs men and women who are sufficient unto themselves, able to stand alone and make the most of trying and unpleasant conditions. The discipline of the life should be to make our knowledge and resources available for practical use. What matter it that we read every book in the world, and gain all the knowledge that science and art can teach us, if we cannot put this information to use either to the profit of our minds or physical conditions? This greatest use of knowledge and culture is not for money-making, for achieving material success in the struggle for life, but to sweeten and discipline ourselves. The philosopher who has gained the true key to knowledge stands aloof from the thronging crowds of eager money-makers and reputation seekers. He is content to know that the visible attainments of life are not the highest and dearest. Others may strive for them, but he longs for the intellectual pleasures which come only to the disciplined soul.—A. S. Atkinson, M. D., in the Woman's Home Companion.

American Women Honored.

American women who have been made Ladies of Grace, of the order of St. John of Jerusalem, by King Edward. They received the honors for the work they did toward fitting out the hospital ship Maine, which was sent to South Africa.

MRS. BLOW. MRS. CORNWALLIS WEST.

Letter Writing.

Apropos of letter writing, how many women make the mistake of not sufficiently revealing their identity in a business communication. Many feminine correspondents still leave much to be desired in this matter of identity, both as regards clearness and dignity. "M. A. Smith" looks business-like enough, but how is the recipient to know whether it is a man or a woman? A woman in a business letter to an equal should always sign herself in full: "Mary A. Smith," prefixing "Miss" in parentheses if she be a spinster—if a married woman with her husband living, with Mrs. John B. Smith" in parentheses below her own name.

A Heroine.

Miss Hannah R. Richards, the pretty daughter of Farmer Joel Richards, of Thorofare, N. J., is a heroine, of whom all the residents of that little town are justly proud. The distinction thus suddenly thrust upon her came through the capture of a runaway horse in Gloucester, and the saving thereby of the lives of two children. Several men had tried in vain to stop the frightened animal. Miss Richards said:

MISS RICHARDS.

'I don't think I deserve all the praise I am getting, but I couldn't see those children killed, and when the horse turned the corner I just ran out and caught him by the bit and held on until he stopped. I am glad I saved the children."

The Conversational Hop.

The "conversational hop" is conducted in this way. Distribute among the company cards on which are written twelve subjects for conversation, duly numbered. The men should then choose partners for each subject, putting the lady's name on their cards and theirs on hers at the subject they are to talk on. At a signal given by the hostess the partners take their places, tete-a-tete all through the room; the conversation must be exclusively upon the subject designated upon the cards. When the conversational hop is finished—that is, all the twelve numbers talked out, votes are cast by the ladies for the best conversationalist among the men and by the men for the best among the girls. Prizes are awarded accordingly.

The prevalence of tucks accounts for the great popularity of the yoke. It is a more simple matter arranging the full tucked skirts on a well-fitting, becoming, shaped yoke, than bringing all of the fullness into the waist band and getting the tucks to set in just the approved way over the hips. The becomingness of the yoke is seldom questioned, especially the yoke known as the "tailor shape" that has a decided dip at the back. Even this particular shape has its variations. Sometimes it boasts a triple effect, often it is scattered and more often slashed at the middle.

For women with pretty arms this will be a delightful summer, if those so gifted are inclined to display their physical attractions. In ten new models for summer waists displayed to a class of ambitious seamstresses, not one waist of the ten had long sleeves. All were cut off either just above or just below the elbow and below the cut-off part there was slipped in a big puff of soft goods. This style of sleeves will be almost universal, and this means that, when the warmth of June shall have melted into the torridness of August, the undersleeve will reign supreme.

Bolero jackets, with or without sleeves, of heavy white, black or ecru lace, are worn over velvet, silk or satin waists. For theater wear, the lace designs are sometimes outlined with gold and rows of gold paillettes, or even the entire jacket is made of gold braid and cord, in renaissance pattern. These all-gold jackets appear to the best advantage over waists of velvet of a deep, rich color, or over ivory white satin waists.

Boudoir Chat.

The beautiful women of Marie Antoinette's court are said to have used the most simple toilet preparations for keeping their skins fresh and rosy. Lemons were supposed to be a cure for discolorations of the skin, and were used freely in the bath. Cucumbers and strawberries were also supposed to play an important part in the preservation of beauty. A delightful cucumber cream was made from cucumbers, sweet almond oil, white wax, spermaceti and lanolin, the proportions being four cucumbers, six ounces of sweet almond oil, an ounce of white wax, an ounce of spermaceti and two ounces of lanolin.

Will Cross Ocean Alone.

Madame Neilson is a name that will be written in large letters on the scroll of fame should she successfully accomplish the feat that she has determined upon—a trip across the sea in an open sailboat. Madame Neilson, who lives in Philadelphia, is generally known as a spiritualist, and she will be unaccompanied on her long age save by the spirits that she may be able to invoke. Her venture is to be made in acceptance of the offer of a prize by Capt. Blackburn, of Gloucester, Mass., to the woman who will make the quickest trip, across the Atlantic to Lisbon, Portugal, in a sailboat, alone. The madame is a quarter-blood Indian.

MADAME NIELSON.

Remedies for Cold Sores.

You can use nothing better for cold sores than pure glycerine; peroxide of hydrogen is also good. Apply with a bit of absorbent cotton the moment the little disfiguring blister begins to form, says the Philadelphia Inquirer. You might also try the following—have it prepared by your druggist: Oxide of zinc, 30 grains; cold cream, 1½ ounces.

Patents Granted to Women.

Since the Patent Office was first established in 1790 only 5,757 patents have been granted to women. There are other interesting figures. There have been 415 patents issued to colored men, of whom 28 were granted to one inventor and 22 to another. More than 80 per cent of the patents issued are to citizens of the United States.

A Chinese Proverb.

"You cannot prevent the birds of sadness from flying over your heads. But you can prevent them from stopping long enough on your shoulders to build their nests in your hair."

IRRIGATION ITEMS.

MACHINERY FOR IRRIGATION.

The adoption of petroleum as a fuel by some of the western railroads and the discoveries of the vast California oil deposits direct special attention to this question of fuel in the western States where coal is such an expensive commodity. It would seem that the California and Texas oil fields may supply the West with motive power, and the discovery of oil is hastening the adoption of oil-using engines.

In many of the smaller irrigation systems power is employed extensively in getting the water to the land. Where coal and wood are expensive it is often advantageous to use engines operated by gasoline, distillate, kerosene, or crude oil.

A recent visit to the large Chicago warehouses of Fairbanks, Morse & Co., showed a great number of types of engines and pumping machinery used in irrigating—petroleum engines, and those using gasoline, kerosene and distillate, steam engines, boilers, windmills, &c.

"If a considerable quantity of water is desired, but it is necessary to raise it only a short distance," explained the sales-manager, "then a centrifugal pump would be a desirable type. If, however, water is to be taken from a greater depth than would be available for an ordinary suction pump, a good machine would be a combined engine with gear and box forming a part of the engine, the base being extended and arranged to carry the gearing. A special form of clutch is used for disengaging the gear to facilitate starting, or so that the engine may be used for other service without disconnecting the pump.

"Another interesting method of pumping from a well is seen in the work of a combined engine and air-compressor. The water is literally blown out by the air forced into the well. A pipe is placed within the well casing and as the air is forced into that pipe the water is forced out in a continuous stream.

"This particular engine," remarked the manager, pointing to a modest-looking machine, "will pump out 42,000 gallons per hour.

"The development of pumping machinery in the United States within the last few years has been remarkable. We have reached a high degree of perfection in this as well as most other classes of machinery, and American pumps and engines easily lead the world."

Mostly Government Land.

In connection with the much-discussed proposition for the Government to provide storage reservoirs for irrigation in the West, it is interesting to note the large proportion of public land yet remaining in some of the Western States and Territories. In Arizona, 76 per cent of the land belongs to the General Government; of California, with all its great private development, 58 per cent. is public land; of Montona, 78 per cent. remains public; in Utah, 89 per cent. belongs to the United States; in Wyoming, 86 per cent.; in Idaho, 89 per cent., and in Nevada, 95 per cent. belongs to the Federal Government.

With title to all this vast acreage yet remaining in the General Government, it would seem to be the part of wisdom for that Government to provide the means for its improvement and settlement.

Differs from the American Way.

"The Forestry and irrigation problems in almost all the countries of the old world are solved by the respective governments. The comparatively small country of Sweden,," says National Irrigation, "owns 20,000,000 acres of forest lands. the income from which maintains numerous forestry schools besides yielding a handsome revenue to the State. Germany and France both have extensive forestry departments and Spain controls all irrigation works. The general government is always the logical manager of both classes of such work, for successful irrigation development depends not only upon proper supervision, but likewise upon a comprehensive forestry system which will protect this important source of irrigation supply."

"It is evident that Congress must soon take steps for national control of the whole irrigation problem," says the Chicago Inter Ocean. "From the one hundredth meridian to the Sierra Nevada, except in a few districts, water must be economized that men may live. The region in question is capable of supporting a vast population if only its residents can arrange for a fair division of the water supply."

The canals of the United States are 4,590 miles in length. And there are fourteen times four thousand five hundred and ninety miles of canals that need to be built before our arid region shall have reached a fair degree of development.

Throughout great areas, the summer flow of waters is not sufficient to maintain irrigation. But with the winter and spring flow impounded in storage reservoirs and then let down as needed, millions of acres can be reclaimed and dotted with farm homes.

Ordinance No. 71.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. It shall be unlawful for any person to hunt, pursue, take or kill or have in his possession within the two years next after the Twenty-third day of January, A. D. 1901, any Japanese or Mongolian Pheasant, within the County of Inyo.

SECTION 2. Every person who, in the County of Inyo of the State of California, within two years next after said 23d day of January, 1901, hunts, pursues, takes, kills or destroys or has in his possession any Japanese or Mongolian Pheasant is guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the county jail not exceeding fifty days or by a fine of not more than fifty dollars, or by both such fine and imprisonment.

SECTION 3. This ordinance shall take effect fifteen days from and after its passage, and all ordinances and parts of ordinances of said Board of Supervisors of the said County of Inyo in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the member of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week, said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo State of California.
{SEAL}

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No 71 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 8th day of January, A. D. 1901, by the following vote:

Ayes: N. J. Cooley, T. C. Boland, J. A. McKenzie, W. P. Yaney, James Jones.
Noes:——

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.

Ordinance No. 72.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male person over the age of twenty-one and under fifty-five years of age, found in each Road District in the County of Inyo State of California, between the first day of March, 1901, and the thirty first day of December, 1901, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time between the first day of April, in the year A. D. 1861, and the first day of September, A. D. 1865, and who have not paid the same in some other road district, must pay to the said County of Inyo, a Road Poll Tax of Two Dollars provided the same be paid before the first Monday in July, 1901, but if not paid prior to the first Monday in July then it shall be Three Dollars.

SECTION 2. Said Road Poll Tax shall be collected by the Assessor of the said County of Inyo, in the same manner that State Poll Taxes are collected, and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the several Road Districts of the said County of Inyo from which said Road Poll Tax was collected.

SECTION 3. This ordinance shall take effect and be in force from and after fifteen days from its passage, and all Ordinances and parts of ordinances of said Board of Supervisors in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the Inyo independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
Chairman of the Board of Supervisors of the County of Inyo, State of California.
{SEAL}

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance, No. 72, was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board on the 10th day of January, A. D. 1901, by the following vote:

Miss L. Landrum and Miss Mary Mulholland left for Big Pine yesterday morning.

Crom Harper and his brother, Will Harper, will start some time next week for Tonapah.

Mrs. Beale and children, of Candelaria and Miss Fay, of San Francisco, are visiting Treasurer Bunney's family.

Wm. Baker, Ed Ober and Mrs. Allingham, of Big Pine, were visitors at the county capital on Tuesday last.

It is reported that over one hundred men will leave Randsburg for the Tonapah mining camp in Nevada.

The Inyo contingent at Tonapah is reported as doing well, and laying a solid foundation for future wealth.

Word has been received from Tom Ferguson at Tonapah stating he has a lease on a mine and is doing well.

Mrs. M. Mulholland went to Big Pine Tuesday on a visit to friends and to attend the Decoration Day ceremonies.

Paul Pfefferle, one of the old-time miners of the Darwin section of country, died at the County Hospital on Sunday last.

O. H. Hill, the genial host of the Valley View Hotel, came down from Bishop last Monday evening, returning next morning.

Miss Mamie Hession was a passenger for Big Pine Tuesday. Miss Mamie will visit relatives and attend the Memorial services.

A few days ago a prospector brought to Lone Pine some gold ore, from five pounds of which he mortared out $200 worth of gold.

Harry Mead passed through town Tuesday morning with his big team on his way to Mojave for a load of freight far the Bishop merchants.

Harry Shaw, one of Mono's Supervisors, Frank Shaw and Johnny Kewley, of Bishop, and Wm. Edwards, of Benton, were in Independence yesterday on land business.

Arthur Smith left for Los Angeles last Monday evening. Arthur has been on the sick list for some time, and goes to the California Hospital in Los Angeles for medical treatment.

Miss Georgia Johnson came out from Mound House last Thursday on a special, being summoned by the critical illness of her mother, Mrs. O. H. Hill, of Bishop.—Hawthorne Bulletin.

Tracy N. Stebbins, who lately sold the "O Be Joyful" group of mines near Ballarat, was a visitor in Independence on Saturday and Sunday last. He left for Los Angeles Monday afternoon.

J. J. Gunn and his brother, Tom Gunn, left on Tuesday morning's train. Mr. J. J. Gunn goes to San Francisco and Tom will visit Tonapah and see for himself the future possibilities of that much talked of mining camp.

Surveyor J. J. Booker started for Tonapah Wednesday. His mission is to survey the county line between Esmeralda and Nye counties in order that we may determine in which county the new mines are situated.—Walker Lake Bulletin.

If Independence intends celebrating the coming Fourth of July it is high time a move were being made. Our people are likely to go elsewhere for celebrating of the day if nothing is done to keep them at home. If our business people would all act together in this matter we feel certain that a program could be arranged and carried out that would do us credit and be a source of pleasure to outside visitors.

About Tonapah.

The last returns from ores shipped have been so good that every one is happy, and we are certain of being able to make this camp a second Comstock. The returns are as follows. Dunlap, Douglass and Stewart, 302 ounces silver and $75 gold. Brougher, 423 ounces silver and $78 gold; Dan Fitzpatrick, 300 ounces silver and $86 gold.

The only drawback is the infernal climate. The wind blows a gale every other day, and the thermometer goes to the freezing point as often. Yesterday Butler Peak and the hills adjoining were covered with snow, and ice formed in the houses. But we don't care about little things like that, for good mines, good fellows and good money make everything lovely. Every once in a while some fellow comes in from the outside and wants to be bad, but gets called down "pretty pronto," for it is the determination of the men here to make people keep the peace. We have had no trouble so far and do not want any dime novel heroes with two or three six shooters on and a machete between their teeth shooting up the town. Almost all the men here have traveled and seen enough of that work to be tired of it, and are about as hard men as any bad men ever ran against, so anybody coming must understand that they will make a good Injun of him if he don't be have.

The roads are in good condition and the teams and stages come in on time. In a little while it will be possible for a man to find a bed to sleep in, but at present it is as hard to find a bed as a 40 carat diamond.—Volcano in Walker Lake Bulletin.

Mazourka Canyon

Dave Pobst and E. M. Huntley are working some new ground in the Pobst gulch which is yielding good returns. It would be interesting to know just how much gold had been produced from this gulch by the dry washers.

D. S. West has about eighteen feet of pay gravel in the Al Rose canyon. H. Detels is also stripping in the same locality.

The Mazourka Mining & Water Co., are still drifting for bedrock in the main channel. An unfortunate accident occurred this week at the works. The store room, which was situated in the main tunnel about fifty feet from the face, caught fire from some unknown cause and consumed a large quantity of provisions and materials.

Times Have Changed.

Some Americans who had long lived in England spent last Summer in Maine, and wishing to play golf, got permission from the farmer to use some pasture land, and there laid out links.

The farmer's old servant, scandalized by the sight of tall, athletic girls in scarlet coats, armed with iron-hoofed clubs, striding over the fields, one day reported to his master:

"Them girls in the pasture scare our cows!"

The farmer scratched his head. "Hiram," came his leisurely answer, "times is changed since we was young. Used to be the cows scared the girls!"—Youth's Companion.

A Remarkable Success.

A remarkable success has been achieved by the management of the Los Angeles Herald in the building up of that paper, and in the Sunday edition of The Herald this fact is particularly apparent. The Herald issues a Sunday newspaper and magazine combined that is fully equal to any in the west, if not in the whole country. The illustrated magazine supplement is always filled with intensely interesting matter, and superbly illustrated. The regular features compare favorably with the best papers.

Our Oil Fields

The 50 Oil Company, which owns 1,920 acres of selected oil lands south of Owens Lake, is now definitely organized and ready for business, and has issued an attractive prospectus. J. L. Cooke, the president, who is familiar with the property of the company and who is a man of both experience and judgment, says that he feels certain of the future on account of the splendid indications of oil that exist on the company's lands.—Mining and Engineering Review.

The past week of cool weather has put a stop to the rapid melting of snow in the mountains. As it was the river, creeks and ditches were bank full of water, and had the warm weather continued nothing could have prevented the streams from spreading out over the country.

The practice of the storing of waste waters for irrigation smacks considerably of the method of the careful husbandman, who, during the time of plenty, lays away an ample surplus against the season of scarcity and want.—National Irrigation.

Nearly every day parties are passing through Independence en route to Tonapah. If the travel from other points is as great as it is from this section, Tonapah will soon have a larger population than any other camp in Nevada.

A meeting will be held at the Pavilion Sunday afternoon at 2 o'clock for the purpose of reorganizing the Independence Athletic Club. All persons interested in the matter are requested to be present.

Trout fishing is the fad now-a-days. E. L. Fletcher, as a disciple of Isaac Walton, has caught as many as three of the finny beauties during a week of constant angling.

SUPERIOR COURT PROCEEDINGS.

Hon. Walter A. Lamar, Judge.

In re estate of Charles C. Steward—Anna Steward appointed Administratrix of the estate of Charles C. Steward with bond fixed at $400.

In re estate of Joseph J. Steward—Anna Steward appointed administratrix of the estate of Joseph J. Steward with bond fixed at $600.

INTERNAL REVENUE CHANGES.

Documents Made Free of Tax on Which Stamps are Now Placed.

Changes of importance in the internal revenue taxation go into effect July 1st. The last congress reduced or repealed a portion of what are known as the "war taxes," and, as a result, after July 1st, next, it will not be necessary to stamp checks, telegraph messages and a number of other written instruments that, for some three years past, the people have been required to pay a "war tax" on. Here are the documents made free of tax on which stamps are now necessary:

Demand bank checks and drafts.
Bills of lading for export.
Certificates of deposit.
Certificates not otherwise specified.
Sight drafts.
Express receipts.
Money orders.
Mortgage conveyance in trust.
Power of attorney to vote.
Power of attorney to sell.
Promissory notes.
Protest blanks.
Telegraph messages.
Warehouse receipts.

The following reductions on business documents are also made to take effect at the same time:

Foreign bills of exchange, 4 cents for each $100; changed to 2 cents for each $100.

Bonds of indemnity, 50 cents.

Conveyance, exempt below $2500; above $2500, 25 cents for each $500.

Bankers' capital and surplus, $50 for $25,000, and $2 for each additional $1000.

Bonds, debentures, certificates of indebtedness, etc., 5 cents for each $100.

Brokers' contract, 10 cents.

Certificates of stock, original issue, 5 cents for each $100.

Certificates of stock, transfers, 2 cents for each $100. (Amended to include bucket shops.)

Time drafts or bills of exchange, inland, 2 cents for each $100.

Freight receipts or domestic bills of lading, 1 cent.

Stock brokers, $50.

What Nature Intended.

If the position of women in France is not particularly enviable from the point of view of the English-speaking nations, it is undoubtedly superior to that of a century ago. A curious document has been preserved as indicating the temper of some Frenchmen of that generation. It was originally presented to the French legislature, and reflected masculine sentiment to a somewhat astonishing degree.

It abounds in "whereases"; and, being an argument upon the fact that maternal love, marriage, filial piety and gratitude antedated the invention of printing, of the alphabet or of writing, and can exist without book-learning, asserts that it is the intention of a wise nature that woman shall be occupied with the duties of the household.

Then it proceeds calmly to affirm that a woman who cannot read is modest and retiring, timid and shrinking, while the tendency of those women who can read and write is toward a boundless conceit; and furthermore, that nature, in giving to woman prodigious aptitude for speech, seems to have wished to save her the trouble of reading.

As if this were not enough to excite all womankind to righteous wrath, the whereases proceed to assert that a woman usually loses in morals as she gains in knowledge, and that since women have entered the professions the nurse has neglected the nurselings, the cook her cooking and the saleswoman her goods, while young girls have become argumentative, and treat their mothers as imbeciles.

As the result of this grevious exposition of the evils of feminine learning, it is "resolved" that neither maid, wife nor widow shall put hand to pen; that the needle and the distaff shall be left to women; that the province of womanhood shall be the sentiments of the heart; and that each sex has its appointed place, and should keep it.

This pleasant arraignment excited considerable discussion and brought forth some expressions of unqualified approval, but it finally expired of its own general imbecility. Even the extraordinary Frenchman of that period could not quite stand for such differentiation of the sexes.—Youth's Companion.

For Sale or Rent.

House of six large rooms on the Main street, Independence, furnished or unfurnished. Three lots, fruits and berries of all kinds. Hot and cold water in house. Bath room, pantry and closet.

Will rent for a long period or sell on the installment plan. Terms, reasonable.

Appiy to
CHAS. WALTER,
Independent Office.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains on Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office Reno. aug2-tf

Letters Proving

Positively that there is No Medicine for Woman's Ills Equal to Lydia E. Pinkham's Vegetable Compound.

PROFUSE PERIODS.

"I commenced taking Lydia E. Pinkham's Vegetable Compound about three months ago, and cannot express the wonderful good it has done me. Menstruations were so profuse as to leave me very weak for some time after. Was also troubled with leucorrhœa, tired feeling, bearing-down sensation, pain across the back and thighs. I felt as though there was a heavy weight in my stomach all the time. I have taken two bottles of the medicine, and now have better health than I have had for four years."

MRS. LIZZIE DICKSON HODGE, Avalon, Ohio.

CHANGE OF LIFE.

"I was taken sick five years ago with 'The Grippe,' and had a relapse and was given up by the doctor and my friends. Change of Life began to work on me. I flowed very badly until a year ago, then my stomach and lungs got so bad, I suffered terribly; the blood went up in my lungs and stomach, and I vomited it up. I could not eat scarcely anything. I cannot tell what I suffered with my head. My husband got me a bottle of Lydia E. Pinkham's Vegetable Compound, and before I had taken half of it I began to improve, and to-day I am another woman. The Pinkham's medicine has saved my life. I cannot praise it enough."

M. A. DENSON, Millport, N.Y.

$5000 *will be paid if this testimonial is not genuine.* Lydia E. Pinkham Medicine Co.

Knowledge of grammar comes into practical use when the blushing maid says "No" twice.

QUEEN VICTORIA'S HAIR.

Its Profusion, at Her Age, Has Always Been a Wonder.

Over 80 years old, Queen Victoria had luxuriant hair, which had for years been a marvel. The court physician, following Professor Unna's discovery, had treated her Majesty's scalp with a germ destroying preparation, which he had always kept secret. It is now known, however, that the remedy for dandruff, the germ destroying element, is embodied in Newbro's Herpicide, the only hair preparation on the market that does destroy the dandruff germ. Without dandruff, hair will grow profusely, and falling hair will be stopped. "Destroy the cause, you remove the effect."

E. W. Grove

This signature is on every box of the genuine **Laxative Bromo-Quinine** Tablets the remedy that cures a cold in one day

HOW'S THIS?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

Tipping the Butcher.

Did you ever buy your own steaks and get the worst in the shop nearly every time? An old friend has had that misfortune, and he is always willing to pay two or three cents more a pound than any other customer. Having listened calmly to his tale of woe, I inquired if he had acquired the practice of tipping the butcher. Tipping the butcher? No! He thought it was a sufficient tip to offer the two or three cents more a pound. "That offer," I tried to explain, "goes to the proprietor direct, or his block man thinks you are trying to make a thief of him by inducing him to hold out for himself the extra price. It will never work.

"Just say to your cutter: 'See here, old chap, I've been dissatisfied with my steaks for some time. Come out and take a drink, and tell me how to select good meat.' He's too busy. Then slip a dime into his hand and say, 'Have a glass of beer when you get out,' or a quarter and say, 'Have a smile with me when you have time.' Repeat this performance and presently your steaks are the delight of home. In the busiest private market in New York it is the rule to tip the butchers. You can get nothing fit to eat without it."—New York Press.

Information.

The citizen looked helplessly at the piles of drifted snow that lay on the sidewalk in front of his house.

"What would you take to clean this walk?" he said, addressing the first man who came along.

"A shovel, sir," responded Mr. Ruffon Wratts, Walking Delegate of Jewelers' Union, No. 247, passing on.—Chicago Tribune.

Cross Tobias.

"But, my dear Tobias, remember that you may die at any time."

"Die, did you say? Die? That's the last thing I'll do."—Sondags Nisse.

The Destroyer.

"I'm afraid poor old Hithard is done for. His locomotor ataxia is too much for him at last."

"What make of automobile is that?"—Smart Set.

Rural Art Criticism.

Impressionist Artist—I paint things as I see them.

Farmer Wayback (kindly)—Do ye, naow! Don't ye think that mebbe some liver medicine would do ye good?—Sommerville Journal.

An Easy Matter.

"The reason some men don't get along happily," said Mr. Meekton, "is that they don't know how to manage a wife."

"You know this?" was the skeptical query.

"Certainly. It is the simplest thing in the world. All you have to do is to say 'yes' whenever she wants anything and always let her have her own way."—Washington Star.

Good Name.

"The new American consul general at Hongkong is named Rublee," remarked the Observant Boarder.

"Rub Lee," repeated the Cross-Eyed Boarder; "how suggestive of washee-washee!"—Philadelphia North American.

An Inquiry.

Miss Beansby—Perhaps you haven't read all of Omar Khayyam?

Mrs. Porkchopp—Perhaps not. Has he written anything recently?—Puck.

His Customary State.

"Your friend Tackey is 'way off in Honolulu now.' Doesn't that surprise you?"

"It does and it doesn't."

"Heard he was going there, eh?"

"No, I didn't know he was in Honolulu, but I knew he was 'way off even when he was here."—Philadelphia Record.

Not Hard to Suit.

Executive—I would appoint your man, but he is too ignorant for the police force.

Heeler—Den put him on de school board.—Moonshine.

They Pass.

Daughter—But he is so full of absurd ideals.

Mother—Never mind that, dear. Your father was just the same before I married him.—Brooklyn Life.

An Objectionable Word.

Weary—What kind o' shavin' soap does yer use?

Dreary—Don't speak o' soap; yer jar me.

Engagement Confidence.

"You trust me thoroughly, don't you, Ethel?"

"Of course, Edgar; but, tell me, are the installments on this diamond ring all paid off?"

No Vernal Joy.

"I pity the rich."

"Why?"

"They know nothing of the joys of spring, for they have lettuce the year round."

Little Angel.

"Does Bobby cry much?"

"No; he doesn't cry at all unless he wants his own way about something."

Fair Enough.

Disgruntled and Umbrellaless Citizen—You played thunder, didn't you, in predicting fair weather for to-day?

Weather Prophet—Well, it is as fair for one as it is for the other, isn't it?—Puck.

Afterward.

She—How did you come to propose to me, Harry?

He—Um—er; I think I came in a street car. I didn't have the price of a cab.—Detroit Free Press.

Roosevelt Never Dodged Trouble.

"When Theodore Roosevelt was a little boy he and a playmate used to walk together to a private school," says the Ladies' Home Journal. "Their way took them past a public school. One day young Teddy appeared in a new sailor suit. This was too much for the public school boys. To them the suit was the distinguishing mark of a 'dude.' The sneering crowd planted itself across the sidewalk. Teddy and his chum, seeing trouble ahead, came on with fists clenched, and the battle began. A few minutes later the 'dude' and his companion went on their way somewhat less tidy than when they started, but leaving behind them a tamed and lame bunch of surprised boys. For a week there were daily fights with the same results. One morning after an especially hard battle, young Roosevelt said to his friend: 'Let's go around the block and come back to fight 'em again.'"

A small boy sometimes gets all the candy he can eat, but never all he wants.

The man who lacks faith in his ability seldom accomplishes anything.

THE DEADLY COBRA.

How Venomous Creature Is Handled by Hindoo Snake Charmers.

The creatures were on the defensive, but not one of them attempted to strike at the master, who sat serenely in front of them, so long as he did nothing to annoy them. Kullan talked to them as if they were his dearest friends. After a time one or the other of them would lower its head, collapse its hood and begin to try to wriggle away. Whereupon Kullan would give it a smart little rap on the tail with his stick and bring it instantly to attention again. Whether this man possessed any special magic over these cobras or whether the description given below of how he could handle and play with them was simply due to his method I cannot say. He himself repudiated the idea of magic and asserted positively that any one who had the necessary nerve and dexterity could do exactly the same.

He used no reed instrument or music of any kind to propitiate the reptiles. He would simply squat on his haunches in front of them, and, after they had been hissing and swaying their uplifted heads backward and forward for a few minutes, he raised his hands above their heads and slowly made them descend till they rested on the snakes' heads. He then stroked them gently, speaking all the time in the most endearing Hindoostanee terms. The serpents appeared spellbound. They made no effort to resent the liberty, but remained quite still, with heads uplifted, and seemed rather to enjoy it. Presently his hands would descend down the necks about three inches below the heads, his fingers would close loosely around the necks, and he would lift them off the ground and place them on his shoulders. The looseness of the grip appeared to be the main secret. The snakes, being in no way hurt, would then slowly crawl through his fingers and wind themselves round his neck, his shoulders and his arms. They appeared to realize that no harm was to be done them, and they made no effort to resent the handling. He would pick them gently off one arm and place them on the other and, in fact, stroke them and pet them as if they had been a pair of harmless worms.—Cornhill.

Cases of Queer Revenge.

In England, where men have more time for everything, including revenge, some queer methods of playing even have come into the courts.

Albert Bewdley of Leeds had a dog that howled at night. A naturalist next door did not like it, but had no legal recourse.

One day ants of the minute red variety began to overrun Bewdley's house. Nothing that could be done headed them off. They grew worse and worse. He had made up his mind to break his lease and move when one night he heard a noise in his dining room. Slipping down, he found the naturalist emptying a bag of ants on the floor.

In court the naturalist paid damages, but he did it smilingly.

Rowley, the late English violinist, was hard to beat on his perseverance against one who had incurred his ill will.

Rowley had a quarrel with a horse dealer named Brant. It was a trivial matter, but Rowley took the next house to Brant, set up a piano, bought a cornet and proceeded to make insomnia for Brant.

After one or two assault cases in court Brant moved. Rowley bought out the next door neighbor and followed with piano and cornet. Brant went to law, but found he could do nothing. Failing, he took a detached house. Then Rowley hired brass bands and organs and assailed him. This was actionable, and Rowley paid £1,000 for his revenge.—Chicago Tribune.

Two Ways of Writing.

Mrs. Bibbs—I declare! You men can't write a letter unless you have a regular desk and office chair and big blotting pad and I don't know what all.

Mr. Bibbs—Yes, and a woman may have a $200 writing desk, with everything to match, and yet she'll sit down on a stool and write on an old book.—New York Weekly.

Made Sure of the Pie.

A young girl who carried her dinner was observed to eat her pie first. When asked why, she replied, "Well, if there's anything left it won't be the pie, will it now?"—Boston Christian Register.

CONGRESSMAN BOTKIN'S RECOVERY.

[Suffered Twenty-five Years.]

WASHINGTON, D. C., April 1, 1898.

Dr. S. B. Hartman, Columbus, O.:

My Dear Doctor—It gives me pleasure to certify to the excellent curative qualities of your medicines, Peruna and Manalin. I have been afflicted, more or less, for a quarter of a century with catarrh of the stomach and constipation; a residence in Washington has increased these troubles.

Hon. J. D. Botkin, Congressman-at-Large from Kansas.

A few bottls of your medicines have given me almost complete relief, and I am sure that a continuation of their use will effect a permanent cure.

Peruna is surely a wonderful remedy for catarrhal affections.

J. D. Botkin.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, O.

The Golfer's Pun.

At a recent auction sale one of the paintings had for a subject a gayly attired golf girl making a long drive. The bidding on this opened very brisk—$60, $65, $70 and finally $72.

"Seventy-two, two, two, two!" cried the auctioneer.

"Fore!" shouted some one in the rear.

With the exception of the golfer in the front row, who immediately "ducked," the joke passed unnoticed.

"Four," repeated the auctioneer. "Do I hear five?"

He did not hear "five," and a cold sweat broke out on the brow of the last bidder as now, for the first time, the possibility of having to buy that picture occurred to him. Seventy-four dollars for making a pun! He made a solemn vow then and there that he would never attempt another as with a sickly grin he thought of unpaid bills. The attendant was standing at his elbow; the auctioneer had raised his hammer. "One—two—th"—

"Five!"

The ordeal was past. The auction proceeded, with the crowd unaware that the punster had received proper punishment.

For the benefit of those who do not play golf a diagram of the pun is furnished. "Fore" is the warning shouted by the player when about to drive.—New York Mail and Express.

Not an Educated Dog.

In the "Floresta Espanola" of Melchior de Santa Cruz the author has an anecdote of Cardinal Pedro Goncalez. That prelate noticed that one of the priests in his retinue, a Biscayan, carried a short sword under his cloak. The cardinal reproved him and told him that it was wrong for a cleric to carry arms. The Biscayan replied that he carried the weapon to defend himself if he were attacked by a dog. The cardinal said that in case he saw a dog running at him he should begin to recite from the gospel of St. John. The priest acknowledged that this was a good way, but held to the dagger, "because there are some dogs who do not understand Latin."

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Fryer's Abietene Cough Balsam saves Doctor Bills.

All first-class dealers sell Gilt-Edge Whiskey because of its purity and excellence, and those that have tried it will use no other. Wichman, Lutgen & Co., San Francisco, Cal., Sole proprietors for U. S. A.

Take Garfield Tea for constipation; it has this to recommend it: it is made from health-giving herbs and it surely cures.

Fryer's Abietene Cough Balsam guaranteed for Croup.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

The Best Preparation for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

It's hard to make a wise man of a fool, but a wise man often makes a fool of himself.

In the Spring

The blood is impure, weak and impoverished—a condition indicated by pimples and other eruptions on the face and body, by deficient vitality, loss of appetite, lack of strength and animation.

There's a physical reason for this—but it need not be discussed here.

Hood's Sarsaparilla

Makes the blood pure, vigorous and rich, creates appetite, gives vitality, strength and animation, and cures all eruptions. Buy a bottle and have the whole family begin to take it today.

"I was bothered with very bad sores on my arms and hands. Hood's Sarsaparilla being recommended, I got a bottle, and when I had taken it the sores were all gone. Hood's is the best blood purifier I ever used." W. E. WILLIS, Felton, Cal.

Hood's Sarsaparilla promises to cure and keeps the promise.

Demand for More Battleships.

When the Secretary of the Navy recently demanded more battleships, Congress considered his recommendations favorably, and authorized the construction of several powerful warships. Protection is what our seaports require, and fortifications will not adequately supply this. Defense against all disorders of the digestive organs, such as dyspepsia, constipation, biliousness, rheumatism and nervousness, is adequately afforded by that efficient remedy, Hostetter's Stomach Bitters. Try it.

Man should have a place for everything and get as much as possible of everything to keep in it.

Got Grip? Try Fryer's Abietene Cough Balsam.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

The Best Shorthand College.

If you wish to succeed as stenographers and book-keepers, follow the advice of all the Official Reporters of S. F., and attend the GALLAGHER-MARSH COLLEGE, Parrott Building, S. F., Cal. Graduates have no trouble obtaining positions, as none but *incompetent* stenographers are out of employment, and graduates of this College are qualified to fill any amanuensis' position very creditably. Board and lodging to be had for $15 per month. Life scholarship, $50; by month, $10. Send for catalogue.

Piso's Cure for Consumption is an infallible medicine for coughs and colds.—N. W. SAMUEL, Ocean Grove, N. J., Feb. 17, 1900.

Spots on some reputations won't show because of the dirt already there.

Contagious Blood Poison

There is no poison so highly contagious, so deceptive and so destructive. Don't be too sure you are cured because all external signs of the disease have disappeared, and the doctor says you are well. Many persons have been dosed with Mercury and Potash for months or years, and pronounced cured—to realize when too late that the disease was only covered up—driven from the surface to break out again, and to their sorrow and mortification find those nearest and dearest to them have been infected by this loathsome disease, for no other poison is so surely transmitted from parent to child as this. Often a bad case of Rheumatism, Catarrh, Scrofula or severe skin disease, an old sore or ulcer developing in middle life, can be traced to blood poison contracted in early life, for it remains smoldering in the system forever, unless properly treated and driven out in the beginning. S. S. S. is the only antidote for this peculiar virus, the only remedy known that can overcome it and drive it out of the blood, and it does this so thoroughly and effectually that there is never a return of the disease to embarrass or humiliate you afterwards.

Like Begets Like. ***The Sin of the Parent.***

SSS cures Contagious Blood Poison in any and all stages; contains no mineral to break down your constitution; it is purely vegetable and the only blood purifier known that cleanses the blood and at the same time builds up the general health.

Our little book on contagious blood poison is the most complete and instructive ever issued; it not only tells all about this disease, but also how to cure yourself at home. It is free and should be in the hands of everyone seeking a cure. Send for it.

FLATFISHES' EYES.

A Migration Which Takes Place After the Creatures' Birth.

Flatfishes keep their white and blind side on the muddy or sandy bottom and pretend that the upper and speckled side is a part of that bottom. This they do to avoid observation, for in spite of their awkward shape they are swallowed at sight by pertinacious enemies, to the manifest discomfort of both. A greedy cormorant curling up and attempting to swallow a plaice, which tries to be as disobliging as possible, affords an object lesson not soon forgotten on the way not to behave at mealtimes. But the bird usually succeeds in its object, and the flatfish, in spite of persistent efforts to retain its natural flatness, at last disappears down the round, elastic throat of the cormorant. With a view to avoid unpleasantnesses of this kind, soles are wont to hide themselves in the sand, keeping only their eyes above the surface to act as sentinels.

In reality the dark surface of a sole, plaice or turbot is its side and not its back. It is true that both eyes are visible, which is not the case when a mackerel or a conger is laid on its side, but this is simply owing to the fact that one eye of a flatfish has since the creature's birth passed across what we may call the bridge of its nose to keep company with the other eye.

The wandering eye begins its migration at a very early age—so early, indeed, that it is a little difficult to detect it on its journey. A plaice a fifth of an inch in length and 5 days old carries one eye on each side of its nose. When three-fifths of an inch long and about 2 months old, the left eye has crossed over to the right side. Lemon soles when one inch long or 2 months old have the left eye on the edge of the head, but when double that size and 6 months old both eyes are found on the right side. A sole assumes its lopsided aspect by the time it has been hatched 2 months. When a turbot is half an inch in length, the right eye just begins to peep over the center arch of the bridge, at three-quarters of an inch it is half way across, and at an inch the passage is complete and the two eyes look out from the left side of the head.—Longman's Magazine.

Not Entirely Alone.

As he entered the car he saw at a glance that there was one seat with a young lady in it, and he marched straight down the aisle, deposited his overcoat, sat down and familiarly observed:

"I entirely forgot to ask your permission."

"That's of no consequence," she replied.

"Thanks. Just arrived in the city, I presume," he ventured to remark as he glanced at the bundles and grips on the floor near by.

"Not exactly."

"You're all alone, eh?"

"Almost, but not quite. My husband is the conductor on this car, the motorman is my cousin and my father and a brother are in the seat back of us."

"Aw! Aw! I see," gasped the man, and the floor of the car suddenly became so redhot that he lit out without another word.—Salt Lake Herald.

Babies In Greenland.

The bed of the baby Eskimo is not always one of eider down. There are times of famine now and then when the condition of the ice makes hunting impossible, and old and young starve to death. Cases have been known on both shores of Baffin bay where babies have been eaten by starving adults, but infanticide in Greenland is unknown because of a belief that the spirit of a murdered infant turns into an evil spirit called Angiak that forever haunts the entire village and brings endless misery and distress.

When a friend is in trouble, don't ask, "Can I do anything?" Do something.—Atchison Globe.

Do but half of what you can, and you will be surprised at your own diligence.

Our first regular factory for manufacturing glass was established at Temple, N. H., in 1780 and was operated by imported German glassmakers.

When you forget there are others, you are nearing a burned bridge.

RHEUMATISM

Caused by an Impure Condition of the Blood—How It May Be Permanently Cured.

From the Mirror, Manchester, N. H.

Although rheumatism is one of the most painful and dangerous of the many troubles which afflict mankind, it can be permanently cured if a proper course of treatment is taken. The real cause of rheumatism is the presence of acid in the blood and the only cure is to purify, nourish and strengthen this vital fluid. The best specific yet discovered for this purpose is Dr. Williams' Pink Pills for Pale People and the number of cures they have effected in cases of this stubborn disease is wonderful. Mrs. S. D. Loveland, of No. 133 West Hancock street, Manchester, N. H., was cured of a severe attack of rheumatism by the use of this remedy. She says:

"Several years ago one of my knees was injured by a fall. About the first of June, 1897, rheumatism set in and at last got so bad that I could not bend my knee. It was very painful and I was unable to move about. I tried various remedies, but not one of them relieved me in any way.

"In the latter part of August, nearly three months after the pain and stiffness began, a friend, Mrs. Rothwell, of Everett, Mass., told me of Dr. Williams' Pink Pills for Pale people. I willingly gave them a trial and experienced relief in a few days. I continued until I had taken three boxes and was able to bend the knee and go up and down stairs without difficulty. I have since taken the pills a number of times for other troubles and always with good results.

"I have recommended Dr. Williams' Pink Pills for Pale People many times. I have not learned with what effect they were taken, excepting in the case of two of my relatives and a young woman living in my family, each of whom was greatly benefited. I feel that I cannot say too much in favor of the pills."

Signed, MRS. S. D. LOVELAND.

Subscribed and sworn to before me this 27th day of February, 1901.

JOHN G. LANE, [Seal] Notary Public.

At all druggists or direct from Dr. Williams Medicine Co., Schenectady, N. Y. Price, 50 cents per box; six boxes, $2.50.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

For Consumption try Fryer's Abietene Cough Balsam.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE $2.00** trial bottle and treatise. DR. R. H. KLINE, Ltd., 931 Arch St., Philadelphia, Pa.

Simplicity, strength and purity combined in Garfield Tea, the herb medicine that cures constipation and liver troubles.

The mental deficiency of the fellow who doesn't agree with you is simply astonishing.

Beware of Them

There are two afflictions which perhaps give the most pain and trouble, viz:

Sciatica and Lumbago

Both disable and cripple, but

St. Jacobs Oil

is their best cure.

Bowels Don't Move?

Caused by over-work! Over-eating! Over-drinking! No part of the human body receives more ill treatment than the bowels. Load after load is imposed until the intestines become clogged, refuse to act, worn out. Then you must assist nature. Do it, and see how easily you will be cured by CASCARETS Candy Cathartic. Not a mass of violent mercurial and mineral poison, but a pure vegetable compound that acts directly upon the diseased and worn out intestinal canal, making it strong, and gently stimulating the liver and kidneys; a candy tablet, pleasant to eat, easy and delightful in action. **Don't accept a substitute for CASCARETS.**

I'll bring a surgeon.—Jeweler's Weekly.

"I have gone **14 days** at a time **without movement of the bowels.** Chronic constipation for seven years placed me in this terrible condition; I did everything I heard of but never found any relief until I began using CASCARETS. I now have from one to three passages a day, and if I was rich I would give $100.00 for each movement; it is such a relief." AYLMER L. HUNT, 1029 Russell St., Detroit, Mich.

Cascarets

BEST FOR BOWELS AND LIVER.

THEY WORK WHILE YOU SLEEP

THIS IS CCC *THE TABLET*

10c. 25c. 50c.

NEVER SOLD IN BULK.

DRUGGISTS

GUARANTEED TO CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking **CASCARETS** today, for you will never get well and be well all the time until you put your bowels right. Take our advice; start with **CASCARETS** today, under an absolute guarantee to cure or money refunded. 449

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith, and will sell **CASCARETS** absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of **CASCARETS.** Book free by mail. Address STERLING REMEDY CO., New York or Chicago.

THE SOUTH WIND.

Wind that sings of the dreamy South
When the pale first blossoms woo the bee,
Wind that flings from a golden mouth
Tender spray of the summer sea,
Wind that keeps for us light and bloom,
That cradles the bird in the tree-top nest,
Wind that sleeps in the lilac's plume,
Of the winds of heaven we love the best.

Over the springing wheat-fields pass,
And over the small home gardens fare,
Evermore bringing to grain and grass
And the flowers thy breath of blessing rare.
Give us the cup of thy wine to taste,
O wind of the South, so strong and fleet!
Never a drop of its joy to waste,
In the days of the springtime coy and sweet.
—Woman's Home Companion.

A COOL SCOUNDREL

MY profession isn't a popular one. There is considerable prejudice against it. I don't myself think it's much worse than a good many others. However, that's nothing to do with my story. Some years ago me and the gentleman who was at that time connected with me in business—he's met with reverses since and at present isn't able to go out—was looking around for a job, being at the time rather hard up, as you might say. We struck a small country town—I ain't going to give it away by telling where it was or what the name of it was. There was one bank there. The president was a rich old duffer; owned the mills, owned the bank, owned most of the town. There wasn't no other officer but the cashier, and they had a boy who used to sweep out and run errands.

The door was chilled iron, about the neatest stuff I ever worked on. I went on steady enough; only stopped when Jim which, as I said, wasn't his real name—whistled outside, the watchman toddled by. By and by, when I'd got pretty near enough, I heard Jim—so to speak—whistle again. I stopped, and pretty soon I heard footsteps outside, and I'm blowed if they didn't come right up the bank steps, and I heard a key in the lock. I was so dumbfounded when I heard that that you could have slipped the bracelets right on me. I picked up my lantern, and I'll be hanged if I didn't let the slide slip down and throw the light right on to the door, and there was the president. Instead of calling for help, as I supposed he would, he took a step inside the door and shaded his eyes with his hand and looked at me. I knowed I ought to knock him down and cut out, but I'm blest if I could, I was that surprised.

"Who are you?" says he.

"Who are you?" says I, thinking that was an innocent remark as he commenced it and a-trying all the time to collect myself.

"I'm the president of the bank," says he, kinder short; "something the matter with the lock?"

By George, the idea came to me then!

"Yes, sir," says I, touching my cap. "Mr. Jennings, he telegraphed this morning as the lock was out of order and he couldn't get in, and I'm come on to open it for him."

"I told Jennings a week ago," says he, "that he ought to get the lock fixed. Where is he?"

"He's been a-writing letters, and he's gone up to his house to get another letter he wanted for to answer."

"Well, why don't you go right on?" says he.

"I've got almost through?" says I, "and I didn't want to finish up and open the vault till there was somebody here."

"That's very creditable to you," says he, "a very proper sentiment, my man. You can't," he goes on, coming round by the door, "be too particular about avoiding the very suspicion of evil."

"No, sir," says I, kinder modest like.

"What do you suppose is the matter with the lock?" says he.

"I don't rightly know yet," says I, "but I rather think it's a little on account of not being oiled enough. These 'ere locks ought to be oiled about once a year."

"Well," says he, "you might as well go right on, now I am here. I will stay till Jennings comes. Can't I help you—hold your lantern, or something of that sort?"

The thought came to me like a flash, and I turned around and says:

"How do I know you're the president? I ain't ever seen you afore, and you may be a-trying to crack this bank for all I know."

"That's a very proper inquiry, my man," says he, "and shows a most remarkable degree of discretion. I confess that I should not have thought of the position in which I was placing you. However, I can easily convince you that it's all right. Do you know what the president's name is?"

"No, I don't," says I, sorter surly.

"Well, you'll find it on that bill," said he, taking a bill out of his pocket. "And you see the same name on these letters," and he took some letters from his coat.

I suppose I ought have gone right on then, but I was beginning to feel interested in making him prove who he was, so I says:

"You might have got them letters to put up a job on me."

"You're a very honest man," says he, "one among a thousand. Don't think I'm at all offended at your persistence. No, my good fellow, I like it, I like it," and he laid his hand on my shoulder. "Now, here," says he, taking a bundle of his pocket, "is a package of $10,000 in bonds. A burglar wouldn't be apt to carry these around with him, would he? I bought them in the city yesterday, and I stopped here to-night on my way home to place them in the vault, and I may add that your simple and manly honesty has so touched me that I would willingly leave them in your hands for safe keeping. You needn't blush at my praise."

I suppose I did turn sorter red when I see them bonds.

"Are you satisfied now?" says he.

I told him I was, thoroughly, and so I was. So I picked up my drill again, and gave him my lantern to hold, so that I could see the door. I heard Jim, as I call him, outside once or twice, and I like to have burst out laughing, thinking how he must be wondering what was going on inside. I worked away, and kept explaining to him what I was a-trying to do. He was very much interested in mechanics, he said, and he knowed as I was a man as was up in my business by the way I went to work. He asked me about what wages I got and how I liked my business and said he took quite a fancy to me. I turned round once in a while and looked at him a-setting up there as solemn as a biled owl, with my dark lantern in his hand, and I'm blamed if I didn't think I should have to holler right out.

I got through the lock pretty soon and put in my wire and opened it. Then he took hold of the door and opened the vault.

"I'll put my bonds in," says he, "and go home. You can lock up and wait till Mr. Jennings comes. I don't suppose you will try to fix the lock to-night."

I told him I shouldn't do anything more with it now, as we could get in before morning. "Well, I'll bid you good-night, my man," says he, as I swung the door to again.

Just then I heard Jim, by name, whistle, and I guessed the watchman was a-coming up the street.

"Ah," says I, "you might speak to the watchman, if you see him, and tell him to keep an extra lookout to-night."

"I will," says he, and we both went to the front door.

"There comes the watchman up the street," says he. "Watchman, this man has been fixing the bank lock and I want you to keep a sharp lookout to-night. He will stay here until Mr. Jennings returns."

I saw Jim, so called, in the shadow on the other side of the street, as I stood on the step with the watchman.

"Well," says I to the watchman, "I'll go and pick up my tools and get ready to go."

I went back to the bank, and it didn't take long to throw open the door and stuff them bonds into the bag. There was some boxes lying around and a safe as I should rather have liked to have tackled, but it seemed like tempting Providence after the luck we'd had. I looked at my watch and see it was just a quarter past 12. There was an express went through at half past 12. I tucked my tools in the bag on the top of the bonds and walked out to the front door. The watchman was on the steps.

"I don't believe I'll wait for Mr. Jennings," says I. "I suppose it will be all right if I give you his key."

"That's all right," says the watchman.

"I wouldn't go away very far from the bank," says I.

"No, I won't," says he. "I'll stay right about here all night."

"Good night," says I, and I shook hands with him, and me and Jim—which wasn't his right name, you understand—took the 12:30 express, and the best part of the job was we never heard nothing of it.

It never got into the papers.—Argonaut.

ARE AFRAID OF MIRRORS.

Most Wild Animals Take Fright at Their Own Reflections.

A glance at himself in a mirror yesterday frightened Big Ben, the zoo's largest lion, so badly, says the Philadelphia Press, that the keepers in charge feared he would do violence to himself. He was in an angry mood all day and paced restlessly up and down his cage, stopping at the bars and raving at every chance passerby.

The antics of a small boy particularly excited his ire and he raged and stormed as only a big lion can. The lad enjoyed the performance and waited until Ben had finished his tirade, and then drew a hand mirror from under his coat and held it directly in front of Ben.

The lion looked over and then jumped for the intruder that dared face him in such a fashion, but brought up against the bars with force enough to throw him to the floor. Surprised at the appearance of the invader, he filled the house with his roars. The keepers ran to the cage and endeavored to quiet him, but he continued the uproar until exhausted.

In the meantime the adventurous youth had disappeared and was discovered in front of the wolves' cage trying to excite them in the same way. He was led from the garden and warned to keep away.

About a year ago a serious disturbance at the zoo was due to the flashing of a mirror in front of the lions' den. At that time the lions, with the exception of one or two of the wildest, were kept in one cage. A visitor held a mirror in front of them one afternoon and the beasts were thrown into panic. They fought and dashed at the bars with such violence that it was feared several would die as a result of their frantic struggles. It required the combined efforts of all the keepers for several hours before they could be quieted.

MICHAEL G. MULHALL, FAMOUS IRISH STATISTICIAN.

MICHAEL G. MULHALL.

Michael G. Mulhall, whose death was recently announced, was perhaps the best known statistician of the present day. Mulhall was born at Killiney, near Dublin, sixty-four years ago, and his career was full of adventure. He was educated in Rome at the Irish College, and he was the pioneer of the English newspaper press in South America, the first paper printed there, in our language, having been the Standard, produced by Mulhall at Buenos Ayres in 1858. In 1878 he returned to England, and proceeded to make his name as the author of "The Progress of the World," "The History of Prices," and the invaluable "Dictionary of Statistics," which finds a place in every reference library. Mulhall was married to a lady whose book, "Between the Amazon and the Andes," placed her among the ranks of ladies who travel well and write well of their travels.

Best Legs in the World.

The most lifelike and serviceable artificial legs in the world are manufactured in America. Enormous quantities of these limbs are shipped to Europe every year.

The first great boom in the artificial-leg business was brought about by the civil war. Since that time railroad and trolley car accidents have kept up an ever increasing demand. Another factor has been the general use of antiseptics. The mortality among those who have their legs amputated is far less than formerly and a large proportion of the survivors become patrons of the wooden-leg factories.

The old-fashioned peg-leg is practically a thing of the past. The modern artificial leg shows a great advance over the old forms. Every improvement has been with the idea of greater simplicity.

The main object of the manufacturers is to improve the fit of the legs. The best models now cost $100. It costs from $5 to $25 a year to keep one of these in order.

Few women wear artificial legs. On the other hand, it is becoming more common to fit limbs to children. Legs are made for children sometimes before they can walk. They are fitted as soon as the child learns to stand and make it possible for it to develop symmetrically.

Sorrow in the House.

There is a tightness in the "help" market of San Francisco. Servant girls have been growing scarce for some months, and at present the stringency has become marked to a dire degree. The surface indications are a falling off of numbers at the employment offices, an absence of response to advertisements for housemaids and a growing tendency among those who are engaged to throw up their places at short notice. A deeper sign is the standard of the wages of house servants. Twenty-five dollar places now bring thirty dollars, thirty-dollar cooks bring thirty-five or forty dollars, while twenty-dollar housemaids cannot be found. In a number of households where it has been customary to have the housework done by female servants, the mistress, from utter inability to secure one, has been obliged to hire Japanese day labor at a dollar and a half a day. This seems to be the time when the energetic Eastern woman should follow the now proverbial advice and go West.

Long-Lived Birds.

It used to be believed that the ravens lived longer than any other species of birds, and it was said that their age frequently exceeded a century. Recent studies of the subject indicate that no authentic instance of a raven surpassing seventy years of age is on record. But parrots have been known to live one hundred years. One lost its memory at 60 and its sight at 90. There is a record of a golden eagle which died at the age of 118 years. Another golden eagle was kept in the Tower of London for ninety years. A third died at Vienna aged 104 years. Geese and swans are tenacious of life, and extraordinary accounts exist of the great age that they have attained. Buffon and other authorities have credited them with 80 and 100 years of life.

The average woman puts off acknowledging her wedding presents as long as possible, knowing that the donors expect the acknowledgment to contain an invitation to visit her.

ON CRUSOE'S ISLAND.

WHERE ROBINSON AND HIS MAN FRIDAY LIVED.

Boston Man's Visit to the Little Dot on the Map of the Pacific Ocean Made Famous by the Charming Pen of Alexander De Foe.

John Burns, of Boston, has been on a journey to Juan Fernandez, the famous island home of Robinson Crusoe. He saw many of the places on the island that were frequented by Alexander Selkirk, and where he fortified himself against real and imaginary enemies.

Mr. Burns took several pictures of the more notable places and strolled about the island, even climbing the high mountains. It is a rockribbed, rather desolate possession of the Chilian Government, 400 miles off the Chilian coast.

"There is a good little harbor on the west side of the strange island," said Mr. Burns, "and it is here that the prosperous and contented inhabitants are located. The colony consists of eighty Germans and some natives of Chili, ruled by Alfred Bodt, who is Governor of Juan Fernandez, and receives $100 a month.

"The bay is pretty and alive with lobsters, mackerel, and yellowtail. The yellowtail are from one to two feet long, and, like the mackerel, are fine eating. As for the lobsters, I do not believe there are any finer ones anywhere. There is a small cannery on the island, where some of the fish are put up for shipment. A schooner comes in every twenty days from Valparaiso and gets some of the fish and lobsters, and also, when required, takes away some of the wild game. Beyond the visits of this craft the island is as lonely as when De Foe wrote of it, or when it was the resort of the Spanish buccaneers.

"I visited the large cave where Robinson Crusoe made himself safe from savage barbarians, as he supposed, when he discovered the footprints of Friday in the sands. The cave runs back into the mountains for at least fifty feet. It does not start from the water, but has its mouth somewhat inland. It is largely grown over with bright green leaves and is attractive even to this day. There are other smaller caves near at hand.

"The island is covered with wild goats, wild donkeys, and wild pigs. The natives, odd to relate, catch the goats in the same way that it is reported that Selkirk did.

"The only fruit that I saw there were the fig and the quince. The fig trees are numerous and grow from fifteen to thirty feet high. I think that almost any kind of fruit would flourish there.

"Altogether the island is a strange little principality, eighteen miles long and six wide, with mountains reaching to a height of 3,000 feet. It is pretty well watered, and is greener and more attractive every way than I had expected to find it. The harbor and the little colony on the shore are very picturesque. The water is as blue as indigo most of the time, and this, combined with a clear sky and soft air, and the singing of birds, makes it a unique place, and altogether one particularly fitted for the hero of the distant island, who became the theme of De Foe's pen."

PAUL JONES AND THE DUCHESS.

Great Captain Was Not to Be Outdone in French Courtesy.

The Duchess of Chartres was an enthusiast in the cause of American liberty, and a warm friend of its great naval champion, Paul Jones, whom she nicknamed the "Untitled Knight of the Sea." The Duchess was a royal Princess and a very great lady, and Captain Jones was a sailor, self-educated, and the son of a Scotch gardener, but in the exchange of gifts and compliments which, according to the custom of the day in France, attended their friendship he was not to be outshone.

At a luncheon which she gave just before he sailed from France in the Ranger, on that famous cruise of his which carried the war to the very shore of Britain, it was the good fortune of Paul Jones to share in a conversation touching a French naval engagement in which the grandfather of the Duchess had borne a conspicuous part, and to defend and explain his maneuvers on that occasion—showing a knowledge of every ship and every captain engaged, and winning on the spot the ardent personal adherence of Mme. de Chartres.

At the close of the feast she presented to him a valuable watch which had been her grandfather's. Taken by surprise, the American captain nevertheless accepted it with a grace that charmed the courtly company, promising in return, if fortune favored him, he would some day "lay an English frigate at her feet."

It was a daring boast, but in A. C. Buells' recent biography of Paul Jones it is related how he kept it. Within two years occurred the marvelous victory of the Bon Homme Richard over the Serapis, concerning which the victor wrote the Duchess a letter, ending: "The enemy surrendered at 35 minutes past 10 p. m., by your watch, which I consult only to fix the moment of victory."

That was a phrase to delight a society that reveled in pretty phrases, and the Duchess was amply satisfied. When Paul Jones reached Paris she gave a grand banquet in his honor. Just before it ended he reminded her of her gift and his promise. A servant was sent to his room and returned with a long leather case, which the Duchess took amid the exclamations and eager curiority of the company.

"Your royal highness perceives the impossibility of keeping my promise in kind," explained the Knight of the Sea, smiling. "The English frigate proved to be a forty-four on two decks, and she is now at Lorient with French colors flying. The best I can do toward keeping my word of two years ago is to place in your dainty hands the sword surrendered to me by one of the bravest of men—the sword of Captain the Hon. Richard Pearson of his Brittannic majesty's late ship, the Serapis."—Youth's Companion.

THE WORLD'S RICHEST MAN.

Alfred Beit, Whose Fortund Exceeds $1,000,000,000.

Rumors from London say that an American lady is to marry the richest man in the world. The lady is Mrs. Adolf Landenburg, widow of a New York banker who was drowned at sea a few years ago, and who is said to be one of the most beautiful women in metropolitan society. Her private fortune amounts to about $500,000. She is tall and stately, is fond of fox hunting and is a superb horsewoman. She has spent much time in London, where she met her affianced, Alfred Beit, a German.

Mr. Beit's wealth is said to exceed ten hundred millions. He is the brains and the biggest part of the diamond trust, and is the principal owner of the famous De Beers diamond mines at Kimberley and of the gold mines further north. He is a partner of Cecil Rhodes, but that astute Englishman is only an incident in the diamond line when compared with Beit. Rhodes

MRS. LANDENBURG. ALFRED BEIT.

was a late comer, and the ingenious German had all but completed the work of organization when Cecil put in his appearance at Kimberley.

Mr. Beit is 47 years old. His father was a well-to-do merchant in Hamburg twenty-five years ago, and Alfred was a clerk in the concern. About that time the South African excitement began to grow important, and the Hamburg merchant was asked for large credits by business men near the diamond fields. Alfred Beit was then 22, shrewd, capable, cautious, and precocious. His father sent him out to South Africa to investigate the general state of business there and determine whether the trade demanded the credits and whether the credits were good.

Young Beit saw and appreciated the situation. He began by buying up the scattered and conflicting claims. To accomplish this work he was liberally backed by his father and his father's friends in Germany. The result was the great De Beers Company, which for many years has paid 5½ per cent on its bonds and from 20 to 40 per cent on its stock. It is capitalized at $40,000,000. Next came the gold discoveries, and here, too, Beit was the first organizer in the field.

Mr. Beit is the poorest-looking rich man on earth. His clothes are so very plain as to be almost shabby. He never discusses his trade with outsiders, but beneath his mild and apparently diffident exterior is a capacity for business unsurpassed by that of any man in the great commercial countries of christendom. His wealth has been estimated at $1,000,000,000, but this takes no account of the few barrels of diamonds he keeps stowed away for fear of lowering prices.

He Would Not Be Beaten.

"Talking about extraordinary things," said one first-class passenger to another on an Atlantic liner, "I once swallowed the contents of eighteen eggs at a sitting. That takes some beating."

"Which I can give it," returned the other. "On one occasion, let me tell you, I got outside the inner meaning of no less than twenty-four eggs, sir; think of that!"

"Ah! I knew—I had a sort of presentiment that you would beat me if I told my tale first. But are you sure of those twenty-four eggs? I may not have heard you quite distinctly. It's a lot, you know."

"Yes; and I did it, fairly and squarely. Twenty-four hens' eggs at a single sitting."

"Oh, I see," said the man who had spoken first, and he said it in the manner of one who has solved an incomprehensibility, "hens' eggs! I thought you meant ostriches' eggs, the same as the eighteen I swallowed!"—Modern Society.

Ready to Start.

A lecturer in a California town had in his audience a lank young man who drank in every word with flattering avidity, and whose eyes bulged with delight at the pictures thrown on the screen.

As the evening wore on, the lecturer got into the habit of looking at this entranced listener, and after a while had almost the feeling that the lecture was intended for him alone.

This evidently was the idea which possessed the lank young man as well, for when the lecturer said:

"And now I will ask you to go with me two miles into the jungle," he sprang to his feet.

"Anywhere you say, mister," he shouted, with kindling eyes, "if you can just hold on long enough for me to cut home and get my gun!"

When you get a new job you always try for a time to please, and work hard and intelligently. Why don't you keep it up?

THE ANCIENT SPORT OF FALCONRY

The ancient sport of falconry is still existent in parts of England, and an afternoon's hawking at partridges recently witnessed by the writer was an enjoyable and quite uncommon experience. The untiring and most persevering patience in the training of the hawks struck one most forcibly as the sport progressed, and it may be interesting to give in a few words the methods practiced, both in flying the birds, and training them for the sport.

To first catch your falcon is the chief difficulty, and some patience may be necessary before a nest is discovered. Mostly the eyrie is built in some almost inaccessible rocky cliff, and only a trained and bold cliff-climber can secure it.

The young falcons should be taken when nearly ready to fly, as when fully fledged they are able to feed themselves and continue their growth without coddling. These youngsters are brought to their future home and turned loose in an open shed—that is, open in front, but roofed against bad weather; here blocks of wood are pegged into the ground which suffice for the twofold purpose of roosting and dining table for hereon their food is placed by the falconer.

Fresh meat, rabbits, or dead birds are given them, and as the days go by the young falcons gradually learn to fly, and in a short space are seen soaring above their home and swooping out into the surrounding country, and very soon they can fly many miles, but they return regularly to feed when hungry. This is the most anxious period for the falconer, as now the hawks grow wilder with increasing powers of flight, and range farther and farther afield. Gamekeepers shoot a hawk on sight unless they happen to know it hails from a neighbor's falconry. To obviate such an unhappy ending, and also to more easily recognize a trained falcon when flying, loud-sounding bells are fastened to the hawk's legs.

After four or five weeks of such freedom the young falcons are sufficiently strong to be caught up, and this must be done ere the native instinct of the bird asserts itself and it stoops at some natural quarry, such as a young pheasant or pigeon, for, then feeling its powers, it gradually forsakes the homestead and forages for itself. So, before this happens, the falconer recaptures his youngsters by snaring them with a slip-noose placed round their meat on the feeding blocks, and then, quickly hooding them, they are taken to the hawking-house and fastened to the ground with a leathern throng, there to await the next step in their education. Here the patience and temper of the successful falconer shows itself most conspicuously, for much weary time is spent in initiating the youngsters into the business required of them. To begin with, they are usually taken out separately, and, a long string being affixed to their legs, the hood is taken off, and the falcon encouraged to fly round in a circle above its master. A piece of meat or a dead bird is then thrown on the ground, and, as breakfast has been withheld, it is tempted to come down of its own accord.

FALCON ON HAND, READY TO FLY.

The falconer has to be continually in the presence of his hawks, handling them frequently, and dissipating all traces of fear. For days and weeks this will have to be continued until the hawks are quite tamed; then they are flown at a live bird, and so on, until their education is advanced enough to try them in the field.

Five falcons accompanied our little party for the afternoon's partridge hawking, borne on a wooden framework by an attendant. A couple of spaniels, a pointer, and a retriever completed the party, besides the sportsmen.

The dogs quartered the ground as the hunting-ground was reached, and one of the hawks was taken on to the falconer's fist and its hood loosened, when a spaniel flushed a covey, which got up very wildly. Calling the dogs in, we marked down two of the birds, and set after them as quickly as we could go. As we drew forward to where one of the birds had been marked down, the falconer ran forward, taking the hood from his falcon, the dogs were set on, and the falcon cast into the air. With a few powerful strokes, the hawk circled above us; and then up went the partridge, right under the nose of the

FALCON HOODED, AND READY TO BE FLOWN.

pointer, where it had hid in the heather till the dog was on it, for fear of the hawk above. With loud shouts the falconer called his falcon to its prey, but the warning was unnecessary, for the keen eye of the hawk had seen the bird, which was whirring rapidly away some fifty yards distant. With a few strokes of its powerful wings the falcon was after it as quick as thought, then, half-closing its wings, it swooped from above; a puff of feathers, and falcon and partridge were on the ground, the latter quite dead. A piece of meat rewarded the falcon, which was then taken up and hooded, and off the party started for another covey.

All He Was Good For.

"I don't know what to do with that boy of mine," said a father to an old college friend, whom he was visiting, and to whom he felt that he could unburden himself of his troubles.

"He is utterly worthless," the father continued, "and I cannot do a thing with him. He does nothing but hang around livery stables, and you know what the moral influence of a livery stable is."

About ten years later the two met again.

"How is your son getting along?" asked the old college friend.

"Did I never tell you?" said the other, with evident pride. "That boy, sir, had such a decided genius for horses that I let him take to horses for a living. He is now a veterinary surgeon of the highest skill, makes ten thousand dollars a year in his profession, and will be the prop and support of his father and mother in their declining years. I tell you, there is nothing like giving a boy a chance to follow his natural bent."

This seems to show that a boy will sometimes turn out well, in spite of a father who does not know how to train him. Perhaps an all-wise Providence looks out for such children.

No Human Bones Are Used.

A Philadelphian of an inquiring turn of mind was informed recently that human bones sometimes found place with bones of the lower animals in the manufacture of bone black, which is used in the process of refining sugar. After a thorough investigation he is satisfied that no human bones ever get into the bone black, even by accident. This is not because of sentiment alone, but owing to the fact that bones of the lower animals turn black, while those of the human being turn white, and should any white flakes appear in the composition it does not serve its purpose and is discarded. Sometimes in large cargoes of bones from South America, where for many years cattle were slaughtered for their skin, the bones of herders may be found, and occasionally an entire skeleton, but in sorting them in the yards these are removed, and the orders are that the remnants of humanity must be buried.

When a married daughter comes home on a visit, she calculates every time she sees one of her sister's garments how it would make over for one of her children.

UNCLE SAM'S NEW BATTLESHIP ILLINOIS

Uncle Sam's new battleship Illinois is one of the finest warships afloat, and has been called "a floating fort." The length of her water line is 368 feet and width of beam 72 feet. Her normal displacement is about 12,000 tons, and her engines are expected to develop 10,000 horse power, or sufficient to propel her at a speed of sixteen knots an hour. Her armament is something tremendous. Her main battery consists of four 13-inch and fourteen 6-inch breech-loading rifles. Her secondary battery consists of sixteen 6-pounder rapid-firing guns, four 1-pounder rapid-firing guns, four machine guns, and one field gun. Besides this fighting array the Illinois has four above-water torpedo tubes, two on each broadside, which fire through an arc of 60 degrees. In all respects she is supplied with all the modern equipments and conveniences. Her cost is in the neighborhood of $4,000,000.

SUN SCALD.

A Factor Requiring Consideration In Growing Fruit Trees.

In some parts of the country sun scald is one of the most important factors in growing fruit trees. Especially is this true in the southwestern states, where the danger from sunburning controls the whole practice of cultivation and pruning. In that country the trees are headed low, even down to within a foot or six inches of the ground, in order to protect the trunks. At the same time any consid-

EFFECT OF SUN SCALD.

erable pruning in the tops is avoided, because it would expose the larger branches to the deadly sun scald. This difficulty is less frequently met in the northeastern states, but the writer (F. A. Waugn, in The Country Gentleman) has lately visited an orchard as far north as Canada and New England line where nearly 50 per cent of the trees were ruined by this trouble. They were pruned too high, with heads six, seven and eight feet from the ground.

Sun scald is usually worst on apples and pears, but it may appear on almost any tree. The accompanying illustration is from a tree of Downer's Late Red cherry growing (or dying) in Maryland. When the damage is as old as this, where it has been accumulating for several years, it is doubtful if any remedy can be applied, though one can see in the photograph how persistently this tree has tried to heal over the wound. When taken in the early stages, sun scald may be cured by protecting the trunk with boards, papers, straw or some similar material. At the same time the scaly, burned parts should be cleaned away, and some sort of wax may be applied. The best treatment for sun scald, however, is to avoid it.

Sunburns are usually only the beginning of other serious troubles. Borers commonly follow closely after. Bacteria and molds gain access and cause increased damage to wood and bark, and the rain and sun check and crack the exposed tissues, to their great and permanent detriment. It is doubtless a fact that sun scald is a more important enemy of fruit trees than many of the fungi that have been extensively studied and elaborately discussed in recent books and bulletins.

Square Cornered Silo.

The principle reason why ensilage spoils in the corners of the square silo is that the construction is such that the corners pull apart enough to admit the air, says L. A. Clinton in The Rural New Yorker:

With the usual form of construction, there will almost certainly be a slight give at the corners, and the result is the ensilage spoils. The figure shows

A LIGHT CORNER FOR A SILO.

how the corners may be constructed so that there will be no possible chance for pulling apart. The principal corner post A should be at least of 6 by 6 material.

The pieces B B should be of 2 by 4 scantling and nailed securely. The siding may be of 1 inch boards, and if they are well seasoned and matched one thickness of boards will be entirely sufficient. Studding should be placed not more than 2 feet apart. It is unnecessary to explain in detail the drawing. The siding shown by D D D is nailed securely to the 6 by 6 corner posts, and the siding shown by C C is so cut that it can be nailed to the supplementary 2 by 4 studding. After constructing the corners in this way, so there is absolutely no chance for them to pull apart, the usual method of boarding across the corner may be followed, so that the ensilage will settle more evenly.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 27th day of May, 1901, an assessment, No. 34, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 31, 19th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

OFFICE—Room 31, 10th Floor, Mills Building, San Francisco, Cal.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

I. J. WALL, Plaintiff vs SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal,

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

BORN.

TOTTEN—At Lone Pine, May 30, 1901, to Mr. and Mrs. B. F. Totten—a DAUGHTER.

Board of Education is in seession.

Supervisor Jones was down from Fish Springs Saturday.

Supervisor Boland was up from Keeler on Saturday last.

Miss Florence Crough, of Bishop, is visiting Miss Nettie Irwin.

S. A Fraser has gone to Monache to look after his cattle interests.

The Harper Brothers, Crom and Wilt, left this morning for Tonapah.

J. Walter Hanby, of Bishop, was in Independence early in the week.

Miss Mamie Hession returned from a visit to relatives at Big Pine on Monday last.

Mrs. Arthur Robinson came down from Big Pine Sunday, and is visiting relatives here.

Two of H. D. Gill's children are quite sick with typhoid fever at Fort Independence.

Mrs. Thomas Callow, of Big Pine, who was so critically ill last week, is reported to be improving.

Deputy Clerk W. O. Meroney returned to his home at Bishop Thursday morning for a brief visit.

Quite a number of the boys from the Reward mine are in town owing to the suspension of work for a week.

Mrs. Roeper, Mrs. Fausel and Mrs Willet returned yesterday from a visit of six weeks to relatives in Kern county.

Robt. O'Neal, Esq., and Mrs. Wm Birchim came down from Bishop on Saturday last on business at the Land Office.

Henry Bell was down from Big Pine a few days ago. It is reported that Mr. Bell will soon be appointed a Sierra Forest Ranger.

The Crocker Brothers returned from Monache meadows on Sunday last, after making a drive of 1000 cattle to that summer range. They report excellent feed.

A farewell party was given to Miss Lucy Harper, at the residence of John Baxter, on the eve of her departure for her home in Virginia City, Thursday morning.

Patrick Downs, an old time miner and packer, and one who was well and favorably known in this section, died at Mountain Spring Canyon about two weeks ago.

The balance of purchase price was lately paid on the Barnes & Anderson mines, and the new management are putting on more men at the mine, which apparently is a bonanza.

Mr. Austin's splendid new residence, on West Main street is being rapidly pushed to completion by Messrs. Lewis and Naylor. This edifice will be a beautiful addition to Independence.

Occupants of the County Jail are sorry they lately complained of the hilarious noises on the back street, and now say they will never complain any more, if the nightingales will only come back.

Assessor Yandell has lately returned from his annual trip to the southern portion of the County. He reports very few men employed in the Ballarat section at present. Poll tax and personal property collections are somewhat in advance of this time last year.

The Board of Education met last Monday and are now engaged in their annual meeting. Three applicants are before them for Grammar Grade certificates, Mrs. E. S. Bigelow and Miss Grace Watterson, of Bishop, and Miss Irene Reynolds, of Thebe. They have all passed the test studies with a high percentage and the probabilities are that each will pass the examination satistactorily. After this meeting of the Board no more Second or Primary Grade certificates will be issued.

MEMORIAL DAY AT BIG PINE

Memorial Day was fully and successfully observed at Big Pine. At 10 o'clock the line of march was formed on Main street, near Callow's Hotel. The procession was headed by the Marshall, Capt. A. O. Collins, and the Bishop Brass Band; next in order were the civic societies, namely, the Woodmen of the World and the Independent Order of Good Templars, followed by the Public school, Indian school, Woman's Relief Carps and veterans of the Union and Confedejate armies and of the Mexican War, citizens following in carriages. At the cemetery the ranks were opened, the procession reversing the line of order. Impressive ceremonies were held at the cemetery and the graves of the veterans were strewn with garlands.

At the sound of the drum the line of march was resumed. At the the scho l house orders were given to disband until 2 p. m., when appropriate exercises were held at the grove. The program was as follows:

Music .....Band
Introduction.....Hen. S. E. Vermilyea
President of the Day.
Invocation .....Rev. A. Clark
Recitation .....Maggie Campbell
Gun Drill..... 13 Boys
Jesse Hession, Captain.
Vocal Solo.....Richard Eldred
Lincoln's Address .... J. Walter Hanby
Music..... Band
Flag Drill .....16 Girls
Male Quartette.....Messrs. Hampton, Peak, Vermilyea and Hanby.
Recitation.....Minnie Allen
Song .....Choir
Oration.....Rev. J. L. Rosen
Music..... Band
America .....Choir and Audience
Vote of Thanks.....Past Commander S. Graham.
Benediction....Chaplain, Rev. I. B. Self
A. S.

Outlaw Stops Mojave Stage.

A Mojave dispatch to the San Francisco Call, May 31, says:

The Mojave-Keeler stage, outward bound from here, was held up by a lone highwayman to-day and its only passenger was relieved of his ready cash. The outlaw made a light haul, as the passenger's purse was slim and the stage carried no treasure of any kind.

The stage left here at 6:10 o'clock, in charge of Ed Monroe. When about a mile and a half out it came up to a man walking along the road. As the coach was passing him he suddenly produced a revolver and commanded a halt. Then it was seen for the first time that he was masked

The mail on the stage was not molested and from the single passenger only $1 50 was collected by the highwayman. Orders were given for the stage to go on its way and its occupants not to look back, and these instructions were followed. From the Eighteen-mile House the news was brought here late this afternoon.

The robber was on foot, was dressed in overalls and a dark shirt and his face was hidden by a handkerchief. As no other description except that he was short and of heavy build is given, it is not likely that he will be apprehended.

It Took.

It was just after dinner and the man who had been sitting next to the young woman with the beautiful arms and neck thought he was the most fortunate individual in the room. He said all the bright things he could bring to mind and was congratulating himself that he was keeping up his end of the conversation fairly well, when the young woman began to show signs of nervousness. She gazed around the room as if looking for an avenue of escape, moved uneasily in her seat and allowed two or three jokes to pass her by without making it evident that she recognized them. Astonished and half alarmed, the man looked at her inquiringly, and, meeting his look, she said:

"I am in misery."

"In misery?" echoed the man.

"Yes," she replied, "I was vaccinated the other day and it has taken beautifully. I could almost scream it hurts so."

The man looked at the beautiful arms and seeing no mark there, said:

"Why where were you vaccinated?"

"In New York," she replied with a smile.—Ex.

The charming Miss Fay, who had been visiting at the home of County Treasurer Bunney for a week or more, returned to Candelaria last Saturday. The young lady is an ardent amateur photographer, and while here secured a novel picture in the shape of a coyote standing on a large boulder near Shepherd's creek. Our local photogs regret she could not remain longer.

The Reword mine closed down yesterday morning, and will not start up again for about a week. The cause of the shut down was the ditch conveying water to the mill had become foul with weeds and debris and had to be cleaned out in order to carry enough water to run the mill. The cleaning out of the ditch will be completed in about a week, when work in the mine will be resumed.

Mrs. A. W. Eibeshuiz, who has been visiting in San Francisco for several months past, will arrive home this evening. She will be accompanied by her son. Eddie, who has lately received his diploma from the Cosmopolitan Grammar School of San Francisco.

Dr. J. C Baxter has opened Dental Parlors in the lower story of the Masonic Hall, where he is prepared to do all kinds of work in his line by the latest methods and in the most approved manner. His card will appear next week.

M. F Showalter, a former resident of Big Pine, who left there over a year ago for the lower country, returned to Independence last Saturday from Bakersfield. "Dad" says there are many places worse than Owens Valley.

District Attorney Dehy returned from San Francisco Sunday, coming to Bishop on Friday last, and remaining there to enjoy the picnic given by the Bishop Brass Band at Berger's grove on Saturday. We are glad to welcome him home again, although we would have been better pleased had he kept his promise and brought a short hand reporter home with him.

Forest Supervisor Price informs us that he is having the Rangers under his supervision fixing up the mountain trails, blasting out rocks, widening, and putting them in condition so that summer tourists wishing to visit our famous mountain resorts may travel over them in perfect safety.

For Sale or Rent.

House of six large rooms on the Main street, Independence, furnished or unfurnished, Three lots, fruits and berries of all kinds. Hot and cold water in house. Bath room, pantry and closet.

Will rent for a long period or sell on the installment plan. Terms, reasonable.

NOTICE OF SALE.

Office of the Tax Collector of the County of Inyo, State of California.

Notice of sale of property of the State pursuant to Section 3897 of Political Code.

Whereas on the 3rd day of June, 1901, there was received by me and filed in my office a written authorization under the hand and seal of the Controller of the State of California, which said authorization was and is in words and figures following:

NOTICE.

CONTROLLER'S DEPARTMENT.
STATE OF CALIFORNIA.

To the Tax Collector of the County of Inyo, State of California:

WHEREAS, on the 10th day of January, 1901, there was filed and recorded in the Controller's Office of the state of California, certain deeds conveying to the People of the State of California the title to those certain lots and parcels of land hereinafter described;

AND, WHEREAS, said deeds recite the fact that said property hereinafter described was struck off and sold to the People of the State of California for the nonpayment of State and County taxes, penalties and costs, and all charges levied and assessed against said property for the year 1894;

AND, WHEREAS, five years have elapsed since the date of said sale, and no redemption, according to law, has been made of said property, or any part thereof;

NOW, THEREFORE, in pursuance of the law in such cases made and provided, I, E. P. Colgan, Controller of the State of California, by virtue of the authority in me vested by the laws of this state, da by these presents authorize, empower, and direct you, the said Tax Collector, to sell at public auction, in separate lots or parcels, the property hereinafter described, in the manner following: Public notice shall first be given of sych sale by publication for at least three weeks in some newspaper published in the county, or city and county, or if there be no newspaper published therein, then by posting a notice in three conspicuous places in the county, or city and county for the same period, which notices must state specifically the place of and the day and hour of sale, and shall contain a description of the property to be sold, and shall also embody a copy of this authorization.

500,000 Women

Have been restored to health by Lydia E. Pinkham's Vegetable Compound. Their letters are on file and prove this statement to be a fact, not a mere boast. When a medicine has been successful in curing so many women, you cannot well say without trying it—"I do not believe it will help me."

LYDIA E.

PINKHAM'S
Vegetable Compound

Is a positive cure for all those painful

Ailments of Women.

It will entirely cure the worst forms of Female Complaints, all Ovarian troubles, Inflammation and Ulceration, Falling and Displacements of the Womb, and consequent Spinal Weakness, and is peculiarly adapted to the *Change of Life*.

Your medicine cured me of terrible female illness. MRS. M. E. MULLER, 1A Concord Sq., Boston, Mass.

Backache.

It has cured more cases of Backache and Leucorrhœa than any other remedy the world has ever known. It is almost infallible in such cases. It dissolves and expels Tumors from the Uterus in an early stage of development, and checks any tendency to cancerous humors.

Your Vegetable Compound removed a Fibroid Tumor from my womb after doctors failed to give relief. MRS. B. A. LOMBARD, Westdale, Mass.

Bearing-down Feeling

Womb troubles, causing pain, weight, and backache, instantly relieved and permanently cured by its use. Under all circumstances it acts in harmony with the laws that govern the female system, and is as harmless as water.

Backache left me after taking the second bottle. Your medicine cured me when doctors failed. MRS. SARAH HOLSTEIN, 3 Davis Block, Gorham St., Lowell, Mass.

Irregularity,

Suppressed or Painful Menstruations, Weakness of the Stomach, Indigestion, Bloating, Flooding, Nervous Prostration, Headache, General Debility.

It is a grand medicine. I am thankful for the good it has done me. Mrs. J. W. J., 76 Carolina Ave., Jamaica Plain (Boston), Mass.

Dizziness, Faintness,

Extreme Lassitude, "don't care" and "want to be left alone" feeling, excitability, irritability, nervousness, sleeplessness, flatulency, melancholy, or the "blues," and backache. These are sure indications of Female Weakness, some derangement of the Uterus.

I was troubled with Dizziness, Headaches, Faintness, Swelling Limbs. Your medicine cured me. MRS. SARAH E. BAKER, Bucksport, Me.

The whole story, however, is told in an illustrated book which goes with each bottle, the most complete treatise on female complaints ever published.

For eight years I suffered with womb trouble, and was entirely cured by Mrs. Pinkham's medicine. MRS. L. L. TOWNE, Littleton, N. H.

Kidney Complaints

and Backache of *either sex* the Vegetable Compound always cures.

Lydia E. Pinkham's Liver Pills cure Constipation, Sick Headache, 25c.

The Vegetable Compound is sold by all druggists or sent by mail, in form of Pills or Lozenges, on receipt of **$1.00.** *Correspondence freely answered.*

You can address in strictest confidence, **LYDIA E. PINKHAM MED. CO., Lynn, Mass.**

Not Given to Squandering.

Justice—You say that you doubt the statement of the previous witness that the defendant squandered his inheritance. Please give the reason for your doubt.

Witness—I tried three or four times to get him to visit a church fair, but it was useless. He always smiled and informed me that he was not born yesterday.—Boston Transcript.

The Chinese are not entirely clothed in cotton. The ordinary annual crop of silk in China is estimated at about 21,000,000 pounds, of which over 60 per cent is consumed in the country where it is produced.

The key to the Bastile is now hanging on the wall in the hall at the old home of Washington at Mount Vernon. It was given to Washington by Lafayette.

Acker's English Remedy

will positively **cure** Consumption, Asthma, and Bronchitis, It will cure a cough or cold in a day. It will prevent Pneumonia. We guarantee it, because we know what it will do. Always insist on having ACKERS.

'In many instances after I had tried my utmost to give even relief. I prescribed ACKER'S ENGLISH REMEDY and it permanently cured every one of the patients. It is a valuable addition to the practice of medicine." C. F. SMITH, M. D., Olean, N. Y.

Write to us for testimonials and free illustrated book on Consumption

Sold at 25c, 50c and $1.00 a bottle. If you are not satisfied return the bottle to your druggist, and get your money back.

W. H. Hooker & Co., Proprs., Buffalo, N. Y.

SUMMER is BEST TIME to CURE **Catarrh, Bronchitis and Consumption**

Our remedy is GUARANTEED; $1.00. P. O. Box 973

W. H. SMITH & CO., BUFFALO, N. Y.

INJURED A SOLDIER'S SIGHT.

Modern Long-Range Rifles Are Hurtful to Those Who Use Them.

"The modern long-range military rifle is going to develop near-sighted soldieds if no precautions are taken," said a New Orleans soldier who has seen service in the late campaign. "The necessity of straining the eyes upon a target a mile or more away is as certain to produce the result as 2 and 2 make 4, and it is a significant fact that quite a number of men have already been relieved from duty in the Philippines on account of 'defective vision.' The nature of the defect is not stated, but it was evidently acquired since the soldiers entered the service, for they are subjected to a searching optical examination upon enlistment, and I hazard the guess that most of the present trouble is due to overstrain in long-distance shooting. The Japanese army surgeons have anticipated the danger, and the troops sent to China were all supplied with small, compact field-glasses as part of their regular accouterment.

"I read in a technical journal the other day that the glasses only cost 78 cents apiece, so they couldn't have amounted to very much, but they were better than nothing. At the same time," continued the physician, "no field-glass meets the difficulty. At best it merely permits the soldiers to examine the target in detail before he picks up his gun, and to draw a bead he is absolutely compelled to do more or less squinting and straining over the sights. The proper appliance would be a very light, modified fieldglass that could be fastened over the eyes and used in actually taking aim. I am convinced that such a glass will be perfected and in use in the near future. It presents no great problem, and all the mountings, if desired, could be made out of pressed paper, so that the chief weight would be the lenses. In fact, it need not be much heavier than a pair of old-fashioned iron-bowed spectacles, and still have sufficient magnifying power to enable a soldier to sight his rifle with ease upon an object at maximum range. I admit, added the doctor, "that a regiment with its glasses on would present rather a ludicrous picture, but the instrument is one of the clear necessities of present conditions, and it is bound to come."—New Orleans Times-Democrat.

One woman to every ten men worked for wages fifty years ago, but now the ratio is one to four.

The demand for automobiles is so immense, it is said, that all factories are behind with their orders.

The bread eaters of the world require more than 2,300,000,000 bushels of wheat every twelve months.

France consumes more wine than Germany, the United States and the United Kingdom put together.

The building trades unions in Brooklyn have started a movement to kill off rivalries between unions by an agreement to adopt the same rate of wages and to recognize each other's union cards. The First National Union of Plasterers, with a membership of 1,500, and the Italian Plain and Ornamental Plasterers' Union, with a membership of 700, have joined hands.

The sweatshops of New York City will be abolished if agitation can do it. The Brotherhood of Tailors has asked Bishop Potter, President Gompers, President Adler and several others to head a movement of 200,000 East Side men, women and children. This movement will extend to other cities of the country until the "hunger, poverty and dirt" of the sweatshops will be a thing of the past.

The Board of Control of the Louisiana State penitentiary closed a deal recently for two immense plantations, and next year over 500 convicts will work them, the crops going to the State. This action was taken under the new law providing for the handling and care of convicts. In this way it is expected to work extensive prison reforms, the convict lease system being abolished. The plantations are in West Felician and Iberia parishes. On the former cotton will be raised, and sugar on the latter. Louisiana has about 1,000 convicts.

A Promoter's Humor.

Charles R. Flint has a quaint Yankee humor which is as well developed today as in his school years. In the Polytechnic Institute the markings were on the basis of one hundred and were bulletined monthly. One day a group of boys were looking at the new bulletin, on which one of the hopeless dullards of the class was marked sixty-six.

Flint said slowly:

"Sixty-six, that's the very number of our year, and I hope when we get to '99 Jack will receive that figure!"

Once a sanctimonious person remarked:

"Children should never be allowed to play with toys on Sunday!"

"May they not play with religious toys?" he queried.

"There are no religious toys, sir!"

"Excuse me, there are!"

"What are they, then, sir?"

"Noah's arks."

Not a Perfect Specimen.

The little girl whom the New York Times tells about is only 5 years old, but she has such a large experience of dolls that she feels herself to be something of a connoisseur in children. Recently there came a real live baby into the house.

When it was put into her arms, this real live baby, the 5-year-old surveyed it with a critical eye.

"Isn't that a nice baby?" cried the nurse, with the joyous pride with which a nurse always regards a new baby, in which she feels that she has a proprietary interest.

"Yes," replied the little girl, hesitatingly, "it's nice, but its head's loose."

A gossip never does much harm unless she has an appreciative audience.

Diligence is a fair fortune and industry a good estate.

England's Army and Navy.

It was recently stated that England's army and navy is inadequate to properly defend herself from a sudden onslaught. England is, in this instance, like the indi idual who allows disease to creep into his system through a stomach too weak to properly digest the food taken into it. To strengthen the stomach there is nothing better than Hostetter's Stomach Bitters. It cures dyspepsia, constipation, indigestion, liver and kidney trouble, and as a tonic, is incomparable.

Reading as a Cure.

The practice of reading aloud at regular intervals is of great benefit to any one affected with a chest complaint. In all cases of lung trouble it is important to indulge in those exercises by which the chest is in part filled or emptied of air, and reading aloud, singing and whistling are three of those exercises.

There are many who cannot sing, and we do not expect the fair sex to whistle, but reading aloud can be practiced by all. Care must be taken not to overdo it, of course, and the body should be in such a position as to allow the chest to have free play.

Reading aloud, if we pay attention to what we are doing, will not only be beneficial from the standpoint of health, but will also have the effect of making us better speakers by teaching us proper modulations of the voice and by increasing our knowledge.

This is where it has the advantage over whistling and singing.

Humors

Waste matters which the skin, kidneys and other organs were too torpid (in the cold days) to take care of, and cannot take care of now without help, there is such an accumulation of them.

They litter the whole system. Pimples, boils and other eruptions, loss of appetite, that tired feeling, bilious turns, fits of indigestion, dull headaches and many other troubles common in the Spring are due to them.

Hood's Sarsaparilla

Removes all humors, overcomes all their effects, strengthens and tones the whole system.

"Last spring I had a lot of sores on my face. I began taking Hood's Sarsaparilla and they went away. I am now stronger and healthier than ever before." JOHN E. Moungoven, Point Arena, Cal.

Hood's Sarsaparilla promises to cure and keeps the promise.

The Galloping White Hearse.

It was in the dark of the evening, and the streets were thronged with men and women on their way home at the end of the day's work. At Thirty-fourth street, where Broadway and Sixth avenue cross with a network of tracks, the usual clangor of gongs, the shouts of newsboys and the roar of the elevated trains filled the air, while myriad electric lights sparkled like so many stars.

Suddenly out of the gloom came a little white hearse, being driven rapidly home. Its sad day's work was over, and the little horses were probably anxious for their dinner. Still it gave one a shock to see them galloping so. Even more pathetic it looked when empty than with its precious little burden. The very emptiness spoke of the vacant little chair at home, the unused toys, the unworn frocks folded away for some woman to cry over on a rainy day.

Fathers hurrying home to their own little ones felt a sudden lump in the throat, mothers leading their children grasped the little hands with a quick access of tenderness, and a strange, sad sense of loneliness came to the heart of the passerby who had no child to lose. Just a little white hearse, seen only for a moment in the gathering darkness by the hurrying throng, but what a world of pathos it suggested!—New York Mail and Express.

Artificial Legs.

The most lifelike and serviceable artificial legs in the world are manufactured in America. Enormous quantities of these limbs are shipped to Europe every year.

The first great boom in the artificial leg business was brought about by the civil war. Since that time railroad and trolley car accidents have kept up an ever increasing demand. Another factor has been the general use of antiseptics. The mortality among those who have their legs amputated is far less than formerly, and a large proportion of the survivors become patrons of the wooden leg factories.

The old fashioned peg leg is practically a thing of the past. The modern artificial leg shows a great advance over the old forms. Every improvement has been with the idea of greater simplicity.

The main object of the manufacturers is to improve the fit of the legs. The best models now cost $100. It costs from $5 to $25 a year to keep one of these in order.

Few women wear artificial legs. On the other hand, it is becoming more common to fit limbs to children. Legs are made for children sometimes before they can walk. They are fitted as soon as the child learns to stand and make it possible for it to develop symmetrically.

Where Was the Swindle?

"Ethel," said Lionel Bertram Jones as he dropped his slice of bread in the plate with a noise that set the canary in the gilt cage overhead chirping merrily. "Ethel, I have something to say to you."

They had been married only four weeks, and the time had not arrived when she did all the saying.

"Do you remember the day on which I proposed to you?"

"Yes," she replied. "I will never forget it."

"Do you remember," he went on as he abstractedly drilled a hole in the loaf with the point of a carving knife, "how when I rang the bell you came to the door with your fingers sticky with dough and said you thought it was your little brother who wanted to get in?"

"Yes."

"Oh, Ethel! How could you? How could you?"

"How could I what?" she responded as a guilty look crept into her face.

"How could you make me the victim of such a swindle?"—London Tit-Bits.

SYBARITES IN THE COLD.

Luxury as It Is Indulged In by the Arctic Traders.

So much has been written of the Eskimo ("husky") dogs and dog sleds of the north that they may well be mentioned here if only to show the idea of luxury which many of the factors and traders of the Hudson Bay company entertain. Seated or rather reclining in his cariole, swathed in furs, he is driven by an engage on foot who dashes along at a great pace. The cariole is painted gaudily. There are Russian bells on the collars of each of the long span of dogs, while the harness is a mass of beadwork and tassels.

No longer when he lodges at night at a post does he partake solely of the simpler fare it can furnish, nor even when he camps out in the wilderness must he be content with what his gun can bring down in addition to the pemmican he carries. For now, either under the cariole seat or in an additional sled behind, there is found a good supply of canned meats and vegetables, products of Chicago and Ontario, and, moreover, his driver is his cook. In the open a fire will be deftly kindled, tea will be made, bacon and even eggs will be fried, and hot "flapjacks," that delectable fritter of the bush, half an inch thick and swimming in grease and molasses will tickle the factor's palate.

At night, enveloped in his furs and maybe reposing on a hastily constructed bed of balsam boughs, the last vision before his eyes close upon the scenes of dreamland will be the scintillating splendors of the aurora borealis, whose purpling waves alternate with bars of vivid light so rapidly and in such volume as to make the beholder almost believe that nature speaks, mauger the silence, all penetrating, all pervading—Cornhill Magazine.

Just Making Sure.

An old farmer in Scotland once went to have a troublesome tooth extracted. Said the dentist after looking at the offending molar:

"It is a very ugly one. I would advise you to have it out by the painless system. It is only a shilling extra."

He showed the farmer the apparatus for administering gas, remarking that it would cause him to fall asleep for a minute, and before he awoke the tooth would be out. After a slight resistance the sufferer consented, proceeding to open his purse.

"Oh, never mind paying just now!" said the dentist kindly.

"Hoots!" answered the cautious old Scot. "A' wasn't thinking o' that. But if A'm ga-en ta sleep, A' thocht A' wad like ta count ma siller fust."

DAN GROSVENOR SAYS:

"Peruna is an Excellent Spring Catarrh Remedy—I am as Well as Ever."

Hon. Dan. A. Grosvenor, of the Famous Ohio Family.

Hon. Dan. A. Grosvenor, Deputy Auditor for the War Department, in a letter written from Washington, D. C., says:

"Allow me to express my gratitude to you for the benefit derived from one bottle of Peruna. One week has brought wonderful changes and I am now as well as ever. Besides being one of the very best spring tonics it is an excellent catarrh remedy."

Very respectfully,
Dan A. Grosvenor.

Almost everybody needs a tonic in the spring. Something to brace the nerves, invigorate the brain, and cleanse the blood. That Peruna will do this is beyond all question.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, O.

When Hannibal's army descended from the Alps into the valley of Lombardy the whole force was well nigh routed by a plague of mosquitoes, which drove men and animals almost wild with pain.

BLOOD WAS THIN.

Patient Treated for Heart Disease and Consumption

But the Diagnosis Was Wrong—When the Blood Was Enriched the Symptoms Disappeared.

From Presbyterian Journal, Phila., Pa.

After years of patient and intense suffering, Miss Gertrude Gilbert, of 3201 Dauphin street, Philalephia, Pa., has recovered her lost health, and is today a rosy and blooming specimen of young womanhood. To a reporter she gave the following account of her case:

"I had been sick for a long time, when a friend urged me to try Dr. Williams' Pink Pills for Pale People. Previous to this three doctors had treated me. They diagnosed my trouble as heart disease together with consumption, and prescribed accordingly. All this medical treatment did not benefit me in the least. I was in a terrible condition. There was scarcely any blood left in my body. My chief trouble was weakness and after laborious efforts to get up stairs I almost went into a faint and on several occasions thought I was going to die.

"So little blood had I that my ears were almost transparent, and my complexion was as white as a sheet. I can scarcely describe my sensations, but after repeated treatment by my physicians I became thoroughly discouraged.

"It was at this time that Dr. Williams' Pink Pills were recommended to me, and I procured a box. Before I had finished it I began to feel the benefit to my health. This gave me encouragement, and I began a systematic course according to directions. At the end of the seventh or eighth box, in addition to having a sufficient quantity and a better quality of blood in my veins I was relieved of that shortness of breath and quick heart action which had been my chief trouble. My appetite returned, and I was enabled to do my daily duties with a cheerfulness which I had never before experienced. I always, as a preventive, keep a box of Dr. Williams' Pink Pills in my room. They are all they are represented to be, and to them, and to them alone, do I owe my restoration to health." Signed,

GERTRUDE GILBERT.

At all druggists or direct from Dr. Williams Medicine Co., Schenectady, N. Y. Price, 50 cents per box; 6 boxes, $2.50

An enemy is a man who injures you and then refuses to forgive you.

Got Grip? Try Fryer's Abietene Cough Balsam.

E. W. Grove

This signature is on every box of the genuine **Laxative Bromo-Quinine** Tablets the remedy that **cures a cold in one day**

The sky is most cheerful when bluest; but it is different with men.

People expect much from Garfield Tea, and they are never disappointed; it cures stomach, liver and bowel disorders and cures constipation and sick headache.

For Consumption try Fryer's Abietene Cough Balsam.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

Our 1901 catalogue contains a full list of everything needed for photographic purposes. The fullest line of amateur goods in the West. Kirk, Geary & Co., 330 Sutter St., San Francisco.

Photos That Would Pay.

Everybody is trying to make money quickly nowadays, and photographers, amateur and expert, form a goodly percentage of the total included in "everybody." Here are a few subjects that would fetch very high prices:

A house being struck by lightning. We have photos of lightning flashes, but no picture of the kind which shows a flash actually striking a house.

Two trains in collision. Photos of wrecked trains are common enough, but a snap shot at the very occurrence of the smash remains unrecorded.

The crew of a lifeboat in the act of rescuing the sailors of a sinking ship in a fierce storm.

A negative of an Atlantic liner batting with an ocean tempest. If you could take a snap shot of this subject from the deck of another liner it would be worth a good sum.

A photograph of a sprightly earthquake in Japan or some other country which is troubled in this way. It would be well to hang up your camera and make it work automatically, as earthquakes are not to be played with. Such a picture would be jumped at.

THE HAIR BRUSH

Breeds Dandruff, Which Causes Falling Hair and Finally Baldness.

Prof. Unna, Hamburg, Germany, European authority on skin diseases, says that dandruff is as contagious as any other malevolent disease, and that one common source of the spread of dandruff is the use of the same hair brush by different persons. The way to avoid catching dandruff or any other disease from another's brush, is to insist on the use of Newbro's Herpicide. It not only kills the dandruff germ, but it is also an antiseptic that will prevent the catching of any disease whatever through contagion of another's brush.

It isn't necessary to cultivate fools. They grow of their own accord.

The Best Prescription for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

When your liver is out of order do not dose yourself with poisonous drugs that harm and never cure, but take Garfield Tea, the HERB remedy that CURES.

Mem. for Good Health.

Today drink some "Castlewood" Bourbon, or Rye Whisky. Highest grade Kentucky goods. Cartan, McCarthy & Co., sole distributers, San Francisco.

Fryer's Abietene Cough Balsam guaranteed for Croup.

$100 REWARD, $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

Address, F. J. CHENEY & CO., Toledo, O
Sold by Druggists, 75c.
Hall's Family Pills are the best.

Tonic For Impaired Health.

Spruance, Stanley & Co., San Francisco, Kentucky Favorite Whiskey, unsurpassed for medicinal purposes.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

That Cough needs Fryer's Abietene Cough Balsam.

The Best Shorthand College.

If you wish to succeed as stenographers and book-keepers, follow the advice of all the Official Reporters of S. F., and attend the GALLAGHER-MARSH COLLEGE, Parrott Building, S. F., Cal. Graduates have no trouble obtaining positions, as none but *incompetent* stenographers are out of employment, and graduates of this College are qualified to fill any amanuensis' position very creditably. Board and lodging t be had for $15 per month. Life scholarship, by month, $10. Send for catalogue.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE $2** trial bottle and treatise. Dr. R. H. Kline, Ltd., 931 Arch St., Philadelphia, Pa

Piso's Cure is the best medicine we ever used for all affections of the throat and lungs.—WM. O. ENDSLEY, Vanburen, Ind., Feb. 10, 1900.

The famous old Gilt Edge Whiskey is recommended by physicians for family and medicinal use, because it is pure. Wichman, Lutgen & Co., San Francisco, Cal. Sole proprietors for U. S. A.

Fryer's Abietene Cough Balsam saves Doctor Bills

Clubs are trumps in the policeman's game.

If you are a photographer and have not received a copy of our 1901 catalog you have missed a good thing. Send for it at once. Kirk, Geary & Co., 330 Sutter St., San Francisco.

The poker player is always ready to uphold the red, white and blue.

YOU KNOW WHAT YOU ARE TAKING

CASTORIA

The Kind You Have Always Bought has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision for over 30 years. Allow no one to deceive you in this. Counterfeits, Imitations and "Just-as-good" are but Experiments, and endanger the health of Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought

Bears the Signature of

Chas. H. Fletcher.

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

An Old Friend

S. S. S. has been before the public for many years; from a small beginning, it has steadily worked its way to the front, and is now known in every city, town and hamlet in the country. Its staunchest friends are those who have known it longest and have witnessed its wonderful curative powers in their own families or among their friends and acquaintances. Grateful patients in all parts of the country tell of their restoration to health and happiness, and the testimony of these is the highest evidence of the medicine's worth. S. S. S. is more popular today than ever in its history—no other remedy stands so high, has ever given such perfect satisfaction or is so reliable in the cure of Cancer, Rheumatism, Catarrh, Contagious Blood Poison, Scrofula, Eczema, Psoriasis, Salt Rheum, Acne, or any disease that originates in the blood. Being strictly a vegetable preparation, you will find it agrees with you much better than a drug store concoction or any of the widely advertised potash and mercury remedies, which affect the bones, muscles and stomach, causing Rheumatism or Dyspepsia. If you have never tried S. S. S., you will be surprised at the immediate good effects, for no sooner does it get into the circulation than the appetite increases; you grow stronger, and gradually but surely it drives out the poisons and restores the blood to a healthy condition. If there is a sore or ulcer on the body, it begins to heal around the edges, the discharge finally ceases and the place gets well; muscular and bone pains vanish, and the skin is relieved of all itching, irritating eruptions. Nervous, run down and anaemic people will find S. S. S. just the medicine they need, for blood poverty and illy nourished nerves are responsible for their condition. For old people and children S. S. S. has no equal; being free from all minerals, it does not nauseate or have any injurious effect whatever, and keeps the blood in good condition, thus fortifying against disease. Experience teaches what is good and what is not good; this applies particularly to medicine, and S. S. S., a remedy that has retained the confidence of the people for nearly 50 years, must have merit—IT CURES, is the secret of its success. When you call for S. S. S. don't be persuaded to accept something else—there is no substitute for S. S. S. It is the only guaranteed purely vegetable blood purifier, and the safest and best for all blood and skin troubles. Do not let them force an inferior mineral remedy on you because there is a larger profit in it. If you have any blood or skin disease, don't hesitate to write us about it; our physicians will carefully consider your case and advise you without charge. Book on Blood and Skin Diseases free.

Don't Experiment—Take S. S. S.

SSS

THE SWIFT SPECIFIC COMPANY, ATLANTA, GA.

When Li Hung Chang Grinned.

Once during a dry season in China the viceroy, Earl Li Hung Chang, called on the American minister, Mr. Conger, and spoke of the weather.

"Yes," said Mr. Conger, "it seems to be dry everywhere. It is dry in my country too. I read in one of our papers the other day that in many places in the west the people were praying for rain."

"What!" said the earl. "Do your people pray to their God for rain?"

"Oh, yes," said the minister, "they often pray for rain."

"And does their God send it when they pray for it?" asked the earl.

"Yes, sometimes their prayers are answered, and sometimes they are not."

"All the same like Chinese joss, hey?" said the earl, with a grin and a chuckle.

May Know Too Much.

"Do women who have had the advantage of advanced education make good wives?" asked the bachelor thoughtfully.

At this the benedict took him to one side, where he could speak confidentially.

"If you ever marry," he said, "and find occasion to frame up a real good excuse for a protracted session at the club, you will discover that it is possible for a woman to know too much."—Chicago Post.

THE FIRST TWO LADIES OF THE LAND.

WASHINGTON OFFICIAL SOCIETY.

Part Taken by Mrs. McKinley and Mrs. Roosevelt—The President's Wife an Ideal Woman.

THE Vice President of the United States has never been much of a figure in political or social circles in Washington. He has been regarded merely as a remote possibility on waiting orders. But there is some justification for the belief that the Roosevelts will bring about a new order of things. In the first place they are going in for society; for another thing, circumstances will make Mrs. Roosevelt the virtual leader of social officialdom. It may be of interest to readers to learn something about the home and social life of the Vice President and his wife, as hitherto such personages have received little attention. In the same connection the home life of the President and his wife may be referred to without risk of wearying interest.

ROOSEVELT'S WASHINGTON HOME.

The Roosevelts have leased the Storer mansion, one of the show houses of Washington, at the corner of Seventeenth street and Rhode Island avenue, six blocks from the White House. For this property the Vice President will pay a rental of $6,000 a year, and as his salary amounts to only $8,000, it is evident that being a Vice President is not a financial benefit, for if the incumbent of the office keeps up with the social current his annual expenses will amount to a sum several times as large as the salary attached to the office. As the Roosevelts are not very wealthy—as wealth is now computed—they make a real financial sacrifice in going to Washington.

Apart from his small salary, however, Roosevelt as Vice President will be very well cared for. He will occupy in the capitol the most luxurious office in Washington.

The Vice President will have at his service a private secretary paid $2,220 a year by the government, and a messenger who will draw a yearly stipend of $1,440. In addition he has for his use a telegraph operator to send his messages for $100 a month, and a page to carry the messages to the operator for the modest compensation of $75 a month. These four plums are all that the next to the highest office in the government has to bestow. Whether he can influence the President in the matter of other patronage is not a question of usage but of the personal relations existing between the two officials. As a rule Vice Presidents have been ignored by their superiors.

In a social way the Roosevelts will rank second only to the President's household. It was not always so. Indeed it never was so until four years ago, when Mr. McKinley raised the Vice Presidency to this exalted social altitude. As has been said, previous to Mr. McKinley's first inauguration the Presidents allowed the Vice Presidency to be "overridden by diplomats, justices, and even by cabinet members." On the other hand Mr. and Mrs. Roosevelt will occupy a social station equal to the former's official station, and will be overwhelmed with invitations. It is altogether likely that she will need the services of a private secretary to attend to her social mail. She will stand at Mrs. McKinley's right hand at all White House receptions of the administration, and as each function will demand a new and elaborate gown, it may readily be understood that this item will amount to a considerable drain on a comparatively small fortune.

But the social exactions of the position do not end with White House receptions. The Vice President's wife must hold her own afternoon receptions weekly, and keep open house for official guests practically every day during the society season.

Mrs. Roosevelt will grace the high social station to which she has been called by the election of her husband to the Vice Presidency, notwithstanding the fact that she is extremely retiring and averse to public notice. As the wife of the Vice President of the United States, Mrs. Roosevelt will be obliged to assume a prominent position in the world, and it must be said that she has yielded to the inevitable with grace and dignity. Mrs. McKinley's ill health precludes the possibility of her taking active part in society, which relegates the responsibilities of the first lady of the land to Mrs. Roosevelt.

There is much curiosity in Washington society concerning the new leader. There will not be much seen of her until next fall, however. The Vice President's family will not take up a permanent residence in Washington until then. At that time the eldest daughter of the house, Miss Alice Roosevelt, will make her entrance into society.

Mrs. Roosevelt was a Miss Edith Kermit Carow. She is now about 37 or 38 years old, and, without being a beautiful woman, posesses unusual attractiveness of face and figure. She has an unmistakable look of race, and has the simple, gracious manners of a truly aristocratic woman. She dresses extremely well.

STATE DINING ROOM IN THE WHITE HOUSE.

MRS. M'KINLEY.

The First Lady of the Land as She Is Seen in the White House.

"Mrs. McKinley has made no record socially or politically. She has simply filled her place without ostentation or display," says a writer. "Mrs. McKinley, wife of the twenty-eighth President of the United States, will pass down in history as an ideal woman. Her kindliness and graciousness will be remembered when the more important events of President McKinley's administration are forgotten. Mrs. McKinley is a woman and wife whose virtues are homely and domestic. The inspiration which she has ever been to her distinguished husband, and his unquestioned recognition of the debt, are two factors in their lives which stand out in bright relief."

It being true that Mrs. McKinley's state of health prevents her taking active part in society, the American people are interested in the home life of herself and her distinguished husband. This glimpse of the home life of the couple in the White House is afforded by Mrs. Morse, a relative of the President, who has been a guest at the White House for weeks at a time, and from whose account in part the following facts are drawn.

LADIES' RECEPTION ROOM IN THE WHITE HOUSE.

Early in the morning the President breakfasts and busies himself with business affairs. Mrs. McKinley is served in her own room, and after the meal in walks the President, brisk and refreshing.

Mrs. McKinley never fails to meet him in a charming morning gown. Every little while she produces a new one. Her husband always discovers it the very first day instead of waiting a week.

"That cream color is wonderfully becoming to you," he said the last time. He even knows cream color from yellow.

"Are you sure you like it?" she said.

"My dear, I never saw you look better in anything except that gown that you wore to the Presbyterian Church supper the year before we were married."

Then they joked for a half hour in reminiscent vein about that Presbyterian church supper. It seems that she, Miss Saxton then, had assisted at the ice cream tables, and the Major had objected to her working so hard.

"I will wait on the tables,' he said, taking two trays out of her hands.

And of course he spilled them both, and the ice cream was pink and it made long pink stains down the front of Miss Saxton's cream-colored gown

"You were very charming about it William. I remember admiring you because you did not try to replace the gown as an American whom I met abroad did on a like occasion."

"It has never been replaced until now, my dear. This substitute is a success. I trust you will send the bill to me, as I ruined the original.

"As for the wearer—I think you are looking a trifle younger this morning than you did at the ice cream festival, but otherwise I see no difference."

By this time the allotted half-hour was up and the President retired to his office for a stretch of some three hours' hard work.

The morning work in the White House seems to move on the better every day for that short chat in Mrs. McKinley's room. When she is not well enough for it a great solemnity hangs over Presidential shoulders and extends over the whole household. It reaches past the Cabinet to the clerks and on to bellboys and even to stablemen and gardeners.

These times are happily infrequent. For the most part Mrs. McKinley is able to supervise her home, to do her own shopping and discharge many social duties.

The morning chat is more often given to Mr. McKinley's affairs than to anything else. He gives her a sketch of the past twenty-four hours in his official world and she listens eagerly.

During the President's busy forenoon hours his wife drives out on shopping excursions or visits with the little folks who are often gathered in the big house, or reads and knits if the weather is too bad for driving and if there be a dearth of little folks.

Mr. and Mrs. McKinley lunch together. All the morning's doings are talked over and the afternoon's plans discussed. Sometimes the President has the happy news that he will have a little spare time, and he deferentially asks if he may have the pleasure of her company for a drive. Once in a while he proposes an evening at the theater and that it always delightful, for she is very fond of the theater. She likes comedy best. "There is enough trouble in the world without seeing sad plays and reading sad books," she says.

Some of the afternoons are passed with her friends. She likes a tea-table chat as well as women who know nothing of the big affairs of state.

During this busy season she is obliged to depend more than usual upon tea-table amusement, for there is very little time to be spared by a husband in Mr. McKinley's position. She does not permit herself to make demands upon his time; she knows that he would respond to those demands even though he had to remain at his desk twenty-four hours at a stretch to make up for it. She recalls the time when he had left for Canton on important business, and hearing of her sudden illness returned straight to Washington. Remembering this she guards her own health like a dragon, knowing how much it means to his success that there shall be no anxiety.

YOUNG MEN BELIEVED HIM.

Senator Dolliver's Optimistic Lectures Brought Large Returns.

The career of Jonathan Prentiss Dolliver, the mountain boy who became a Senator, is described by Cyrus Patterson Jones in Success. Of the Senator's love for humor Mr. Jones says:

"Hit wit is one of the most attractive of his gifts. He can tell a story with wonderful effect. His keen sense of humor would have made him a comedian, if nature had not cast his faculties in a more serious mold. Therefore, his fun crops out only at times. When I asked him when and where he first began to consider himself famous, he said:

"'My first term in Congress gave me my first sense of exaltation. The people up in the Iowa hills had a little lake, and they named it after me. Then a new postoffice was named in my honor, and a colored woman named her baby after me. I began to think of engaging a niche in some temple of fame. But, in my second term, I was disillusioned. A climatic disturbance dried up the lake, free delivery wiped out the postoffice, and the child died—and I found myself back in the very place whence I had started.'

"A few years ago Mr. Dolliver was invited to deliver a lecture in St. Paul and Minneapolis before the Young Men's Christian Association lyceum. In each city the hall wherein he spoke was crowded, some 1,500 men attending. His topic was, 'Chances for Young Men.'

"'That,' said he to me, 'was a favorite topic with me. I believed in young men, and liked to talk with them, knowing full well that if one can stir them up to energy and ambition, he is doing a grand work in the world.

"'Well, I have not changed my opinion since the delivery of that lecture; but when I got back to Washington to resume my Congressional duties a week later I began to hear from those particular young men. Letters began to pour in on me. They came in bunches of two and three; then in dozens, and finally in baskets-fuls. Every St. Paul and Minneapolis young man who had heard me declare this is the young men's age wrote that he fully agreed with me—and asked me to get him a government job!'"

Desert Land Made Beautiful.

No fewer than 12,000,000 acres of land have been made fruitful in the Sahara desert, an enterprise representing perhaps the most remarkable example of irrigation by means of artesian wells which can anywhere be found.

Features of a National Park.

The Vicksburg National Park will soon be complete as far as the acquisition of land is considered. It will comprise in all 1,231 acres. It is proposed to restore all military features that marked it in the struggle of 1863.

There is at least one thing to the credit of the girl who wears tights on the stage—her stockings stay up.

About one-half a man's life is devoted to rectifying the mistakes of the other half.

SHEAR NONSENSE

He—I always say what I think. She—I notice you are extremely reticent.—King.

"I suppose rum brought you here," remarked the prison visitor. "Yes, ma'am, an' a patrol wagon," replied the prisoner.

A Wisconsin newspaper refers to a man who was caught by an eight-foot cave-in of snow as "a little bit under the weather."

She—"Why do they always speak of 'the sad sea waves?'" He—"I suppose because they usually look blue."—Harlem Life.

Mrs. Keyboard—Why do you always sit at the piano? You can't play a note. Old Stokes—Neither can anyone else while I'm there.

"You ask for the hand of my daughter! What expectations have you?" "Why—none at all." "Neither has my daughter. Take her and be happy."

McCarthy—"Old Brown declares you are the most entertaining talker in the club. What do you usually talk about in his company?" McCormick—"Old Brown."

He—And now, darling, when do you think we would better announce our engagement? She—Oh, there is no hurry, dear. Any time within the next twenty-four hours.—Harper's Bazar.

"Yes, she wouldn't speak to the editor when she met him." "Had he offended her?" 'I should say he had. His society reporter called her one of the last century's buds."—Cleveland Plain Dealer.

Only One Theory: "How in the world did she ever come to marry a man with one leg?" "I don't know, unless it can be traced to her strong liking for damaged goods that come cheap."—Chicago Times-Herald.

Tourist—I understand that you have relics of the war for sale, my little man? 'We did have," replied the boy, "but they have bought us out, an' the swords daddy buried last week won't get rusted 'fore summer."

Exposure: "Where are you rushing so fast?" "Up to the health office to get vaccinated." "Eh! Been exposed?" "Yep. Telephone girl this morning gave me the pest-house number by mistake."—Cleveland Plain Dealer.

Diner—"Come, tell me straight. Is it any real advantage to a man who gives you a tip?" Truthful Waiter—"Honestly, I can't say that it is; but it is apt to go hard with the gentleman that doesn't tip me."—Boston Transcript.

Awe-struck Visitor—It must be very difficult to produce such an exquisite work of art. Dealer—Nonsense. Almost anybody can paint a picture, but finding a victim to buy it after it is painted is where the art comes in.—Tit-Bits.

"What's all that crowd of women over there at Bargen's?" "Shoppers who read Bargen's 'ad.'" "But that's an unusually large crowd for so early in the morning." "I know, but the 'ad' said: 'Come early and avoid the crowd.'"—Ex.

Tainted: "I hear you want to sell your dog, Pat. They tell me he has a pedigree." "Shure, an' Oi niver noticed it, sor. Anyhow, he's nothin' but a puppy yit, an' Oi'm thinkin' as how he'll be afther outgrowin' it, sor."—Philadelphia Bulletin.

"What brought on these dyspeptic feelings which cause you so much trouble, I wonder?" "I haven't the slightest idea. All I've eaten is a few oysters and a broiled lobster, and a taste of ice cream and all I've taken to drink is a glass of milk."

"I am sorry for you, my boy," said the old man. "I feel certain you are about to wed a woman that does not know how to cook." "It might be worse, father," answered the young man. "She has promised never to try to learn."—Indianapolis Journal.

Cause of the feud: Mr. Meddergrass—"Hi Slocum an' Bill Hocorn ain't speakin' now." Mrs. Meddergrass—"Do tell! What's up?" Mr. Meddergrass—"Hi claims his th'mometer averages ten degrees lower'n Bill's in winter an' fifteen degrees higher in summer."—Baltimore American.

Fatal Process: "Gazzam has been going without his breakfast for a month, to reduce his flesh," said Twynn. "With what effect?" asked Triplett. "He is losing two pounds a week and is very much tickled over it." "Well, if he keeps on at that rate he'll be tickled to death."—Detroit Free Press.

"No, I can make you no contribution; I don't believe in sending out foreign missionaries." "But the Scriptures command us to feed the hungry." The man of wealth shrugged his shoulders. "Well, I'd feed them something cheaper than missionaries,' he rejoined, with the brusquerie that characterizes his class.—What to Eat.

"Charley, dear," said young Mrs. Torkins, "I am going to turn over a new leaf." "In what connection?" I'm going to quit being superstitious. I have always disliked to begin anything on Friday." "Yes. It is very silly of you." "Well, your arguments have convinced me. You know that new dress I was talking to you about?" "Y-yes." "Well, I'm going to start out and buy the material on Friday, just to show I'm not afraid."—Washington Star.

The school teachers of Illinois have done a great work in the protection of birds, says the Chicago Tribune. They have aided and supplanted the work of the Audubon Society, and all the other associations which are interested in giving "our friends in feathers" a good chance. Five years ago few people paid much attention to the native song birds. Their eggs were stolen, their nests broken up, and the birds themselves wantonly destroyed. At present there are more than 35,000 people in the State who are actively interested in preserving and fostering the birds.

A BIRD TABLE.

The State game commissioner, aided by the Audubon Society, has had posted on the outside of every postoffice in the State a large placard calling attention to the law which forbids the killing or confinement of native birds, and asking the assistance of the public in enforcing it.

Under its provisions there are only four species of native birds which it is lawful to keep in confinement. They are the crow, the crow blackbird, the chicken hawk, and the English sparrow. Any person who kills any other bird, or who keeps it in captivity or destroys its nest or eggs is subject to a fine of $5 and costs or to a sentence of ten days in jail, or to both for each offense.

Collecting of either eggs or birds is allowed only for scientific purposes, and every person engaged in it must comply with some onerous conditions. No person under 15 years old is allowed to do collecting under any circumstances. A person of proper age who wishes to collect must first secure the indorsement of at least two scientists of note; he must file a bond for $200 in the County Court, and must, in addition, pay a license fee.

As one result of the work of the Audubon society many people living in and near Chicago have been led to take an active interest in the care as well as the protection of birds. There are in Cook County several hundred "bird tables," which are kept up all winter by bird lovers. A "bird table" consists of a board supported between two branches of a tree, on which are exposed small dishes which are regularly kept filled with seed, while above is fastened a large piece of beef suet. Such a table will attract a whole host of birds, who will remain welcome visitors all the winter through. Among the birds which will be attracted by a "bird table" are blue jays, nuthatches, chickadees, red-headed wodpeckers, downy woodpeckers, kinglets, gold finches and English sparrows. It is not likely, however, that the gold finch, which is commonly known as the wild canary, will be recognized in his winter dress, except by those who know that with the coming of cold weather he changes from a gorgeous black and yellow to a gray and dirty green.

Easier still than the "bird table" as an expedient for attracting birds is the setting up a few boxes or tin cans to serve as nesting places. An ordinary empty tin can if set up on the top of a pole will serve as a nest for the pretty bluebird, which will spend all his summer with you if only the English sparrows are kept away.

Within the last year or two it has been noted that the English sparrow has taken to living out in the country lanes and hedges as well as in streets and alleys. It is there, as always, a mean, domineering little bully, depending on its great numbers to kill or drive away any bird which appears in its vicinity or whose resident district it invades. It has met one native bird, which so far from being frightened by the noisy little "avian rat," finds it only good sport to kill a dozen sparrows and hang them up to dry in the sun. This enemy of the English pest is the great American shrike or butcher bird. The shrike kills the sparrows, dines daintily on their brains, and then impales their bodies on spikes in a thorn tree. A single shrike will do more to clear a district of sparrows than any number of artificial devices.

TIN CAN NEST FOR BLUEBIRDS.

MRS. ANDREW CARNEGIE.

Wife of the Great Altruist Is a Philanthropist.

Mrs. Andrew Carnegie, wife of the great philanthropist, has been his ablest helpmeet in all his projects to do good to his fellow men. It was, in fact, through his benevolent work that Mr. Carnegie met his wife. She was Miss Louise Whitfield, daughter of John Whitfield of the importing firm of Whitfield, Powers & Co., and she and her future spouse became acquainted through a philanthropic plan in which both were interested. Miss Whitfield was an heiress in a small way. She possessed $60,000, which she was using in charitable work. She had also beauty, good humor and good health. The king of the steel industry had known her sixteen years before their marriage. After that happy event Mr. Carnegie's immense fortune was at the disposal of his wife for her benevolent activities, and these, though obscured by her husband's prodigality, have been, nevertheless, useful and extensive. Mr. and Mrs. Carnegie have one pretty daughter.

MRS. ANDREW CARNEGIE.

She Wasn't Thrown.

The man who asks "Are you reading?" when he sees some one so deeply immersed in a book as to be entirely oblivious to outside surroundings, was walking along a country road the other day when a horse came dashing madly into view. It was a powerful horse, and on its back a slim young woman swayed back and forth in unison with its strides.

Just before the runaway reached the man it swerved violently to one side and the rider fell headlong to the ground, lay inert for a moment, and then got painfully to her feet, holding her limp left arm with her right hand.

"Did your horse throw you?" asked the inane man, as he hastened to her assistance.

The young woman pulled herself together with an effort. Then—

"No; he did not," she replied, coldly. "I got off. That's the way we always get off in Georgia."

And the inane young man admits that he felt like a fool.

In a Businesslike Way.

Men of experience are not anxious to give notes, as a rule, but there is an old negro in Mount Pleasant who, says the Pittsburg News, once insisted on doing so—and did it in an original way.

He had bought a cow from Captain Jordan. Burgess, the negro, hadn't the money just then, but Captain Jordan knew he would pay, and told him to take the cow. That was too informal to suit Burgess.

He knew that notes and other papers of that sort passed between white men, and he insisted on a note in this transaction. Captain Jordan told him to draw up one to suit himself. When he presented it, it read:

"I, Davy Burgess, do hereby promise to pay Captain Jordan thirty-five dollars for the spotted cow when I has the money to spare.

"DAVY BURGESS."

"Now," he said, "I'll jes' keep dis en take de cow."

He put the note into his pocket and drove the cow away. When he was ready to pay the thirty-five dollars, he went to Captain Jordan with it.

"Heah's yo' money," he said, counting it out. "An' now, sah," he remarked, with considerable satisfaction, "dat transaction may be considehed closed."

A Georgia jury recently brought in the following verdict: "We, the jury, find the prisoner almost guilty."

A man likes to feel that he is loved and a woman likes to be told.

IRRIGATION BY ELECTRICITY.

Interview with Hydrographer NEWELL.

Irrigation by Electric power promises to work a revolution in many sections of the arid West. The streams are to be used in the mountains to generate power, and the power is to be transmitted to the fields below for pumping water on the land.

Mr. Frederick H. Newell, the Hydrographer of the Geological Survey, has just returned to his office from a surveying tour of the West, and he states that this power development will add immense and, at the present time, unknown areas to the irrigable land of the arid region, while at the same time the water supply under the system will be certain and most satisfactory to the irrigator.

"The feasibility of transmission of electrical power for not 20 or 30 miles but for 150 to 180 miles has opened the way," says Mr. Newell, "for this new and enormous additional development to the hitherto supposed resources of the arid West.

"The method by which additional areas can be brought under irrigation with a given visible water supply, is this: We will suppose a stream flowing from the mountains down into a large broad valley or a plain a hundred miles below. The water from this river is sufficient to irrigate only one-half or one-third of the plain; all the rest is, then, dead land. There is, however, an underflow beneath this remaining, or "dead" land, which can be found at a depth of from 20 to 50 feet. This furnishes an inexhaustible supply of good water for irrigation could it be gotten economically to the surface. The great bulk of the lowlands of the valleys adjacent or tributary to the forest areas of the Rocky Mountains or the Sierra Nevadas are underlaid with this water—a practically inexhaustible supply against pumping.

WATER FURNISHES THE POWER.

"Fuel for pumping, however, is expensive, and it does not seem practicable to get the water onto the land except at a prohibitory cost. But here is where the power can be brought into operation. Storage reservoirs can be constructed way off in the mountains in such a manner as to utilize the power of the river or its fall to the full extent, and from this plant or plants the power generated can be transmitted down the valley to the the twenty or forty-acre irrigated farms, where it can be applied to an electric motor operating a centrifugal pump lifting water upon the land as required. This should be the ideal irrigation system. The farmer starts his motor and the water comes; when he has enough, he shuts it off. His water supply is right under him, in great abundance, and he does not have to jump on his horse and ride off twenty miles to a canal headgate to find out why his water does not come down the ditch."

"But is this a theoretically possible development, Mr. Newell, or is it something which has been actually tested?"

NOT A THEORY BUT A FACT.

"The practicability of this development has already been demonstrated by the number of plants already in operation in the San Joaquin Valley. It is claimed that water is actually being pumped at a less cost than it is supplied by gravity ditches. There are many opportunities not only in California, but also in Colorado, Utah, and other States where power plants can be economically installed in the canyons, and the water from these used to irrigate the fields. The power from these plants can be conducted out to points beyond reach of the canals, and employed in lifting the underground waters to the surface. The ultimate development of this class of work must rest largely upon water conservation, the holding back of the floods of the spring to supply a continuous discharge during the summer, keeping the power plants in operation, as well as furnishing water for the ditches.

DEPENDS UPON CONGRESS.

"This complete conservation must rest largely upon the governments comprising its work in the forest reserves, not only in protecting the growing timber, but also by constructing large reservoirs where the conditions are favorable. By such works the largest possible use can be made of the irregularly distributed water supply, and the moisture which exists beneath the surface and which now is practically useless, can be recovered and made to assist in the creation of thousands of homes upon the public lands.

Organizing for Work.

The national irrigation movement is being taken hold of with vigor by the people of the West. Southern California has organized a branch of the National Irrigation Association, and is recruiting members rapidly, mostly from business houses. Members pledge themselves to not only support the movement, but agree to urge their Eastern business correspondents to join the Association and lend it their support. A favorite method of securing the attention of the Eastern business man is for the Western merchant, whenever he sends a check East in payment of a bill of goods to write a personal letter calling attention to Western development, and to the great increase of business which would follow the adoption of a national irrigation policy, and soliciting Eastern cooperation to secure the enactment of adequate Federal legislation.

The work is being pushed by the National Irrigation Association of organizing branches in other States along these lines. The Association is becoming a power.

GUY ELMORE MITCHELL.

OFFICIAL.

AUDITOR'S REPORT

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 25th day of May, 1901, an assessment, No. 56, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 1, 14 Ely Block, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES S. ANDERSON,
Secretary.

OFFICE—Room 51, 19th Floor, Mills Building, San Francisco, Cal.

SUMMONS.

In the Superior Court of the County of Inyo, State of California.

J. J. WALL, Plaintiff, vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. J. HARNESS, Attorneys for Plaintiff, Independence, Cal.

The People of the State of California, sending Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County, or within thirty days if served elsewhere.

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

(SEAL.) J. E. MERONEY, Clerk.

By ..... Deputy Clerk.

(Endorsed:) Superior Court, County of Inyo. J. J. Wall, Plaintiff, vs. Surprise Mining and Milling Company, a Corporation, Defendant.

DIED.

O'MALLEY—At County Hospital. June 9. 1901, Michael O'Malley, a native of Ireland, aged about 60 years.

SMITH—At Los Angeles, June 13, 1901, Arthur Smith, a native of New York, aged 46 years.

Haying has commenced.

Tonapah is in Nye county, Nevada.

Bertrand Rhine left last Monday for San Francisco.

John Calloway and James Christie are visitors from Ballarat.

Mrs Harvey and daughters were up from Lone Pine Tuesday.

Geo S Wood was elected School Trustee for this district last Friday.

Mr. and Mrs. J. J. Morton have rented the Lake View Hotel at Keeler.

O. I. Mairs returned yesterday morning from a visit to Los Angeles.

Wm. McDonald, of Big Pine, is suffering from an attack of erysipelas.

Silas H. Reynolds is again on deck at the Inyo Mercantile Co's. store.

Mr. J. J. McLean and children left last Tuesday morning for Washington, D. C.

County Surveyor Dixon, wife and family, of Big Pine, are visitors in Independence.

H. P Cartier returned from a visit to San Francisco and Los Angeles last Saturday morning.

Mrs. Matlack and daughter, Lizzie, are expecting to leave for Los Angeles some time next week.

H. W. Barton, of Big Pine, was a visitor in Independence for a couple of days during the week.

District Attorney Dehy and S. F. Vermilyea, Esq. went to Ballarat last Saturday returning Wednesday.

As yet, no move has been made in Independence to celebrate the glorious Fourth in a fitting manner.

Mrs. Mart Church, who has been visiting friends in Hawthorne, departed Monday for Los Angeles.—Bulletin.

Miss Maggie Bunney, who has been visiting Mrs. Ed. Clarke of Bishop for several weeks past arrived home Monday.

Ed Cross and Gustave Marsh came up from Ballarat about six weeks ago and have been visiting their friends in Lone Pine.

J. H. Shannon, who has been attending the Board of Education for over a week past returned to his Bishop home Wednesday.

Word has been received that Andy Ramsey and his partners have succeeded in getting a good supply of water in a well they have been sinking near Tonapah.

Tom Gunn writes from Tonapah saying that the future outlook for that budding mining camp is more than encouraging, and predicts that it will prove a second Virginia City.

A dispatch was received here Tuesday stating that Arthur Smith, who left here about two weeks ago for the California Hospital in Los Angeles for medical treatment, could not recover.

A man named Still sat down on a pot of hot slag at the Mason valley smelter the other day. It is needless to add that he did not sit still for any length of time He will eat his meals standing up for some time to come.

The Fair Directors met in Big Pine last Thursday. It was decided that the Fair of 1901 would be held here, provided a reasonable amount of money be subscribed by the citizens. What little comment we heard favors a departure from old lines—less one-sided horse-racing and more of variety.—Register.

George Montgomery and Clair Tyler will leave next Tuesday for Lincoln county, Nev., on a prospecting trip.

It is reported that O A. Turner of Grass Valley has bonded the Tonapah mines for $336,000, of which $50,000 is to be paid July 1st and $286,000 before December 31st, 1901.—Hawthorne Bulletin.

A stabbing affray took place at Tonapah last Saturday. Tom Bishop, who worked at the Reward mine for a time, and a man by the name of O'Niel had a quarrel and in the mix-up Bishop was cut in six places. Bishop will recover. O'Niel was arrested.

Here is another problem for the schoolmarms. One of our school boys has a baby sister that weighs 16 pounds, and he gets tired holding her in five minutes When he is twice as old how long will it take him to get tired holding some other fellow's sister who weighs 122 pounds?

Full of Human Interest

The stories and feature articles that help to make up the Los Angeles Sunday Herald each week are different, somehow, from the matter usually found in other Sunday papers, and the reason seems to be that they are full of what may be termed human interest. They are stories of life and action and achievement They are not only instructive and entertaining, but actually helpful. The Sunday Herald never contains a dull page. Its illustrations are ahead of any other paper, and the colored pictures and sheet music that are given free each week are really valuable.

Clark Says Road Will be Built

A press dispatch of June 7, to the Los Angeles Herald, says: A special from New York says that Senator Clark of Montana arrived from Europe last night ahead of time. He will stay in New York a week an then go to Butte to attend the wedding of his son to Miss Foster. His wedding present to the bride will be a check for a million dollars. From Butte the senator will go to Salt Lake, where he will hold conferences with Senator Kearns and others interested in the railroad between Salt Lake and Los Angeles Senator Clark emphatically declares that the road will be built at once regardless of all opposition.

Carnival and Street Fair

Carson City will hold a Carnival and Street Fair, beginning July rd and continuing four days. The people of Nevada and particulary those of Carson, have a way of making fetes of the kind as the one scheduled a complete success in every particular. The Committee having the affair in charge are sparing neither time, trouble or expense in making this a celebration that will exceed anything of the kind ever attempted in Nevada. The good people of Carson are noted for the open hospitality and uniform courtesy that is invariably accorded their guests on all occasions. Every person who can possibly get away should attend the Carnival and Street Fair and make merry with the people of Carson City. We acknowledge receipt of invitation and will certainly attend if we can dig up the necessary needful. Special Excursion rates will be given by railroads to be announced later in our local columns. See ad.

Arthur Smith Dead

Last evening John C. Irwin received a telegram from Dr. Cook of the California Hospital at Los Angeles, announcing the death of Arthur Smith, who died at that Institution at 6 o'clock, p. m., Thursday, June 13.

For some months past Arthur had been complaining and two weeks ago Wednesday, went to Los Angeles for treatment for stomach trouble. He was thought to be improving, and as late as last Saturday was able to be up and around town. A telegram received Tuesday of this week saying that he was not expected to live, came as a surprise to his many friends here, but prepared them for the worst, as the fatal ending was not unexpected.

Arthur has been a resident of this County for 27 years, having come to Paramint when a boy 19 years of age, and during his long residence had made many friends who regret his untimely death. He has no immediate relative in the west, a brother, Wm C Smith, having died here about four years ago. One brother, Fred, still survives him and resides at their old home at Melone, in the State of New York.

No man ever had a more loyal and warm hearted friend than Arthur Smith.

Board of Education

Board of Education met at Independence, June 3rd. 1901.

The following applicants received Grammar Grade Certificates: Miss Grace Watterson, Mrs. E. S. Bigelow and Miss Irene Reynolds.

The above class deserve honorable mention as they presented one of the best sets of papers ever placed before this Board.

The Board examined and credited the papers from the various applicants, for State Diplomas, and granted Diplomas to the following:

Bishop:—Hazel Gunter, Blanche May, Geo. Merten, Bart McGee, Yandell Rowan

Round Valley:—Birdena Smith, Evalena Evans, Stella Jones.

Fish Springs:—Alice Jones, Evelyn Jones.

Taboose:—Katie Walter.

Irving:—Elmer McLaren.

Big Pine:—Hazel Eldred, Jessie Thomas.

The following books were adopted, viz:

The works of Mayne Reid, "Lights to Literature," series, 8 volumes.

The Board decided to hold an Institute at Bishop, beginning Dec. 18, 1901.

The next meeting of the Board will be held Dec. 27, 1901.

The certificates of Miss Peterson and Mrs. Stevens were renewed.

Miss Truscott was recommended to State Board for Life Diploma.

Great New Oil District.

While the great oil industry in the State is moving slowly ahead there is every evidence that when a satisfactory settlement is made on freight rates nothing can prevent a veritable boom in the production and sale of oil in this State. It has been admitted by all experts on geological formations, that the State of California will be the great world oil producer and will also consume the greater portion of the product for the next fifty years, either in fuel or illuminating oils. What great possibilities for the amassing of wealth by her wide awake people if they only pay attention to the new districts that will be opened up for development! If one could have forseen enough to have secured some interest in the Sunset, Coalinga or McKittrick and last but not least the great Kern River District, in the early stages of the development, a few hundred dollars invested would have resulted in an independency for life. Now do not say that the opportunity to make money is exhausted, in fact it has only just begun Set your-self to work to investigate the great possibilities of that new district just opened in Inyo county. If you look at the map of our great State you will see that in the southwestern portion of Inyo county, immediately south of Owen's Lake, lies a natural basin hemmed in by the Sierra Nevada mountains on the west and the Inyo range on the northeast with a high range of hills crossing the south end of the basin. Within this inclosure there is approximately forty square miles of undisturbed cretaceos formation equal, if not superior to the great Kern River oil district, and from an expert's opinion, after a minute examination, it is said to be the greatest oil basin in the State, his opinion being based on the following indications:

1st. Stratification of cretaionery sandstone, chalk and fossil.

2nd Sulphuretted hydrogen and carburretted hydrogen gas.

3rd. Great pressure of gases in south end of Lake.

4th. Waters of Lake chemically mixed, soda predominating, thereby purifying the oil before reaching the surface and destroying the iridescent coloring Only light gravity oil will be found in these formations.

These are some of the principle indications of this new district and the 50 Oil Company will be the first in the field to develop their specially selected 1920 acres.—Mining and Engineering Review.

Death Valley Survey.

John Fox, the well known government guide and mountaineer of the Kings River Canon, is in the city. He is preparing for a journey through Death Valley, in Inyo county, at the head of a government geological survey of the valley Mr. Fox has spent the greater part of thirty years as a guide for government expeditions through all the great Sierra, and is highly esteemed for his efficient services by the departments at Washington. So far as known, there has never been a successful expedition through Death Valley, except an individual trip made by Mr. Fox. Every party that has tried to cross the scorching desert, which is ninety miles across, and without a drop of water, has proven a failure and death and disaster have followed, but Mr. Fox, who has crossed Death Valley, is confident that he can lead an expedition safely across the arid waste, and the government has decided to intrust a large geological survey party under his leadership, and make the crossing during the month of August.—Fresno Democrat.

It is surprising that papers as near by as Fresno should know so little of Death Valley. It is truly a valley of death and well deserves its name but as to its being 90 miles across, without water, that is sheer nonsense. For the most part, Death Valley throughout its entire length of 100 miles or perhaps a little more, does not exceed five miles in width. It is a narrow valley running almost north and south between the Panamint range of mountains on the west and the Funeral range on the east, and lies nearly entirely in Inyo county, almost on the state line of California and Nevada. There is water at Bennet's Holes, the lowest point in the valley, and lots of it 20 miles north at the mouth of Furnace Creek, and the writer has been in it from end to end and across it, too.—Randsburg Miner.

A Word to Ella.

Ella Wheeler Wilcox says in the Examiner:

"The summer sun shone fairly down,
The wind blew from the south;
As blue eyes gazed in eyes of brown,
His kiss fell on her mouth:
Alas! alas! the woe that comes from kisses on the mouth."

Now, Ella, dear we have read many of your passionate poems, and having done so, we ask in all sincerity where else you could expect his kiss to fall? Not on the tip of her nose or the toe of her boot The former might be cold or the latter dusty; and really there doesn't seem to be any place exactly suited to kiss other than the mouth; so why mention the place, Ella?

And are you writing poetry Ella, or are you only rhyming? Why speak of the sun shining 'fairly down?" Does the sun ever shine unfairly or in any other direction than down? That is a law that obtains even on the top of Pike's Peak; in fact you can't reach an elevation any place where the sun shines up, Ella.

And the blue eyes gazing in brown eyes. Now, dear, that's mighty bad grammar or it represents a very peculiar condition of affairs. Blue eyes might gaze into brown, but in them—well, hardly, unless indeed there was an artificial—but of course that isn't it. So it must be grammar after all.

Oh, Ella, wouldn't you just as soon write prose? Or, what is better still, not write any more whatsoever?—Bakersfield Californian.

School Superintendent Hampton, who has been in attendance at the meeting of the Board of Education, and Miss Flossie Crough, who has been visiting Miss Nettie Irwin, started for their home in Bishop Wednesday morning.

CONTROLLER'S DEPARTMENT.
STATE OF CALIFORNIA.

To the Tax Collector of the County of Inyo, State of California:

WHEREAS, on the 19th day of January, 1901, there was filed and recorded in the Controller's Office of the State of California, certain deeds conveying to the People of the State of California the title to those certain lots and parcels of land hereinafter described;

AND, WHEREAS, said deeds recite the fact that said property hereinafter described was struck off and sold to the People of the State of California for the nonpayment of State and County taxes, penalties and costs, and all charges legal and assessed against said property for the year 1894;

AND, WHEREAS, five years have elapsed since the date of said sale, and no redemption, according to law, has been made of said property, or any part thereof;

NOW, THEREFORE, in pursuance of the law in such cases made and provided, I, E. P. Colgan, Controller of the State of California, by virtue of the authority in me vested by the laws of this state, do by these presents authorize, empower, and direct you, the said Tax Collector, to sell at public auction, in separate lots or parcels, the property hereinafter described, in the manner following: Public notice shall first be given of such sale by publication for at least three weeks in some newspaper published in the county, or city and county, or if there be no newspaper published therein, then by posting a notice in three conspicuous places in the county, or city and county for the same period, which notice must state specifically the place of and the day and hour of sale, and shall contain a description of the property to be sold, and shall also embody a copy of this authorization.

The property above referred to and hereby authorized to be sold, is situate, lying, and being in the County of Inyo, State of California, bounded and particularly described as follows, to wit:

In Panamint Mining District, Wyoming mine, lot 38, T 21 S R 45 E. M. D. M., containing 20 acres. Sold to the state July 3, 1895.

Also, in Panamint Mining District, Stewart's Wonder mine lot 39 T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Star mine, lot 31, T 21 S. R. 45 E M. D. M., containing 20 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Hemlock min, lot 46, T 21 S. R. 45 E. M. D. M., containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Little Chief Mine, lot 47, T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Little Chief millsite, lot 47, T 21 S R 45 E. M. D. M., containing 5 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Comstock mine, lot 49, T 21 S R 45 E. M. D. M., containing 20 acres. Sold to the state July 3, 1895.

Also, in Panamint Mining District, Alabama mine, lot 33, T 21 S. R. 45 E. M. D. M., containing 17 acres. Sold to state July 3, 1895

Also, in Panamint Mining District, Marvel mine, T 21 S. R. 45 E. M. D. M., containing 16 acres Sold to the state July 3, 1895.

Also, in Panamint Mining District, Challenge mine, T 21 S. R. 45 E M. D. M., containing 10 acres. Sold to the state July 3, 1895.

Also, in Panamint Mining District, Hudson River mine, containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Stewart's Wonder millsite, containing 5 acres. Sold to the state July 3, 1895.

Also, in Panamint Mining District, Challenge M. S., containing 2 acres. Sold to the State July 3, 1895.

Also in Panamint Mining District, Ida mine, containing 19 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Independence mine, containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Eureka mine, containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Independence M. S., containing 1 acre. Sold to the state July 3, 1895.

Also, in Panamint Mining District, Wyoming millsite, containing 5 acres. Sold to the state July 3 1895.

Also, in Panamint Mining District, Eureka millsite, containing 4 acres. Sold to the state July 3, 1895.

Also, in Panamint Mining District, ten stamp quartz mill, millsite and machinery, store building, office, boarding house, wash house, blacksmith shop and Company's spring and pipe line; 20 acres. Sold to the State July 3, 1895.

That no bid shall be received or accepted at such sale for less than the amount of all the taxes levied upon such property, and all interests, costs, penalties, and expenses up to the date of the sale hereby authorized, together with all such subsequent taxes as may have been levied upon such property, up to the date of the issuance to the state of the deed or deeds hereinbove referred to, with all interests, costs, penalties, and other charges thereon added to such subsequent taxes.

That said sale shall be conducted in all respects as by law governing such sales

Given under my hand and seal of office, at Sacramento, this 8th day of May, A. D. 1901.

[SEAL] E. P. COLGAN,
Controller.

By W. W. DOUGLAS, Deputy.

Therefore in pursuance of law, public notice is hereby given that I will, on Wednesday, July 3rd, 1901, at the hour of 10 o'clock, A. M., in front of the Court House, in the Town of Independence, County of Inyo State of California, sell at public auction to the highest bidder, for cash in lawful money of the United States, the said property hereinbefore in said authorization described, which authorization is hereby made a part of this notice, to wit: Situate, lying and being in the County of Inyo, State of California, and particularly described in said deeds to the state above referred to, as follows, to wit:

ROYAL Baking Powder is indispensable to the preparation of the finest cake, hot-breads, rolls and muffins.

Housekeepers are sometimes importuned to buy other powders because they are "cheap."
Housekeepers should stop and think. If such powders are lower priced, are they not inferior?
Is it economy to spoil your digestion to save a few pennies?

The "Royal Baker and Pastry Cook"—containing over 800 most practical and valuable cooking receipts—free to every patron. Send postal card with your full address.

Alum is used in some baking powders and in most of the so-called phosphate powders, because it is cheap, and makes a cheaper powder. But alum is a corrosive poison which, taken in food, acts injuriously upon the stomach, liver and kidneys.

ROYAL BAKING POWDER CO., 100 WILLIAM ST., NEW YORK.

Looking Without Seeing.

Perhaps you are an exception to the rule, but if you are not you have probably on many occasions, just after looking at your watch, been forced to acknowledge to a friend who asked you the time that you did not know what it was. Yet you undoubtedly took your timepiece out of your pocket, looked at its face and carefully replaced it in your pocket, showing a logical sequence of thought and a well defined object, which did not, however, result in leaving a sufficiently distinct impression on your mind to satisfy your friend's curiosity as to the hour of the day. The motion was not an involuntary one, like that of the boy who cannot too often admire his first chronometer, nor yet habitual, for few persons are merely in the habit of taking out their watches. One does so only for a specific purpose.

Now, how may this seeming contradiction be accounted for? Perhaps the reason is that not once in ten times does a man look at his watch to see what the actual time is, but rather to learn whether he still has time to accomplish some purpose. He may want to keep an appointment at a certain time or to be sure not to miss a boat or train. When he takes out his watch, therefore, he instinctively looks for the hands in the position called for by that particular moment, and when he sees that they have not yet reached that point he returns the watch to its resting place, with his mind relieved.

The actual position of the hands really plays no part at all in the operation, and so when the time is asked of him he is unable to reply. In other words, he accomplishes the paradoxical feat of intently looking at a thing without really seeing it.

Trouble With a Telescope.

Continued observation with the telescope of the Yerkes observatory revealed the unpleasant existence of a number of curious streaks of light running horizontally, whose appearance had certainly never been noticed before and gave rise to redoubled uneasiness. And yet everything seemed right with the glass viewed externally and the most searching investigation could discover no cause.

At last in desperation the eyepiece end was unscrewed, and Professor Ellerman, the slimmest of the party, was bidden to crawl, as he well could do, along in the tube itself, and see if he could discover aught amiss. He crept along well enough, so wide is the tube, till he got beyond the center, when the telescope began to turn over with his weight, and he would have slid down on the top of the glass had not the other end been promptly seized and held fast. Then he continued his journey, and in another moment had discovered the unsuspected author of the mischief, an overindustrious spider and her equally hardworking progeny, who had succeeded in filling up the entire end of the tube with a mass of cobwebs in the hope of catching what must have been wholly imaginary flies. The webs and their spiders were carefully removed, and from that day to this the behavior of the Yerkes 40 inch glass has been all that heart could desire.—Good Words.

A Big One.

An octopus which had been in a fight with some other monster once drifted ashore on the Malay peninsula. He had feelers, or arms, which were from 12 to 17 feet long and weighed altogether 550 pounds. It was calculated that he was big enough and strong enough to drag a two ton fishing boat under the surface by main strength.

DR. BYLES STOOD GUARD.

It Was a Thanksgiving Day, and the Cause Was Urgent.

One of the most famous of the old Puritan divines was Dr. Mather Byles, who was born in Boston in 1706 and who was the first pastor of the Hollis Street Congregational church, to which he ministered for more than 40 years.

Dr. Byles was famous as a humorist and wit, and innumerable anecdotes are related of his clever quips and retorts. He was a zealous Tory and warmly advocated the cause of "the mother country" against the colonies. In November, 1777, he was arrested as a Tory, tried, convicted and sentenced to be confined on board a guard ship and sent to England with his family within 40 days. The sentence was afterward commuted by the board of war to confinement in his own house, a guard being placed over him with instructions not to permit him to leave his residence for a moment under any circumstances.

On Thanksgiving morning, observing that the sentinel, who, like many of the colonial soldiers, was a simple rustic, had disappeared and that Dr. Byles himself was pacing up and down before his own door with a musket on his shoulder, the neighbors crossed the street to inquire the cause of this singular spectacle.

"You see," said Dr. Byles, "I begged my guard to let me go out to procure some cider with which myself and family might celebrate Thanksgiving day, but he would not permit me to stir. I argued the point with him, and he has now gone to get the cider for me on condition that I keep guard over myself during his absence."

Didn't Cut His Corners.

A writer in the Boston Transcript gives this reminiscence of the Rev. Dr. Elijah Kellogg of Harpswell, Me.: "One Sunday before his sermon the doctor announced from his pulpit: 'The widow Jones' grass is getting pretty long. I shall be there with my scythe, rake and pitchfork at 4 o'clock tomorrow morning, and I hope every male member of the congregation will be there too.'

"The next morning they were all there and among them Captain Griggs, six feet two in his stockings, with a weight of nearly 250 pounds. 'Parson,' said he as they were working up the field near each other, 'I'm goin to cut your corners this mornin.'

"Now, Dr. Kellogg was a little man, weighing scarcely more than 130 pounds, but he knew how to handle a scythe, and, as he told me, with a little shrug of his shoulders, 'he didn't cut my corners that morning.' More than that, the man who had thought he could beat the parson at mowing dropped under a tree exhausted from working with such a pacemaker."

The Worst Paved City.

Moscow is probably the worst paved city in the world. Great cobblestones driven by hand into a loose bed of sand form a roadway which is always dusty in summer and muddy in autumn, and in many of the roads there is no attempt at a roadway of any kind. The streets are badly watered and cleaned.

The city is regarded by the Russians as "the holy city," probably because of the large number of monasteries it contains. It was once the capital of the empire and still enjoys the distinction of being considered the capital of the interior, but there does not seem to be any particular desire on the part of the authorities to make it more worthy of its title.

The Policyholders' Company.

THE MUTUAL BENEFIT

Life Insurance Co. of New Jersey.

ASSETS, Jan. 1st, 1901, - - $74,311,468

Paid Policyholders since Organization, $182,509,190

Annual Distribution of Surplus vs. Tontine.

During the past TEN years, with $1,000,000,000 LESS premiums than the Mutual Life, the Equitable Life, and the New York Life, the three leading Tontine companies combined, the MUTUAL BENEFIT, the leading "ANNUAL DISTRIBUTION" Company, of its interest receipts has SAVED more than TWICE as much of its Interest receipts from investments above expenses, for Policyholders, as all of said Tontine companies combined—the MUTUAL BENEFIT having thus saved over $15,000,000.

JAMES MUNSELL Jr., Manager, 503 California Street, San Francisco.

LITERARY LITTLE BITS

"Acording to Plato" is the unconventional title of Frankfort Moore's forthcoming novel. It is said to be a social satire.

Marie Corelli has written a short book on the life of Queen Victoria. It is entitled "The Passing of the Queen," and is an attempt to estimate the great lessons of her Majesty's reign.

It is said that John Tenniel is busy on his book of reminiscences, which is sure to be a delightful volume. It is Sir John's proud boast that he is one of the very few men in England who have never been authoritatively interviewed.

'Sweetheart Manette," now published for the first time in book form, and "Rosalynde's Lovers," which appears in the Lippincott Magazine, are the posthumous novels by Maurice Thompson which are to be brought out immediately.

Prof. Brander Matthews seems to be keeping the presses busy with new books from his pen and reissues of old ones. A reprint of his "Philosophy of the Short Story" and a new book by him, called "Notes on Speechmaking," are announced.

Publication of George Moore's new novel, "Sister Theresa," has been postponed, in order that "Evelyn Innes" might be retouched, so that a continuous story might be presented in the two books. Mr. Moore has completely rewritten his earlier work, and the plot and characters are considerably changed.

Over a thousand hitherto unutilized Heine manuscripts and letters have been acquired by Prof. Hans Meyer, of Leipsic. Among these is the earliest manuscript of "Atta Troll," embracing two hundred sheets, containing many corrections. The letters addressed to the poet by relatives and friends throw much valuable light on phases of his life.

Maurice Hewlett is engaged on a new novel dealing with Florence at the height of her greatness. He is a very slow and conscientious worker—indeed, "Richard Yea-and-Nay" was entirely rewritten four times before it satisfied him; and the new novel, which at present bears the title of "The Tuscan Crown," is not likely to be published for some considerable time.

Frank Norris' 'The Octopus," which is announced for early publication, begins a trilogy, "The Epic of the Wheat," which will form a complete picture of a crop of wheat from its sowing in California, through the exchange gambling based on it in Chicago, to its relief of a European famine. This story is founded upon the "Mussel Slough Affair," when, about 1870, the wheatgrowers of the San Joaquin valley came to actual war with the railroad, which was trying to dispossess them.

Was Not Entirely Alone.

As he entered the car he saw at a glance that there was one seat with a young lady in it and he marched straight down the aisle, deposited his overcoat, sat down and familiarly observed:

"I entirely forgot to ask your permission."

"That's of no consequence," she replied.

"Thanks. Just arrived in the city, I presume," he ventured to remark as he glanced at the bundles and grips on the floor near by.

"Not exactly."

"You're all alone, eh?"

"Almost, but not quite. My husband is the conductor on this car, the motorman is my cousin and my father and a brother are in the seat back of us."

"Aw! Aw! I see," gasped the man, and the floor of the car suddenly became so red-hot that he lit out without another word.—Salt Lake Herald.

The Grand Duke Made Irish Bulls.

The late Grand Duke of Saxe-Weimar—he was affectionately called Serennissimus by his intimates—made as many "bulls" as any Celt in the world. Once while on a hunting expedition he saw a forester whose face seemed familiar to him.

"Are you not a brother of Chief Inspector Schmidt?" asked the Duke.

"I am Chief Inspector Schmidt," said the man.

"Ah," said Serennissimus, "that accounts for the resemblance."

Another time the Grand Duke was waiting at a small railway station in his tiny realm, and addressing two little girls playing near the signal box asked:

"Who is your father?"

"The station master."

"How old are you?"

"I am 5 and my sister 4, Serennissimus."

"How is that possible? Why, the line has only been opened three years."

Great Surprise.

It will surprise Americans to learn that they, and not the English, are the greatest beef-eaters in the world. Our average consumption is 175 pounds of meat a year. The English come next, with an average of a little over 110 pounds. The French eat only half as much meat as the English, and the people of Germany, Austria and Italy still less.

Feminine Ignorance.

Pa—Johnny, your mother says you came home to-day with wet feet, and she wants to know how is was possible for you to get them wet when the sidewalks are all so dry.

Johnny—It's funny how ignorant women are about such things, ain't it, pa?—Boston Transcript.

Cooking by the Sun's Heat.

An inventor in India has constructed an apparatus for cooking by the heat of the sun. It consists of a box made of wood, and lined with reflecting mirrors, at the bottom of the box being a small copper boiler, covered with glass to retain the heat of the rays concentrated by the mirrors upon the boiler.

Some Big Parks.

Hyde Park, the most distinctive of London parks, is 400 acres in extent. The Bois de Boulogne covers 2,200 acres. Central Park, New York, 840 acres.

GRIP'S RAVAGES.

After-Effects Are Often Worse than the Trouble Itself—How They May Be Avoided and Good Health Restored.

From the Journal, Kansas City, Mo.

Following every epidemic of the grip there remains a trail of after-effects which are often worse than the trouble itself and which seem to baffle all efforts of physicians. A specific, however, has been found, which not only will quickly restore the health after an attack of grip and expel the lingering germs but, working through the blood, will render the system proof against the disease. In hundreds of cases it has been shown that Dr. Williams' Pink Pills for Pale People have accomplished this result. One of the many recent cures is that of Mrs. J. B. Shaw, of 2101 Bellefontain avenue, Kansas City, Mo., who says:

"When the grip was epidemic here I was one of its victims and the disease left me in a bad state. I formerly had an excellent memory, but after the attack I could scarcely remember anything. I had severe pains in the top and back of my head and was dizzy by spells. I would lie awake until nearly morning and then fall into a sleep that was not restful. My heart action was weak and I was a victim of nervousness. In fact, my health was shattered by the attack of the grip and recovery seemed hopeless.

"After being afflicted in this manner for several weeks I happened to read an advertisement of Dr. Williams' Pink Pills for Pale People. Thinking they might do me good I began taking them at once. In three days I was much better and could sleep like a child at night. After using a box of the pills my memory was restored and I felt greatly encouraged. I continued taking them until I had used three boxes and was in better health than I had enjoyed for several years.

"If a stamped envelope is sent for reply I will gladly answer all inquiries relating to my case."

Signed, MRS. J. B. SHAW.

Actors Who Stutter.

It would seem that the stage is not only the last profession that would be chosen by a person afflicted by stuttering, but that a stutterer would never dream of selecting that profession. Yet it is a fact that some well known actors and singers labor under this disadvantage.

The strangest thing about it is that the sad impediment which is so painfully evident in private life seems to vanish entirely when they are on the boards.

It is curious that appearance on the stage or in the pulpit should have this beneficial effect, for stutterers in other walks of life do not lose their impediment when at work, however enthusiastic their love for their profession.—London Answers.

Victoria Got Her Primroses.

"The following little anecdote, told by Queen Victoria herself, will show her independence of character," says a writer in The Century. "Very fond of primroses and finding none in the royal gardens, she sent word to have some planted. The gardeners, the queen said, made many objections, and, finding shortly afterward that her wishes had not yet been carried out, she dispatched a messenger inquiring the reason. 'I suppose Queen Anne had none,' she said, 'so they did not think it proper for me to have any, but I sent them word promptly that Queen Victoria would have some—and she did.'"

WONDERS OF WATCHMAKING

Queer Timepieces Owned by Two of England's Queens.

Among the treasures of a Swiss museum, inserted in the top of an old fashioned pencil case, is the tiniest watch ever constructed. It is only three-sixteenths of an inch in diameter, and its little dial not only indicates hours, minutes and seconds, but also the days of the month. So perfectly formed is this lilliputian watch that it keeps excellent time and is a marvelous piece of mechanical workmanship.

Two of the most elaborate and curious watches which the world has ever seen belonged to Queen Elizabeth and her unfortunate contemporary, Mary, queen of Scots. Good Queen Bess had a watch made for her in the form of a duck, with beautifully chased feathers, the lower part of which opened. The face was of silver, with an elaborate gilt design, and the whole was kept in a case of brass, covered with black leather thickly studded with big silver knobs.

The ill fated Mary was the possessor of a watch in the form of a skull. The dial was introduced where the palate should have been, and the works occupied the place of brains in the cranium. In the hollow of the skull, moreover, was a bell which had works of its own and by means of which a hammer struck out the hours upon it.

One of the choicest rarities of the Bernal collection was a book shaped watch. This curious time indicator was made by order of Bogislaus XIV, Duke of Pomerania, in the time of Gustavus Adolphus. On the face of the book, where the dial of the watch is set, there is an engraved inscription of the duke and his titles and armorial bearings, together with the date, 1627. On the back the engravings are also very finely and skillfully executed, among them being the portraits of two gentlemen of the seventeenth century. The dial plate is of silver, chased in relief, while the insides are beautifully chased with figures of birds and foliage. The watch has two separate movements and a large, sweet toned bell. At the back, over this bell, the metal is ornamentally pierced in a circle, with a dragon and other devices, while the sides are pierced and engraved with a complicated design of beautiful scroll work.—London Tit-Bits.

Some Odd Mistakes.

An urban chemist advertised in his shop window: "Artificial eyes. Open all night." Away down south in front of the postoffice in an inland town may have been seen this legend, "Post here letters too late for the next mail." In a picture of the departure of the pilgrims from Delfthaven the artist placed a large steamer in the distance leaving the harbor under full steam.

The Steam Locomotive Doomed.

It is claimed that within a few years the electric motor will completely supplant the steam locomotive, and trains will then rush along at a speed of 100 miles an hour. To travelers this will prove a great blessing, but no more so than Hostetter's Stomach Bitters, has proved a blessing to those who wish to regain their health quickly. The Bitters cure dyspepsia, indigestion, biliousness, malaria, fever and ague, also improves the appetite and purifies the blood.

Many a man is known by the company of his wife's relations he keeps as an easy mark.

CAUSE OF FALLING HAIR.

Dandruff, Which Is a Germ Disease—Kill the Germ.

Falling hair is caused by dandruff, which is a germ disease. The germ in burrowing in to the root of the hair, where it destroys the vitality of the hair, causing the hair to fall out, digs up the cuticle in little scales, called dandruff or scurf. You can't stop the falling hair without curing the dandruff, and you can't cure the dandruff without killing the dandruff germ. "Destroy the cause, you remove the effect." Newbro's Herpicide is the only hair preparation that kills the dandruff germ. Herpicide is also a delightful hair dressing.

The Discovery of Abietene.

In 1864 Jacobson & Pence were making Turpentine at Pentz, California. Two teamsters, stopping at the headwaters of Butte Creek, on the western slopes of the Sierra Nevadas, tapped the large Pitch Pine forests and, gathering the gum, delivered it at the Still. While unloading, Jacobson noticed, by the odor, a great difference between this and the gum they had been distilling. The Still, being filled with Butte Creek Gum, had hardly become warm, when, to his surprise, the liquid commenced to pass over. He caught some in a cup, and touching a lighted match to it, it flashed up with a beautiful flame. He knew this was not turpentine, but what, he could not tell. He submitted it, therefore, to the best chemists, who pronounced it *Abietene*. It came forward rapidly as a healing and purifying remedy. In fact it has been used with great success for about all diseases to which flesh is heir. Old residents take the pitch and make a plaster for a lame back, an ointment for a cut, etc.; for a cold they take a little gum Abietene. *D. F. Fryer uses the Abietene Gum as the base for his famous Abietene Remedies.*

ARCADY.

Be not hesitant with me,
For I go to Arcady.
Winter is stern monarch here,
And without the window there,
Scornful of the leafless year,
Breathes his frost upon the air;
Now from all the hapless trees
Every frisky dryad flees,
Be not hesitant with me—
Let us go to Arcady!

Be not hesitant with me—
Come and go to Arcady!
We have drunk the summer's wine,
Every yellow drop is gone;
Plucked the last grape from the vine.
Yonder woodlands hide the fawn,
Where beneath the young moon's glance
Lithsome dryads throng and dance,
Be not hesitant with me—
To the woods of Arcady!
—Eugene Field.

WHEN THE EDITOR DUG.

HOWEVER small the garden, potatoes, it seems, may be had in any quantity. The patch which forms the scene of this particular little comedy is to be found in the neighborhood of Fleet street. It consists of a room on the first floor of a newspaper office, and the large white letters on the window indicate to all the newsboys, carriers, poets and other unfortunate individuals whose calling brings them into the street that here is the editorial apartment of the Sunday Spade.

Putting aside such minor lights as the typewriter, doorkeeper, sub-editor and the rest, we have leading parts for two men and one woman. One of the men is known to his family, his friends and a certain number of theatrical acquaintances as the dramatic editor of the Sunday Spade. For us, he plays juvenile lead. The other actor is the editor of the paper. Though not bound by any ties of kinship to the young critic, yet he has taken upon himself the responsibility of watching the boy's career. Maybe he loved the boy's mother; that is a detail for the reader to fill in as he pleases. Anyhow, we will call him the heavy father.

The woman to whom falls the leading lady's part is the more in keeping with the theatrical flavor of the comedy, because she happens to be earning her living on the boards of the theater. To the playgoer she is known as Maisie Mayne.

There are many beautiful and talented young actresses on the London stage in a similar position, but, at the time of the story, they had failed to impress the young dramatic critic of the Sunday Spade. And, after he had seen Maisie, it was, of course, needless for any one else to apply. For him she was Bernhardt transformed, Terry reduplicated, Duse glorified. He told the Sunday Spade readers so in his notices of plays in which Maisie displayed costumes. He went to tea with Maisie in the flat which she shared with five other girls and a general chaperon. The result was to be found in the Sunday Spade theatrical notes column signed "Head Light." Some of Miss Mayne's friends suggested "Light Head" as a more suitable pen name. This, of course, was due to sheer jealousy.

For, in spite of his superlatives in the matter of Maisie, our juvenile lead had ability, and his chief knew it. When, therefore, the editor saw, for the fifth time, the names of Mayne and Bernhardt coupled together in a few appreciative lines on the leading actresses of the world, he reached out for his fork and began to turn over the soil of the potato patch. In this case the fork was a pen and the soil was the proof slip of the "Head Light notes, but he was at work in the potato patch all the same.

The editor didn't dig very deep as yet. He contented himself with knocking out an adjective here and an adverb there, the modified paragraph being far more to Miss Mayne's advantage than the original writer would have supposed. His next step was to make some guarded inquiries from the few ladies of the profession he happened to know as to Maisie's family, fortune, character, disposition and the like. Her family, it appeared, had disowned her since she went on the stage; that was awkward. Her fortune was her face—supplemented, the dear creatures admitted, by a certain amount of determination. Some of them called it "cheek." Her character? Well, a pretty girl on the stage shouldn't go out to supper more than four times a week. Not that there was the slightest suspicion of anything of the kind, but one couldn't be too careful.

Then the editor turned all these things over in his mind, and waited for an opportunity. It came with the first performance of a new piece in which Maisie was again displaying gowns. The boy's notice was absurd; it was evident that his infatuation for the girl was ruining his work. Therefore, the heavy father summoned him to the first-floor room and put on the smile of the serpent.

"Ah!" he announced, watching his young critic narrowly. "I want to send you off on a special mission. You will probably be away from England six months, and have a chance of putting in some excellent work for the paper. What do you say?"

The boy was taken by surprise, but he flushed suddenly when the editor paused. "Thank you, sir," he said hesitatingly. "Where do you wish me to go?"

"China. You will have to start tomorrow morning, and I particularly desire that you will not tell any one your destination. I have no objection, of course, to your sending a line of farewell to your family and to—any particular friend. But, please, do not say more than that, and remember that I rely on your honor to see nobody before you start. Is it agreed?"

"It is a great honor," mumbled the boy. "Perhaps——"

"That's all right, my lad," said the editor. "We want a strong series of descriptive articles, and I think you are the very man to write them. It will be a change," he added significantly, "after all this theatrical stuff. Now as to expenses."

And so Maisie's friend went.

When Maisie received the next number of the Sunday Spade she tore off the wrapper with eager little hands. The sudden departure of the boy had been a shock, but he had told her in his note to look out for his notice of the new play, and added that he thought she would like it. 'I hope it will help you," he concluded, "to remember me until I return—sorry I mayn't say when."

She found the column, and hastily passed over the description of the plot and the criticism of the leading players' performances. At last she caught sight of her own name and read as follows:

"Miss Masie Mayne wore a different costume in each act, and seemed to be generally pleased with herself. She also spoke the six lines of her part without apparent effort."

Maisie had some trouble in getting to sleep that night, and, when at last she had cried herself into a sort of a slumber, every woman she knew was jeering at her and waving the latest copy of the Sunday Spade before her eyes. She awoke with a start at 9:30 and, with the memory of that nightmare still upon her, was almost afraid to go out. But the brightness of the morning and a cup of tea soon chased the phantoms away, and, having worked up a cheerful expression before her glass, she went down to the theater for her letters.

There were no letters, but there was a copy of the hateful Sunday Spade waiting for her. The handwriting on the wrapper was unfamiliar, and it struck her as being a little odd that any one in the office should take the trouble to send her a copy of the paper now that the boy had gone away.

A sudden thought caused her to raise her umbrella and hail a crawling hansom.

"The Sunday Spade office," she directed.

Maisie climbed the stairs with palpitating heart. She even forgot to notice that the banisters were dusty as she grasped the rail with her daintily gloved hand.

The editor was standing at the window, his back to the light. One does not edit a smart weekly for twenty years without learning the values of light and shade.

"Miss Mayne? Pray sit down."

Maisie was no match for the strategic journalist. She took the chair facing the window.

"Not painted," the heavy father noticed, somewhat surprised. Then he waited for her to speak.

"I have come about the notice of our new play," Miss Mayne began, wishing she could see the man's face.

The editor still waited.

"I think there must have been some mistake," the girl went on, "because I know your critic personally, and——"

"Yes?"

"And he sent me this letter." She handed it to him, caring nothing so long as she could get the man's eyes off her face.

The heavy father took the letter and read it through. Then he said abruptly:

"There has been no mistake."

"Then he wrote the notice?"

"Yes, he wrote the notice."

Maisie rose.

"Thank you," she said; "that is all I wanted to know. Good-morning."

She moved toward the door.

"One moment!" said the editor, stepping across the room and meeting her by the door. "I want to say something to you. May I?"

"Is it important "

"It is, rather, on somebody else's account. Won't you sit down again?"

"If you wish it," said Miss Mayne; but this time she took a chair that did not face the light.

"From the tone of that letter," said the editor, "it is evident that the boy is—fond of you. Are you engaged to him?"

"Have you any right to ask?"

"Yes. To all intents and purposes I am his guardian. Apart from that, and a promise which binds me to look after him, I take a very great interest in his career."

"We are not engaged," said Maisie. Then, looking up at him, she added: "I see you are glad."

The editor lit a cigarette carefully. Then, "Yes," he said, "I am glad."

"Why?" asked Miss Mayne, looking at the carpet. She was not afraid of him, but she felt that he didn't want to be looked at.

"Need we discuss that?" said the man, crossing over to the fireplace and flicking his cigarette ash into the fender.

"Perhaps not. But I should like to know what you have heard about me."

"Nothing, except that your family has cut you off, that you are on the stage, and that you have been——"

"Yes?"

"Indiscreet about going out to supper, and so on."

Maisie laughed.

"It is all true," she said, "although my friends told you. The day before yesterday I might have put these dreadful sins before you in a better light. Now, as it happens——"

She tried to smile in his face; but through her veil he saw the tears in her eyes. For the first time he looked at the matter from her point of view, and was sorry.

"Before you go," he said, "I want to make a little confession. I altered his notice of your performance."

For a moment she stared at him, hardly comprehending. Then, in place of the outburst that he expected, she said quietly: "It was a rather mean thing to do."

He was silent. He hadn't thought of it in quite the same way before. You see, he hadn't met Maisie.

"And I suppose you sent him away?"

He nodde, wondering that she took it like that.

"How wise men are!" said Maisie, and before the editor could think of a suitable reply she was gone.

That night the critic, eastward bound in search of copy, received a cablegram. "Return immediately!" it said.

And it was signed by the editor.—Chicago Times-Herald.

SEAS MOUNTAIN HIGH.

Exaggerated Ideas as to the Height of Ocean's Biggest Billows.

We hear persons who go down to the sea in ships talk about "waves mountain high," but such waves exist only in the imagination, or are hyperbolic, for the purpose of adorning a tale. If, one the land, you see an elevation thirty-eight feet high, you wouldn't call it much of a mountain, yet it is very seldom that an ocean wave reaches that height.

Vaughan Cornish, of London, has recently been measuring waves, and has given an interesting report on the proportions. He didn't measure with his imagination or his sensation when being violently rocked in the cradle of the deep while on a wave washed deck, but he used unimaginative, unimpressible, matter of fact instruments that recorded impressions only in meters and hundredths of meters.

In the southern Indian Ocean, between the Cape of Good Hope and Island of St. Paul, he measured thirty waves during a violent northwest gale, and they averaged nine meters (29.53 feet) in height. The largest of them was eleven meters (37.53 feet) high. Of these latter six followed each other with remarkable regularity.

In the open ocean a quite strong wind caused waves five meters (16.4 feet) high. East of the Cape of Good Hope, during strong west winds, which blew with great regularity for four days, the height of the waves only increased from six to seven meters (19.69 to 22.97 feet).

Such waves as these latter are very rare on the usual transatlantic route, and persons who tell tales about the great seas should be moderate in the estimate of height.

COUNTERFEIT COPPER CENTS.

Handsome Living from Clandestine Toil—Search for Coiners.

Counterfeiting copper cents would hardly seem to offer profit sufficiently commensurate with the risk to engage the activities of a gang of expert coiners, but the arrest of a 13-year-old girl discloses the fact that this work has long been in progress in this city, and that those who have carried it on have garnered, if not a fortune, much more than a handsome living from their clandestine toil. Chief Hazen says that for two years he and his agents have been trying to run down a gang who have been fairly flooding the country with spurious pennies, which yield the makers a profit of about 60 cents on every hundred, or about half as much again as is made by counterfeiters who use the real metal in making silver coin.

Complaints of the false pennies have come from expert handlers of money in almost every part of the country, and the Washington authorities have been greatly exercised over the matter. During recent months as much as $40 in these counterfeits has reached the subtreasury in Wall street in a single week and been destroyed. All the coins bore the date of either 1884 or 1893. They are of excellent workmanship, and with the little attention given to pennies by the average citizen, not one person in a thousand would notice anything wrong with them. They all have a peculiar hue, which experts say is as though they had been immersed in some acid in order to give them the appearance of age. A close inspection showed that the edges are slightly uneven.—New York Times.

"Objections."

An old soldier tells of some laughable incidents occurring just after the war, while he was with a party surveying for a railroad out West. At one place a man came hurrying out of his house and asked, "What are you doing here?" "Surveying," was the reply. "Surveying for what?" "For a railroad." "Where is it going?" "Right through your barn, I guess," laughingly said the veteran. "What?" "I can take it through your barn." "Well, now, mustn't I calculate I've got something to say 'bout that? I want you to understand I've got something else to do besides running out to open and shut them doors every time a train wants to go through."

On another clearing an old lady came hurrying out. "What are you doing on my ground?" she asked. "Surveying for the new line of railroad, ma'am." "Right here, across my garden?" "Yes, ma'am; we'll probably be obliged to do this." "Well, now, it just sha'n't do nothin' of the sort." "You will be paid for damages done." "That don't make no difference; your old engine ain't comin' here." "I fear they will have to." "Well, now, look here; I'll tell you right out and out what I'll do. And I'll do it as sure as them cars come inside this fence, and you can tell the railroad so. I'll tie my clo's line across the track ov'ry single night, and smash your ingine all to pieces! I will, I vow I will."

Many people complain of their want of memory, but none of their want of judgment.

If a recent report from London, Ky., that the Baker-Howard feud has been finally settled is correct it will put an end to a warfare which has lasted for more than thirty years, which has cost the lives of more than thirty men, and has several times necessitated the calling out of the State troops with gatling guns and loaded rifles.

"Bloody Clay" County, the scene of the famous feud, is perhaps the most remarkable as it is one of the best known counties in the country. There is not a mile of railroad or even a wagon bridge with its limits. The whole country is covered with high hills, so close together that it is declared there is not a piece of level land in the county a sixth of a mile square. Down and between all these wood-covered hills are the beds of streams which are dry in summer time and are turned into roaring torrents in the spring and winter. The people of Clay County travel either on horseback or on foot, and they use the beds of those streams in the place of roads. Some of the hills are quite high, and in several instances

MANCHESTER, KY., JAIL.

the tops of two hills, which are 400 feet in height, are less than 200 feet apart. Often a cornfield, which begins down in a gully, will run up several hundred feet in the course of a few rods, and several farmers have been killed by falling off their cornfields.

The citizens of Clay County are almost all the descendants of people who settled there in 1770 or thereabouts. Strangers are not encouraged to move into the county, and there is nothing to attract immigrants, even if they were welcomed. For more than a century and a quarter the land has been held by comparatively few families, who have intermarried until practically all the population is related in different degrees of consanguinity.

Over much of the country the forest is still unbroken and untouched, and the hills are full of deep and mysterious ravines. The only industries are the raising of hogs, mules, and corn, some of which is said to be turned into moonshine whisky at hidden stills.

The people are by nature taciturn and almost sullen. They rarely laugh, and are given to moods and brooding. In personal appearance they are all of the same general type, tall, averaging over 6 feet, and dark, with black hair and eyes. The women are also large and dark, and a few of them have any claims to good looks. Scattered about among the hills and usually near the creeks are the little one-story log cabins, in which the larger part of Clay County's population lives. These cabins are built in a most primitive manner, with clay between the logs and a huge clay and stone chimney at one end, which is often almost as large as the rest of the house.

Some of the people of Clay County have Indian blood in their veins. Others are descended from old Scotch border families. Absolute and democratic equality prevails among them all. The power of money is unknown, probably because there is so little money within the limits of the county. They are divided into clans, claiming descent from some common ancestor of distinction, and the poorest of them is always ready to hold his own and defend his honor at the point of a rifle or revolver. To call a man a liar in Clay County means at least one and probably half a dozen deaths. Everybody in the county knows everybody else, and it is taken for granted that a stranger is either a government officer or a detective looking for some of the feud warriors. Therefore there are few visitors to Clay County, and those who go once are not at all likely to return a second time.

Every Clay County boy has a rifle by the time he is 15 and in many cases he has taken part in one or more of the feud battles before he has reached that age. They are all good shots and they keep up to the times in the line of the latest and most improved weapons. A favorite amusement in Clay County is the shooting out of cabin windows by a party of prominent citizens riding their mules home through the hills after partaking freely of "corn juice."

With this knowledge of the country and its people it is easier to understand how a feud like that one which has just come to an end might find its beginning in a trivial cause and be continued for years, being handed down from generation to generation.

In 1844 Dr. Abner Baker, a prominent physician of Clay County, shot and killed his brother-in-law, Daniel Bates. Dr. Baker engaged as his attorney Daniel Garrard, the head of one of the great families of the county and the son of the second Governor of the State. Hugh White, a man of almost equal prominence, took the leading part in Baker's prosecution. Dr. Baker was convicted and finally hung. Ever since that time the Garrard family, one of the few wealthy families of the county, has backed the Bakers in all their troubles, while the Whites, who for years have controlled all the county offices, have always been ready to espouse the cause of the people who for the time being were fighting the Bakers.

For that reason the feud which has just been ended is known as the Garrard-Baker-White-Howard feud. It began in a quarrel between Tom Baker and A. B. Howard. Baker lived with his wife and a family of ten children in a one-story log cabin on Crain Creek twelve miles from Manchester. Howard, who owned a few hills near by, hired Baker to cut some timber on his land. He did not like the way Baker did the work and quarreled with him about it. An appeal to the ever-ready rifles was promptly taken. "Tom" Baker and his brothers laid out in ambush like Indians one night and shot and killed one of Howard's sons and one of his employes and severely wounded the elder Howard. Another son of Howard waited his chance and put a bullet through the head of "Tom" Baker's elder brother. "Tom" Baker took it for granted that Sheriff White had instigated the killing of his brother and took the first opportunity to kill William L. White, whose crime was that he was the Sheriff's brother. A few days later Gilbert Garrard, son of the present head of the Garrard family, was shot at from ambush as he was riding his mule home from church. He escaped unhurt and took occasion to move out of the county. But his father was made of sterner stuff. When notified that as the backer of the Bakers he was in danger of assassination he hired a nephew of "Tom" Baker and a negro man to guard his premises at night with dogs and rifle. Within two weeks after the guard was set both of the men were shot and killed from ambush.

Meanwhile Sheriff White was making efforts to arrest "Tom" Baker for the murder of his brother. But Baker did not like the idea of falling into the hands of the White-Howard faction. Accordingly he took to the hills, where a man might hide for years with absolute security. Finally the State sent a hundred militiamen, armed to the teeth

TYPICAL HOME IN THE PIGEON ROOST.

and accompanied by a gatling gun, up into Clay County to force Baker's surrender and to protect him from the violence of the opposing faction. Baker surrendered and was taken under guard to Manchester, where he was confined in a guard tent pitched in the courthouse yard and surrounded by the troops. Half an hour before the case was to be called for trial he stepped to the front of the tent to look around. Instantly a shot rang out, coming from the house of Sheriff White, directly across the street, and "Tom" Baker fell back dead into the arms of his wife. Almost before he had gasped his last and before the startled militiamen had recovered from their surprise and horror, Mrs. Baker, the newly made widow, called her ten children around the body of their father and there swore each of them never to rest until the death had been avenged.

Then "hell bust loose in Clay," as they say on the other side of the Ohio. Both the Garrard-Baker and the White-Howard factions hired and armed a number of men to fight for them, paying $1 a day and ammunition, bacon, and corn bread in plenty for such services.

Now the word comes from London that more than twenty of these professional fighters have enlisted in the United States army and that old Gen. Garrard, once a distinguished Federal cavalry leader, has given his word to Judge Beverly White that the feud shall come to an end.

First Railroad Incorporation.

The first railroad act of incorporation granted by any state in the Union was given by the Maryland Legislature to the Baltimore & Ohio Railroad Company on Feb. 28, 1827. On April 24 of the same year the first railroad company in the United States organized as the Baltimore & Ohio Railroad Company. Peter Cooper on Aug. 28, 1830, made the first journey from Baltimore to Ellicott's Mills.

There is nothing a loafer enjoys better than looking wise on election night when returns are coming in.

A man, when he has no opportunity to do wrong, is fully as good as a woman.

PING PONG.

This Game Is the Latest Form of Amusement.

Do you ping pong? It's the latest game. Ping pong is a game for those who like an indoor recreation to remind them of their favorite outdoor game, lawn tennis. Ping pong apes lawn tennis and seems to be trying to rival it in popularity.

What is ping pong? It has another name, and that is gossima, and gossima gives a clue to its identity. Translate the word into gossamer, and you have the net that is stretched across the table at a height varying from eight to six inches. Instead of tennis rackets you have battledores, and for balls small things made of white celluloid, wherefore it is well to learn speedily to aim straight over the net, and not at the fire. But the balls are quite a cheap item, and, indeed, the whole game can be purchased now at prices varying from 25 cents to $5, though the cheapest "regulation" game on the market is about $1.50. It is surmised that an epidemic of ping pong is imminent.

Ping pongers play in twos, one at one end of the table, the other at the other. The server is the man who first

HERE'S HOW PING PONG IS PLAYED INDOORS.

delivers the ball, and the striker-out is the other. At the end of the first game the parties change, the striker-out becomes the server and the server the striker-out. The player who tots up six games to his credit first wins the set.

The game can be extended to take in several more players, just as bagatelle can, and battledores can be passed from one player to another. Then, to make it a more scientific form of amusement for the dining room table, which is usually converted into the lawn, there can be substituted a board surface, painted black, with a narrow white boundary line at the edge.

Ping pong clubs and ping pong matches are springing up all over the country, and ping pong tea parties are rivaling play teas among the fair sex.

THE FACE OF YOUR WATCH.

You Think You Know What It Looks Like, but Do You?

"I will wager," said a Broadway watchmaker to a customer the other day, "that you cannot correctly put down the numerals on the dial plate of your watch."

"Done," said the other. And he wrote down I., II., III., IV——

"Wrong," interrupted the watchmaker.

"How wrong?"

"Pull out your watch and look at the figure four."

Sure enough the figure was IIII., not IV.

"Are all clocks and watches made that way?" asked the customer, as he put his watch back in its fob.

"All that have Roman figures on their dial."

"Why?"

"Well, there is a tradition which accounts for the custom. The first clock that resembled the ones now in use was made by a famous French jeweler named Henry Vick in 1370. He made a present of it to King Charles V., surnamed the Wise. Now Charles was wise in many ways, but he did not know everything, though having a reputation to sustain he pretended to omniscience. When Vick brought him the clock he examined the works very attentively, seeking a flaw somewhere. 'Yes,' he said at last, 'the clock works well, but you have got the figures on the dial wrong.' 'Surely not, your majesty,' demurred the jeweler. 'Yes, the four should be four ones.' 'You are wrong, your majesty.' 'I am never wrong,' thundered the king. 'Take it away and correct the mistake.' Vick did as commanded. The fashion was followed by others. And so to this day we have IIII. instead of IV."

"But suppose my watch had Arabic and not Roman numerals?"

"I took that chance, of course, because the larger proportion of watches have the Roman numerals. But even then I'd have had you in all probability. For there is another peculiarity about the figures which is almost universal in watches. But I will show you. Go on writing the rest of the figures."

So the customer continued and wrote down V., VI.——

"Wrong again," interrupted the watchmaker.

"But"——

"Pull out your watch and see," calmly retorted the other.

Once more the watch dial was exposed to view. There was no six on it. The space where it should have been was occupied by the second hand.

"The second hand," continued the jeweler," is to be found in exactly that place in almost every watch that is made. Whether your dial was registered in Arabic or Roman numerals there would be no six on it. It is only on a few of a very cheap sort of watches that the second hand is omitted and the 6 or VI. stands revealed."

HE DONE FORGOT TO ASK.

That Was the Reason a Colored Swain Had to Use the Telephone.

One day a good-looking colored man, who had appeared rather prematurely in a loud spring suit, entered one of the down-town telephone stations and asked for Joliet. He was compelled to use a wire that was in the open office and as he apparently labored under the impression that the person whom he called up was rather deaf, every word he said was audible to all who were within ten feet of him.

After the necessary connections had been made, the young man smiled genially and said:

"Dis Mrs. Williams, the mother of Miss Lucy?"

Apparently it was, for in a moment he added:

"Fo' de good lawd, yoh voice 'pears so natural-like, yoh done scade me! Then, after a short pause, "Reckon you all's kinder sprized to heah frum me. What's dat? No, suh, I hain't seen yoh all sence New Yeah's. I reckon yoh don't have no idee what foh I wants to talk with yoh, but, Mrs. Williams, I wants de proud honor of bein' yoh son-in-law."

Both expectancy and trouble shone on the young man's face and the receiver shook nervously in his hand.

"Oh, yoh go 'long, Mrs. Williams, you jest tryin' fer to tantalize me. What's dat? Oh! Golly! Yes'm I got a stiddy job an' I got er house done picked out. What, ma'am? What fer I didn't ask Lucy New Yeah's time? Why, why, I done gone clean fergot to."

Evidently Mrs. Williams looked favorably on his suit, notwithstanding his absent-mindedness, for in a few moments he rang off and with his face radiant with joy and his eyes sparkling with emotion, he stepped out of the telephone booth and up to the operators' desk.

"What's ma bill, Mr. Operator? I done won de prize!" he announced. Then he buttoned his plaid coat over his swelling chest and marched out with a triumphant gait.—Chicago Inter Ocean.

Where Beggars Can Ride.

Horses are so cheap in Auckland that pedestrianism bids fair to become extinct. The postman does his rounds on horseback. The butcher, a huge basket slung over his arm, canters up with ordered provender. Schoolboys, two frequently sharing a mount, ride to school, where a paddock is reserved for their ponies. Even the lamplighter performs his duties perched on an ambling nag, while the droves of live stock passing along the roads are always under the care of a mounted escort.

When an outdoor man is sent on an errand that would entail walking a quarter of a mile he invariably spends ten minutes in catching a horse that he may ride. But more ludicrous than all else was it to see a sweep, his attention to the kitchen chimney completed, canter off on his nag, with the bag of soot perched on the saddle before him.

As an instance of the topsy-turvy state of things antipodean it may be mentioned that it is considered smarter to drive in a hired carriage than in your own trap.

Work Their Brains Hard.

A French investigator has come to the conclusion that the brains of military and naval men give out most quickly. He states that out of every 100,000 men of the army or naval profession 199 are hopeless lunatics. Of the so-called liberal professions, artists are the first to succumb to the brain strain, next the lawyers, followed at some distance by doctors, clergy, literary men and civil servants. Striking an average of this group, 177 go mad to each 100,000. Domestic servants and laborers are far behind them; the professional men supply 155 out of each 100,000 as candidates for the lunatic asylum. Next, but with a long interval, come the mechanics, of whom sixty-six in each 100,000 lose their wits. Wonderful to relate, commercial men retain their sanity the best of the whole group, as they send only forty-two out of 100,000 to the madhouse.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

PUBLISHED EVERY FRIDAY.

INDEPENDENCE, CAL.,

FRIDAY, JUNE 21.....1901

Thirty-Third Volume.

Last week's issue of THE INDEPENDENT began its thirty-third annual volume. There are very few papers in California that have withstood such length of time without intermission.

Beginning with the present Volume XXXIII yearly subscription has been reduced to $3.

In its impartial support of all the varied social and material interests of the county and surroundings it hopes to gain a wider range of usefulness and influence.

IN THE NEAR FUTURE.

Nevada is at the present time attracting much attention as a field for miniug investment. It is equally a good field for the prospector. Probably no other State has as large an area of unexplored country of mineral-bearing possibilities. The recent discoveries at Reno show how easy it is not to see a mine when handicapped with a conviction that there is no mine. Tonopah, which now has, it is said, a full half thousand of population, eight months ago was not even a name on the map, and had no population at all. On the eastern boundary the enterprising miners of Utah have been prospecting westward and finding promising mines all along between the two States. There is no reason why the same close prospecting that Idaho, Utah and Arizona are having should not produce equally substantial results when extended over Nevada.—Mining and Scientific Press.

In view of the great copper and other mineral discoveries already made in the vast mineral region of Inyo county lying west of the Nevada line there is good reason why intelligent prospecting should "produce equally substantial results." It is all Nevada, in everything except a geographical line. The great Amargoza wash heads at Oasis and extends down through Nevada into San Bernardino and northward into the center of Inyo. At times it carries a torrent over the sand for two hundred miles, but is generally dry, with water a few feet from the surface. The sink in Death Valley forms another oasis. There is no section of Death Valley proper that will not furnish greatly better water facilities than is possessed by either Randsburg or Tonopah. There are scores of well known properties lying idle on account of inaccessibility. After while there will less fool talk about the Amargoza and Death Valley countries, fewer official "explorations" and more digging for valuable minerals. The new railroads will make a second Colorado out of the Sagebrush State. The so-called deserts of Inyo will gain accordingly, when the superb agricultural interests of Owens Valley will have to be utilized to the utmost extent.

Oil is becoming a factor in every industry in Southern California, where every factory is coming to use it, and the number of factories is increasing rapidly on account of the cheap fuel thus afforded; the farmers use oil to pump water in great quantities; the sugar factories consume vast quantities, and street railways are driven by means of the electricity generated through its use, while the latter use is being very rapidly increased through the extension of lines and the multiplication of the number of cars in service. The estimate of the use of 1,000,000 barrels a year for such service in Southern California is conservative enough. The Southern Pacific will use 5,884,200 barrels; Santa Fe, 1 260,000; other roads, 126,000; refineries, 2,000,000; factories, 1,000,000; consumption which can be estimated, 10,270,200; probable consumption, 15,000,000 barrels. The prospective production of nine districts, a year hence, is placed at 10,350,000.

A Redlands correspondent of the Los Angeles Herald says: The Salt Lake railway surveyors who started out from Los Angeles on September 1 of last year are now camped in the Cajon Pass, heading for the desert. There are fourteen in the party. According to the route surveyed, this city will be the first place of importance on the new road in California en route from Salt Lake. Naturally this will be an important point for the company, and there has been some talk that Redlands would be made a division point. In time the Board of Trade intends making an effort to secure the company's machine shops here.

The movement for a road improvement league deserves every encouragement. The problem that confronts every American community is how to secure the best results from every dollar expended on the highways. In this county, as in every other county in the State, and especially in this city, the road tax is onerous, and there is a general sentiment that taxpayers are entitled to better results without an increase of the taxes for that purpose.—Stockton Independent.

President McKinley has issued a letter explicitly declining acceptance of nomination for third term. Republican papers wildly applaud the act, which was simply refusing something that he could not get.

As Redlands is a strictly prohibition city the receipt of thirty barrels of beer by one of its drug stores, in a single order, shows that a "powerful bad" rattlesnake season is expected thereabouts.

OFFICIAL.

High Grade Oil in Inyo County.

First opportunity to develop Inyo County Oil Fields.

Get in now while you have a chance.

The Kern River District will be a mere bagatelle in comparison.

Send for prospectus to

THE 50 OIL COMPANY,
No. 393 PARROTT BUILDING,
SAN FRANCISCO, CAL

T. A. SHEPPARD, Secretary.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 27th day of May, 1901, an assessment, No. 34, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 31, 10th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

OFFICE—Room 31, 10th Floor, Mills Building, San Francisco, Cal.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal,

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

Real Estate Transfers.

Recorded during the week:

C. A. Richel and wife to Emma R. Sutherland—80 acres land near Bishop; consideration, $100.

Charles H. Parsons to Isaac F. Smith; 80 acres of land in Round Valley—$50.

Edward Brown to J. C. Miller; lot 5 in block 12 of Given Addition to Big Pine—$10.

E. O. Brown to F. A. Hyde & Co.; 40 acres land in SW part of Inyo county—$500.

F. A. Hyde & Co. to United States—40 acres land in southwestern Inyo; consideration, lieu lands.

Mollie Conklin et al to United States—640 acres land in Monache Meadows; lieu lands.

H. M. Litchfield et al to Thos. J. Hicks—160 acres oil land near Olancha; $10.

J. W. Calloway and family are up from Ballarat for the Summer.

J. C. Baxter, D. D. S., went to-day to Lone Pine, on professional business.

District Attorney Dehy and Ben. H. Yandell, Esq., left this morning for Bishop.

Mrs. Matlack and daughter, Miss Lizzie, will depart for Los Angeles this evening.

Supt. Steele reports a good strike of high grade ore at the 70-foot level of the Black Eagle mine.

Geo. Montgomery has bonded to Los Angeles parties the Worldbeater and other mines in Pleasant Canyon.

It is apparently quiet times in the town, but the actual producers out on the farms and in the mines are busy all the same.

At the present time there is not a serviceable irrigating ditch in the valley that is not supplied with more water than it can carry.

Stockmen report that the mountain meadows to the west and south of Whitney Peak are covered with the finest of cattle feed.

Our agricultural editor volunteers a tip to gardeners, thusly: Liquor made by boiling the common wild or Indian tobacco plant applied to growing cabbage will destroy the lice without injury to the vegetable.

Statement comes that Mr. Godsmark, of the Radcliffe Con. mines, has bought the Mineral Ranch and the mill, and will soon begin operation. This is the well known Anthony property, the first opened gold mines of the whole Ballarat country.

The onslaughts of a small cutworm have destroyed whole fields of corn and many early garden products in and around Big Pine. The notable scarcity of birds this season may possibly have something to do with the prevalence of the pests, although the white, moth-like butterfly which produces the voracious worms would appear to be non-edible even for an English sparrow.

The initial issue of the Tonopah "Bonanza" made appearance on the 15th instant. It is published by W. W. Booth, with entirely new material, and shows up handsomely. A feature of the issue is an historical and descriptive article on the new mines, which alone is worth the yearly subscription price of $5. The northern section of this valley is the most available supply point for all that region, and the bigger grows Tonopah and its paper the better Inyo will be pleased.

An old miner by the name of Taylor—whose given name we have been unable to learn—was found dead at the Minnealta mine on Tuesday last. He was working in a drift alone, and from appearance of blood about his mouth evidently died from hemorrhage. The Darwin mail carrier saw the deceased all right on Monday, but upon return trip from Ballarat found him dead as stated. The driver reported the fact at Darwin, whereupon men went over. The remains were found in such condition that immediate interment was necessary.

A bold attempt to rob the retort house of the Standard Consolidated Mining Co. at Bodie was made about 3 o'lock Monday morning. One bar of bullion, valued at $3,000, had been secured, and the thieves were trying to open another retort when they were interrupted by the appearance of Joe Beck, the night watchmon. A gunfight ensued and Beck received a bullet in the shoulder. The thieves escaped, leaving their plunder behind. The Standard Company offer $500 reward for the capture and conviction of the guilty parties.—Bulletin.

Married.

Miss Minnie E. Collins, an estimable young lady of Inyo county, daughter of Mr. and Mrs. A. O. Collins of Bishop, and sister of Mrs. Bertrand Rhine of Independence, was married at the residence of her brother W. W. Collins, at Tulare, on June 12th, to Wm. L. Blythe of Arcata, Humbolt county.

Miss Collins was one of Inyo's most popular young ladies and was highly esteemed for her many good qualities. She will be sorely missed by her host of friends, but what is Inyo's loss will be Arcata's gain. Mr. Blythe has been a resident of Tulare for many years, of which city he was very popular, being an honored and highly respected citizen. He was with the firm of Goldman Co. for a number of years. He has recently embarked in the mercantile business in Arcata, Humbolt county, where the newly wedded couple will in future reside. At 8 o'clock on the evening of June 12 the happy couple were led by two sweet little maidens, the Misses Hazel and Vera Collins, attended by Mr. and Mrs. W. W. Collins, to the beautifully decorated parlor, where, by a very impressive service conducted by Mr. Weage, they were pronounced husband and wife. The bride was beautifully attired in light "mode" traveling suit. After the ceremony the guests were invited to the dining room, where a bountiful repast was served. Those present who were not residents of Tulare were Miss Edith Braly of San Jose, Mrs. D. Onruh of Los Angeles, Mrs. J. Clarke, Mrs. M. Clarke and Master Arthur Clarke of Inyo county. At 9:30 o'clock the bridal party was driven to the depot, where the bride and groom, amid showers of rice, boarded the train for San Jose to visit the mother and sisters of Mr. Blythe. They will then leave for their home in the north. The host of friends of Miss Collins join us in wishing them a long and happy married life.

Independence Day.

Notwithstanding the dilatory hour, our townsfolk intend to observe the Fourth of July in the best and most enthusiastic manner possible.

Tardiness in the beginning of these things is almost inexcusable, for various reasons; but even now some rapid preparation can render the occasion of more importance than an entirely impromptu affair.

At a meeting held last Tuesday evening a Financial Committee was authorized to interview the business houses. It was readily found that with the liberal subscriptions offered, together with a surplus from last year, there would be provided ample funds for a good celebration. A meeting was arranged to be held last evening, for the purpose of preparing a program, etc., in time for regular announcement to day, but in deference to the gathering in honor of Bishop Nicholls the matter was postponed until to-night. Notices will be distributed containing essential features of plan adopted and the full program given in our next issue.

Distinguished Divines.

On account of an error in the direction of a letter intended to inform THE INDEPENDENT of their proposed visit, or rather because the announcement was sent to a gentleman who is not here, we were unable to announce the coming yesterday of Rt. Rev. Nicholls, Bishop of the Episcopal Diocese of California, together with his son and Deacon Emory, who are all of San Francisco.

These distinguished churchmen are engaged in missionary work. Their arrival becoming known, Independence did its best under the circumstances. The Court House was promptly tendered them and in the evening a goodly audience gave appreciative attention to a fine discourse from the Bishop.

They will preach at Lone Pine this evening, and at Big Pine on to-morrow (Saturday) night. The following Sunday will be spent at Bishop, where the various church organizations will unite in giving them hearing and welcome.

Secretary of the Interior Hitchcock, who has developed a strong interest in irrigation, is stated to be preparing a report to the President endorsing a system of irrigation dams for the arid lands of the West, and recommending legislation by Congress along this line. The western trip made by the Presidential party graphically demonstrated to the members the great need of irrigation dams, and showed the benefits derived from the work already accomplished. It has been further intimated at Washington that in his forthcoming message to Congress the President will recommend an appropriation for the construction of storage reservoirs in the arid West. Secretary Hitchcock is now preparing a lengthy brief on the subject of irrigation legislation, and will, it is stated, recommend a first appropriation for the Gila river dam in Arizona. He is basing his report on the surveys and recommendations of the Geological Survey of his Department.

A large sheep and cattle raiser of Utah declares that the number of sheep now dependent on the grazing lands of Western States is nearly 1,000,000 more than the ranges will properly support. As a result, tens of thousands of sheep must be marketed this year or allowed to starve. The increase in flocks has been greater this year than for many years, while grazing lands have been reduced in area throughout Washington, Idaho, Oregon, Montana, Wyoming and Utah by the influx of homeseekers and by the limiting of the number of sheep permitted on forest reserves.

The Department of Agriculture at Washington employs about 2,500 clerks. Conservative estimates place the mineral output for this year at fully $1,000,000,000, yet there is ho division in the federal machinery of the Government to look after the mining industry.

Mining Bureau Analysis.

The work of the assay laboratory of the State Mining Bureau offers incidental evidence of the increased interest in the State's undeveloped mineral resources and also shows that prospectors are abroad in the mountains with the return of spring. During the last week in May forty-four mineral samples were received for determination and during the first week in June Mr. Preston received sixty-five, an average of eleven per day. Among the specimens received were a copper blende from Mendocino county, carrying a large percentage of zinc, and a sample of molybdenite from Mono county. There is still, and always has been, a constant misunderstanding of the functions of this department of the Bureau, by people who ask and expect assays of their samples. It makes qualitative analyses only and never quantitative ones. Anyone in California may find out, by sending to the Bureau, what his mineral contains, but not the percentages and values. The law governing the Bureau wisely provides that it shall inform inquiring citizens of the mineral contents of rocks they discover, but as wisely prevents competition on the part of the Bureau with those who make assaying their business. Prospectors and others are constantly guessing that some unfamiliar substance they run across is ore of this or that, and by shipping a sample to the State Mining Bureau they learn without charge what the stuff is. The samples sent are generally worthless, but if they contain anything of interest or value the sender must go to an assayer for further information. Samples are often received from other Western States, but this institution is for California people and resources and no attention is paid to such inquiries.—Pacific Coast Miner.

Mining Bureau.

State Mineralogist Lewis E. Aubury, who has been visiting Southern California in the interest of the State Mining Bureau, has been looking over the copper possibilities of this section. He has already sent field assistants to various counties to report on copper prospects, and on the 11th instant instructed Mr. George A. Tweedy to proceed at once to Inyo, Mono and Alpine counties to examine and report upon copper prospects in those counties. Mr. Tweedy, in accordance with his instructions, has gone to Keeler, Inyo county, where he will be joined by Mr. George McConnel, who will assist him in that county. Field Assistant S. W. Bowers is now in Los Angeles, collecting statistics of structural materials for the Bureau. He has been instructed by Mr. Aubury, as soon as this work has been completed, to proceed to Carriso Creek, San Diego county, and report upon the oil possibilities of that section. Mr. Aubury expects soon to commence work upon a special Bulletin, entitled "The fuel values of California oil, and methods of application." This work will be of the greatest possible value to the general public and will be of greater assistance to the oil industry at this time than any publication that could be issued. The object of the work will be to educate people in respect to the advantages of oil as fuel, and to the adaptability of it as such. Large quantities of oil are being produced in the State, but sufficient efforts are not being put forth to encourage a more general consumption of it. To interest possible consumers will be the aim of the work, the State Mining Bureau being desirous of aiding to the extent of its power the oil industry along practical lines.—Los Angeles Mining Review.

The largest bull in the world is being fattened near Merwin, Missouri, for exhibition at the World's Fair in St. Louis. The animal is six feet and one inch high at the shoulders and is fifteen feet and one inch from the tip of the nose to the base of tail. The animal weighs 3000 pounds, and experienced stockmen say it will not be difficult to fatten it until it brings down the scales to 4500 pounds, which will be a record breaker. The bull is a pure bred Shorthorn.

The pesky Boers lately killed two British officers and sixteen men, capturing about 200 soldiers. The government proposes a tax to make the mines pay the expenses of the South African war, which doesn't appear to close with much rapidity.

The work of repairing the Giant Forest road is to begin at once. In ten days time a wagon can be driven over the best graded mountain road in California to within two miles of Giant Forest.—Visalia Times.

For Sale or Rent.

House of six large rooms on the Main street, Independence, furnished or unfurnished, Three lots, fruits and berries of all kinds. Hot and cold water in house. Bath room, pantry and closet.

Will rent for a long period or sell on the installment plan. Terms, reasonable.

NOTICE OF SALE.

Office of the Tax Collector of the County of Inyo, State of California.

Notice of sale of property of the State pursuant to Section 3897 of Political Code.

Whereas on the 3rd day of June, 1901, there was received by me and filed in my office a written authorization under the hand and seal of the Controller of the State of California, which said authorization was and is in words and figures following:

NOTICE.

CONTROLLER'S DEPARTMENT.
STATE OF CALIFORNIA.

To the Tax Collector of the County of Inyo, State of California:

WHEREAS, on the 10th day of January, 1901, there was filed and recorded in the Controller's Office of the State of California, certain deeds conveying to the People of the State of California the title to those certain lots and parcels of land hereinafter described:

AND, WHEREAS, said deeds recite the fact that said property hereinafter described was struck off and sold to the People of the State of California for the nonpayment of State and County taxes, penalties and costs, and all charges levied and assessed against said property for the year 1894:

AND, WHEREAS, five years have elapsed since the date of said sale, and no redemption, according to law, has been made of said property, or any part thereof;

NOW, THEREFORE, in pursuance of the law in such cases made and provided, I, E. P. Colgan, Controller of the State of California, by virtue of the authority in me vested by the laws of this State, do hereby present authorize, empower, and direct you, the said Tax Collector, to sell at public auction, in separate lots or parcels, the property hereinafter described, in the manner following: Public notice shall first be given of such sale by publication for at least three weeks in some newspaper published in the county, or city and county, or if there be no newspaper published therein, then by posting a notice in three conspicuous places in the county, or city and county for the same period, which notices must state specifically the place of, and the day and hour of sale, and shall contain a description of the property to be sold, and shall also embody a copy of this authorization.

The property above referred to and hereby authorized to be sold, is situate, lying, and being in the County of Inyo, State of California, bounded and particularly described as follows, to wit:

In Panamint Mining District, Wyoming mine, lot 38, T 21 S R 45 E. M. D. M., containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Stewart's Wonder mine, lot 39, T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Star mine, lot 31, T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Hemlock mine, lot 46, T 21 S. R. 45 E. M. D. M., containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Little Chief Mine, lot 47, T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Little Chief millsite, lot 47, T 21 S. R. 45 E. M. D. M., containing 5 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Comstock mine, lot 40, T 21 S R 45 E. M. D. M., containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Alabama mine, lot 53, T 21 S. R. 45 E. M. D. M., containing 17 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Marvel mine, T 21 S. R. 45 E. M. D. M., dontaining 16 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Challenge mine, T 21 S. R. 45 E. M. D. M., containing 10 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Hudson River mine, containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Stewart's Wonder millsite, containing 5 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Challenge M. S., containing 2 acres. Sold to the State July 3, 1895.

Also in Panamint Mining District, Ida mine, containing 19 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Independence mine, containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Eureka mine, containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Independence M. S., containing 1 acre. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Wyoming millsite, containing 5 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Eureka millsite, containing 4 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, ten stamp quartz mill, millsite and machinery, store building; office; boarding house, wash house; blacksmith shop and Company's spring and pipe line; 20 acres. Sold to the State July 3, 1895.

That no bid shall be received or accepted at such sale for less than the amount of all the taxes levied upon such property, and all interests, costs, penalties, and expenses up to the date of the sale hereby authorized, together with all such subsequent taxes as may have been levied upon such property, up to the date of the issuance to the State of the deed or deeds here inabove referred to, with all interests, costs, penalties, and other charges thereon added to such subsequent taxes.

That said sale shall be conducted in all respects as by law governing such sales

Given under my hand and seal of office, at Sacramento, this 31st day of May, A. D. 1901.

[SEAL] E. P. COLGAN,
Controller.

By W. W. DOUGLAS, Deputy.

Therefore in pursuance of law, public notice is hereby given that I will, on Wednesday, July 3rd, 1901, at the hour of 10 o'clock, A. M., in front of the Court House, in the Town of Independence, County of Inyo State of California, sell at public auction to the highest bidder, for cash in lawful money of the United States, the said property hereinbefore in said authorization described, which authorization is hereby made a part of this notice, to wit: Situate, lying and being in the County of Inyo, State of California, and particularly described in said deeds to the State above referred to, as follows, to wit:

Wyoming mine, in Panamint Mining District, lot 38 T. 21 S. R. 45 E. M. D. M., 20 acres. Sold to State July 3rd, 1895.

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains o Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Re

What is Ovaritis?

A dull, throbbing pain, accompanied by a sense of tenderness and heat low down in the side, with an occasional shooting pain, indicates inflammation.

On examination it will be found that the region of pain shows some swelling. This is the first stage of ovaritis, inflammation of the ovary. If the roof of your house leaks, my sister, you have it fixed at once; why not pay the same respect to your own body?

You need not, you ought not to let yourself go, when one of your own sex

POWER OF IMAGINATION.

A Druggist's Story of How It Worked In One Case.

"The power of imagination," said a New York druggist, "is past comprehension. Not long since a domestic in the employ of a prominent family came into the store in great haste with a prescription which called for two grains of morphine in two ounces of aqua pura—that is, distilled water—the accompanying direction reading, 'A teaspoonful every hour until the pain is allayed.' The patient for whom it was intended was the head of the family, who was suffering from a severe attack of nervous neuralgia.

"Now, it so happened that the family physician who had written the prescription was behind the counter when the messenger arrived, having dropped in, as was his wont, on the way to his office. While I was putting up the prescription we chatted and laughed and joked and passed the time of day as only professional men are capable of doing. I filled the bottle, corked it carefully and labeled it properly, and when the retreating form of the domestic had disappeared out of the store door returned to my companionable physician visitor. As I did so I saw to my amazement the two grains of morphine reposing upon the prescription scales.

"'Doctor,' I ejaculated, 'I've given that girl nothing but distilled water. The morphine is here; look at it. What shall I do?'

"'Do?' he replied, with admirable sang froid. 'Do? Why, nothing at all. I'll wager you that the aqua pura will work as well without the opiate as with it.'

"'Agreed,' said I. And do you know," concluded the pharmacist, "the doctor was right, and the patient with the nervous neuralgia—an exceptionally intelligent and college bred man—was sleeping as peacefully as a babe after the second dose of the 'mixture.' Faith is everything where medicine is concerned."—Exchange.

Why Spiders Are Not Insects.

The spider is not an insect, though probably nine people out of ten would class it under this term. With scorpions and mites spiders form a class in the animal kingdom known as Arachnida. This name is derived from a mythical personage called Arachne, the daughter of a purple dyer of Lydia, who was fabled to have challenged Minerva to a trial of skill in spinning. So indignant was the goddess at this act of boldness that she forthwith transformed the hapless challenger into a spider, presumably in order that she might have the best possible opportunity of practicing the art on which she prided herself so much.

Spiders differ from insects in five main particulars. Their eyes are simple instead of compound, they have eight legs in place of six, they do not pass through the metamorphoses which are characteristic of insects, they have no antennæ and their breathing is accomplished by means of organs which combine the functions of lungs and gills, instead of by tubes pervading their bodies. These points of distinction are sufficient to determine the fact that it is impossible to class spiders as insects.

A Literal Construction.

In a school for colored children there was a little boy who would persist in saying "have went," says a contributor to The Christian Endeavor World.

The teacher kept him in one night and said:

"Now while I am out of the room you may write 'have gone' 50 times."

When the teacher came back, he looked at the boy's paper and there was "have gone 50 times." On the other side was written, "I have went home."

Cheap.

Lover—You are getting prettier every day.

Sweet Girl—Just now I am living on brown bread and water to improve my complexion.

"How long can you keep that up?"

"Oh, indefinitely."

"Then let's get married."—Exchange.

Comparing Notes.

Mrs. Slowboy—My husband's so lazy that if it wasn't for me I don't believe he would get up in time to go to bed.

Mrs. Rounder—My husband's different. He scarcely goes to bed in time to get up.—Chicago News.

UNDERGROUND NEW YORK.

In the Near Future One May Shop Entirely Below Level of the Street.

Owing to the rapid transit tunnel in New York City, underground stores are apt to become a feature. The city has extended some distance toward the sky in many instances, and now it appears to be bent on going in the opposite direction. Subterranean arcades are being planned by real estate speculators, and they expect to make a big profit from the enterprise.

In Longacre square, where the bulk of realty manipulation has taken place recently, a combination of wealthy agents who were too late to secure surface space have contracted for the privilege of building structures underground, on a level with and adjoining the new rapid transit station. The arcade idea has spread rapidly along the entire tunnel line. Downtown it has taken the shape of plans to erect booths and stores underground, connecting with mercantile and office buildings. The advantage of underground construction has given an added value to property all along the route. According to one enthusiastic promoter, the arcades will be much more elaborate than anything ever attempted in London or Paris. Instead of mere kiosks, where books, papers and flowers can be bought, it is proposed to rent store space to merchants in all branches of trade, so that one so inclined can shop entirely below the level of the street.

CARRIES A ROW OF BRICKS

The invention shown below is a device for picking up a row of bricks quickly and transporting them with safety. The device consists of a turnbuckle provided with threaded sockets at the ends, in each of which is journaled a screw-threaded shaft. The one at the left in the drawing is bent downward and flattened to form a grip, and the one at the right ends in a clevis. In this clevis is pivoted an L-shaped lever, which is flattened at

DEVICE FOR CARRYING BRICKS.

the short end to form the opposite grip for the row of bricks, the long end being bent back over the turnbuckle and provided with a grip for carrying in the hand. In operation the turnbuckle is set to spread the grips apart until the desired quantity of bricks can be picked up for each load. Then the flat grips are dropped over the two end bricks of the row, the handle meanwhile being lowered and the hand grasping the turnbuckle. As soon as the carrier is in position an upward pull on the lever clamps the grips over the bricks and binds them together with such force that they can be transported without danger of dropping. The patent on this device has been granted to Frank E. Sproat of Allegheny, Pa.

ACTING IS NOT ALL PLAY.

The play world is not all play. During the past few months a number of the disciples of Thespis have been compelled to leave the stage to recover from the effects of its exacting demands. Miss Annie Russell grew faint during a performance of "A Royal

MISS RUSSELL. MISS BERKELEY.

Family" at Chicago several nights ago and Gertrude Berkeley is also a victim of overwork in the Windy City. It was during a performance of "Darkest Russia" in Kansas City that Miss Berkeley first faltered in her lines, and then became hysterical. Later in the evening she showed decided signs of mental derangement.

Why He Was Tardy.

Not long since a little chap who attended the Windsor street school, on Walnut Hills, arrived about half an hour late. He was not only tardy, but brought with him a very dirty face.

"Willie," said the teacher, "why are you late, and why didn't you have your face washed before you left home?"

"Please, ma'm," said Willie, "my grandmother went skating last night and was too tired to get up this morning to get me ready for school."

The teacher, of course, did not think that Willie had told the truth. She investigated, however, and found that Willie was a truthful lad. His parents were dead and he made his home with his grandmother. The old lady had joined a skating party the night before. She enjoyed the sport and got along very well while on the ice, having been an expert skater in her younger days. When she awoke next morning and attempted to get out of bed she found her bones "cracking like a horse fiddle," to use the lad's own words, and it took the services of three neighbors to pry her out of bed.—Cincinnati Enquirer.

A Daily Thought.

There is no use to help a man to climb a ladder unless he helps himself; for, as sure as you let go, he falls. His last state is worse than his first.—Andrew Carnegie.

Loss of Appetite

Is Loss of Vitality, Vigor, Tone.

That stands to reason.

It is common in the Spring, when the blood, which needs cleansing, fails to give the organs the stimulus necessary for the proper performance of their functions.

Hood's Sarsaparilla

cleanses the blood, restores appetite, gives vitality, vigor, tone—this is one of the reasons why it's called the Greatest Spring Medicine.

Take it.

"I have taken Hood's Sarsaparilla and it has created a good appetite and cleansed my blood." ADOLPH RHODE, Plattsmouth, Neb.

"My little brother had no appetite. He has taken Hood's Sarsaparilla and now gets hungry like any other boy." MAUD KILGORE, Alden, Kan.

Hood's Sarsaparilla promises to cure and keeps the promise.

His Bumps.

They were newly married and were calling upon one of the friends of the bride who had been particularly pleasant upon the occasion of their wedding. The bridegroom, apropos of nothing, began to talk about phrenology and told how his wife had discovered two very prominent bumps on the back of his head. He was proud of them. So was she, and she passed him around that the host and hostess might feel the bumps and know of their existence. Then she explained:

"My book on phrenology says that they mean good memory and generosity."

It was evident that she was proud of the facts, and so was he. But the host, being of an inquiring turn of mind, wished to satisfy himself, so he got down a phrenological work from one of his library shelves and after much labor found the bumps on the chart. Turning to the notes, he read, seriously at first, then unsteadily. The bride became suspicious, but she was game and said:

"Read it out loud. Please do!" And the host read:

"These bumps are most frequently found on cats and monkeys."

Other topics consumed the remainder of the visit, which was brief.—New York Sun.

Swells With Swell Chests.

"I had occasion to examine two brothers who had applied for policies in our company the other day," said the medical examiner of a life insurance company. "One was 35 years old and the other was 33. They are both unmarried and are known about town as pretty gay boys. Usually there is considerable attached to writing policies for men who are known as 'rounders,' but these two proved to be perfect specimens of physical manhood.

"I was particularly impressed by their chest developments. They both had the same measurement and also the same expansion—from 39 to 43. When I found that they had smoked cigarettes from boyhood, I wondered all the more at the four inch expansion. Then they told me that when they were youngsters they used to delight in seeing how long they could hold their breath under water. Every time they took a bath in the tub one would take a deep breath, duck under, and the other would time him with a watch. A minute and a half, I believe, was the limit of their endurance. They said it was all their mother could do to get them out of the bath and drive them to bed."—Philadelphia Record.

A Trait of Augustin Daly.

A lovely trait of Mr. Daly's character was his tenderness and thought for children. I never knew him to pass a little newsboy on the street without buying a paper, and he always took the paper with a look in his eyes as much as to say, "We must help the boys to get a living." It was a beautiful trait—not giving as charity, but buying what the boy had to sell.—Mrs. Gilbert in Scribner's Magazine.

The Coffee He Wanted.

"Lady," said the beggar, "won't yer gimme a nickel to git some coffee?"

The woman did so, and he started into the neighboring saloon.

"Here," she cried, "you don't get coffee in there!"

"Lady," he replied, "dat's where yer way off. Dey keeps it on de bar wid de cloves an orange peel."—Philadelphia Record.

Trying Work.

Thin Haired Man—What! A shilling for cutting my hair? That's outrageous!

Barber—But, my dear sir, the hairs on your head are so far apart that I had to cut each one by itself.—London Tit-Bits.

A famous ink long used in Germany was made of a combination of chromate of potash with a solution of logwood in the proportions of one part of the former to 1,000 parts of the latter.

The Clothes Moth.

We may marvel at grubs growing fat and succulent upon such unpromising fare as old timber affords, but that achievement is improved upon by the insects that prefer to draw their entire nutrition from woolen fabrics, fur, horsehair, feathers, tanned leather and the like and apparently without ever a desire to "wet their whistles" by anything of a juicy nature. Any small, silvery winged moth that is seen flitting about the house is regarded as a "clothes moth," but every one killed is not an enemy, for there are a number of moths of similar size and appearance that come from outdoors and have been occupied as grubs in destroying green leaves. It is a common error to suppose that it is the clothes moth that does the mischief, though by destroying the moth we prevent the laying of innumerable eggs from which come the consuming larvæ, whose cutting jaws would be actively and incessantly employed in mutilating choice fabrics and valuable furs. These caterpillars are rarely seen by the housewife because their first care on leaving the egg is to disguise or hide themselves.

The clothes moth proper has yellowish gray wings, with three or four indefinite brownish spots upon them, and in consequence of its marked preference for furs it is known to science as Tinea pellionella.—Good Words.

Had Lost His Fourth.

One of Judge Howland's stories had to do with the old Maine farmer who had been married four times. Shortly after the death of his fourth wife a neighbor stopped him and said:

"Mornin, Cyrus. How's the wife this mornin?"

"Waal, to tell ye the truth," replied Cyrus, "I'm kinder out of wives just now."—Detroit Free Press.

THE SEVENTY-FIFTH BIRTHDAY.

A Noteworthy Anniversary in the History of the Youth's Companion.

With its issue of April 18th THE YOUTH'S COMPANION will enter upon its 75th year. To celebrate this event THE COMPANION of that date will be a double "75th Birthday Number," containing contributions by the Vice-President of the United States, Theodore Roosevelt, Mary E. Wilkins, Sarah Barnwell Elliott and half a dozen others.

To further commemorate this anniversary, the publishers have prepared a richly printed Souvenir illustrating the growth of the nation and of THE YOUTH'S COMPANION since the year THE COMPANION was founded, 1827. Perhaps the most significant features of the Souvenir are its three maps. The first shows the small section of the continent occupied by the United States of 1827, when THE COMPANION began life with practically no subscribers. Another shows the system of railways which cover the United States in 1901, an aggregate of 187,781 miles, THE YOUTH'S COMPANION traversing every mile of this system once a week. The third map shows the number of subscribers to THE YOUTH'S COMPANION in every state of the Union in 1901, the paper being delivered every week to 545,342 American homes.

But another suggestive fact is brought out in this Souvenir, and perhaps furnishes a clue to all the others—the amazing growth of THE YOUTH'S COMPANION and its hold upon the homes of the nation. And this is a quotation from the announcement made by Nathaniel Willis, the founder of the paper, in the first issue, April 16, 1827:

Our children are born to higher destinies than their fathers; they will be actors in a far advanced period of the church and the world. Let their minds be formed, their hearts prepared, and their characters molded for the scenes and duties of a brighter day.

While THE COMPANION has kept pace with the progressive spirit of the time and has welcomed every improvement that really improved, it has remained true to the purpose of its founder. The words of the announcement of 1827 would be equally appropriate to announce the volume for 1901. This constant effort of the editors to make a better and still better paper year after year is well illustrated by reference to any of the current issues.

YOU KNOW WHAT YOU ARE TAKING When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

A Misplaced Letter.

The transposition of letters in the same word sometimes produces the most ludicrous results. In "The Still Hour," which was written by Professor Phelps, is the fine line, "The stillness of the hour is the stillness of a dead calm at sea." A large number was printed and disposed of before it was discovered that "clam" had been printed for "calm."

A Heavyweight.

"And then," she said in telling of the romantic episode, "she sprang to his arms."

"She did?"

"Of course. Do you doubt it?"

"Oh, no," he replied, "but after seeing her I can't help thinking that it must have jarred him quite a bit."—Chicago Post.

First Submarine Cable.

The first submarine cable was laid across the English Channel about fifty years ago. It was also about the same time that Hostetter's Stomach Bitters, the world renowned dyspepsia cure, was first introduced to the public. If you are a sufferer from this ailment, or from indigestion, flatulency, constipation, nervousness or insomnia you should try it at once, if you would be well. It will strengthen your entire system and produce sound sleep.

A good talker is always delighted when he encounters a good listener.

SOFT, GLOSSY HAIR.

It Can Only Be Had Where There Is No Dandruff.

Any man or woman who wants soft glossy hair must be free from dandruff, which causes falling hair. Since it has become known that dandruff is a germ disease, the old hair preparations that were mostly scalp irritants, have been abandoned, and the public, barbers and doctors included, have taken to using Newbro's Herpicide, the only hair preparation that kills the dandruff germ. E. Dodd, Dickinson, N. D., says: "Herpicide not only cleanses the scalp from dandruff and prevents the hair's falling out, but promotes a new growth. Herpicide keeps my hair very glossy."

When some men think they are thinking they are only killing time.

Fryer's Abietene Cough Balsam saves Doctor Bills

TO CURE A COLD IN ONE DAY
Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Life Insurance Contracts.

It seems as though the real meaning of the policies now issued by many companies is not understood, and that under the guise of the so-called five, ten or twenty year "distribution" policies and the five, ten or twenty year "accumulation" policies, many of the leading companies are endeavoring to avoid annual dividends. But the Mutual Benefit Life Insurance Company of Newark, N. J., the leading annual dividend company, makes a splendid showing in a double-column advertisement in this paper. Good agents wanted in all interior towns.

A folding pocket camera, making 3½x3½ pictures, for $11.25. No experience required to make perfect pictures. Film 60 cents. Send for full description. Kirk, Geary & Co., 330 Sutter St., S. F.

Good Health comes to those who take the great herb blood purifier, Garfield Tea; it cleanses the system and cures digestive disorders. All druggists sell it.

That Cough needs Fryer's Abietene Cough Balsam.

"THESE IDLE DAYS."

I have read from the great book of nature,
How the seasons unceasingly roll;
And where myriads of stars are unfolded
By night, on the heaven's wide scroll.
I have learned that their law is to labor,
Inaction would wreck the great plan
That holds worlds upon worlds in their orbits,
And governs the frail life of man.

There is never a night in the summer,
So still but the dew dripping air
Is keen with the singing of insects
At work in some cool grassy lair;
And the day, rising bright-eyed and rosy,
From the depths of the green eastern sea,
When it trails down the western horizon,
Will be morning on some distant lea.

When winter lies chilling around us,
Each snowbound, and skies sullen gray,
In the heart of the trees, gaunt and leafless,
There's a song of the sunshine of May;
And the flowers that drooped in the autumn,
Are waiting to grow up anew,
When the springtime shall smile a bright welcome
To brooklets and grasses and dew.

So these days that seem clouded by waiting
With listless and sad folded hands,
While all of life's brightest endeavor
Has fled with time's vanishing sands,
May be only some wise preparation
For a part in the infinite plan
That has governed the worlds since creation,
And considers the brief life of man.
—Boston Globe.

The Trick Was Exposed.

I WAS a young man possessed of sufficient means to enable me to live at my ease, when suddenly there came a blow which scattered my prosperity to the winds and forced me to labor in the general struggle of gaining a living.

Securing a clerkship in the house of a creditor of our late firm, my first care was to look up a less expensive boarding house. I inserted an advertisement in several city papers, asking for reasonable board in a strictly private family, and received a multitude of answers by next post. Out of this motley installment of epistles, there was but one which pleased me, and I decided to answer that one in person immediately.

Grace Kingsley was the name of the favored landlady writing to me, and the letter stated that her house was entirely private, she having no boarders whatever. I was much pleased with the fair, delicate handwriting, and an idea took possession of me that Grace was a young and fascinating widow. I was not disappointed when I reached the house, and my ring at the doorbell was answered by the lady herself. She invited me into the parlor in a manner that was so courteous and yet so modest, that I had fallen in love with her before I even crossed the threshold.

Before leaving my former boarding house, a letter was handed me by the postman, but I did not find time to examine it until I was comfortably ensconced in the parlor of Mrs. Kingsley's cosy establishment.

Opening it, I discovered it to be from a wealthy uncle, residing in Vermont, who regularly sent me a letter every year, but whom I had never seen.

About a year previous my uncle made some pressing inquiries respecting my matrimonial prospects, and stated that if I wasn't already married I should immediately enter into the wedded state and let him know of it or "he would never more be uncle of mine."

Now, as my uncle lived in Vermont and I in Philadelphia, and I never anticipated the old gentleman would ever pay me a visit and discover the falsehood, I wrote to him and informed him that I was not only married, but also the father of a bouncing boy. This intelligence so pleased him that he sent me a gold goblet and a silver pap-spoon, to be presented to my child. I at first sat down and wrote a very romantic letter to my uncle, thanking him for the present and then visited the nearest jewelry store and turned both the goblet and the spoon into cash, which I pocketed.

I had received no further letters from my uncle until the one which I read in Mrs. Kingsley's parlor. The postscript to this one not only astonished, but absolutely frightened me. It read as follows:

"P. S.—I have never visited Philadelphia, so I have decided to do so at once and get a look at you and your wife and child. You may expect me about the 10th of the month."

"Good gracious; my uncle coming to visit me," I exclaimed, "and it is past the 10th of the month now! I don't know at what moment he may pop in. What am I to do for a wife and child?"

At that moment there came a terrible ring at the door bell, as if the man who pulled it imagined he owned the house and could make as much noise as he pleased. A sickening sensation took possession of me, for I had a misgiving it was my uncle.

Now, as good fortune would have it, Mrs. Kingsley had gone out for a few minutes and had requested me to have an eye to her child while she was gone. As I glanced at the cradle, and thought of my uncle at the door, a bright idea entered my mind. I determined in case the visitor was my uncle to claim the youthful occupant of that cradle as my own.

The visitor proved to be my uncle. I knew him by the picture of him I had seen, and he likewise recognized me by my photograph. After a mutual recognition and handshaking, I ushered my honored relative into the parlor and presented to him my newly claimed offspring.

So far I had succeeded in deceiving my uncle, but the worst I feared was that when Mrs. Kingsley returned she might object to my claiming ownership in her child. Besides, to carry out my deception I must find a wife as well as an infant, and Mrs. Kingsley was the only one I could conveniently claim. The only difficulty was to get her consent to the deception, and this might be done if I could secure a private conversation with her before I introduced her to my uncle.

I watched my opportunity, and gained an interview with her before she entered the room. I told her, in a few brief, hurried words, the extent of my difficulty, and how I had taken the liberty of acting as papa for her little one. I then told her I must find a wife somewhere, and begged her to allow me to introduce her to my uncle in that capacity. She laughed heartily at the suggestion, said she could comprehend my difficulty, and consented to my proposal, but warned me roguishly not to presume upon the occurrence.

We entered the parlor, and I introduced her as my better half. My uncle was much pleased with her, and complimented me upon my good choice in the selection of a wife. Mrs. Kingsley colored most charmingly at this compliment, and I could see she could scarcely refrain from laughing.

A short time afterward Mrs. Kingsley came to me, when I was alone, in an adjoining room, and I saw immediately something very humorous must have happened, for the corners of her lips were breaking out into beaming smiles.

"Do you know, sir, into what an awkward predicament you have gotten me?" she inquired.

"What's the matter?" I asked.

"Why, your uncle came to me a short time ago and asked to see my marriage certificate, as he said he had some money to settle upon us immediately, but wanted to be sure everything was right first."

"Did you expose me?" I inquired anxiously.

"No, sir, I did not, for I never enter into a deception or anything else by halves."

"Then we must lose no time," I replied; "if my uncle is so anxious to have our marriage certificate, let us put no obstacles in his way."

We lost no time, I assure you. I don't think Mrs. Kingsley ever got into her Sunday clothes in such a hurry in her life before, while I spoiled two pairs of suspenders in my frantic endeavors to be "on time." We quite astonished the parson by our haste, and at the conclusion of the ceremony I would have forgotten to give him the usual fee if he had not reminded me of it.

We had secured the coveted marriage certificate, signed and sealed, and were now safely out of our difficulties, as we thought. We had omitted one precaution, as we found when we had presented the certificate to my uncle. The date was too modern.

"Why, how is this?" said my uncle. "I thought you were married over a year ago?"

"So we were, uncle," I said, solemnly.

"How comes it, then, the certificate is dated to-day?" he asked in a voice of thunder.

We were both struck speechless.

"Come," said my uncle. "I see there has been some trickery here. Own up to it, or I will never forgive you."

I did own up to it, and told him the whole story. I expected it would make him angry, but it didn't, for he laughed heartily, and said I was a clever rascal and he was proud of me.—Indianapolis Sun.

A Substitute for Pockets.

Everybody knows that British sailors wear their trousers wide at the bottom, but everybody may not know that they can either make, mend or wash their own clothes. Now, at one time every sailor had sufficient cloth given out to make the articles in question, with just a bit left over for future repairs. But here came the difficulty. He was not allowed to have any pockets. So, quite naturally, he kept the repairing bit in a handy place, where it could not get lost. If he wanted to mend a hole in his jumper all he had to do was to cut a piece out of his trouser ends. It will be readily seen, therefore, that by the time the trousers were altogether worn our they had become the same width the whole of the way down, or, better still, the much-desired peg-top shape. The navy is so conservative, that's why sailors' trousers still continue to float in the breeze nowadays.

Bermuda's Revenue from Lily Bud.

The Bermuda lily was introduced into this country in 1875. Two plants in bud and bloom were brought to Philadelphia by a lady and given to the florist. This florist, appreciating their beauty and value, cultivated the plants for the bulbs. Since that time the exporting of the lily bulbs has been one of the industries of Bermuda. Very few lilies are exported, as the cut flowers do not arrive in good condition. Nor does it pay to export the growing plants, because of the duty and the cost of freighting so delicate a cargo. The bulbs are exported all over the world and are a valuable source of revenue.

Defined.

Willie—Pa, what's an "old flame?"

Pa—My son, when a man speaks of "his old flame," he refers to something over which he used to burn his money. —Philadelphia Press.

Ocean Freight Rates.

Within the last twenty years freight rates from and to England have decreased from 50 to 75 per cent.

MORMON LEADER GONE.

George Q. Cannon, Church Apostle, Died Recently in California.

The death of George Q. Cannon, of Salt Lake City, whose death occurred in Monterey, Cal., has removed one of the most noted of the Mormon leaders since the death of Brigham Young. Until a few years ago he was the real leader of the church and his counsel was eagerly sought by its president.

GEO. Q. CANNON.

Mr. Cannon was born in Liverpool, England, in 1827. He became a convert to the Mormon faith and joined his fellow believers in this country in 1844. He was among the pioneers under Brigham Young, who founded Salt Lake City, in 1847. He did missionery work for many years and was elected delegate to Congress from Utah in 1872.

He was deprived of his seat by the House of Representatives after serving for eight years, because proof was given that he was a polygamist. He was then made an apostle in the Mormon Church. He was its real leader during the polygamy prosecutions from 1880 to 1890, and is credited with having outlined the manifesto of 1891, in which the leaders of his church pledged themselves to abandon the teaching of polygamy. This manifesto and other pledges resulted in the admission of Utah into the Union.

With the elevation of Lorenzo Snow to the presidency of the church, in 1897, Mr. Cannon's power waned, his health having been poor for several years. His advice, however, was always eagerly sought by the active leaders. Two years ago Mr. Cannon was a candidate for the United States Senate, but was defeated. Mr. Cannon had several wives and numerous children. A suburb of Salt Lake City was peopled exclusively by his family.

One of the most interesting incidents of Mr. Cannon's life took place during the polygamy persecutions. While Federal officials were active throughout the Territory in 1886, Mr. Cannon, in common with the other high officials of the Mormon Church, was in hiding. He was captured, however, and while being taken to Salt Lake evaded his guards and jumped from a train which was running at the rate of twenty miles an hour. The train was stopped, however, and as he had been injured by his fall he was soon recaptured.

He was arraigned on a charge of living in polygamy, and bail was fixed at $45,000. His lawyers and the Mormon leaders protested strongly against this action, but bail was furnished by wealthy churchmen. When the time came for trial, however, Mr. Cannon had disappeared. The Mormon people raised the amount necessary to indemnify his bondsmen, and a special act of Congress in recent years restored the money to the church.

INTERNATIONAL FLIRTATIONS.

Latest Organization to Come from W. T. Stead's Idea Fac ory.

The latest organization to come from the idea factory of William T. Stead, the English editor, is one for promoting what he calls "international flirtations." Primarily the scheme is intended to promote correspondence between the school children of all nations. He would have a German school girl write a faulty letter in English to

WILLIAM T. STEAD.

an English school boy, who in turn will send back an answer written in more or less faulty German. In the same way French and American pupils may correspond, or any two pupils who speak and write different languages. So far as he has already gone, Mr. Stead has succeeded in getting more than 9,000 school children—English, French and German—busy in murdering each other's languages on paper. He works through the school teachers. For instance, he finds a dozen pupils who would like German correspondents, and he puts him in communication with a German teacher who wants an equal number of English correspondents for his children.

MAKING OF RUBBER BANDS.

Process Is Simple and the Business Is of Large Proportions.

"The little elastic rubber band that is nowadays used in various businesses in place of twine seems a simple sort of thing, but there are few, if any, of the multitudinous articles made out of rubber for which there is such an enormous demand, especially in the United States," remarked a wholesale dealer in rubber bands in New York to the writer the other day. "In this country the number of rubber bands sold in one year amounts to about 400,000 gross, or 57,000,000 single bands. At least 60 per cent of the goods are made in New York and the rest are produced in factories located in New Jersey and New England. In New York there are a half dozen factories devoted partly or exclusively to the manufacture of rubber bands.

"The process by which the bands are made is simple. The rubber in a liquid state is molded into tubing of sizes suitable for forming the small and medium varieties of bands. When the tubing is ready for use it is put into a rapid running machine having knives, which cut or slice the rubber into bands. The larger bands are cut by machinery from flat sheets of rubber and joined together with the aid of heat and a pressing machine.

"Rubber bands are made in only two colors, black and brown. They range in size from one-quarter of an inch to six inches in length. The smallest bands are one-sixteenth of an inch wide and the largest are one and one-half inches wide. The smallest bands are worth 24 cents per gross, while the medium-sized bands sell at from 48 to 96 cents per gross wholesale. Larger sizes cost from $1 up to $6 per gross.

"The greatest consumers of rubber bands are druggists and grocers. They use the smallest and medium sized bands in place of twine for putting up small packages. The large flat and expensive bands are used by court officers, lawyers, bankers and merchants for filing documents and papers. No rubber bands are imported into this country, but a few American rubber bands are exported to the West Indies and South American countries."—Washington Star.

Colds: In making a hot lemonade for a cold remember that glycerine instead of sugar will make the remedy more valuable. Drink the hot lemonade at bed time.

Antidote for Lead Poison: Barley water is recommended as a curative in case men are leaded through working in a mine or smelter. Sulphuric acid is an antidote for lead poisoning and one drop in a glass of water should afford relief.

Smallpox: The worst case can be cured in three days by using one ounce of cream of tartar dissolved in a pint of hot water and drank at intervals when cold. This is said to be a certain and never-failing remedy—does not leave a mark, never causes blindness and avoids tedious lingering. In using never put it in an iron or tin vessel.

Change of Altitude for Consumption: Prof. Weinzirl, of the University of New Mexico, has evolved what is believed to be a cure for consumption. By careful testing he has determined that the transitory effects upon the blood corpuscles of a person passing from a lower to a higher altitude are renewed by frequent changes of altitude. By occasional visits to the sea level, he says, the system can be reinvigorated, even when the effects of the higher altitude have worn off.

Appendicitis Due to Grippe: Dr. Lucas Championniere has demonstrated that one of the common causes of appendicitis is grippe or influenza. Although this theory had been advanced by the late Dr. Simon, Dr. Championniere's statements have produced a profound sensation. He calls attention to the fact that an epidemic of appendicitis has always followed a grippe epidemic or that the two often co-existed. He says that appendicitis is but a localization of the gripppe affecting the intestines and often the appendix itself.

Burns: Scalds and burns are of frequent occurrence in childhood. The first great treatment is to exclude the air as quickly as possible. Carbolized oil is a clean, soothing application and should be covered with absorbent cotton. Flour or whiting dredged over the burn makes a good covering. Strips of lint or canton flannel answer well, soaked in a saturated solution of washing or baking soda and covered with cotton. This dressing is very soothing. Great care should be used in removing clothing that adheres to a burned surface. It should be soaked, not torn away.

Pawning the Crown.

At least four times the crown of England has been in pawn. Henry III. and Henry V., Edward III. and Richard II. all resorted to this means of raising money. The merchants of Flanders once had possession of the crown, the City of London held it as security for $10,000, and it was pledged at another time for $100,000. Edward III. disposed of it to the Bishop of Winchester for $67,500, and Charles II. would have used the crown as a personal asset if he had been able to turn it into money.

After Conversion.

"Have you noticed any change in Smithers since he joined the church?"

"Yes. He uses a jointed fishpole instead of the old long one."

"What has that to do with it?"

"Oh, he carries it under his coat when he goes fishing on Sunday."—New York Herald.

Nothing Agreed with Her.

Mrs. Bixby—I don't believe the doctor's medicine agrees with mother.

Bixby—The medicine would be more than human if it did.—Town Topics.

It is a great pity that the government doesn't organize a department to maintain a censorship over love letters.

CZAR'S GREAT ROAD.

MANCHOORIAN BRANCH OF BIG SYSTEM COMPLETED.

Advantages of the New Line, Which Opens a Vast Territory—The Time of a Journey Around the World Will Now Be Cut in Two.

Russia's Manchoorian branch of the Siberian railway has been practically completed, says United States Consul Smith at Moscow. This indicates that Russia has not allowed the Boxer uprising seriously to retard the work of constructing her railroad through Chinese territory to the ice-free port at Port Arthur, and it also indicates that the longest railroad in the world is nearing completion to provide an all-rail route from Europe to the Orient. This work has been going forward for ten years under the direct control of the Russian government, and while it has met many apparently insurmountable difficulties the resources of the Czar's government have been equal to overcoming them.

Ten years ago, while the rest of the world was reading about Siberia as a penal colony to which were banished the nihilists, the Czar of Russia was beginning the construction of the greatest railroad in the world. In May, 1891, the present Czar, then the Czarowitz, was in Vladivostok, and drove the first spike in the road begun from the eastern coast, which was to be built west to join with the road under construction from the Ural mountains east through Southern Siberia.

The subject of the building of a railroad across Siberia had been under consideration and discussion in Russia for many years, but it did not take definite shape until the success of the transcontinental roads in the United States had been assured. Russian statesmen watched with eager interest the construction of these transcontinental roads in America, and when the Union Pacific Northern Pacific and Southern Pacific roads had been built and put in operation, developing our great West and populating it in a comparatively short time, the Russians concluded that they could follow the American example with like success.

In 1894 there were 60,000 men at work on this great undertaking, which was estimated to cost $250,000,000. The world began to realize that way off in Siberia the most gigantic railroad enterprise had its theater, and that Russia was doing what no other government in the world had ever undertaken. This road was to be nearly 5,000 miles long, and it was crossing a country so little known that any story of Russian cruelty practiced there found ready belief. To the world at large Siberia was a land of ice and snow, and banished nihilists, but the Siberian railroad promised to develop new markets for German as well as Russian goods, and it also promised an outlet for the greatest wheat field in the world. People in every country began to take a new interest in Siberia.

Opening Up Siberia.

The road was built rapidly, and as the western division was pushed into the interior of Siberia it made travel easier, and the country became better known. Not only Russians, but other people, realized the future possibilities of Siberia. It resembled our great Northwest, with grazing lands for great herds and flocks, and, what was more surprising, immense tracts of wheat land to make the country a rival of the United States and Argentina in supplying the food products of Europe. The western division of the Siberian road was opened to Irkutsk, on Lake Baikal, in 1898, and trains have been running from St. Petersburg to that point regularly ever since. The eastern section from Vladivostok to Khabarovska, where the railroad strikes the Ural river, was opened in 1897, and it has been doing a large business ever since, the river being used above Khabarovska to transport passengers and freight into the interior of Siberia from the Pacific coast.

In 1896 the Chinese Eastern railway was organized and a secret treaty with China negotiated in that year provided for the construction of this road across Manchooria. The Russian government guaranteed the resources of the company. The total length of this branch of the road, for it is to be the Eastern division of the Trans-Siberian railroad, is 1,272 miles, of which 945 miles is in Chinese territory. It makes Port Arthur the eastern terminus of the road.

This port is one of the most valuable in China, opening on the gulf of Pechili, within easy reach of Tien-tsin and Pekin. It is an ice-free port, and when within another year or two Russia completes the section of road between Irkutsk and the Amur river, the Czar will have a military road which will carry his troops from St. Petersburg to Port Arthur in ten days, while the other nations of Europe will have to follow the old Suez canal route, which consumes from thirty to forty days.

But Russia had other and even greater ambitions in building this road, and those who are studying the commercial relations with China are impressed with the business foresight of the Czar Alexander, who planned the enterprise.

That it will save from twenty to thirty days' travel between Europe and China is the best indication that the road will draw to it the travelers who go to the Orient on business, for time is money. Consul Monaghan says that in 1895 there were 216,938 passengers who went the Suez route to China and Australia. If one-half of these are business men, as Mr. Monaghan assumes, they will prefer the cheapest and quickest route. The first-class fare from Moscow to Port Arthur will be less than $50, and the fare from London to Moscow is about the same, making the railroad fare from London to Port Arthur about $100. A ticket from Japan via Brindisi and the Suez canal now costs $428, or more than four times as much as the ticket by rail.

RUSSIA'S GREAT ASIATIC TERRITORIES.
(Colossal Trans-Siberian railway system from St. Petersburg to Port Arthur, which shortened by half the girdling of the globe.)

She Dances Like a Siren.

I held my breath as I watched the gypsy in the Seville dancing hall; I felt myself swaying unconsciously to the rhythm of her body, of her beckoning hands, of the glittering smile that came and went in her eyes. I seemed to be drawn into a shining whirlpool, in which I turned, turned, hearing the buzz of the water settling over my head. The guitar buzzed, buzzed in a prancing rhythm, the gypsy coiled about the floor in her trailing dress, never so much as showing her ankles, with a rapidity concentrated upon itself; her hands beckoned, reached out, clutched delicately, lived to their finger tips; her body straightened, bent, the knees bent and straightened, the heels beat on the floor, carrying her backward and round; the toes pointed paused, pointed, and the body drooped or rose into immobility, a smiling, significant pause of the whole body. Then the motion began again, more vivid more restrained, as if teased by some unseen limits, as if turning upon itself in the vain desire of escape, as caught in its own toils.—Arthur Symons in London Saturday Review.

Exhilarating Exercise.

To the unaccustomed a drive in the automobile coupe in which most visitors decide to see Washington, is exhilarating to a degree. The man at the helm makes a practice of missing the wheels of coal carts by a hair's breadth and of swerving only the second before it seems that his vehicle must be struck by a trolley car.

If it were not for the tacit admission it would convey that an automobile is not her every-day equipage at home, the feminine visitor to the Capital would feel much like leaning from the window and shouting directions in forcible English to the uniformed coachman. As it is, she calmly keeps her seat and says—

"Isn't that a pretty hotel?" when she's passing a park and vice versa. But when she alights she does not fall to the pavement in a frenzy of prayers of thanksgiving. She's restrained by Twentieth Century shame, but her gloves are worn out from the tright grip her fingers have had of each other during the ordeal from which she has just been delivered.

A Matter of Apparel.

"Then you don't believe that one can tell character by physiognomy and bearing?"

"No; when a man has on his old shoes it gives him a cringing air."

When a man is homesick, he begins to refer to his old home as "God's Country."

Time well arranged indicates a well-ordered mind.

BOY HERO OF PEKIN

A CADET AT WEST POINT.

Calvin T. Titus, of Iowa, the youth who was the first of the foreign soldiers to scale the walls of Pekin in the attack of the allies last August, has been appointed by the President a cadet at the United States Military Academy at West Point. The War Department sent a cable message to General MacArthur, at Manila, ordering him to send Mr. Titus home on the first transport leaving for the United States.

The reward given to Titus for his rare

CALVIN T. TITUS.

courage and high qualities as an American soldier has been a long time coming, but it was none the less sure. When the boy scaled the walls of the mysterious Chinese capital and planted upon them the emblem of American power he made a record as being the first man to perform an act of this kind in the eternal empire of the Mongol.

The young soldier is a native of Vinton, Iowa, where he earned the reputation of a brave, harly and generous boy. His father was a blacksmith in Iowa, who removed to Wichita, Kan. The Titus family were living in Wichita in 1898. Calvin was visiting a relative in Vermont when the war with Spain broke out. He enlisted in the First Vermont Infantry, and was discharged Nov. 2, 1898. The following spring he enlisted in Company E of the Fourteenth United States Infantry, and was sent with his regiment to the Philippines. He was thence sent to China last summer. The hero of Pekin is 20 years old.

Prevents Spilling the Paint.

The difficulty of holding a can of paint on a stepladder while decorating the interior of a house or doing other painting where a ladder is utilized, has induced Harvey Kepler of Dawson, N. D., to design the can-supporting attachment for stepladders, which is shown in the picture. It has the advantage of being adjustable in any position, thus holding the can level, no matter what the angle of the ladder may be. It is also provided with a gripping mechanism which will securely hold a can of any ordinary size, and with the ratchet attachment the paint is always within easy reach of the decorator. It will be seen that the outer surface of one side of the ladder members is stepped at short intervals throughout its entire length and fitting in the slot which contains the steps is a spring tongue which automatically engages each step. To aid in holding the support in place a yoke is provided, which

CAN-HOLDER ATTACHMENT.

extends partially around the leg of the ladder. By a slight pressure of the thumb on the projecting lever beneath the can the tongue is withdrawn and the support can be raised or lowered at will. To hold the can on its shelf the latter is divided into two parts, with a screw device to open and close the parts, the raised rim gripping the lower edge of the can as the screw is tightened.

Veteran Life Saver.

In command of the government life-saving crew at Stony Beach, Hull, Mass., is a man who is past his seventy-second year and who yet has just passed a physical examination before a government board of physicians with a higher marking than any of the men under his command. His name is Capt. Joshua James, and he is a member of a family remarkable for its longevity and great physical strength. He was also presented with a special gold medal struck in recognition of his work as a life saver. The Captain retains active and personal command of his crew, and rather enjoys a tussle with the winds and waves off the rocky coast of Massachusetts.

CAPT. JAMES.

The Proper Spirit.

First Doctor—I don't think it absolutely necessary to operate.

Second Doctor—But I told them that it was.

"Oh, well, then, as a matter of professional courtesy, I, of course, shall stand by what you said."—Life.

A Palpable Error.

"Victor Hugo said that to reform a man you must begin with his grandmother."

"Nonsense; he meant his grandfather."

FRIDAY, JUNE 29.....1901

A COLOSSAL PROJECT.

The American people are no longer startled by figures that mark a billion dollars. It is interesting to them, on the contrary, to be told what a billion dollars might accomplish in the internal development of the United States. A distinguished political economist has outlined a plan, which is attracting attention in the East, for the expenditure of that sum of money by the Government in a system of internal improvements. There is nothing essentially new, however, in the proposition. It merely groups a number of projects for great artificial waterways, pointing out the vast benefits that would result from their construction.

The first proposition in the scheme aluded to is a connection between the Hudson river and Lake Outario, at Oswego, by a ship canal. Second, a similar canal from Albany to the St. Lawrence river, passing through Lake Champlain. Third, a ship canal from Chicago to navigable water on the Illinois river. Fourth, improvement of the channels of the Hudson, Mississippi, Missouri and Ohio rivers. In addition to these improvements, the plan contemplates similar development on the Canadian side, by enlargement of the Welland canal, etc. The billion-dollar investment would cover all works referred to, and probably leave a sufficient balance for the cost of the Nicaragua canal.

Such a colossal undertaking would have been ridiculed only a few years ago, but now it is seriously considered. All sections that have business interests along the lines indicated are naturally favorable to the scheme. In a general way the proposed expenditure would come back directly to the people in wages for the labor required. Even if the Government should borrow a billion dollars far internal improvements the addition to our national debt would not make the total more than about one third the national debt of France.

But if that proposition ever materializes it will carry an amendent offered by the western part of the United States. Internal waterways are not the only needs in the development of the country. Water for irrigation, in semi-arid sections, is a more urgent necessity than ship canals and deep rivers. If the projector of the interesting scheme in question will supplement it by provision for a comprehensive system of irrigation in the great West, he will make more rapid headway in securing popular favor.—Los Angeles Herald.

Those who say that the present high price of beef is a boom proposition may read the following from the Breeders' Gazette: "Why is beef at its present high price? Why do men bid freely for high types of improved animals of the beef breeds? Why are the dairy breeds feeling the awakening? In 1900 we had in this country 10,000,000 less cattle than in 1892. In that time the population increased over 10,000,000. In 1892 we had 826 head of cattle for every 1000 of population. In 1900 this ratio had fallen to 585 cattle to every 1000 of people. During the eight years intervening between the years named we lost on an average over 1,000,000 of cattle per year. To maintain even our present ratio of cattle to population we must show an increase of about 1,000,000 cattle annually, and when thes figures are added together some understanding of the present situation should be easy of grasp by the most uninformed mind."

The scrippers, failing to secure valuable oil lands in California over the legitimate mining appropriations of other people, would seem to be hunting more litigation. Scrip is claimed to have been located on mining lands in Tuolumne county, and it has been necessary for miners to protect their holdings by protest to the Land Department at Washington. With the law so explicitly adjudicated, there is not the shadow of an excuse for the attempt to acquire mineral lands by agricultural land scrip, and it would seem as if there ought to be some provision of law under which the cost to legitimate miners of fighting the willful, unlawful acts of scrippers could be collected from them.—M. & S. Press.

Work has been begun on the cable that is to connect, telegraphically, British Columbia and Australia. The line will consist of 5,834½ miles and will be transported in and laid by one ship, which is under construction for that purpose. The new cable will run from Vancouver Island to Fanning Island, 3,337 miles, without any intermediate landing. It will thence be laid to the Fiji Islands, thence to Norfolk Island and Queensland. The cable will be laid and in operation by January 1, 1903, and the cost of the entire work will be $10,000,000. In a general way Johnny Bull has not in the last decade played much winner, but in the matter of a Pacific cable he scores a home run forninst Uncle Sam.

Connecticut has a law which is about to go into effect, establishing the indeterminate sentence system. Instead of sending the convict to the state prison for a specific term, under the interminate method he goes up for the possible maximum fixed by law as punishment for the crime involved. But on the other hand the prisoner can, by good conduct, secure his liberty much earlier than by the credit system alone.

In Mexico everything and everybody pays a direct tax, from the street porter to the largest mercantile establishment, and the stamp tax for documents is equally lucrative.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 27th day of May, 1901, an assessment, No. 14, of five (5) cents per share was levied upon the Capital Stoc of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 33, 10th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

MARRIED.

SHELLY-KISPERT—At residence of the bride's mother, Georges Creek, Inyo Co., Cal., on Wednesday, June 26th, by Rev. E. S. Bigelow, Mr. ALLEN SHELLEY, of Bishop, and Miss IDA KISPERT.

The propitious event occurred at 10 o'clock a. m., the happy couple soon leaving for Bishop, accompanied with the sincere congratulations and good wishes of all throughout this section of the valley.

DIED.

SCHALTEN—At Big Pine, June 21, 1901, RAY, son of Mr. and Mrs. Louis Schalten, aged about 3 years.

Warm?

Hurrah for the Fourth!

"Corn weather" sets in in fine style.

See program of entertainment printed elsewhere.

Subscription to the INYO INDEPENDENT $3 per year.

Mr. and Mrs. Aaron Reynolds departed yesterday for the southern country.

Ball supper, Fourth of July night, will be given at the Norman House.

P. H. Mack, Esq., arrived home from Los Angeles on Tuesday last.

Early peaches, blackberries, raspberries, etc., are ripe and luscious.

Read about the various orders of the day on the Fourth? Of course.

First cutting of alfalfa reported to be fully equal to the "average best."

Robt. O'Neal, Esq., and J. W. Hanby were down from Bishop yesterday.

The County Board of Supervisors will meet in regular session on Monday next.

The Carson Carnival bids fair to be the finest celebration ever witnessed in Nevada.

Mis Jennie Roughney left for Los Angeles last Monday, via Keeler and Mojave.

Jas. J. Wall and J. R. Moffit will this evening set out by train, headed for the old camp of Panamint.

Musical and social entertainment at the M. E. Church to morrow night should not be overlooked.

Miss Helen Gunn very successfully entertained her many juvenile friends at her birthday party last Tuesday.

Mrs. Mary Mulholland left by Monday's train, bound for Los Angeles, on a visit to her daughter, Mrs. P. H. Mack.

The various authorized committees on celebration of the Fourth of July have done well; the invited and appointed ones will do the rest.

Geo. Montgomery and Clair Tyler have gone northward to examine mining properties, intending to take a look at the Tonopah belt among others.

Mr. and Mrs. Ernest Halliday, Miss Nellie Shelley and Wm. A. Trickey were down from Bishop to attend the Shelley-Kispert wedding.

Seventeen Italian and Swiss laborers passed through from San Francisco to Keeler last Monday, who are to replace the Indians at the Soda Works.

Dan Lewis and Pat Keys the other day returned from a short, crude working at Beveridge District, and out of the proceeds of a few hundred pounds of rock shipped eighteen ounces of gold.

The Board of Equalization will be in session next week, and possibly the week following also. If your own property valuations cannot be reduced you may see that the other fellow is assessed on all that he has. You can also ask to have your own assessment raised. That's equalization.

The authorities of the Inyo Canal Company will receive a number of prominent outside capitalists and promoters of an extensive colonization scheme on the Eastside lands. Several have already been here and made investigations, with more a'coming. A better time could not have been selected.

Dr. Blair made a canvass among all the young ladies of Independence who attend dances, for the purpose of gaining concensus of opinion as to which hall or floor was considered the best for enjoyment of the exercise. The result was an overwhelming majority in favor of Mairs' Hall. Novel adaptation of the referendum principle.

From the Oil Operators.

Letters received this week are interesting, inasmuch as they indicate that the great and important problem as to whether oil exists in Owens Lake basin bids fair to be solved. Chemists have no postive knowledge yet as to the genesis or origin of the California oils, or any other for that matter, beyond mere theorizing—so that few would have the hardihood to venture an assertion that oil measures can not there be found, in the face of favorable geological conditions and the confidence in the district expressed by practical experts.

Mr. W. H. Adams, of the Adams Oil Company, Bakersfield, writes as follows: "The company that Messrs. Hoyt and Holloway represent [which is the Pennsylvania corporation, owning lands near Cottonwood—ED.] is all right. I am informed that they intend to go to work sometime in September. We will soon have our prospectus out. We will try and begin operations soon; we want to have money enough in the treasury to go right ahead with the work. Although the business is very dull at present, the Inyo people can look for an oil boom this fall. I think as I did when I was there—that Inyo's prospects are very promising, because the kind of oil we will find there will be of such a better grade and a much higher priced oil."

Mr. J. L. Cooke, President of the 50 Oil Company, San Francisco, writes:

"The development of our lands would certainly be of great benefit to your county. We will undertake to place a drilling outfit on our land south of the lake, and we think owners of land in our vicinity should come together and exert their influence to raise at least $1500 among themselves and the merchants of the county to purchase our stock and help develop the oil industry.

"Now, understand that we do not want this money until our rig is taken from the cars at Keeler, but we would like to have the assurance that your people have some confidence in their own county as an oil producer. The money could be placed in the hands of one of your banks as trustee and a time limit placed on the fulfillment of the obligation, the money to be returned to the original owners upon failure on our part to make good our proposition. All our purchases will be made for cash, hence the rig will be paid for before it arrives at Keeler, our intention being to keep our company free from debt."

THE INDEPENDENT fails to see wherein any business proposition could be fairer or more legitimate than this. Later, at a greater cost, our people are liable to be be drawn by some outsiders into speculations of the kind less promising, to say the least. On the average oil prospecting costs less and is becoming just as legitimate as nine-tenths of any other kind of mining industry.

Mining Bureau Investigations.

Geo. A. Tweedy, E. M., Assistant-in-the-Field to State Mineralogist Aubury, has been in Independence during the past week. From him we learn that he has already visited pretty much all the copper properties of note in the central part of the county, notably at Darwin, Ubehebe and Russ District. On the Ubehebe trip he was accompanied by Mr. Geo. McConnell, a man thoroughly acquainted with all that country. Mr. Tweedy's formal report to the Mining Bureau is necessarily limited to a statement of the principal facts concerning the numerous properties visited, but comprising all that a practical investigator need to know before making a minute inspection—the apparent extent, actual development, exposure of ore and croppings, locality, elevation, character of ores and the general formation, together with names and address of the owners, without, of course, volunteering any speculation as to present or prospective values. The personal opinion of the young mining engineer, however, based on the geology and mineralogical showing of the copper mines lying east, south and southwest of Saline Valley, is very favorable—a decided opinion that he does not withhold from inquirers. Mr. Tweedy has none of that superior disdain for laymen characteristically assumed by pedantic scientists, and has no hesitancy in answering or explaining all questions pertinent to the mining industry and the particular mines reported upon. His explanation that the future of the Ubehebe properties cannot be estimated with any great degree of certitude until there shall be some exploitation to a depth of at least 300 feet, to all of which mining men will unhesitatingly subscribe.

All hands of the Mining Bureau are this year acting under instructions to devote their entire attention to copper propositions, the chief reserving to himself business of the oil reports and bulletins. All this is timely and liable to effect some good, especially to the comparatively unknown copper deposits of this county.

In the Class of 1900 Mr. Tweedy graduated from the Massachusetts School of Technology, Boston, the *alma mater*—if our memory be correct—of L. F. J. Wrinkle. On the main roads Mr. Tweedy is accompanied by his wife. In order to keep, so far as is possible on this side of the hills, within the bounds of our own State the couple have before them some of the most interesting features of California—northern Owens Valley, Casa Diablo, Mammoth, Mono Lake, Bodie Bluff, Bridgeport Meadows and Alpine. From thence they cross the Sierras via Tahoe.

Acting under the general direction of Chief Hydographer George Newell, surveying parties have just begun work in the Gunnison River Valley, in Western Colorado, near Montrose, which looks to diverting the river by means of a great tunnel through a mountain range into a dry and fertile valley. Another party has begun the preliminary work of diverting St. Mary's River into the Milk River Valley, in Montana.

Newsy Notes from Big Pine.

Monday last Messrs. H. M. Barton, R. W. Thomas and John Carson returned from a trip to Saline Valley. At the summit the team "lit out" for a runaway, but the driver—Mr. Thomas—soon stopped the horses. The others jumped, Mr. Barton alighting upon his head while Mr. Carson landed his left shoulder. Both were severely shaken up and bruised.

Saline Valley thermometers mark 114 degrees in the shade, and the grapes are nearly ripe. This season, when the weather begins to get real warm the Borax Company contemplate a suspension of very hard work.

Dr. I. J. Woodin of Independence, is frequently seen on the streets and roads of Big Pine.

The revival meetings held by Evangelist Dudford of Los Angeles, ably assisted by Rev. J. H. Rosen, have been a pronounced success.

Mr. J. E. Nolan, capitalist of the Montezuma mine, and family arrived last Monday. The new engine and pumping plant and now on the ground. Pipe for conveying spring wster and the concentrators will arrive Monday from San Francisco; seven men are employed in grading for the mill site.

Improvements on the Bouser residence lately purchased by A. K. Eugley greatly enhance apaearance of the Lagier addition to the town.

The hum of the planer and feed mill that George Hall is erecting will soon be heard. It is on the property lately purchase by Mr. Hall from A. Lagier.

Eldred & Pitman, lessese, are taking ore out of the Bunker Hill mine in Lead Canyon faster than Dan Hall's team can haul it out.

CORRESPONDENT.

On and after July 1 it is all off, or almost all off, with the "stamp tax." There will be no more 41 cent telegrams and no more one-cent express receipts. The man who is hard up can borrow money without sticking the badge of government's permission. Nearly all of the more common papers of trade will be exempt after that date. On all of the less used papers the tax has been reduced materialty, as is shown by the following:

Foreign bills of exchange, 4 cents for each $100; changed to 2 cents for each $100. Bonds of indemnity, 50 cents. Conveyance, 50 cents for each $500; now exempt below $2500: above $2500, 25 cents for each $500. Banker's capital and surplus, $50 for $25,000, and $2 for each additional $1000. Bonds, debentures, certificates of indebtedness, etc., 5 cents for each $100. Broker's contract, 10 cents. Certificates of stock, original issue, 5 cents for each $100. Certificates of stock, transfers, 2 cents for each $100 (amended to include bucket shops). Time drafts or bills of exchange, inland, 2 cents for each $100. Freight receipts or domestic bills of lading. 1 cent. Stock brokers, $50.

Documents free from taxation will be: Bank checks and drafts, bills of lading for export, certificates of deposit, certificates not otherwise specified, express receipts, sight drafts, money orders, mortgage or conveyance in trust, power of attorney to vote, power of attorney to sell, promissory notes, protest, telegraph messages, warehouse receipts.

Press news anent the San Pedro, Los Angeles & Salt Lake Railroad is to the effect that F. E. Gibbon, Vice President, has left Los Angeles for Salt Lake to attend an important conference of the officials of the road. Senator W. A. Clark, George Leighton, R. C. Kerens, J. Ross Clark, Perry Heath and Senator Kerns will also be in attendance. The meeting will occur sometime before July 1, and is, according to J. Ross Clark, "for the purpose of taking stock"—otherwise to estimate what has been accomplished and to plan for the future. Material for about seventy miles of road has been received, and it is expected that the contract for that portion of the road between Los Angeles and Pomona will soon be let.

The Sweepstake mine, located near Weaverville, Trinity county, have been sold to Philadelphia capitalistsst for $4,000,000. The property consists of a channel about four miles long and 200 feet wide, crossing a hill at an elevation of 2980 feet. It has long been known to be immensely rich, but the trouble has been lack of water. Water will be piped from Canyon creek, a distance of nearly twenty miles, and the line will cost about $1,000,000. This is the largest mining deal consummated in California in many year. So newspaper reports go. It is a wild shot as to figures.

Here is a pretty problem in arithmetic to amuse people who have leisure for calculations: An unknown donor has presented Columbia College, New York, with $100,000 to found a chair of the Chinese language, accompanying the gift with a letter saying: "For fifty years I have refrained from the use of whisky or tobacco, and inclose you a check which represents the interesi on my savings." The question is to determine how much whisky and tobacco the man would have had to consume to make the interest on it amount to $100,000.—Call.

The Southwest Miners' Association will hold their annual meeting on July 9, 1901, in Los Angeles. It is said matters of great importance will come up for determination and members are requested by the directors to be present, if possible, otherwise to be represented by proxy.

The boiler and engine of the old Banner or Wild Rose mill has been sold by Dr. G. P. Doyle to the Messrs. Nolan for use in running machinery at the Montezuma concentrating plant. C. W. Geiger passed through town with it last Thursday.—Register.

Tonopah Mines Sold.

J. F. Butler, the original locator of the Tonapah mines, and who still owns a five-eights interest, came into Austin yesterday afternoon direct from Tonapah. Mr. Butler says that O. A. Turner of Grass Valley has bonded, or in fact, has purchased the Tonapah mines, the price being $336,000, of which price Mr. Butler has been paid $50,000, $100,000 to be paid in ninety days and the remaining $186,000 to be paid on the 20th day of December, 1901. Mr. Butler will remain in charge of the mines and have control of the leasers until December 31st, at which time all leases go into the hands of the new company. The sale in no way affects the miners who are now at work, as the agreement in the sale is to the effect that the leasers have until December 31st before giving up the ground on which they are at work. Mr. Butler will meet Mr. Turner in San Francisco the first of July, when the sale will be completed.—Reveille.

The Supreme Court has denied Mrs. Nettie Craven's petition for a rehearing of her petition for a jury trial in the matter of the alleged forged deeds which involved two pieces of San Francisco real estate valued at $1,000,000, belonging to the Fair estate. Looks like the lawyers have made the most of hair-splitting points, for fees. In way of justification if not "vindication," however, it could be set up that the Fair Craven was no worse than old Jim.

The State rock-crushing plant located at Folsom has been destroyed by fire, involving loss estimated at $70,000. To an ordinary man it may seem that a public building erected at a stone quarry, by enforced stone-cutters, for crushing stone, might have been so constructed that it couldn't burn.

His modest desire: "Yes," said the irascible aeronout, "I told you a moment ago that the escape valve is out of order, and that I was doing my best to fix it. What do you want now?" And his timid companion trembled vfolently as he answered: "I want the earth."

Practically, the alien-contract labor law has been United States Supreme-courted out of existence. And should Congress fail to continue or re-enact the Chinese exclusion law a glimmering of expansion policy will get right here.

NOTICE OF SALE.

Office of the Tax Collector of the County of Inyo, State of California.

Notice of sale of property of the State pursuant to Section 3897 of Political Code.

Whereas on the 3rd day of June, 1901, there was received by me and filed in my office a written authorization under the hand and seal of the Controller of the State of California, which said authorization was and is in words and figures following:

NOTICE.

CONTROLLER'S DEPARTMENT.
STATE OF CALIFORNIA.

To the Tax Collector of the County of Inyo, State of California:

WHEREAS, on the 10th day of January, 1901, there was filed and recorded in the Controller's Office of the State of California, certain deeds conveying to the People of the State of California the title to those certain lots and parcels of land hereinafter described:

AND, WHEREAS, said deeds recite the fact that said property hereinafter described was struck off and sold to the People of the State of California for the nonpayment of State and County taxes, penalties and costs, and all charges levied and assessed against said property for the year 1894:

AND, WHEREAS, five years have elapsed since the date of said sale, and no redemption, according to law, has been made of said property, or any part thereof;

NOW, THEREFORE, in pursuance of the law in such cases made and provided, I, E. P. Colgan, Controller of the State of California, by virtue of the authority in me vested by the laws of this State, da by these presents authorize, empower, and direct you, the said Tax Collector, to sell at public auction, in separate lots or parcels, the property hereinafter described, in the manner following: Public notice shall first be given of sych sale by publication for at least three weeks in some newspaper published in the county, or city and county, or if there be no newspaper published therein, then by posting a notice in three couspicuous places in the county, or city and county for the same period, which notices must state specifically the place of, and the day and hour of sale, and shall contain a description of the property to be sold, and shall also embody a copy of this authorization.

The property above referred to and hereby authorized to be sold, is situate, lying, and being in the County of Inyo, State of California, bounded and particularly described as follows, to wit:

In Panamint Mining District, Wyoming mine, lot 38, T 21 S R 45 E. M. D. M., containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Stewart's Wonder mine, lot 39, T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Star mine, lot 31, T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Hemlock mine, lot 46, T 21 S. R. 45 E. M. D. M., containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Little Chief Mine, lot 47, T 21 S. R. 45 E. M. D. M., containing 20 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Little Chief millsite, lot 47, T 21 S. R. 45 E. M. D. M., containing 5 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Comstock mine, lot 40, T 21 S R 45 E. M. D. M., containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Alabama mine, lot 53, T 21 S. R. 45 E. M. D. M., containing 17 acres. Sold to State July 3, 1895.

Also, in Panamint Mining District, Marvel mine, T 21 S. R. 45 E. M. D. M., dontaining 16 acres Sold to the State July 3, 1895.

Also, in Panamint Mining District, Challenge mine, T 21 S. R. 45 E. M. D. M., containing 10 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Hudson River mine, containing 20 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Stewart's Wonder millsite, containing 5 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Challenge M. S., containing 2 acres. Sold to the State July 3, 1895.

Also in Panamint Mining District, Ida mine, containing 19 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Independence mine, containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Eureka mine, containing 18 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Independence M. S., containing 1 acre. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Wyoming millsite, containing 5 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, Eureka millsite, containing 4 acres. Sold to the State July 3, 1895.

Also, in Panamint Mining District, ten-stamp quartz mill, millsite and machinery, store building; office; boarding house, wash house; blacksmith shop and Company's spring and pipe line; 20 acres. Sold to the State July 3, 1895.

That no bid shall be received or accepted at such sale for less than the amount of all the taxes levied upon such property, and all interests, costs, penalties, and expenses up to the date of the sale hereby authorized, together with all such subsequent taxes as may have been levied upon such property, up to the date of the issuance to the State of the deed or deeds here inabove referred to, with all interests, costs, penalties, and other charges thereon added to such subsequent taxes.

That said sale shall be conducted in all respects as by law governing such sales

Given under my hand and seal of office, at Sacramento, this 31st day of May, A. D. 1901.

[SEAL.] E. P. COLGAN,
Controller.

By W. W. DOUGLAS, Deputy.

Therefore in pursuance of law, public notice is hereby given that I will, on Wednesday, July 3rd, 1901, at the hour of 10 o'clock, A. M., in front of the Court House, in the Town of Independence, County of Inyo State of California, sell at public auction to the highest bidder, for cash in lawful money of the United States, the said property hereinbefore in said authorization described, which authorization is hereby made a part of this notice, to wit: Situate, lying and being in the County of Inyo, State of California, and particularly described in said deeds to the State above referred to, as follows, to wit:

THE DEER'S HORNS.

They Present all the Phenomena of Animal and Vegetable Growth.

Why and how is the deer so peculiarly unlike any other of the bovine race, the horn differing so materially from all the horned cattle in its composition, growth, maturity and decline? It presents all the phenomena of animal and vegetable growth. It sprouts from the brain without any prolongation of the frontal bone. It rises and breaks through the sinews and takes root on the bone, growing the same as a vegetable. It is nourished by and secretes albumen upon the surface and disposes of the fibrine the same as an animal.

It is clothed with a skin and hairy coat very different from that on the rest of the body. This covering and hair possess a property unknown in other animal bodies—that of being a styptic to stanch its own blood when wounded. It carries marks of the age on the buck by putting out an extra branch each year, which shows an additional power each year to produce them. And this power does not exist in the female. So this difference is more distinctly marked than in any other class of animals. Again, the horn possesses properties unknown in any other animal matter. It is entirely inodorous, capable of resisting putrefaction and almost impervious to the effects of the atmosphere.

And still water at 300 degrees F. will dissolve these horns readily, even though they are not soluble in alcohol and resist the action of acids and alkalies. It is the only vegeto animal substance that we know of that does not perpetuate itself by procreation.

The male and the female are sustained by the same nutrition and elements, and the male only produces horns. This phenomenon is quite as much of a curiosity as the absence of the horn in the buck after shedding.

A Girl's Good Recipe.

There was a modicum of sense in the response to a request made by a young lady as to what would keep her hands white and soft, "Soak your hands three times daily in dishwater while mother rests on the sofa."—Boston Transcript.

Labor World

Nearly 200 servant girls attended the last meeting of the recently organized Servants' Union of Minneapolis.

A large plant for the manufacture of tin is to be erected in Waynesburg, Pa., at a cost of $250,000. The concern is expected to begin operations August 1 and will employ 350 men.

The Cambria Steel Company, at Johnstown, Pa., is preparing for the employment of 280 skilled mechanics and 1,000 additional men to engage in the manufacture of forgings for street cars.

The depression in the British iron and steel trade, and also in the shipbuilding industries, is very marked. The area of unemployment spreads and the edge of hard times is upon us, writes Thomas Reece from London.

The American Tin Plate Company's Monongahela plant, in Pittsburg, which has been idle since last July, has started in full blast. It is an eight-mill plant, with a capacity of 1,000 to 1,200 boxes, and employs from 500 to 600 men.

The Cigarmakers' International Union has a surplus of almost a third of a million dollars, and the fund is constantly growing. Union labels issued from the headquarters for the year 1900 numbered 22,632,000, an increase over 1899 of more than 4,000,000.

The United States Steel Corporation, the greatest combination of interests in the world, began doing business on April 1, and in the Pittsburg district, the leading iron and steel center of the country, over 50,000 employes in the mills and blast furnaces have new employers.

The Workingmen's Educational Association, of New York, has purchased three lots for $30,000 and are having plans prepared for a five-story brick and stone building, divided into club rooms and offices for union secretaries. A gymnasium and roof garden will also be provided. The estimated cost of the building is $40,000.

Of all the disorganized cities in the United States, so far as the labor movement is concerned, Philadelphia is far in the lead. Outside of the master trades, such as plumbers, painters, printers, machinists, etc, there is hardly a solid union in the city. An organizer of the American Federation of Labor will soon take the Quaker City in hand.

The eight-hour movement of 1897 in Great Britain was not the success the nine-hour movement had been in 1871 and 1872, but this triumph is only delayed. The total amount spent in connection with the 1897 struggle was £650,000—an amount which the Amalgamated Society of Engineers raised in six months, and a drain from which it has rapidly recovered.

The growth of unionism in Erie, Pa., is remarkable—a greater amount of enthusiasm has never been known. Many trades are realizing benefits from their unions, and before long Erie will be one of the best organized cities to be found. The men are making a demand for union goods, and it is having a good effect. Shoe men are ordering a label shoes, caused by an active agitation for the stamp. Union tobacco and clothing are gaining strongly, and Erie is redeeming herself and will not long bear the name of being the poorest paying city in the State.

Ancients Lived in Luxury.

In an article of the North American Review Charles Waldstein, Slade professor of the fine arts in King's College, Cambridge, endeavors to interpret the significance of the results of the excavations recently made in the island of Crete by Messrs. Evans and Hogarth. Nothing, Professor Waldstein thinks, of so striking a nature has been found since the days of Schliemann. The material unearthed in Crete belongs to a period as remote as the fifteenth century before Christ, and it gives the impression of a civilization of a very high order:

"People lived in a developed social organization, in ease and comfort, nay, in luxury. The various handicrafts and arts were practiced with great variety and proficiency; wood, ivory and metals were carved, turned, beaten, soldered and combined in the most skillful manner; architecture and painting and architectural sculpture reached a comparatively very high stage of perfection, a stage higher than we have evidence of for several centuries succeeding this era And now through the most brilliant discovery of Mr. Evans, we learn that they even possessed the art of writing. For he has found written documents in the Hellenic lands at least seven centuries earlier than the first known monuments of historic Greek writing."

Art Treasures from the Deep.

Off Cerigo, the island at the southern end of Greece, divers are bringing up art treasures that were sunk 200 years before Christ. Lucians tells of a ship laden with art spoils that went down on the voyage from Athens to Rome, and it is believed that the wreck has been found now. Besides many bronze statuettes a life-size bronze statue resembling the Hermes of Praxiteles has been brought up. Some of the objects are excellently preserved, but others are corroded.

Ice in Cuba.

"I was out in the rural districts in Cuba," said an American official, "and by some chance we got a chunk of ice sent to us. I told our cook, a raw native, to let us have it at dinner. When the time came there was no ice and I called on Jose for it."

"'Oh, oh,' he cried, holding up his hands in appeal, 'I put it in the pot to boil and it's gone, sir.'"

Energy is not always rewarded. A girl has practiced six hours a day on the piano for seven years, and accomplished nothing beyond making the neighbors hate her.

After a woman has had experience, she knows that a man is just as mean before marriage as after.

First Horse In Central Africa.

In "A White Woman In Central Africa" Miss Caddick gives an interesting account of the first horse which had survived the attacks of the tsetse fly on the journey from Durban to Mlanje. This lucky or luckless animal had an adventure on the way which came near ending its history, if not its life.

The horse was landed safely at Chiromo, but one evening while the party was in camp something frightened it, and it broke away, with the saddle on its back.

The boys followed it in vain and at last gave it up as lost and went on to Mlanje. From there natives were sent out in all directions to search for the lost horse.

It was quite two weeks before the animal was found, tired out, very hungry and still very much frightened. Its saddle was still on, but turned underneath its body.

It was the first horse the natives had seen, and they gazed at it awestruck, not daring to touch it, nor even to go near it. Finally they gave the animal a great heap of native corn, and while it was eating they hastily put a fence around it, which they made very high and strong. They then built a roof to shelter the horse from the sun and sent off for the owner to come quickly.

It was a long time before the poor beast got over the fright and the fatigue and the sore places caused by the saddle, but it did recover at last and became the joy and pride of its owner.

Tougher Than Leather.

In New York the other day a typical street fakir was selling boxes of shoe polish. At the top of his voice he was telling the virtues of the compound. "All you have to do, gents," he said, "is to put it on, and your boots will shine like patent leather. You don't have to rub it, and it will preserve the leather and make it waterproof. It costs but a nickel, a half a dime, one-twentieth of a dollar, and," he concluded, holding out a box toward a rawboned countryman, "here is one man that wants a box, I know."

"Waal, I dunno whether I dew er not," said the countryman. "I rather guess the danged stuff's got acids in it, and it'll rot the leather."

"Sir," answered the fakir, with great solemnity, "you are unduly incredulous. I will demonstrate to you that this polish is so harmless that it might be put into the hands of a teething child. Look, I will eat it."

As he spoke he took a pinch of the grimy looking compound from a box, placed it in his mouth, and, with a look of triumph in his eyes, began to chew it. "Now, sir," he said to the countryman, "are you convinced?"

"Waal, I dunno," said the incredulous one. "Because you eat the stuff it ain't no proof that it won't rot leather. Guess I won't buy none."

Peerage on the Decimal System.

As money is to be the master, would it not be wise to have our peerage established on the decimal system? It would work out in this way. The rank of a man should depend entirely upon his income as returned by him for taxing purposes and would vary with it. Thus one with an income of £150,000 and over would be a duke, £100,000 would be a marquis, £50,000 would be an earl, £25,000 would be a viscount, £10,000 would be a baron, £5,000 would be a baronet, £1,000 would be a knight and £500 would be an esquire. The rest would be the copper classes.

The scheme would be especially serviceable in increasing the amount of the income tax, for of course every self respecting Englishman would return his income at the highest figure which his resource could support. What man so sordid that, having but £500 a year, he would not willingly pay tax on £1,000 so as to enjoy the right of being dubbed a knight? The instinct of self advancement would make each pay on the highest scale, so that the revenue would benefit enormously, and the authorities could rely upon the vast majority of taxpayers overstating rather than understating their incomes.—London Truth.

Capers.

Those curious little appetizers, capers, without which the boiled leg of mutton is incomplete, are cultivated largely in southern France, especially Savoy, but many come to us from the Balearic islands, in the Mediterranean, off the coast of Spain, where they grow wild. The vines clamber over the rock is a very beautiful manner, and the berry, which is the seed vessel of the plant, is gathered by the peasantry. Capers are publicly sold in the market places of Balearic towns and shipped to Spanish or French ports for exportation.

WEARY WOMEN.

Throughout the Land Many Are Slaving Over the Needle and Wearing Themselves Out.

From the Maine Farmer, Augusta.

There are many women all over the land who are earning a living by the use of the needle. Confinement in close rooms and the trying nature of their work often causes them to grow pale and wan and to experience a feeling of constant weariness. This goes on, sometimes, until nature rebels and health breaks down. There is one way and only one way to restore the impaired vitality, and that is to strengthen the worn-out nerves and build up and nourish the impoverished blood. If the blood is kept healthy and rich and the nerves strong, new life and energy will soon be felt. This was the experience of Mrs. Addie R. Holt, a dressmaker, of No. 73 Bridge street, Augusta, Me. She says:

"About five years ago I began to experience a worn-out feeling. Sometimes I would lie in bed for a day or so, but my dressmaking work obliged me to keep up, even when I did not feel able to be about. I suffered from female troubles and last spring I had rheumatism in my left arm and also a pain in my left side in the region of my heart.

"In August a friend recommended Dr. Williams' Pink Pills for Pale People and I began taking them immediately. I commenced to improve in about two weeks and in three months my weight increased from 121 to 133 pounds. Since taking the pills I have had no return of the pain in my arm nor near my heart.

"I am still taking Pink Pills for Pale People and I am gladly recommending them to all who say that anything ails them."

Signed, ADDIE R. HOLT.

Subscribed and sworn to before me this 4th day of February, 1901.

FREMONT J. C. LITTLE.
[Seal] Notary Public.

Dr. Williams' Pink Pills for Pale People are sold by all dealers, or will be sent postpaid on receipt of price, 50 cents a box, or six boxes for $2.50 (they are never sold in bulk or by the hundred), by addressing Dr. Williams Medicine Company, Schenectady, N.Y.

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

KNEW THE NOON HOUR.

A Pair of Horses That Stopped When the Whistles Blew.

A pair of intelligent horses attracted the attention of a large crowd on Nassau street at noon one day last week. They were attached to a heavily loaded ice wagon coming down the steep grade between Cedar street and Maiden lane and were holding back the wagon with a noticeable effort. When they were half way down, the whistles blew for 12 o'clock. Suddenly the horses drew in toward the curb and began to plant their hind feet well forward to stop the wagon.

The driver made no effort to check them, and their hard work at once attracted notice. Pedestrians looked at the horses and then at the driver, who had a broad grin on his face. By hard work the wagon was stopped. The driver sat still and watched his animals. One of them immediately began rubbing his head against the neck of the other and with nods and pushes succeeded in rubbing his bridle off. Then the other horse took his turn at rubbing, and his bridle came off.

Fully 200 persons had watched this, and when it was completed the driver got down from his seat and swung a bag of oats over the nose of each animal. They stood there and ate their midday meal. The driver was patient and proud of his team. He petted them and talked to them and when they were through drove off whistling.

"Talk about the laboring man dropping his shovel at the sound of the noon whistle," said one man—"that beats anything I ever saw. No one hereafter need try to convince me of the intelligence of the horse. That ice wagon team settles it."—New York Sun.

DEPTH OF A RAINFALL.

The Method by Which It Is Accurately Measured.

Probably one question that has puzzled the lay mind is how the depth of a rainfall may be accurately determined. The way it is done is this:

A funnel whose larger aperture represents a surface of 100 square inches is placed in a position where it may catch the direct fall of the rain, with the rim of the funnel extending perhaps an inch or more beyond the platform to which it may be fixed. This is for the purpose of preventing any rain from being washed into the funnel and increasing the true fall. From this funnel the water runs to a tube which bears an exact and carefully determined ratio to the area of the funnel's mouth, say one-tenth.

If, therefore, the tube shows water to the depth of an inch, it is clear that one-tenth of an inch of rain has fallen. The tube is provided with a carefully graduated scale so that the fall may be readily seen. Three inches of rain would show a depth of 30 inches in a tube one-tenth the size of the receiving aperture, and the decimals of an inch could be quickly noted by observing the scale.

If placed on the roof of a building, the apparatus should be kept away from the edges to prevent any peculiar slant of the wind carrying into the funnel a larger proportion of rain than would fall into it under normal conditions. The larger the aperture of the receiving funnel is made the more accurate will be the results obtained.

A curious fact that has been noted in connection with rainfalls is that gauges placed on roofs usually gather less water than those placed on the ground. This is accounted for on the theory that the rain in falling absorbs some of the moisture of the air, and the greater distance it falls the larger will be the bulk of the individual drops.—New York Herald.

A Feast.

An old darky who lives in the thickets across the river came to Memphis one day to get his pension check cashed. After receiving his money, which amounted to $11, the old ex-slave sauntered down Front street to a produce house and bought three crates of cabbages. When they were delivered at the wharf late that afternoon, the old man was there and received them with a mouth watering in anticipation of the good time ahead.

"Whut yer gwine ter do wid dem cabbages?" inquired the negro drayman who delivered them.

"Eat 'em," was the quick response. "I'ze bin free 40 years, and dis is de first time I'ze had de money to buy 'nuff cabbage. I'ze gwine ter eat cabbage till I furgit de way ter my mouf."—Memphis Scimitar.

Exhibits at Buffalo.

There will be exhibits from all over the world, at the Buffalo Exposition, which will prove very interesting to all who may attend, but no more so than the news that the famous remedy, Hostetter's Stomach Bitters, will cure dyspepsia, indigestion, constipation, biliousness and nervousness. To all sufferers from the above complaints a trial is recommended, with the assurance that when honestly used a cure will be affected. It also tones up the entire system.

No man is greater than his environments, for his environments are created by his own supreme will.

Adams' Sarsaparilla Pills

act gently and promptly on the liver, kidneys, stomach and bowels. They cure sick headaches, constipation, biliousness, stomach disorders, sallow complexion and are the only pills that will also purify and enrich the blood. Sold in 10ct. and 25ct. boxes by all druggists. Every box guaranteed.

That Cough needs Fryer's Abietene Cough Balsam.

Stops the Cough and Works Off the Cold.

Laxative Bromo-Quinine Tablets cure a cold in one day. No Cure, No Pay. Price 25 cents.

Coffee Not Necessarily Harmful.

At the department of agriculture some thorough tests have been made of samples of coffee to determine the extent and nature of coffee adulterations. The results are entirely reassuring to coffee lovers. The expert in charge finds that while very little pure Java or Mocha berries find their way into the American market, almost if not quite as good flavored beans are had from other tropical places, Porto Rico and Hawaii being mentioned as furnishing good coffee. The adulterants, when used, are for the most part harmless.

The testing chemist further declares that the use of coffee in moderation should not do any injury to adults even if continued a full lifetime, but mentions in detail what moderation means. This is a cupful—only half of it coffee, the rest hot milk—at breakfast, none at noon, and a small cup of black coffee after dinner. On some systems undoubtedly coffee may act as a poison, and such persons, of course, should not drink it. The average grown person in normal health may use it moderately without harm.—Exchange.

The Sicilian woman is generally illiterate and is proud of being so. In native parlance such a one "sees with two eyes only." Those who can read are said to see with four eyes.

Fryer's Abietene Cough Balsam saves Doctor Bills

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

The Best Prescription for Malaria

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

A DOUBTING THOMAS.

Had His Falling Hair Stopped, and Dandruff Cured, Without Faith.

H. B. Fletcher, Butte, Mont., Oct. 20, 1899, says: "Like many other people, I have been troubled for years with dandruff, and within the last few months my hair came out so badly that I was compelled to have what I had left clipped very close. A friend recommended Newbro's Herpicide. I confess that I doubted his story; but I gave Herpicide a trial; now my hair is as thick as ever, and entirely free from dandruff." "Destroy the cause, you remove the effect." At druggists, $1.00. Herpicide is a delightful hair dressing for regular use.

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

For $12.00 we sell one of the finest 4x5 cameras made. Equipped with all improvements. Send for full description. At dealers, or Kirk, Geary & Co., 330 Sutter St., San Francisco, Cal.

Fryer's Abietene Cough Balsam guaranteed for Croup.

Cocoanut.

The celebrated brand of Pioneer Shredded and Desiccated Cocoanut is daily manufactured from fresh cocoanut just received and arriving by each steamer from Pago Pago and Tahiti. Medals awarded wherever exhibited. By sending for samples and prices you will double your profit. L. G. Sresovich Company, 519-521 Sansome Street, San Francisco.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for FREE $2 trial bottle and treatise. Dr. R. H. Kline, Ltd., 931 Arch St., Philadelphia, Pa

Mem. for Good Health.

Today drink some "Castlewood" Bourbon, or Rye Whisky. Highest grade Kentucky goods. Cartan, McCarthy & Co., sole distributers, San Francisco.

The Best Shorthand College.

If you wish to succeed as stenographers and book-keepers, follow the advice of all the Official Reporters of S. F., and attend the GALLAGHER-MARSH COLLEGE, Parrott Building, S. F., Cal. Graduates have no trouble obtaining positions, as none but *incompetent* stenographers are out of employment, and graduates of this College are qualified to fill any amanuensis' position very creditably. Board and lodging can be had for $15 per month. Life scholarship, by month, $10. Send for catalogue.

For Consumption try Fryer's Abietene Cough Balsam.

Cascarets

BEST FOR BOWELS AND LIVER.

THEY WORK WHILE YOU SLEEP

THIS IS CCC THE TABLET

10c. 25c. 50c.
NEVER SOLD IN BULK.
DRUGGISTS

GUARANTEED TO CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking CASCARETS today, for you will never get well and be well all the time until you put your bowels right. Take our advice; start with CASCARETS today, under an absolute guarantee to cure or money refunded. 441

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith, and will sell CASCARETS absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of CASCARETS. Book free by mail. Addr: STERLING REMEDY CO., New York or Chicago.

INTERNATIONAL EXPOSITION AT GLASGOW, SCOTLAND

The International Exposition at Glasgow, Scotland, recently opened, is built on the finest site in the city, in the West End Park. The grounds and buildings cover 100 acres. Just under the buildings is the River Kelvin, and beyond are the steep banks of the river dotted with white pavilions. On the top of the banks, throned above the whole city, is the university. Towards the right are the terraces which mark the sky line, green ramparts on which are built some of the mansions where the wealthier residents of the city have their homes.

The buildings are divided into three parts, the industrial hall, the art gallery, and the machinery hall. Apart from Great Britain and Ireland, Russia is the largest exhibiter, and its buildings form one of the most striking features of the exhibition. Next in importance to the Russian is the French section, occupied by 400 exhibitors. Canada is the greatest exhibiter among the British colonies. The United States is not officially represented, but American manufacturers are represented, particularly in the machinery section.

THE LOST GARDEN.

"Somewhere in the distant Southland
Blooms a garden—lost to me—
Warm with poppies burning fragrant,
Drowsy fires I may not see.

"Subtle shadows flit and beckon
Down dim pathways bound with yew,
Where a white wraith wanders lonely
'Twixt the darkness and the dew.

"In the ruined walls that echoed
Once to happy-hearted moods,
Now the stealthy, lightfoot lizards
Unmolested rear their broods.

"And beneath the oleanders,
No clear voice sings, as of old;
But the fleet caressing sunbeams
Whisper secrets to their mold.

"Though I follow as the southwind
Fares his way through wood and plain,
Though I question hill and valley,
I shall never find again

"My lost garden—where lie buried
Joys that swift the glad hours sped;
Only one could bid me enter;
Only Love—and Love is dead!"
—Ainslee's.

A Baby's Shoe

THE ladies of St. Mark's were holding a rummage sale. Beautiful women, high bred and dainty, stood behind the counters and handled wares with the deftness of their more humble sisters. The accumulation of cast-off articles, which clutter the attics of every household, was spread upon the counters and shelves. Crowds of people, from the lowest to the highest grade of society, thronged

"HOME, JOHN," CRIED NED.

the store, elbowing each other rudely. At the further end of the long store was a table piled high with children's clothing of every description. "Your choice for 25 cents!" was the motto upon the card, hung conspicuously above the table. Almost hidden beneath the pile was a little heap of baby shoes and stockings, and among them a tiny pair of blue shoes. They were a bit faded and worn, with faint creases at heel and toe, where the chubby foot had pressed its weight against mother's knee. The soft, white hand of the saleslady seemed to linger caressingly upon this particular pair, as she sorted over the clothing for each new customer.

There were round-faced Irish mothers, with their frowsy-headed offsprings clinging to their skirts; yellow-haired Swedes, whose wondering blue eyes took in every detail of the crowded table, and dark-browed Italian women carrying their babies within shawls that were their only covering. Bernice Colby served them all graciously and sweetly, yet, as each turned away, her eye glanced with half relief at the tiny blue shoes, still unclaimed.

"How foolish I am!" she whispered to herself. "Why cannot I give them up?"

With a sudden impulse she held them out as a broad-faced Irish woman, with a child in her arms, stood beside the table.

"Och! Mem, but them's foine, indade," said the woman, with a gay laugh. "But Jamey's fut ne'er'd squeeze into the loikes o' them."

A scarlet wave swept Bernice's cheek as she dropped the little shoes and hastily sought among the clothing for something more suitable for the sturdy "Jamey." Far back in the store, partly hidden by the crowd, a man stood, watching Bernice's table. It was a dark, handsome face, yet showing the marks of dissipation. As he witnessed the little scene a sneer curled his lips.

"Heartless and cold! Willing to sell her dead baby's shoes," he muttered.

Hastily pushing forward, the man approached the table. His upturned coat collar and the soft felt hat, pulled down over his brows, nearly concealed his face, yet as he brushed past the eyes of the two met. For a second the woman's heart semed to stand still within her bosom, as she recognized the man's face; then he passed by and was gone.

That night, as Bernice was being driven to her own luxurious home, she leaned back amidst the soft cushions with a weary sigh. Not because of the unusual exertions of the day was she spent and weary, but the sight of that dark, gloomy face, that for five years she had longed, yet dreaded, to see, had completely unnerved her. With the past thus opened, the waves of memory submerged her. Five years before Bernice Colby had been a happy wife and mother. Then the dark angel had snatched from her arms their precious burden. Selfishly yielding to the grief that overwhelmed her, she had neglected her wifely duties until her husband had sought more cheerful company and consolation in the wine cup. Suddenly awakened to his intemperate habits, repugnance and disgust for the time, swept love from her heart, and heedless of his repentance and remorse, she drove him from her with stinging words of bitter scorn.

She sent him from her to do battle alone with that dreadful demon that lies in wait for the souls of the weak and the unwary. Upheld by the praise of false friends, she deemed herself wise in thrusting from her so vile a thing, yet in the long and lonely years that followed the voice of conscience spoke loudly in her ear. It said that she herself was, in a measure, responsible for her husband's downfall. That, had she been stronger, braver, her love and faith, her prayers and purity of living would have saved him. Alas! She had not stood the test! And so, though lacking naught that riches can buy, Bernice Colby was a childless mother and a wife in name only.

The rummage sale was still in progress, and the next day Bernice stood behind her table, smiling and gracious, though her bright face hid an aching heart. In turning over the garments upon her table, she missed one of the tiny blue shoes, and with a faint smile she took its mate and thrust it quickly within the bosom of her dress.

As the day sped onward, a heavy storm arose, the most severe of the season. A whirlwind of snowflakes blinded her eyes as she left the store, and hid from her view her own carriage, as it stood among the long line of waiting coaches.

Turning in the wrong direction, she stumbled into the arms of a man standing upon the curbstone. Starting back she glanced up into his face, and their eyes met.

"Ned!"

"Bernice!" they both exclaimed in a breath. "Let me see you to your carriage?" said the man, and without a word Bernice placed her hand within his arm. With the touch of those light fingers, Ned Colby's heart throbbed with the love of other days, and words of tenderness trembled upon his lips. Placing her within the carriage, he was about to turn away, yet her hand still clung to his arm, as she said earnestly:

"Oh, Ned! are you not coming too?"

"May I, Bernice?" questioned he, eagerly.

"Come!" answered his wife, drawing him in beside her with both hands.

"Home, John," cried Ned to the wondering coachman, and the door closed upon them.

Tears dimmed the old servant's eyes at the sound of that ringing voice.

"Thank God! it's the master!" he muttered, as he gathered up his lines.

"Bernice, like the prodigal son, I have sinned against heaven, and in thy sight and am no more worthy——"

"Hush, Ned!" whispered Bernice, covering his lips with her hand; "I have done wrong, too. Let us forget the past and begin our lives anew."

As she leaned towards him there fell from the folds of her dress a tiny blue shoe. Holding it up, Bernice whispered softly:

"The baby's shoe."

Thrusting his hand into his coat pocket, Ned drew out its mate, and crushing them both together in the little hand that held them, he bent and kissed his wife tenderly.

"Our baby's shoe!" said he with a smile.—Philadelphia Item.

HE CONGRATULATED HIM,

And Gave the Best of Reasons for the Felicitation.

They met in front of the Read House. One was fat and black, with a wonderful expanse of mouth and a voice like a couple of foghorns. The other was black and lean and wizened.

Said the fat black to the lean black: "Why doan ye 'gratulate me, Brudder Johnsing?"

"What fer I 'gratulate you?" said Brudder Johnsing.

"What fer you 'gratulate me? Why, man, kase I done mar'd de Widder Jeff's'n."

"You is—you dun mar'd de Widder Jeff'son?' squeaked out the lean one.

"I sho' is done mar'd dat lady," said the fat one with an air of great satisfaction.

"Den I does 'gratulate yer, wif my whole heart. I sho' does."

The two separated, when the lean one turned to a knot of white gentlemen who had been interested and amused auditors of the conversation, and remarked:

"Yes, I 'gratulate him! Haw! haw! haw!—he! he! I sho' does. He's de wus en'my I has, an' I cert'inly 'gratulates. Why, boss," he said confidentially, singling out one of the spectators, "I wus mar'd to dat 'oman fer a year myself. Yas, I sho' do 'gratulate dat man," and he moved off toward Market street chuckling and muttering to himself.—Chattanooga News.

American Fruit-Growing.

The United States leads all other nations in the matter of fruit growing. Strawberries were valued at $80,000,000 last year, and grapes at $100,000,000.

WHOLE COUNTRY SPECULATION MAD.
MANIA EXTENDS FROM COAST TO COAST.

The country seems to have gone speculation mad. Never before in America's history has this mania been so paramount as in the past few months. From coast to coast, men and women, young and old, ignorant and wise, seem to have been swept along on the great wave of desire to gain a fortune by the rising or falling of stock and grain. Not alone is the epidemic an affair of the Stock Exchange of New York. Not a village exists along the great railroads of the West which has not men among its residents who take a "turn" at the market in the cities near to them. In every hamlet, no matter how unpretentious as to population, the market prices of corn and grain are closely watched and over the wires comes ticking along the request to buy or sell, according to what is considered the more fortunate side to be on.

THE SPECULATOR FACE.

Never in the history of the land has the speculative fever been so madly general. It seems to matter little to the men from one end of the country to the other whether they take a plunge in wheat or corn, stock or bond, so long as they are in with the maddened crowd to make a fortune in a short space of time. Here, as in the closer combinations, thousands and tens of thousands are endeavoring to add a little to their gain, perhaps made by hard labor. So general from ocean to ocean has been this speculation that the government has found it necessary to sound a warning.

CHRISTIAN SCIENCE

SPREADING RAPIDLY OVER THE CIVILIZED WORLD.

One Million Members in America—The Boston Society Has the Largest Congregation in the World—Has 20,000 Members.

The spokesmen of some of the leading denominations have been attacking Christian Science, and they have not minced matters in dealing with it. Dr. Parkhurst for the Presbyterians, Dr. James M. Buckley for the Methodists, Rev. Dr. Alfred G. Lawson for the Baptists, and Rev. Dr. David G. Burrell for the Reformed, have by a vigorous assault upon the new faith made plain the line of action which these powerful bodies will pursue in the attempt to crush it out of existence. These gentlemen declare that their respective churches have not suffered in membership by the introduction of the propaganda, but assert that its rapid growth has come from that great body not affiliated with any of the churches. Dr. Lawson says Christian Science is bound to bring a sad harvest of corruption. Rev. Mr. Buckley thinks it ridiculous and indecent and that it should be spurned by respectable people everywhere. Dr. Parkhurst charges it with being the greatest delusion of the age in that its followers are the biggest dupes of its wickedness. Dr. Burrell says he regards it as a dangerous delusion. So far from being a form of Christianity, it is, in his judgment, blasphemy against God the Father, in denying his personality; against God, the Son, in denying his divinity and the reality of his atonement for sin, and against the Holy Ghost, in asserting that Christian Science itself is the Spirit of God. There are undoubtedly Christian people in the circle of the Christian Scientists, but they labor, he says, under a delusion of the most dangerous sort, and as to their leaders, they are deliberate enemies of true religion and wilful deceivers of those who follow them.

MRS. MARY BAKER G. EDDY.
Who founded Christian Science in 1866 and who claims that that religion, with 1,000,000 adherents to-day, will be the dominant one of the world in fifty years.

Its Wonderful Growth.

The growth of Christian Science has been marvelous, the more because its followers have been drawn from the rich and comfortable classes. It was founded by Mrs. Mary Baker Eddy in Boston in 1866, but it did not begin to attract general attention until 1890 and the beginning of the erection of the splendid temples found in the large cities was undertaken within the past five years. In New York City alone there are three churches completed or on the way to it—the aggregate value of which is $1,500,000. The First Church cost $670,000 and the Second $550,000. Both are paid for. In addition there are six more societies in Greater New York. In Boston, the mother church, built at a cost of $500,000 and dedicated in 1894, has the greatest number of members of any church in the world—15,500, of whom 4,000 were added last year. Chicago has three handsome churches erected within four years. Tennesseeans take to it strongly, especially in Memphis, where two flourishing churches have been established within two years with 1,500 followers. Philadelphia has four churches and 1,000 believers. Buffalo is a stronghold of the cult and Denver is preparing a temple to cost $250,000 to further its principles. Boston, however, is the leader in winning followers. From 26 members in 1889 the church there has now a membership of more than 20,000. Altogether in America the Scientists have 623 church societies, with a membership of 1,000,000, and with churches to the value of $12,000,000.

Abroad the cult is taking wonderfully, especially in Great Britain. London has a flourishing church, as have Dublin, Liverpool, Manchester, Birmingham and Leamington. Among the English converts enumerated are the Earl of Dunmore and the Earl of Tankerville, Mrs. Henry Montague Butler, wife of the master of Trinity College, Cambridge, and Mrs. Charles Smith, wife of the head master of Sidney Sussex College, Cambridge. It is said that King Edward, while in no way wavering in his allegiance to Anglicism, is well disposed toward Christian Science.

The churches, or temples, are open every day, and in some of their features and appointments are suggestive of club houses rather than places of worship. This has done much to popularize the institution, especially in large cities, and to wean away members of other Christian denominations.

RESTAURANT ROMANCE,

With Tears Along the Edges and Smiles at the End.

She entered the lunchroom on Michigan avenue so softly she was almost unnoticed. She gave the impression of one alone in the world, and, from her absent, dreamy look, appeared to dwell with the memory of a past. At a glance one would say that the pure country air had blessed her earlier years, had imparted the soft bloom to her cheeks, now losing its freshness. Her dress, plain, but scrupulously clean, told the story of a struggle to appear respectable. But native beauty which gives a charm where all else fails aided her here, for her features would have delighted an artist. And her beauty was heightened by the pathos of the expression. She walked to a table in a corner where none other sat, and presently a waiter brought her a cup of coffee. She took from an inside pocket of her coat a small paper parcel and unwrapped a couple of thin butter sandwiches. Then, leaning her elbow on the table, she bowed her head and prayed. She dallied over her meal like one who has no appetite, gazing before her as if some scene enthralled her. Spirit and body seemed wide apart.

She had come to this lunch room for months, it was said, arriving always about the same time, after the rush of the noon hour. She had finished her frugal meal, and as she turned to go a dapper young man entered and stared at her in amazement. She staggered, and all color left her face. The young man seemed too surprised to control his emotions. She timidly put out an inviting hand, but he, sphinx-like, was transfixed to the spot. Her head sank, and she moved toward the door intending to pass him. At the same moment an Italian stopped with his piano in the street, and began winding off Mendelssohn's wedding march. The young woman stood erect, and as she raised her hands to her head her eyes wandered wildly. An involuntary smile flitted across her face, then her eyes closed with a painful expression, and tears began to flow.

'Oh, Bert," she cried in agony, "that mocking music," and would have fallen, but the young man was instantly at her side, and caught her in his arms, where he held her while she wept without restraint.

"Come, my darling," he said tenderly, "and we will begin all over again. God knows I love you."

Then he led her away.—Detroit Free Press.

Air Ship Is Promising.

Mechanics have not yet despaired of constructing a ship that will navigate the air, but are constantly at work developing new ideas or improving upon old ones. A new type of such craft has been tried with some success at the Crystal palace, London, the design being the invention of Auguste Gaudron and Cecil Barth.

The contrivance is rather an air ship than a flying machine proper, from the fact that it depends for its support upon a cigar-shaped balloon seventeen feet in length by three feet in diameter, holding about 100 cubic feet of hydrogen. The ideal flying machine, of course, is to support itself by mechanical power apart from any balloon. Beneath the balloon in question are fixed platforms, certain of these containing a motor and fan to supply the propulsive power, the center platform being reserved for the aeronaut who there controls the steering gear. During the trial the machine behaved very satisfactorily, ascending and descending at any given angle and answering readily to the rudder. On a windless day the inventors hope to attain a speed of thirty miles an hour and have in contemplation a machine to accommodate five people. The balloon of such an apparatus would have to be 100 feet long and thirty feet in diameter and would require four motors, each of ten horse power. The balloon would be made for safety's sake in compartments and would require 120,000 cubic feet of hydrogen to inflate it.

Mustache Fad in England.

A humorous result of Emperor William's recent visit to England is evident in the mustaches of the inhabitants of the west end of London. That upward and outward twist so associated with the Kaiser's mustache has been extensively adopted, especially by those having pretensions to military appearance. Interviews with west-end barbers reveal the trouble they are encountering in transforming lifelong droops into upward curls.

The Pope's Pens.

The Pope does his private writing with a gold pen, but his pontifical signature is always given with a white-feathered quill which is believed to come from the wing of a dove, although persons who have seen it say it must have come from a larger bird. The same quill has been in use for more than forty years. It serves only for important signatures, and is kept in an ivory case.

"Alps on Alps Arise."

First Poet—I've read that it took Gray seven years to write his "Elegy."

Second Poet—Yes. Say, wouldn't it been a shock to him if, when he had finally got it written, he had sold it to a magazine, and then found out that they paid on publication?—Brooklyn Life.

Cogent Reasoning.

Lena—I didn't think you would let a man kiss you on such short acquaintance.

Maude—Well, he thoroughly convinced me that it was all my own fault that I hadn't met him sooner.—Smart Set.

A Severe Critic.

She (turning from the piano)—There, how do you like that refrain?

He—Splendid—and the more you refrain the better I like it.

About all a boy is good for until he is fifteen is to run errands, and eat up the last piece of pie.

CURING FISH AT GLOUCESTER

Much Depends Upon How Old Sol Does Its Work.

Probably no where on earth is the sun kept more constantly down to more grinding daily toil for the benefit of mankind, for which he was created, than in Gloucester. Through the whole year, on every pleasant day, he is drying fish on the flakes. There is nothing which takes more skill in the business than this curing of the fish. Winter and summer, without thermometer or any definite appliances, the curer must watch and anticipate the mad jumps of our New England weather, and provide against them. No cook can watch an oven so closely as this man. He is a chef with 50,000 pounds of meat to watch, and a slip of a quarter of an hour may mean a thousand dollars' loss.

The chief dangers are cooking or burning in the summer and freezing in the winter. To provide against the first, the fish flakes are protected all the summer through with white canvas awnings to protect them from the heat of the sun. Even with these it is impossible to put the fish out on very hot days. When the fish are burned it can be told by merely feeling of the backs of the fish underneath; they have become cooked and sticky with the heat. This means that the meat of the fish will flake off when they are being skinned, and will not hold together in the various proocesses of preparing.

Frezing the fish often occurs in the winter, if the days are too cold, and the trouble from this is that they will seem to be dry, when in reality they are frozen, and will be found to be moist when put into the storeroom. When the fish is really cured the expert can tell it from its appearance, principally from the small crystals of salt on its surface. It must be dried just right, and it is often necessary to hurry it off the flakes to get it in the shed in time. For the United States trade a fish which is somewhat moist is prepared. For the old West Indies trade it is necessary to have the fish hard and dry for preservation in the tropics.—East Gloucester (Mass.) Correspondence Boston Transcript.

MARCONI TO WED.

Italian Inventor Betrothed to Miss Holman of Indianapolis.

Guglielmo Marconi, inventor of wireless telegraphy, is engaged to marry a charming American girl. The Italian inventor, on his next visit to this country will wed Miss Josephine Bowen Holman of Indianapolis. She is a daughter of the late Justice J. A. Holman of the Indiana Supreme Court, and

MISS HOLMAN.

the Judge was a cousin of Congressman Jephtha Holman, the famous "watchdog of the Treasury."

Miss Holman is of medium height, 22 years old, with blue eyes, hair of light auburn and a fair complexion. She dresses quietly, and in the best of taste. She is well educated and musical. She would not say when the wedding will be, but the family think it will occur in the early fall. The bride will then go to England to live, a move which she looks forward to as somewhat in the light of an ordeal, for she is perfectly satisfied with the United States.

In Time of Peace.

"No sailor worth keeping will desert in time of war," says an old naval commander. "But in times of peace, when everything appears to be going along as though it were greased, desertions will begin from no apparent cause and will suddenly become epidemic. Away they'll go, and it's two to one that in a little while they will be hunting around to see if they can't get back into the service without having to suffer punishment. If you were to sail a ship for heaven, and stopped on the way for coal, half the crew would desert."

Her Hair.

She—They say that women never tell of any defects they may possess.

He—But there are exceptions. Miss Eggletop very frankly told me to-day that her hair comes out dreadfully, and that it is a great nuisance to her.

She—And you never guessed that Miss Eggletop's head is as bald as a billiard ball! Oh, you goosie! You'll believe me after this.—Boston Transcript.

Size of Molecules.

Lord Kelvin estimates the diameter of the molecule of a gas to be not more than one five-hundred-millionth of a centimeter. If a drop of water were to be magnified to the size of the earth and its molecules were magnified proportionately, the size of each molecule, according to the same authority, would be between that of a duckshot and that of a cricket ball.

May Be Overlooked.

"The baby looks just like his father."

"You won't mind that if he's otherwise all right, will you?"

JOLLY JOKER.

"You say you have spent hours on a single line?" "Yes; and sometimes days." "Then you're a poet?" "No; I'm an angler."—Exchange.

Perhaps some contrast does us good,
And makes existence snappy.
If no one had the blues, how could
We tell when we were happy?
—Washington Star.

They were discussing their marital experiences. "When I was married," said the old lady, "I was so unspeakably happy that I almost cried myself to death."

School friends meet in the French capital. "Why, what are you doing in Paris?" "Spending my honeymoon." "And where's your husband?" "He's in New York."

"So old Dingus' fever is gone?" repeated the old physician pleasantly to the young assistant who was attending him. "Yes, it's gone, but it's taken Dingus with it."

Game to the very end: An old lady, being told that a certain lawyer "was lying at the point of death," exclaimed: "My gracious! Won't even death stop that man's lying?"—Tit-Bits.

"A Chicago ex-groceryman was lately arrested for sandbagging." "That's nothing wonderful." "But when his sandbag was examined it was filled with the sugar he used to sell."

"I understand that Frailman has come to the conclusion to contest his wife's will." "Well, what is there courageous about that? She's dead, isn't she?"—Richmond Dispatch.

"I've just found out how J. Pierpont Morgan must have proposed to his wife." "How?" "He probably said, 'Darling, will you put yourself in my trust?' "—Chicago Herald-Record.

Another triumph: "How did your charity ball turn out?" "Oh, it was a splendid success. Our expenses were only $227, and we had $4.33 left over for charity."—Chicago Times-Herald.

The better half: "I believe that the great body of American people are gentlemen," says President Hadley. Our experience has been that fully half of them are ladies.—Boston Transcript.

We All Have It.—Towne—He's quick enough to expose the faults of others, but he will never willingly lay bare his own. Browne—No. I suppose that's what you might call faults' modesty.—Philadelphia Press.

Young Dr. Smith—A patient got very angry the other day because I advised him to take a Turkish bath. Mrs. Dr. Smith—I don't see why anybody should get mad about that. Young Dr. Smith—Well, this fellow was a Greek.—Judge.

Admiration: "I hov the grettest admiration fur the man behind the gun," said Mr. Dolan. "Mebbe you're right," answered Mr. Rafferty; "but it always seemed ty me it's the felly in front of it that's takin' the chances."—Washington Star.

Small loss: "Oh, sir, please, I have swallowed a pin!" exclaimed a servant-girl, running into her employer's study. "Never mind Mary," he replied, deep in study—"never mind; here's another," drawing one from his pin-cushion.—Chicago Journal.

"I suppose you San Franciscans think you have the greatest climate in the country?" said the tourist. "No," answered the man who was suffering from a cold; "we don't claim the greatest in that line. But we do claim the largest variety."—Ex.

"Well, good-night," said Mr. Borem, finally breaking away; "I've had a most enjoyable evening. Er—by the way, I expect to pass your house to-morrow evening, and I thought I might——" "I'll be delighted," said he, quickly; "good-night."—Philadelphia Press.

Mrs. Johnsing—I jes' met Mrs. Yallerby, an' she tole me her daughter done eloped wif a gemman in de iron business. Mrs. Jackson—Well, I declar'! Sech airs! Who am de gemman? Mrs. Johnsing—He's de Chinese launderman 'roun de cohner.—Philadelphia Record.

Mrs. Bingo—You are perfectly welcome to another piece of cake, Willie, but I am afraid it will make you sick. Your mother told me particularly to give you but one piece. Willie Slimson—That's all very well, but I don't know where the pantry is here.—Leslie's Weekly.

Savagery: "And do these Indian girls never evince a tendency to relapse into their former savagery?" Tears sprang to the eyes of the mission worker. "Ah, yes!" sighed she; "only last evening they set the table without putting doylies under the finger-bowls."—Detroit Journal.

Hitting His Pa.—Wicked Willie—Paw, I wuz good yesterday and went to Sunday school, when Tommy wanted me to go to Sohmer Park and see the monkey in a cage. Ain't you goin' to give me somethin' fer it? Paw—No, my son; you should be good because it is right to be good. Wicked Willie—Ah, gwon; didn't you tell me the last time you licked me that you didn't want your little boy to grow up good fer nothin'?—Montreal Star.

A Scottism minister who was indefatigable in looking up his folk one day called upon a parishioner. "Richard," he said, "I hae na seen ye at the kirk for some time, and wad like to know the reason." "Weel, sir," answered Richard, "I hae three decided objections to goin'. Firstly, I dinna believe in being whaur ye does a' the talkin'; secondly, I dinna believe in sl' muckle singin'; an' thirdly, an' in conclusion, 'twas there I got my wife."—Albany Argus.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

INDEPENDENCE, CAL.,

FRIDAY, JULY 5.....1901

A special dispatch to the San Francisco Call from Salt Lake, June 29, says: In an interview this afternoon Senator Clark declared most emphatically that the road connecting Los Angeles and Salt Lake would be built. Everything relating to financial affairs, he said, had been accepted, contracts had been let for a great deal of engineering work and considerable equipment ordered. Definite and final plans will be decided on at the meeting, after which the work of construction will be actively commenced and pushed through to completion. As to the Uvada contest pending in the Federal Court at Carson City, the Senator said he hoped for a favorable decision, but should it be against the San Pedro Company it would not make a particle of difference in the general plans.

The meeting of congressional representatives and irrigation engineers at Cheyenne last week, to agree upon lines along which irrigation propositions should be urged at Washington, resulted in a considerable discussion and a call for a later meeting to be held in Washington just before the meeting of Congress. A bill was proposed to provide for the settlement of the arid lands by using the money derived from the public lands, in the expenditure of which each State should own its own reservoirs and sell them to the settlers using the water. The money from such sales is to be used in the building of new reservoirs, etc. Thus the public lands are expected to provide for their own reclamation and irrigation.

From New York to Texas the people are sweltering, suffering, dying from the excessive heat of the weather. We in California, with a dry and vitalizing atmosphere, bask in generous sunshine, fearing no humid heat, no prostrating sultryness, no enervating and gasping breath or torrid weather. Thank heaven for the heritage that is ours, which is not to say that we do not have some warm weather, some heated terms, but never anything like that reported from the East, where a humid atmosphere, heated to the point of non-endurance, saps the vigor of the strongest, paralyzes labor, brings business to a standstill and fills the receiving hospital with unhappy victims. Blessed are we in the land of our inheritance.—Record.

The San Bernardino Sun reports the discovery of large deposits of nitre, northeast of Barstow, on the south side of the Slate Range and east of Borax Lake. The Sun says: "It is one vast nitre bed, and it is claimed will rival the nitrate fields of Peru and Bolivia in the near future, and as the beds are practically inexhaustible, that part of this county where the saltpeter deposits are situated is bound to open up rapidly." The "discovery" referred to was made just about ten years ago. The opening up has, therefore, not been very rapid and is not likely to be until it may be tapped by a railroad. About four sections of the beds are situate in Inyo, while something like 10,000 acres lie in San Bernardino territory.

The amazing pace of scientific research is indicated by two recent discoveries. One is the utility of the earth for telephonic transmission, and the other is the liquification of hydrogen gas on a commercial scale. The first discovery is due to a young American electrical engineer, and the second to Professor Dewar, the distinguished English scientist. The use of the earth as a telephonic conductor was probably suggested by wireless telegraphy through the air. The reduction of hydrogen to a liquid form is the latest achievement of Professor Dewar in discoveries beginning with liquid air.

The new endless cable friction gear cars which deliver ore to the 100-stamp mill are now in operation and work beautifully. The cars, two of them coupled together and holding two tons each, are worked by two men and make the trip easily, loading, traveling, unloading and returning in one and one-half minutes. It requires two men, one to go with the cars, the other to work the machinery. —Randsburg Miner.

Anent the rumors of army frauds at San Francisco General Shafter is quoted as saying that there has not been much fraud. A story is told of a fellow who hailed Noah's ark from the top of a tree, and when Noah ignored the call, he said: "Go to thunder; it is not going to be much of a shower after all!"

It is proposed to illuminate the Yosemite falls, 2000 feet in heiget, by the use of twenty arc lights, in connection with means for producing color effects. Some of the roads are also to be lighted with electricity.

The modern long-range military rifle, it is asserted by a physician who has served in the army, will tend to develop near-sighted soldiers. The strain upon the eyes in trying to distinguish an object a good mile away is too great.

Does the Constitution follow the flag, or does the flagstitution follow the const, or does the constiftion follow the gag? —Hawthorne Bulletin.

Haiwaii will join New Mexico and Arizona in seeking statehood at the hands of Congress next winter.

Kern County gains $5,000,000 property valuation on account of oil development.

His Handy Valise.

An old friend of the late ex-Governor Oglesby tells a reminiscence of a valise. He was traveling through the state and met the governor on the train.

When they were seated, the governor drew out a valise that had a peculiar and handy way of being opened from the top. It was made of strong leather and had tags pasted all over it.

"I carried this valise through the Holy Land," said the governor. "I think a great deal of it."

"I suppose it brings up some pleasant memories," suggested the other traveler.

"More than that," was the reply, and the keen eyes of the governor twinkled as he reached down and touched a button and the valise opened immediately, but cautiously, at the top. It opened wide enough to admit a hand and to permit it to withdraw with a black bottle in its clutch.

"This is a great valise. I can get a bottle out of it, and nobody ever sees me."

When the residence of ex-Governor Oglesby burned, all of his private papers of every sort and all of his war trophies were destroyed. A short time after he met this same peripatetic friend.

"It was a great loss you sustained, governor," he said.

"Yes, all my papers are gone. Sorry to lose them, too, and then my swords are gone too. I was sorry to lose them, and I know you'll be grieved to hear it—that valise was burned up. Yes, it's gone. Bob Ingersoll gave me that valise, and I did hate to lose it, it was so handy."—Chicago Tribune.

Clever Enough to Vote.

A keen witted fellow, despite his general ignorance, was brought down to the courthouse to receive the rights of citizenship.

"Name the capital of the nation," said the judge.

The applicant scratched his head.

"I can't just place it, judge," he said, "but you name over a few of the towns and I'll tell you when you strike it."

"Is it Chicago?" queried the judge.

"No."

"Is it St. Louis?"

"No."

"Is it Arizona?"

"No."

"Is it Washington?"

The candidate looked puzzled. He hesitated.

"Say, judge," he slowly replied, "if thet ain't the place it's a close shot!"

He got his papers.

Another candidate was brought in by a well known local politician.

"Let me see what you know about geography," said the judge. "Supposing you and Mr. Blank walked straight down to the lake and started across it, going due north, where would you land?"

"On the bottom," said the candidate promptly.

He got his papers too.—Cleveland Plain Dealer.

Where Soldiers Must Swim.

In the Dutch army a man must be able to swim as well as to fight. Moreover, if he is in the cavalry he must have a horse which will take a river as easily as a hunter takes a fence.

Swimming maneuvers are part of the regular drill there. Collapsible canvas boats, manned by a few oarsmen, lead the horses, so that they do not attempt to land on stone quays and other difficult points. The men swim across with their horses and on them. They do it in swimming costume and in all the accouterments of war.

There are few nautical emergencies for which the Dutch army is not prepared. Some of the officers have even reached a degree of proficiency that not only their horses and kit cross the river with them, but their pet dogs sit upon their shoulders and are borne over almost without getting wet.—Stray Stories.

Trying It on a Dog.

The sultan of Turkey is most inquisitive as to what is said and written about him abroad. Every day translations are laid before him from the newspapers of the world, and these are all closely perused. His majesty, by the way, is a bad hand at suffering.

At one time he wanted to have an aching tooth removed and dared not. Eight slaves had molars drawn out in his presence that he might have an opportunity of judging the extent of suffering entailed, and finally the sultan decided that he would rather bear the pain than undergo such an ordeal.

Cleaning the Chimney.

An easy way to clean a chimney of soot has been discovered by a Maine man. Instead of going to the top of the chimney and probing with rods, he begins at the bottom. There an opening is made, and he fires upward a revolver charged with a blank cartridge. The concussion, it is said, will clean out the soot. He also claims that the burning of a piece of zinc in a stove will clear the stove and its funnel of soot.

Too Honest to Ever Grow Rich.

Emerson keeps a grocery store on Grand avenue, opposite the limekilns, west of Western avenue. As all his customers are either Greeks or Italians, he keeps a stock on hand somewhat different from other grocers.

One day a drummer strayed into the store. Emerson was waiting on an Italian woman, while her 4-year-old son was stealing sugar out of a barrel.

Eggs were 18 cents a dozen. The woman wanted only one egg. The solitary prospective chicken was wrapped up.

"Two cents, please," said Emerson. She paid and received a small slip of yellow paper.

"What was that slip you gave her?" asked the drummer, after she left.

"H'm, you see, eggs are 18 cents a dozen. That makes 1½ cents for each egg. The woman would not pay a half cent too much, and, as I did not want to sell the egg for 1 cent, she paid 2 cents and I gave her the slip good for one-half cent. Thus she will get the next egg for 1 cent if she brings the slip."—Chicago Journal.

But He Realizes It Now.

Mrs. Benham—Many a true word is spoken in jest.

Mr. Benham—That's so. I little dreamed when I said, 'With all my worldly goods I thee endow,' that you would take every cent I had.—Twinkles.

THE LISTENER.

The late George Muller, the philanthropist, of Bristol, England, left an estate valued at $800.

Obadiah Sands of Chicago is known as the "butter king." He owns 80 creameries and controls as many more.

Colonel Tom Ochiltree, so long a familiar figure in the corridors and bar of the Hotel Waldorf, in New York, has gone to Europe for his health.

Of the ten soldier presidents of the United States whose services in that office cover practically 40 years of the existence of the republic William McKinley is the first to call the nation to arms.

Lord Waldegrave, captain of that ancient corps known as "Her Majesty's Yeomen of the Guard," has been transformed into one of the wealthiest peers in the kingdom by the death of Lord Carlingford. He is very popular.

Captain Charles Weaver of an Arkansas company wears a sword that was first carried by his great-great-grandfather in the Revolutionary war, again by his great-grandfather in the war of 1812 and next by his uncle in the rebellion.

M. Deibler, Jr., son of the French public executioner, was lately married to a young lady once a cigar maker in a government factory. Young Deibler is now an assistant at executions and hopes some time to succeed his father in his grewsome office.

Colonel Robert H. Crockett, a grandson of the famous pioneer and patriot, "Davy" Crockett, is a typical southern gentleman of the old school. He is of medium height, with white hair and beard and stands as straight as an arrow, although he is now 70 years of age.

B. L. Stevens of Atlantic City, who was a gunner under the brave Dewey when the latter was a lieutenant on the Mississippi at New Orleans, in 1862, says that Dewey directed the shot which put the Manassas out of the fight and that he showed wonderful nerve in the battle.

Charles Boone, who has been appointed as a naval cadet at Annapolis, has supported himself and his mother and gained a good education by selling papers in Dayton, O., and was the only one of 50 applicants for the appointment who did not have recommendations from wealthy men.

The will of the Rev. Horace S. Bishop, rector emeritus of Christ Episcopal church, East Orange, N. Y., contains a bequest of $2,000, the income of which is to be used to supply altar lights and incense for the parish church. Mr. Bishop in his lifetime was never classed among the ritualistic clergy of the Episcopal church.

The father of the French chamber, M. Henri de Lacretelle, who is 83 years of age, is retiring from parliamentary life. He has represented Macon, but recently became so infirm that he had to be carried in and out of the chamber and appeared to be perfectly indifferent to the speeches and scenes which went on around.

THE PAINTERS.

The late Aubrey Beardsley is said to have done his best work at night by candlelight.

Although 79 years of age, Rosa Bonheur, the great painter of animals, appears as active as ever so far as her work is concerned. She spends about five hours a day perched on a ladder in her studio.

William Haskell Coffin, whose remarkable picture, "Karma," attracted so much attention in Washington art circles not long ago, is only 20 years of age and is the son of a former assistant comptroller of the currency.

Mr T. R. Lamont, who has just died in London from an attack of pneumonia, was the original of the Laird in "Trilby." He and Mr. Du Maurier had been fellow students. As an artist he devoted himself especially to water color, and he was long an associate of the Royal Water Color society.

Georges Montbard, the artist, was a communist rather more than a quarter of a century ago and could frequently be seen careering about the Latin quarter on horseback and girded with a huge saber. When the Versailles troops entered Paris, he fled to England, and has since prospered with his pencil.

The Colonel's Romance.

"Colonel," said the romantic girl, "tell me how you got that scar upon your left cheek. Oh, I just know it must be a thrilling story. Was it made by a bullet or a saber thrust? I prefer a saber thrust. It seems so much more like the knighthood of old. You can't see a bullet coming, and there is no way to escape it or combat it, but when your enemy rushes at you with his uplifted saber there is the possibility of parrying his blow and cutting him down. That seems much more manly, even if the victor in the fray does receive a wound or two, than to just be laid low or to lay the enemy low by a bullet that cannot be seen. There is no bravery in shooting a man, but there is something knightly in meeting another face to face with a sword. Your scar looks like one that was left by a gleaming blade, and I know that your enemy must at least have been rendered hors de combat. Tell me all about it, colonel—when it happened and how. I am so interested in war stories."

"Yes," he replied, "I agree with you fully about the sword and saber business. There isn't much bravery in shooting a fellow, and there is something knightly about standing up and thrusting and parrying with a blade. But I got this wound while acting as an innocent bystander at a Chicago strike riot. It was a brick."—Chicago Times-Herald.

The Soldier and His Heart.

Very few soldiers who have seen much service escape what is called battle heart.

The ordinary state of the heart in healthy people is one of irritability, but in the soldier of five or six years' service the irritability is so great that it constantly affects his temper.

The soldier wears such tight clothing that his heart has not room to beat freely, and the perpetual struggle to do its work under difficulties injures it. The soldiers' trousers are tight at the waist. His coat is buttoned as tightly as possible and very often he squeezes himself with a belt.

Then when on the march his chest is compressed by the weight of his knapsack, canteen, great coat and heavy cartridge belt.

If you watch a company of soldiers when they are doing a long march, you will observe that most of them have flushed faces, red ears, red noses, swollen necks—showing that the heart is greatly overtaxed. Some, on the other hand, are pale, which proves that their hearts are not equal to the work thrown on them.

When, after a very long march, the men have to deploy into fighting order, and perhaps rush a hill, a very large number break down altogether. Their overstrained hearts never become really strong and healthy again.—Answers.

OFFICE OF INYO MERCANTILE CO.,
INDEPENDENCE, CAL.,
July 1, 1901.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

OFFICIAL.

Ordinance No. 71.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. It shall be unlawful for any person to hunt, pursue, take or kill or have in his possession within the two years next after the Twenty-third day of January, A. D. 1901, any Japanese or Mongolian Pheasant, within the County of Inyo.

SECTION 2. Every person who, in the County of Inyo of the State of California, within two years next after said 23d day of January, 1901, hunts, pursues, takes, kills or destroys or has in his possession any Japanese or Mongolian Pheasant is guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the county jail not exceeding fifty days or by a fine of not more than fifty dollars, or by both such fine and imprisonment.

SECTION 3. This ordinance shall take effect fifteen days from and after its passage, and all ordinances and parts of ordinances of said Board of Supervisors of the said County of Inyo in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week, said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo State of California.
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 71 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 8th day of January, A. D. 1901, by the following vote:

Ayes: N. J. Cooley, T. C. Boland, J. A. McKenzie, W. P. Yaney, James Jones.
Noes:——

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo, State of California.
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.
(Endorsed:
ORDINANCE No. 71.
Filed Jan. 8, 1901.
J. E. MERONEY,
Clerk.
Entered in Ordinance Book "B" at page 154

Ordinance No. 72.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male person over the age of twenty-one and under fifty-five years of age, found in each Road District in the County of Inyo, State of California, between the first day of March, 1901, and the thirty first day of December, 1901, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time between the first day of April, in the year A. D. 1861, and the first day of September, A. D. 1865, and who have not paid the same in some other road district, must pay to the said County of Inyo, a Road Poll Tax of Two Dollars provided the same be paid before the first Monday in July, 1901, but if not paid prior to the first Monday in July then it shall be Three Dollars.

SECTION 2. Said Road Poll Tax shall be collected by the Assessor of the said County of Inyo, in the same manner that State Poll Taxes are collected, and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the several Road Districts of the said County of Inyo from which said Road Poll Tax was collected.

SECTION 3. This ordinance shall take effect and be in force from and after fifteen days from its passage, and all Ordinances and parts of ordinances of said Board of Supervisors in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo, State of California.
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance, No. 72, was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board on the 10th day of January, A. D. 1901, by the following vote:

Ayes: W. P. Yaney, N. J. Cooley, T. C. Boland, J. A. McKenzie, James Jones.
Noes: None.

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo, State of California.
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.
[Endorsed.]
ORDINANCE NO. 72.
Filed January 10, 1901.
J. E. MERONEY,
Clerk.
Recorded in Ordinance Book B, page —

Ordinance No. 73.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male inhabitant of the County of Inyo, State of California, over the age of twenty-one years and under sixty years of age, except paupers, insane persons and Indians not taxed, and who have not paid the same in another County of this State, must annually pay to the said County of Inyo a Hospital Tax of Two Dollars; provided, the same be paid between the first Monday in March and the first Monday in July, but if not paid prior to the first Monday in July, then it shall be Three Dollars.

SECTION 2. Said Hospital Poll Tax shall be collected and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the Hospital Fund of the said County of Inyo for the care and maintenance of the Indigent sick or otherwise dependent poor of the said County of Inyo.

SECTION. 3. This ordinance shall take effect and be in force on and after fifteen days from and after its passage and all ordinances and parts of ordinances of the said Board of Supervisors, of the said County of Inyo in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time, and before the expiration of said fifteen days.

JAMES JONES,
{SEAL} Chairman of the Board of Supervisors of the County of Inyo, State of California.
Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 73 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 10th day of January, A. D. 1901, by the following vote:

Ayes: W. P. Yaney, N. J. Cooley, T. C. Boland, J. A. McKenzie, James Jones.

INYO INDEPENDENT.

INDEPENDENCE, CAL.,

FRIDAY, JULY 5.....1901

ADVERTISE
IN THE
INDEPENDENT.

—Largest circulation of any paper published in town.

The Oh Be Joyful mine and mill has closed down for a few weeks.

J. J. Gunn will resume operations on the Minneatta property the latter part of September.

Double shifts are working in the cross-cut tunnel on the World Beater mine, in charge of Supt. Stebbins.

The Black Eagle property, recently purchased by Mr. A. C. Steele from Nibecker & Anderson, is turning out large quantities of rich milling ore, and more stamps will soon be added.

Last Wednesday morning Tax-Collector Given, under authorization of State Controller Colgan, sold at public auction in front of the Court House, the following mining property situated in old Panamint Mining District: Wyoming, Stewart's Wonder, Star, Hemlock, Little Chief, Comstock, Alabama, Marvel, Challenge, Hudson River, Ida, Independence and Eureka mines, all patented, six mil-sites, 10-stamp mill, buildings, water right and pipe line, for delinquent taxes for the years 1894, 1895, 1896, 1897, 1898, 1899 and 1900, amounting to about $1950. P. H. Mack bid in the property for Mr. W. E. Hadley, a capitalist of Riverside county. The property was deeded to the State some months ago, and the sale was the first of the kind ever held in this county. Among the mines sold are some noted silver producers. We understand that the new owner intends to erect a concentrating plant and conduct operations on a large scale.

The Southern Pacific Company has secured an order from the U. S. Circuit restraining the several assessors of Nevada from collecting the assessment on railroad property as fixed by the State Board of Assessors last April. The argument on the writ will be made before Judge Hawley on July 15th. The State will fight the matter to a finish and take it to the U. S. Supreme Court if necessary. The State has retained Wm. Woodburn, J. R. Judge, Alf. Chartz and Trenmor Coffin to prosecute the case.

THEIR FIRST HORSE CAR.

The People Were So Delighted That They Rode All Day.

"I made the survey for the street car lines in the City of Mexico," said the civil engineer, "and when we got the tracks down and the cars running we had a laughable time. Young men of the first families not only ventured to act as drivers and conductors, but insisted on taking those places without wages. The thing was like a new toy to children. People paid fare or withheld it, just as they saw fit, and some would ride around for half a day. The Yankee superintendent of the lines was in a sweat all the time, but it was kicking against a stone wall.

"The tracks were single ones, with switches here and there for the cars to pass, but such little things didn't bother the drivers. Some of them would start the mules on a dead run and go clear to the end of the line, and others would pull out on a switch and go to sleep or indulge in games with the passengers. I guess it was two months before the drivers consented to give up their siesta hours. At 12 o'clock precisely the mules were brought to a halt, no matter where the car was, and the driver would walk off to eat, sleep and smoke and be gone two hours. No Mexican ever hurries. Most of the complaints received were to the effect that the cars went too fast. Even after we got things somewhat systematic, Don Pablo Chora, the president of the road, returned from a trip one day to say to the manager:

"'Ah, senor, but I am afraid we shall never get our people to accept this enterprise.'

"'What is wrong now?' was asked.

"'Why, one of our greatest merchants paid his fare to be taken to the Alameda in 20 minutes, and, lo and behold, the driver cut the time down to 10! We shall be ruined by moving folks around too quickly. Let us tie up the legs of the mules and take the whips away from the drivers!'"—New Orleans Times-Democrat.

DOWN EAST CURIOSITY.

One Instance In Which It Was Not Satisfied.

It takes a down east man to ask questions, but once in awhile one of them finds his match. Jonathan overtook a gentleman who was traveling on horseback, notwithstanding the fact that he had lost one leg. His curiosity was awakened, as he rode alongside of him, to know how he chanced to meet with such a misfortune.

"Been in the army, I guess?" was the anxious inquiry.

"Never was in the army in my life," the traveler returned.

"Fit a duel, p'haps?"

"Never fought a duel, sir."

"Horse throwed you off, I guess, or something of that sort?"

"No, sir, nothing of the kind."

Jonathan tried various dodges, but all to no effect. At last, almost out of patience, he determined on a direct inquiry as to the nature of the accident by which the gentleman had come to lose his leg.

"I will tell you," said the traveler, "on condition that you will promise not to ask me another question."

"Agreed, agreed!" exclaimed the eager listener joyfully.

"Well, sir," remarked the gentleman, "it was bit off!"

"Bit off!" cried Jonathan. "Waal, I declare; I'd just like to know, powerful well, what on arth bit it off!"—Christian Endeavor World.

Assessment Roll of 1901.

Realty (197,891 acres)	$ 799,208
Improvements	318,477
Town Lots	71,078
Improvements	146,952
Personal	445,463
Money	5,400
Total	$1,786,578

This is a material increase over the values returned by the Assessor last year, mainly due to the increased acreage of patented lands; but it hardly worth while to enter upon comparative data until the railroad assessment has been added and the County Board of Equalization shall have completed its work. The mortgage columns foot up $179,467—the lightest, and therefore best, for a number of years.

Unique.

Journalistic compliments in the following go into print unaccompanied with apology. The vein of fun crops out all right:

The INYO INDEPENDENT of June 21 enters its 33d volume—a kind of Thirty-third degree, as it were, in journalism. Many happy returns.—Times-Index, San Bernardino.

LONE PINE, July 1.

Dear Editor Independent—It grieves me to note that the Spirit of Progress has taken hold of your paper. The old, familar faces are seen no more. Where is the honest and truthful Auditor's Report?—the abundance of ink that we have been getting? Sir, for the last eighteen years I have been a regular borrower of your valuable paper; some weeks I have walked the entire town, just to get a copy of it. So you can see how highly I valued it. But it is not as it used to be, so that I will borrow it no more. Yours, A. BORROWER.

The conclusion that Mr. A. B. arrives at is refreshingly equivocal.

Voice from the Indians.

CAMP INDEPENDENCE, July 1, 1901.

At a meeting of the Fort Independence Indians John Goodale and George Ramshaw were re-elected Trustees of the Indian Day School at the Fort. The Indians are anxious to have their children educated like white children. The Trustees urged all the parents to send their children to school regularly.

The Trustees each in turn urged their people to keep from drinking and gambling. The older Indians are steady; only the younger ones are learning the vices of the white man. When they are drunk they are dangerous and reckless, but when they are sober they are good young men. So the leaders among these people ask that no whisky be sold to the Indians. *The men who are selling whisky to Indians better quit that now.*

Dee Lacey and Sam Baxter were elected Indian Sheriffs for this camp.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal,

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] Superior Court, County of Inyo.

J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 2,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office Reno. aug1-tf

Help for Women

Who Are Always Tired.

"I do not feel very well, I am so tired all the time."

You hear these words every day; as often as you meet your friends just so often are these words repeated. More than likely you speak the same significant words yourself, and no doubt you do feel far from well most of the time.

Mrs. Ella Rice, of Chelsea, Wis., whose portrait we publish, writes that she suffered for two years with bearing-down pains, headache, backache, and had all kinds of miserable feelings,

Mrs. Ella Rice.

all of which was caused by falling and inflammation of the womb, and after doctoring with physicians and numerous medicines she was entirely cured by Lydia E. Pinkham's Vegetable Compound.

If you are troubled with pains, fainting spells, depression of spirits, reluctance to go anywhere, headache, backache, and always tired, please remember that there is an absolute remedy which will relieve you of your suffering as it did Mrs. Rice. Proof is monumental that Lydia E. Pinkham's Vegetable Compound is the greatest medicine for suffering women.

Some Exploded Food Fallacies.

Fish as a food of the brain worker must be consigned to the limbo of vanities, though certain forms of fish are the cheapest of all foods, notably the bloater. Oysters and turtle soup are frauds. It would take 14 oysters to equal the nourishment of one egg and 223 to provide the same amount of nutriment contained in a pound of beef.

Salt fish, especially salt fat fish, is the most valuable food for the poorer classes, and whole races in the south of Europe live on the Newfoundland cod. Canned salmon we see at 18 pence a pound is no more expensive than cod at sixpence. Millions of people live on it, and the North American settler who is not well provided with cash finds it a good substitute and change from flesh meat at times.

Frogs' legs are not of high nutritive value, which need not surprise us. Turtle soup from the chemist's point of view is not worth a tenth of the price paid for it.—Exchange.

ROMANCE OF AN AMATEUR MILKMAID

THE young man with the milk pail in his hand went out of the room, and as the door closed behind him Judith turned toward her mother and sister with fierce indignation in her brown eyes.

"I wish you wouldn't do that, mother," she said in a low voice. "It is perfectly horrid to ask a visitor to milk the cow. You know father will be home in half an hour, and he can do it then just as well as not. Ever since John Harwood has been coming here you and Sylvia have seemed to want to make a hired man of him, getting him to bring in wood and do errands and milk. Father, too, always keeps out of the way Wednesday afternoons so as to get out of doing all the work he can. I feel ashamed to look people in the face."

"There, that will do," said Mrs. Simmons, sternly. "I guess John isn't too good to help us a little."

"But he has his own work to do before he comes here."

"Well," said Sylvia with a simper, "he seems to like to come, just the same. How many times has he been here to supper the last two months?"

"And to-day," Judith said hotly, "of all times, when he is going to take Sylvia to that dance, and has come with his best clothes on."

"Well, we gave him your father's overalls and frock to wear, didn't we?"

"You are altogether too particular," said Sylvia, contemptuously. "Don't you know that if you get folks to do things for you it makes them like you all the better? And, besides, it isn't any of your affair, so you needn't get so excited about it. He doesn't do the things for you, so you can forget all about it," and Sylvia laughed rather unpleasantly.

When, a little later, John Harwood came in with the milk, Sylvia, with a sweet smile, went forward and took the pail from his hand. "So good of you," she murmured.

She carried the pail into the pantry. "Here, Judith," she said, "can't you strain the milk? Don't make me stand here holding it all night." She did not know it, but the young man heard what she said.

At supper time Mrs. Simmons passed the cake to the guest. 'Sylvia made it," she said, with a fond glance at her eldest daughter.

"Indeed," said John, "and did she make that delicious bread?"

"No," said his hostess, a little shortly, "Judith made that."

"Now, if you will go in the sitting-room and wait a little while, I will be all ready," said Sylvia when they rose from the table. "If you can help me, mamma, it won't take so long."

Thus Judith was left alone with the dishes. When she was alone it was her habit to sing to herself. So, forgetting all about John Harwood, she was soon singing happily about her work.

Suddenly a strong bass voice joined in. She looked quickly toward the sitting-room, but no one was in sight, so, with only a slight hesitation, she kept on, feeling a thrill of delight as her clear soprano was supported by that vigorous bass.

When the song was ended John appeared at the door. He looked at Judith with interest.

"I did not know you could sing," he said.

"I don't think you know it now," she said, deprecatingly. "I just hum a little to myself once in a while, but the others don't like to hear it."

"You ought not to disparage your ability. I took a few lessons once, but if I'd had as good a voice as you I would not have given it up."

"I wish I could take lessons, but I never had time. I know I don't do it right, and that is why I never want any one to hear me. I forgot you were listening."

Just then Sylvia appeared.

Judith was left with her dishwashing. Once she passed the back of her hand across her eyes and the hand was quite wet.

It was the next Wednesday but one, and Sylvia and her mother and John Harwood were in the sitting-room. Judith was getting supper in the kitchen. When it was half-past five she went out into the back room and put on an old calico skirt, a jacket of antiquated fashion, and on her head a huge sweeping cap.

Then she took the milk pail and lantern and went out to the barn. 'There'll be time for me to get through before he starts out, and I can get these things off. I should hate to be seen in such regimentals."

Fifteen minutes later John Harwood went to the barn. Sylvia and her mother had failed to find the milk pail, so he had taken the next best thing, a large tin pail with straight sides and no strainer. The lantern was missing also, but he said he could manage without it.

When he got to the barn he saw in the light cast by the lantern a grotesque figure seated beside the cow.

"What are you doing?" he asked as soon as he had recovered from his first surprise.

"Milking," was the brief answer.

He listened a moment. "I—I beg your pardon," he said then, "but you are not milking, you know—and you are crying."

She sprang to her feet and faced him. The pail fell with a clatter and the cow kicked spasmodically.

"Of course I'm crying," she sobbed. "Who wouldn't cry to find they hadn't wit enough to milk a horrid old cow? And—and she kicked me over three times. Why, Mr. Harwood, what are you doing?"

"I am just putting my arm about you, and as it is going to stay there for a while you needn't look so horrified. First let me get my handkerchief and wipe away these tears—that is better. Now, I want to know why you were trying to milk that cow."

"Because I hate to have you do it, and I couldn't stand it any longer."

"But I don't mind doing it."

"Well, I mind having you. Now, please let me go, or you will be late to that party."

"What party?"

"Why, over at Upham Center. Aren't you going to take Sylvia?"

"No, I am not. I did think of it, but as long as I did not say anything to her about it I am not going. Not that I should feel obliged to go, even if I had said anything—now. Do you want to know what I am going to do this evening?"

"Yes."

"I am going to stay and visit you. And before I go home you are going to promise to marry me."

"Why—why, John!"

"Well, what?"

"I thought—I have been trying all the time to think of you as a brother-in-law."

"Trying, Judith?"

"Yes, because—oh, John, don't make me say it."

"And, Judith," said John, "I believe I have loved you all the time, only you have been so shy and reserved that I didn't know it."

The cow stirred uneasily. Judith gave a happy little laugh. "Oh, John," she said, "aren't you ever going to milk that cow?"

"Yes, I am. And, what is more, I am going to milk her every time I come here, and I am coming oftener now. So if you feel very badly about it, you can set the day just as soon as you like."

"Perhaps I shall learn to milk yet," she called back as she went hurrying to the house. She took off her skirt and jacket and went to look after the neglected supper.

"You are getting awfully careless," her mother complained. "A little more and that hot water would have gone on my foot."

"I should think you were crazy," said Sylvia, a little later. "You go flying around, singing some idiotic song, and what under the sun you have that hideous sweeping cap on your head for is more than I can see."

Judith put up her hand and snatched it off, coloring guiltily.

"Seems to me it takes John forever to milk to-night. We'll be late to the party if we don't look out," Sylvia said, crossly.

"And Judith is late about supper, too," said Mrs. Simmons. "I think you had better put on your dress before supper. It will take longer, being a new one, but I will help you."

When they were seated at the table Sylvia was very pretty in her smart new gown, but, somehow, she could not get John to look at her. When his eyes were not on Judith they were on his plate.

When they were through supper John stepped to Judith's side.

"Sylvia," he said. Sylvia colored slightly; he did not often call her by her first name. "Sylvia, can't you do the dishes to-night? Judith and I are going into the other room. You see, we have rather a good deal to say to each other, being just engaged."—Chicago Record-Herald.

HERE IS THE MODERN ANANIAS.

He Was Among Strange Liars, but He Made Them Ashamed.

A tall, thin man, better known on the St. Lawrence in the bass season than anywhere, stepped from the steamer one noon recently at Santa Catalina Island, California. The boatmen who own the stands along shore, and who have a keen eye out for a prosperous-looking visitor with a rod, did not give him a second glance. A dark-eyed tuna fisher moved up to give the stranger a seat, and then continued his conversation. Some one had just landed with a catch of forty barracudas, and he was discussing it.

"But you should see the Florida barracudas. I killed one in Bahama some years ago that measured eighteen feet in diameter."

The stranger shifted his seat nervously.

"Its teeth were like young bowie knives, and dozens of men are killed by them every year. This one I took on a reel; it was a sort of arrangement fixed into the stern of the boat and turned on a crank, and when we hooked the fish I began to work on it, and for ten hours I wound and worked, during which that barracuda towed our boat from Bull Pup key to Punta Gorda, a distance of ten miles, where we finally killed it on the beach. It weighed 290 pounds, and its bite was deadly poison."

"That is a remarkable story," said the stranger, who did not seem especially pleased, "but it is nothing to what I have seen in the Gulf of Panama, where the sharks are so thick that when you go fishing you have to dynamite the bay to kill them off. But what I was getting at was the story of the first mate of the Mozambique. She came in with flag at half mast, and it seemed that the mate had put after a whale. She was a whaler, and had fired at a big sulphur bottom, the gun harpoon striking it on the tail, passing directly along the spine, and coming out at the mouth. When the animal was hit it turned around so quickly to see what had struck it that the harpoon, in coming out of the whale's mouth, struck the unfortunate man and killed him."

The stranger rose and passed on in silence.

Longevity of Quakers.

The remarkable longevity of the members of the Society of Chosen Friends in Great Britain has been fully sustained during the last year, the average age at death in the United Kingdom, from 1 to 100 years, being 61 years 7 months and 7 days. Two women members died over 100 years old.

Some women, when they talk gossip, have the intense look in their eyes that distinguishes a miser when he counts his money.

We often wonder if anyone ever really liked lettuce.

HIS DISTINGUISHED VISITOR.

A Pompous Reception That Amused President Grevy.

M. Severiaro de Heredia, the minister of public works in the Rouvier cabinet during the presidency of M. Grevy, belonged to the famous naturalized Cuban family, of which another member, the Comte de Heredia, is one of the immortal 40 of the French academy. Most of the family have dark spins, suspiciously mulatto, and other negro characteristics. This has, however, in nowise interfered with their standing in Paris, where several of the family have long been prominent. The former minister had also been president of the municipal council of Paris and a deputy from a Paris arrondissement.

His dark skin led to a curious mistake at the Elysee the day after he had been appointed a member of the Rouvier cabinet. According to immemorial custom the new ministers called singly on President Grevy to pay their respects. On the same day, as it happened, an official visit was expected from the president of the republic of Haiti, who was to present his letters to the president. When M. de Heredia arrived in the court of the palace, the minor officials stationed there, who were not familiar with the new minister's features, judged from his complexion that he was the Haitian dignitary. The courtyard became very animated with guards hurrying to and fro to their places, while one of the officers of the president's military household went to inform M. Grevy of the distinguished visitor's arrival.

M. de Heredia received all this with dignified composure, for, never having been a minister before this, he thought this ceremonial was probably the usual one. Finally, with the beating of drums, he was ushered into the reception room, where the chief executive stood ready to receive him. "What," cried he, "it's only you, Heredia!" "Why, yes, M. le President," replied the puzzled minister. Grevy began to laugh. "Well," he cried, "you have been minister only 24 hours and have succeeded in turning my house upside down. What will you do later on?"

Printing Without Ink.
A company has been formed to control the process of printing without ink, and in a short time it is expected that old methods will be revolutionized. There is one thing, however, that has resisted all innovations; that is, Hostetter's Stomach Bitters. It is a wonderful medicine for dyspepsia, indigestion, biliousness, insomnia, constipation and nervousness. It also prevents malaria, fever and ague. Try it, and you will not be disappointed.

The only way you can convince a girl that kissing is dangerous is by showing her.

Adams' Sarsaparilla Pills
act gently and promptly on the liver, kidneys, stomach and bowels. They cure sick headaches, constipation, biliousness, stomach disorders, sallow complexion and are the only pills that will also purify and enrich the blood. Sold in 10ct. and 25ct. boxes by all druggists. Every box guaranteed.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

A sunny mood should be long drawn out.

Out-of-Tone Conditions

Marked by failure of appetite, loss of vitality, that tired feeling, bilious turns, dull headaches, indigestion and other stomach troubles, as well as by pimples, blotches, boils and other eruptions, are all referable to an impure or impoverished condition of the blood.

Hood's Sarsaparilla

Corrects all these conditions — it's the medicine that makes the blood pure and rich — the peculiar tonic that strengthens every weak function and builds up the whole system.

"We think there is no medicine that can equal Hood's Sarsaparilla. It has cured me of rheumatism and relieved my husband of catarrh. I have tried it for boils and have found it fine. When we have that tired feeling we take Hood's and in a short time the trouble is gone." Mrs. J. A. Reynolds, Stockton, Cal.

Testing the Schoolmaster.

In the town records of the city of Boston there is a curious passage which records how a schoolmaster was examined and what happened. The manner in which the visit of inspection is recorded makes one incline to the view that the unlucky schoolmaster may not have had fair play, although if he was really inefficient he may be said to have been judged by his peers.

In the record for the 22d of May, 1722, it is set forth that:

"Coll Pen Townsend, Jeremiah Allen Esqr, & John Edwards together with the Select men, Vissitted the wrighting School at the Southerly End of Boston on Thirsday the 24th apll 1722. and Examined the Scholars under mr Ames Angers tuition as to their proficiency in Reading writing Scyphering & the masters ability of teaching & Instructing youth his rules & methods therefore And are of Opinion That it will be no Service to the Town to Continue. mr anger in that Employ."

Whereupon it was voted that the said Mr. Ames Anger should not continue master of the "Said South school."

It is true that nothing is said of the methods of spelling inculcated at the "wrighting School," and it is also possible that a clerk rather than the committee was responsible for the errors of the record, but there is certainly something absurd in the passage as it stands.

Maddened by Solitude.

The Canadian northwest is a probationary haven for wealthy young Englishmen of nomadic instincts. Numbers of them annually purchase hunting and camping outfits from the Hudson Bay company and strike into the barren lands to prospect for minerals or take up land on the prairies. But most often they return to the civilization of the towns with nothing but hard words for the wilderness.

The construction of the Temiscaming railroad induced the younger son of one wealthy English family to take a trip into that outlandish district. He returned to Ottawa a disappointed man. "It's the most desolate country you can imagine," he said to his friends. "I have been out prospecting sometimes for a whole day without seeing a sign of animal life. Once the only living thing I came across was a bird, and it was so disgusted that it was trying to knock its brains out against a tree."

He had seen a woodpecker.—New York Commercial Advertiser.

THE SALESWOMAN.

WHY IT IS SOMETIMES HARD FOR HER TO BE PLEASANT.

A Clerk in a Minneapolis Dry Goods Store Tells How She Became Able to Perform Her Duties Easily.

From the Minneapolis Journal.

Have you ever stopped to think that the position of a saleswoman in a large dry goods store is a particularly trying one? Working long hours, being compelled to stand most of the time, and being expected to look pleasant regardless of suffering which she may be enduring, is it any wonder that weak, nervous women find it impossible to follow this occupation? Everyone will be interested in the experience of Miss Nellie M. Tomlinson, of 3118 Minnehaha avenue, Minneapolis, Minn., who is a clerk in one of the large dry goods stores of that city. She says:

"When I was eight years of age I had the scarlet fever and it left me with weak kidneys and a complication of diseases. I was nervous and finally became so bad that I left school and did not go for an entire term. I had headache all the time and was too irritable to talk with any one. The least excitement seemed to make my heart flutter and a fainting spell would follow. At times I became so dizzy that I would have to sit down until the feeling passed away. My blood seemed to have turned to water and I had no color whatever in my face. I was a mere skeleton and had to lie down several times during the day. I had one of the best physicians in the city, but he did not help me.

"My parents read about Dr. Williams' Pink Pills for Pale People in one of our city papers and thought it would be wise for me to give them a trial. I began to get better when I had taken the first box and by the time I had used two and a-half boxes I was cured. I can perform with ease my duties as clerk in a dry goods store. I was never so well as I am today and it is all due to Dr. Williams' Pink Pills for Pale People." Signed,

NELLIE M. TOMLINSON.

Subscribed and sworn to before me this 26th day of December, 1900.

R. M. Thompson,
[Seal] Notary Public.

WHAT CAUSES DANDRUFF.

Greatest European Authority on Skin Diseases Says It's a Germ.

The old idea was that dandruff is scales of skin thrown off, through a feverish condition of the scalp. Prof. Unna, Hamburg, Germany, European authority on skin diseases, says dandruff is a germ disease. The germ burrows under the scalp, throwing up little scales of cuticle, and sapping the vitality of the hair at the root. The only hair preparation that kills dandruff germs is Newbro's Herpicide. "Destroy the cause, you remove the effect." Not only cures dandruff, but stops falling hair and causes a luxuriant growth. Delightful hair dressing.

Columbus Buggy Company,

Market Street, between 9th and 10th, San Francisco. Holding big clearance sale preparatory to going into wholesale business exclusively. Write for the kind of vehicle you need, and a cut accompanied by price will be mailed. We ship 50 ft. cars, and it costs us only about $10 to lay a vehicle down in S. F. This is the distributing house for territory tributary to the port of S. F., including Australia and the Islands. Our reason for doing only wholesale business in the future is to protect our dealers. At this particular time you can buy a fine vehicle at about the same price you pay for a shoddy article with four prices added.

STANDARD OIL COMPANY

He thinks he lives, but he's a dead one. No person is really alive whose liver is dead. During the winter most people spend nearly all their time in warm, stuffy houses or offices or workshops. Many don't get as much exercise as they ought, and everybody knows that people gain weight in winter. As a rule it is not sound weight, but means a lot of flabby fat and useless, rotting matter staying in the body when it ought to have been driven out. But the liver was overburdened, deadened—stopped work. There you are, with a dead liver, and right now is the time for resurrection. Wake up the dead! Get all the filth out of your system, and get ready for the summer's trials with clean, clear blood, body, brain free from bile. Force is dangerous and destructive unless used in a gentle persuasive way, and the right plan is to give new strength to the muscular walls of the bowels, and stir up the liver to new life and work with *CASCARETS*, the great spring cleaner, disinfectant and bowel tonic. Get a 50c box to-day—a whole month's treatment—and see how quickly you will be

BROUGHT BACK TO NEW LIFE BY

Cascarets
LIVER TONIC
BEST FOR THE BOWELS

10c. 25c. 50c.
ALL DRUGGISTS.

NEVER SOLD IN BULK.

CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking CASCARETS to-day, for you will never get well and be well all the time until you put your bowels right. Take our advice; start with CASCARETS to-day, under an absolute guarantee to cure or money refunded. 408

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith and will sell CASCARETS absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied, after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of CASCARETS. Book free by mail. "IF ALL MY SHIPS COME HOME."

If all the ships I have at sea
Should come a-sailing home to me,
Ah! well, the harbor would not hold
So many ships as there would be,
If all my ships came home to me.

If half my ships came back from sea
And brought their precious freight to me,
Ah! well, I should have wealth as great
As any king that sits in state,
So rich the treasure there would be

In half my ships now out at sea.
Should come a-sailing home to me,
Ah! well, the storm clouds then might frown,
For if the others all went down,
Still rich and proud and glad I'd be
If that one ship came home to me.

But if that ship went down at sea
And all the others came to me,
Weighed down with gems and wealth untold,
With honor, riches, glory, gold,
The poorest soul on earth I'd be,
If that one ship came not to me.

O skies be calm. O winds blow free,
Blow all my ships safe home to me.
But if thou sendest some awrack
To never more come sailing back,
Send any, all, that sail the sea,
But send my love ship home to me.
—Ella Wheeler Wilcox.

SOMETHING ABOUT THE GAMES FOR THE LITTLE GIRLS.

It is not only the knickerbockered small boy who has games of his own. Girls, too, have fads and occupations, though all of them are not monopolized by doll babies. In fact, their historic devotion to these painted beauties seems to be lessening. Dolls of sawdust and paper are good for rainy days and for the twilight hours before or after dinner, when one is not allowed to go out. But the doll day is decidedly on the decline. It is better for girls, as for boys, to be in the open, to chase butterflies with nets, to climb trees even at the expense of clothing, and to jump and frolic with all their might.

There is more to be discovered with the ants, the bees, the birds, the flowers, or in the companionship of a wise dog, than in all the sawdust and china-eyed babies in the world.

However, there are certain games sacred to our grandmothers and still kept up in a measure by little girls, being revived from year to year. Some of them are silly. Most of them date from the time when boys and girls did not study from the same books, and when it was reasoned out that even games must be feminine. Now we know better. The same sports that develop the little male animal are good for little girls, too. Girls now play baseball and even football.

First and dearest of all the girls' games comes tag. The children range in a row and somebody counts.

Eeeny, meeny, miney, mo,
Catch a nigger by the toe,
If he hollers let him go,
Eeeny, meeny, miney, mo.

The last "mo" is "it," and the game begins with a nimble scattering and a shrill squeak. The lines are silly and ungrammatical, and the kindergartners do not approve of them because they are such meaningless jabber, but the old doggerel has been used for so many years that very likely its meaning, if it ever had any, has all been rubbed off from constant use, like the red on Gladys Gwendolen's waxen cheek. In constant repetition there's a certain wear and tear.

Heaven knows if the Scotch had anything to do with hop-scotch or not. There's nothing in a name, anyway. To play the game a complicated scheme is chalked on the concrete walk. The squares are quite large and numbered, and the hopping begins. It is certainly good exercise. A little chip or stone must be kicked from square 1 to square 2 and so on. It must always be done with one foot and the other foot must never touch the ground. Neither must the chip stop on one of the numerous chalked lines, and the hopper must never twinkle a toe on one of these lines, either. It's all very complicated and jarring. Almost everything is prohibited in hop-scotch.

Jumping rope is left to girls, too. Doctors have inveighed against it, but all in vain. The girls are still jumping. Whenever you see boys spinning tops you will find girls jumping rope, and probably the benefit, so far as exercise goes, is on the side of the girls.

It is a matter of pride to be able to jump to twenty or forty or sixty, according to age and strength. How the braids bob and the curls fly! They hold their hats on by main force, while the rope whips the ground beneath the flying feet. There is a double rope called the Spanish rope, which calls for great swiftness of eye and lightness of foot. There is a slow motion of the rope from side to side, called making the cradle. Anybody can jump that.

Whether you are a girl admitted to the blessed privilege of overalls, or whether you are a girl obliged to look after the unbroken continuity of skirts and stockings, the pleasant spring days are the time for fun. The days are so short and the plays are so many that the little folk stuff themselves at night, after all the vigorous exercise, and go to sleep with skins tight as any drum.

A DESERTER'S FATE.

CECIL BUTTERWORTH and Guy Chadwick had been chums in college. The acquaintance formed there was cemented by time into a fast friendship, and when war was declared against Spain both offered their services to Uncle Sam. But this friendship, so strong, was one of diametrically opposite natures. Equal opportunities had been given the two men to secure shoulder straps. Butterworth alone took advantage of them. "The Government has need of educated men as officers," he said, in accepting a lieutenancy. The sentiment of his friend was: "If the country has need of my services, I give them gladly, but a gun shall rest upon my shoulder; I care not for the honors of war." For this speech Private Chadwick was highly esteemed by his comrades in Company B, of the Ninth.

Life in the home camp was drudgery to Lieut. Butterworth. Chadwick, as eager as any to strike a blow at the "dirty Spaniards," as he termed them, took the matter more philosophically. He submitted to the inevitable gracefully. When, at last, the order to break camp was given, there was some regret that the Philippines were the objective point. Nevertheless, it was a jolly crowd that unpegged their tents and rolled their blankets, preparatory to the departure for the coast.

The trip across the continent and the life on the transport, lessened, in a measure, their eagerness for action. To stand once more on firm, steady land, with no longer the pitching, rolling deck beneath their feet was contentment for a time. Barrack life in Manila was begun. Then a new element came into the lives of Lieut. Butterworth and Private Chadwick.

Nina was a Filipino girl. She was the daughter of an insurgent leader. Lieut. Butterworth and Private Chadwick had fallen prey to her snapping black eyes and pretty face, smiling coquettishly beneath a crown of inky black hair. She fascinated one, charmed the other. Butterworth was head over heels in love with the girl. Chadwick, less impetuous, was caught by her sweet simplicity. Yet their friendship did not suffer; rivalry, rather than jealousy, was the keynote of their relations.

"Guy," said the lieutenant, one day, forgetting rank in a burst of confidence, "I can't get away from those black eyes, they follow me everywhere, they are in everything I see, but, someway, I doubt her sincerity."

"I have my doubts, too," returned Guy, "but knowing how much you care for Nina, I have refrained from mentioning them. I have a fancy myself for the girl. Nevertheless, I believe that she is trying to inveigle us into joining the insurgent cause."

"Oh, Guy," exclaimed Cecil, "Nina is too loyal a girl to conspire for our ruin in such a manner. I laud her strong belief in her father's cause. But no, not that from little Nina."

Private Chadwick said nothing. He prayed for a call to the field to sever this attachment. His hopes were realized—but partially. The Ninth was ordered to join in the chase of the insurgents, but the activity failed to restore to Lieut. Butterworth his equilibrium of mind. Military duties now precluded further intercourse between the two friends. In the excitement of battle Private Chadwick gave the black-eyed Nina but a small place in his thoughts.

Private Chadwick lounged carelessly in front of his tent admiring the beauties of the setting sun, which painted the horizon with glory. He was thinking of Manila and, for the first time since he had taken the field, of the bright-eyed Nina. He wondered if Butterworth had forgotten her. It was pleasant to recall those happy days.

"S-s-s-s-t."

The sound interrupted his revery. A dirty, ragged individual stepped from behind the tent. Looking cautiously to the right and left he slipped a grimy bit of paper into Chadwick's hand.

Guy hastily tore open the note. He read:

My Dear American Soldier: Prove to me that you love me. Join us to-night. Papa will make you a big officer.

NINA.

A pang went to his heart. A smouldering fire flamed up. In spite of this evidence of her insincerity, Guy now realized that his feeling for her was more than mere interest in the girl. He was disgusted to discover his weakness.

"Get out of here," he said in a harsh voice. "Go tell the one who sent you that my flag is dearer to me than all the world, and before I leave it I will die. Go."

The effort cost him pain. He crawled back into his tent a miserable man. The sun had set.

"Private Chadwick's sick," commented his comrades.

One ran with the news to Lieut. Butterworth's tent. It was empty.

"The lieutenant went off with a dirty-looking beggar," said the guard. "One of his charities, I guess. Said he'd be back before long."

Private Chadwick knew otherwise. He was torn one way by jealousy toward his erstwhile friend, another by anger at the girl who had played him false. He worked himself into a fever. His comrades attributed it to sorrow for his lost friend, for, after a fruitless search, it was said that Lieut. Butterworth had been trapped into an ambuscade.

In the gray dawn of morning Private Chadwick paced slowly up and down, with his gun on his shoulder, doing sentry duty. He was still weak from the fever. A rustle, as of some one moving, caught his attention.

"Who goes there?"

His challenge went unanswered. He espied a form disappearing into a clump of bushes.

"Bang." He fired—but into the air.

The corporal of the guard came running down the line. He received the sentry's report: "Marauding party of 'devils.'" But Guy did not tell of all he saw. In the disappearing form he had recognized his deserter friend.

With hasty formation Company B was sent forward. Keeping under cover of the trees, they halted on the edge of a clearing. Not more than a thousand yards away, 900 Filipinos, under the leadership of a young officer in the uniform of the United States army, were stealthily advancing.

"Careful men. Don't fire. Wait for orders," cautioned the officers.

The American lines deployed and now a volley carried death into the opposing force. The battle raged back and forth. Scattering were the shots which returned the regular fire of the boys in blue. The insurgents became disorganized. Their retreat became a rout.

The battle was over. The soldiers returned victoriously rejoicing. As they picked their way over the spot of the first encounter, they came upon a sad scene. In the midst of the dead and dying, lay the lifeless body of a pretty black-eyed Filipino girl, beside the dead deserter lieutenant, and there, with his head buried in his arms and weeping like a child, was Private Chadwick—he mourned the loss of friend and sweetheart.—New York Evening Sun.

MONEY WITH A HOLE IN IT.

Uncle Sam to Coin a 3-Cent Piece Like a Dollar.

Uncle Sam, it is said, is to coin a new 3-cent piece. The new coin is to be of nickel, and its radical difference from all other coins with Uncle Sam's mint mark on them lies in the fact that it will have a hole in the center. It is the supposition that this hole in the middle will enable the hurried handler of the coin to detect its value by the sense of feeling. Some such safeguard is considered necessary, for the reason that it is to be about the size and weight of the present nickel 5-cent piece. The size of the center hole in the proposed coin will be large enough to make it merely a ring of metal, this hole being about one-half of the diameter of the coin. It will prevent one of the difficulties which handlers of small silver coins were troubled with when the metal money began to circulate after the era of paper money. The small coins, which got into the hands of children, and some classes in the remote districts, were treated as curiosities and great prizes. To secure their safe keeping a favorite method was to punch a hole in them and tie them on a string. This destroyed the circulation value of the coins, and dealers who subsequently took them in had to stand the loss, a fixed scale being finally arranged for deduction for punched dimes, nickels, or other pieces. The new piece can be strung without injuring it.

It is the general opinion of Government officials that there is no crying need for an additional subsidiary coin of small value and large bulk and weight, the 5-cent nickel piece and the copper 1-cent piece being considered ample to meet the wants of the people of the West. Bank people and treasury officials have a very lively conception of the bother there is in handling the present 1-cent pieces, the larger institutions getting hundreds of pounds of them sometimes on hand. The weight as well as bulk cuts quite a figure in these cases, and the addition of another intermediate between the 5-cent piece and the cent piece would, it is believed, but add to this trouble. Vault room for storage purposes and draying facilities would have to be provided in proportion.

The old 3-cent silver piece which was coined several years ago did not meet with popular favor, and it was found impossible to keep it in circulation. The sub-treasury people fear that the attempt to put out a new one will be but a repetition of this experience.

In the West and Southwest the 1-cent piece was slower in coming into favor than in the East, and the coinage of the new piece is supposed to be to meet a demand which the 5-cent piece is too large for and the 1-cent too small. This would indicate if it is correct that the Western people are relinquishing their old idea that nothing less than 5 cents was worth counting in a business transaction.

WRITES WITH BOTH HANDS.

Wonderful Feat of Penmanship Performed by an Australian.

Wrapper writing is, it would seem, a popular way of earning a livelihood with the inmates of Rowton house, a 6-penny hotel. Here is an amusing story of the perfection to which it may be brought by practice and a strong will.

"There is a tradition lingering among the elder brethren of the wrapper writing profession to the effect that once upon a time, when the work was better paid than now, a young man from Australia turned up and ventured as a last resource into their sphere of labor. He spent his all and found himself stranded until funds should arrive from the antipodes. So, on the suggestion of an acquaintance, he applied for a job at the world-famed firm of Schmidt & Co. On being duly installed and supplied with 500 envelopes and some pages from a directory he looked around and asked for a pen.

"'But you have one already,' said the young man in authority.

"'I want two,' said the Australian, and an interested and obliging fellow scribe supplied his need. The scene which thereupon ensued baffles description, for the colonial, separating the pile of envelopes into two equal lots, began copying the addresses by writing simultaneously with both hands. So runs the legend, at least, and, furthermore, it is averred that his rapidity was such as to put the 'sloggers' to shame. Fifty pens dropped from the nerveless grasp of those who but a minute before had been writing against time and as if for dear life. A hundred eyes were fixed in astonishment on the unknown one. Presently the young overseer who superintended the labors of many old enough to be his grandfather rose and timidly said he would consult 'the governor.' The latter arrived, and, the situation being explained, the Australian was turned into a loose box all by himself and fed with another thousand or so of envelopes. At this rate he earned enough in two or three weeks to enable him to last out comfortably till his remittances arrived; then he went home and Schmidt's knew him no more. We asked the old gentleman who told us this yarn to fill his pipe and have another cup of tea, for we thought he deserved both."—London Telegraph.

DEAN FARRAR.

Famous Churchman and Author Reported Critically Ill in London.

The Very Rev. Frederick W. Farrar, dean of Canterbury, whose critical illness was recently reported from London, is accounted the most eminent and eloquent pulpit orator in England. Dean Farrar is now 70 years old. He was ordained deacon in 1854 by the Bishop of Salisbury, and three years later was admitted into holy orders by

DEAN FARRAR.

the Bishop of Ely. Until 1871 he was one of the masters at Harrow, and for five years thereafter was head master of Marlborough College, a position he held with great distinction. Among his other offices was that of honorary chaplain to the Queen and chaplain in ordinary. In 1883 he was appointed archdeacon of Westminster, and in 1895 he was given his present office in the church. Dean Farrar has written voluminously upon religious and philosophical topics, but his fame will rest upon his "Life of Christ," which was published in 1874.

RECENT JUDICIAL DECISIONS.

Negligent handling of a derrick near a railroad track by employes of the State is held, in New York, N. H. & H. R. Co. vs. Baker (C. C. A. 2d C.), 50 L. R. A. 201, not sufficient to make the railroad company liable for injuries to a passenger on a train who was injured in consequence.

Municipal grant to a street-railway company of the privilege of using its streets for the conveyance of electricity is held, in Clarksburg Electric Light Co. vs. Clarksburg (W. Va.), 50 L. R. A. 142, to constitute a valid franchise and contract within the protection of the Federal constitution; but an attempt to make such franchise exclusive was held void.

The administrator of one who during the owner's lifetime died in possession of chattels, under an agreement by which she was to have the use of them during her life, and that of the owner, is held, in Salter vs. Sutherland (Mich.), 50 L. R. A. 140, to have no title which will support an action for their possession against a third person who wrongfully took possession of them after the death of the bailee.

Heart Disease from Bicycling.

A curious effect of hard cycling is reported from France. Out of the last batch of conscripts no fewer than eight widely known cyclists were rejected as being physically incapable of military duty. Diseases of the heart were the chief reasons for their rejection. This causes profound astonishment, all classes thinking them at least fit to be accepted as military cyclists.

MONEY IN PEANUT-GROWING.

Tons of Them Raised on a California Ranch at Good Profit.

"Yes, I raise my stock and sell it," said a Santa Anna (Southern California) peanut dealer and rancher. "And say, you tourists have queer ideas of things.

"One man came out to the ranch and asked to see my peanut grove—that's a fact, and almost every tenderfoot thinks that peanuts grow on trees. I have been raising peanuts some years now, and my humpbacked nuts are the vogue—at least around here. Why they grow humpbacked I don't know; perhaps the soil is so rich they try to grow too hard.

"You would be surprised to see a peanut ranch," continued the owner of one, "if you have never seen one. It looks like a field overgrown with weeds.

"The plant is low and clings to the ground, running along it, and when the nuts begin to appear they try to bury themselves, and by the time they are ripe they are several inches underground; so peanuts are dug something like potatoes.

of peanuts for a nickel, but if they knew that a bag of peanuts doesn't cost five mills they wouldn't think so.

"But I think there is more money in peanut oil—you know, perhaps, that a good peanut is from 25 to 50 per cent

"They are easy to harvest. When they are ripe we run over the vines with a digger, which hauls up the vines, or they can be raked up and arranged in rows, and then comes the hard work—picking them.

"Each peanut is attached to the root by a stem, and a great many have to be picked to make a ton, and a ton of peanuts fills a heap of space. But, after all, raising peanuts is an easy matter. They require but little care and seem to grow well in sandy soil.

"I can sell them to the trade, or roast them myself. I generally sell about half my crop to San Francisco at from $2 to $5 per bushel, depending upon prices, and roast the balance, and you would be surprised how many I sell.

"People think they are getting a lot oil, and good oil, too. After it is deodorized it is good to eat. In Italy about all the poor people get in the way of oil is peanuts.

"You have no idea how many peanuts are sold in this country, but it runs up into thousands of tons. They are raised in all the Southern States, where they are called groundnuts and gouba peas, but they cannot supply the demand, and vessels come from Italy and South America with hundreds of bags of them, and that is where the best peanuts come from—South America and Africa."

NOVELIST FOR GIRLS.

Miss Yonge, the Famous Authoress Who Has Passed Away.

Charlotte Mary Yonge, the author, who died at Otterbourne, Winchester, was born in 1823, and had never married. Her first novel, "Abbey Church," was written before she was twenty-one. "The Heir of Redclyffe," with which she made her greatest success, was published nine years later, in 1853. This book went through many editions and

MISS YONGE.

was translated into seven languages. Miss Yonge's faculty for interesting young girls in her novels and the high moral tone which permeated her work were largely responsible for her success. In her forty books there is not a line to which the most exacting mother could object, and a religious spirit runs through all of her works. These characteristics gave her novels for girls the approval of mothers and accorded them a welcome in every household. Three years ago the Princess of Wales and the Archbishop of Canterbury headed the movement to establish a university in England in honor of Miss Yonge in recognition of her "great service as the pioneer of that religious and high-toned literature for young people which for the last fifty years has been the special glory of England and the admiration of America and other countries." Miss Yonge was the daughter of William Cromley Yonge, an army officer and justice of the peace, and Frances Mary Bargus, and was educated at home by her parents.

Strange Behavior.

A mirth-provoking scene once took place in the palace of a former Duke of Hamilton.

The Duke had invited one of his neighbors, a plain-spoken laird, to stop at the palace for luncheon after the conclusion of a business transaction.

The laird was not used to the luxuries of life, and watched with an impatient eye the flittings about of a liveried servant who seemed to be everywhere at once, anticipating the laird's wants in a way that struck the rustic as positively uncanny.

At last the guest turned deliberately about in his chair and addressed the servant in a tone of considerable irritation:

"What are ye dance, dance, dancing about the room for, man?" he demanded. "Can ye no draw in your chair and sit doon? I'm sure there's enough on the table for three."

Glad that the Noise Was Heard.

The Mistress (entering the kitchen)—Jane, didn't I hear a dish break a minute ago?

The Maid—I hope you did, mem. It made noise enough. If you hadn't heard it I should have thought you were getting deaf, and that, you know, would be awful.—Boston Transcript.

MANCHURIA, THE CHINESE TERRITORY COVETED BY RUSSIA.

By the Chinese Manchuria is called the country of the Manchows, or Manchus, an epithet meaning "Pure," chosen by the founder of the dynasty which now rules over Manchuria and China as an appropriate designation for his family. Manchuria as it has existed for upward of two centuries—that is to say, since it has had an historical existence—is a tract of country wedged in between China and Mongolia on the west and northwest, and Corea and the Russian territory on the Amur on the east and north. Speaking more definitely, it is bounded on the north by the Amur, on the east by the Usuri, on the south by the Gulf of Leaou-tung, the Yellow sea and Corea, and on the west by the river Nonni and a line of palisades which stretch from Kwan-chung-tsze to the Great Wall of China. The territory thus defined is about 800 miles in length and 500 miles in width, and contains about 390,000 square miles. It is divided into three provinces, viz., Tsitsihar or Northern Manchuria, Kirin or Central Manchuria, and Leaou-tung or Southern Manchuria. Physically the country is divided into two regions, the one a series of mountain ranges occupying the northern and eastern portions of the kingdom, and the other a plain which stretches southward from Moukden, the capital, to the Gulf of Leaou-tung.

MAY BE CUBA'S FIRST PRESIDENT

T. Estrada Palma Is Prominently Mentioned for This Honor.

When one considers the sacrifices T. Estrada Palma has made for his beloved Cuba it does not strike him as strange that there should be a demand from the Pearl of the Antilles that he be the first President. It is possible that this wish of many Cubans will be carried out and that the modest, unassuming and genuine patriot will be the first head of the republic he did so much toward creating.

Of ancient Castillian descent this man was born in Cuba in 1835, studied law in Spain and determined when a

T. ESTRADA PALMA.

youth to free Cuba. In 1877 he was elected President of the Cuban republic—which was a republic in name and not in fact, and after his election served in the field during the ten years' war in which 200,000 Spaniards fell. His estates were confiscated and he spent seven years in a Spanish prison. He was for several years a prominent man in Honduras, where he served as postmaster general. In 1883 he came to the United States, established a school for boys in Orange County, this State, where he remained until the breaking out of the Cuban insurrection, when he went to New York and became the head of the junta. He has spent thousands of dollars—the accumulations of years of industry—for the benefit of his native island.

WHITE INDIAN FOR WOMEN.

It Attracts the Sex to a Particular Store for Their Cigarettes.

There is a white Indian enrolled as a permanent resident of an uptown block in Atlanta, Ga., in a neighborhood where good clothes obtain and the street conversations are grammatical, if not uplifting. This Indian is usually to be found standing outside the shop of a purveyor of tobacco to the fashionable. At other times he is inside.

A man who entered the shop the other day bought his cigar and casually inquired as to the color of the wooden sign. "I have seen a good many cigar store Indians," he said, "but this is the first white cigar store Indian I recollect. What is the idea of having him painted this pure color?"

"Why," said the proprietor, hesitatingly, "why, well, if you must know, I do it to attract the ladies."

"The ladies?" said the customer.

"Why, certainly," said the shopman. "The ladies smoke. As a matter of fact they are my best paying customers. When I first started in business in this neighborhood I had the regulation brown Indian in front of the store. One day a young woman came in and asked for a package of cigarettes. She went to the unnecessary trouble to convince me that they were for her brother, who was sick and couldn't come for them himself, never seeming to think that it was pretty funny for a man to be so sick he couldn't walk out of the house, and yet could smoke cigarettes. I asked her what kind he smoked and she said she had heard the name, but had forgotten. Oh, she tried hard to be foxy. But she gave herself away when I showed her one brand and she said, "Oh, that kind bites my tongue." After that she blushed and began talking about my sign.

"She said the brown Indians were so ugly, and she asked why I didn't have a white Indian. She said white was so much more gratifying to the eye, and somehow or other she conveyed the idea that if I put a white Indian in front of the shop all the other girls could come here to buy cigarettes for their sick brothers. I don't attempt to explain what her motives were, but I could see she was in favor of white. I knew who she was. Her father is a wealthy broker and she has lots of money to spend on sick brother's cigarettes, so I just spent a couple of dollars in having the Indian painted white.

"The next time she came in she didn't say anything about her sick brother, but she did comment on the changed appearance of the Indian, and she let me see she was flattered that I had taken her advice. Ever since then she has been doing a good deal to build up my business. I don't care very much now for man's trade—no offense to you, sir—and I never will let any of the young fellows get in the habit of lounging around the store. That would keep the women away, and it's their patronage that pays my rent and gives me a profit."—New York Journal.

NEVER HAD A HUG OR KISS.

Chicago Professor Hasn't Smoked, Swore or Kissed a Woman.

Prof. Alja R. Crook, of the Northwestern University, Chicago, who obtained prominence through a report that he had never kissed or hugged a woman, was afterward reported to be engaged to be married. Prof. Crook was found locked in the laboratory of the Academy of Science. "Engaged to be married? I won't talk about it!" said the professor, in gentle but firm tones. "It's nobody's business, anyway. I have been hounded since that kissing story until I have no peace."

Prof. Crook, it is said, admitted to his class that he "never swore, never tasted intoxicants, never smoked and never kissed or hugged a woman." He says he is not interested in women, and adds: "People should grasp the fact that the scientific atmosphere is inimical to the love germ. My abstentation from intoxicants and narcotics is temperamental. I have no time for love, nor any thoughts to send wandering in that direction."

PROF. ALJA R. CROOK.

Prof. Crook is 5 feet 10 inches high, gracefully formed, and weighs 150 pounds. Health shows in his skin and carriage. His forehead is high and a little narrow. His nose is cleanly cut and pronounced, his eyes of grayish blue, clear and full of expression. His lips are rather thick and close firmly, and his chin is determined.

Strontium at Put-in-Bay.

Our present supply of strontium, principally employed in the manufacture of fireworks, comes chiefly from Germany. Lately it has been reported that a large bed of strontium has been discovered at Put-in-Bay Island.

Some women would rather listen to a story about a spell of sickness than read a novel.

There is usually something the matter with a man who carries a woman's watch.

If a man has crow's feet about his eyes there must be some caws.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday.

INDEPENDENCE, CAL.,

FRIDAY, JULY 12.....1901

We read about heat prostrations and the sufferings of many people, but no adequate idea can be conveyed of the distress caused by torrid weather in a large city. In New York, for instance, where three fourths of the people are huddled together in tenement houses, the suffering can hardly be imagined. Helpless little children, dying everywhere from exhaustion, for want of the vitalizing influence of cool fresh air. Think of a night in pent-up quarters with such temperature as reported from Chicago—"In many places on the street it was 104 and 106; at midnight the mercury was soaring round 99 degrees." The heats of Yuma and the shades of Death Valley will be approved by the mortuary statistician.

The projectors of the San Pedro, Los Angeles and Salt Lake Railroad, last week continued a secret session at Salt Lake to Los Angeles. The Union Pacific had great hopes that the meeting would end in an abandonment of the Clark project, but the Montana man is a stayer. He has thus far expended over a million dollars. Sixty miles of the new road is under construction in Lincoln county, Nevada, and twenty miles of track is being laid near Los Angeles on the Terminal property, that has been acquired by the Clark corporation. The right of way from Redlands to Los Angeles has been perfected and the contract for the building of the road on this section will soon be let.

It is announced from Washington that Secretary Hitchcock is preparing to organize a forestry bureau in the Interior Department to carry out an extensive system of reforestation, somewhat on the plan successfully pursued in Germany. It was too early to go into the details, he said, but the President and his colleagues were satisfied with the practicability of the scheme and impreseed with the results which could be achieved in restoring the rapidly disappearing woodlands of the country. Nothing can be achieved, unless all restrictions against the importation of foreign timber are abolished.

On the "desert,, some six miles north of San Bernardino some parties in boring for oil struck a good flow of good, pure water at a depth of 185 feet. On the strength of this there is quite a land excitement and homestead filing is the rule. The land on the desert will produce almost anything when water can be had. If artesian water at that depth—or any other depth—can be found under any considerable portion of the desert it will be a great thing for Southern California. They know the value of water down there.

When the authorities of the San Francisco mint got through with the annual clean-up of flue dust, etc., and checked up the accounts, they counted the cash and found that six bags of gold, each containing $5000 in $20 pieces, "had disappeared as if by magic." Perhaps this case will be like some that have occurred at the Philadelphia mint and at the United States treasury—they never did find out where the money went. The jobs were slicker than that bungling business at Carson.

Few protective laws are so difficult to enforce as the game laws, yet they are among the foremost essentials. Unless they are firmly upheld American game will be exterminated. The difficulty in the case is that the mass of the public, unfortunately, are perfectly willing to satisfy their appetites for out-of-season food, regardless of the law. They give encouragement to the hunter illegally taking and killing.

Andrew Carnegie, replying to an appeal from the Mayor of San Francisco, will contribute to that city $750,000 to be used for public library purposes, provided the citizens will do the rest. The Carnegie plans are right in principle and we hope that he will live to see them all carried out to the letter.

The United States branch mint at San Francisco has just completed the largest single year's coinage of any mint in the world. The output for the year ending June 30, 1901, is $80,211,426, of which $74,482,500 is gold. The highest previous coinage of any mint was in 1881 by that at Philadelphia, $76,000,000.

While a water right cannot be patented as such, a placer claim can be taken up covering the site and this patented. That title will not preserve the water right, but will protect the site from forcible invasion while the water right is actually used.

The reports of dividend payments made during the first six months of 1901 indicate that mining, including the separate smelting and treatment operations dependent on it, is the most profitable of all the industries.—S. F. M. & S. Press.

The miner's inch is being abolished as a legal measure for water. California, Arizona and Montana have each passed laws making the cubic foot the standard measure.

It is the nation's business to strengthen the nation, and this can be done quite as surely by development from within as by extension from without.

The Kentucky distilleries have decided to reduce their output this year 25,000,000 gallons. They say that the late drop in price is a drop too much.

The proposition upon the basis of which the warfare between the bee keepers and pear growers of Kings county seems to be compromising, is that the two parties shall determine with the microscope whether the nectar or the insects contain the blight germs during the blooming season, and if they do contain these germs the bee keepers shall move the bees away from the orchard region while the bloom is on. Theoretically, this is all right, but we wonder if each party has any apprehension of the difficulty of determining this matter. A bacterium has neither dimensions nor the individuality of a bedbug, and simply compound microscopic sight will not determine its presence. However, the advantage of this issue will rest with the pear growers. When the bee keepers get their microscopes at work they will see enough to scare them wild and will probably consent to move on the testimony of their own senses.—Rural Press.

The proposition to annex Hawaii to California and make the islands a part of this State should be hailed with pleasure by the office-holders. For instance, the Bank Examiners, members of the State Board of Equalization, Railroad Commissioners and other junketing bodies could always look forward to a splendid vacation probably twice each year. Then when the Legislature is in session what a picnic the boys would have. All sorts of investigations would be in order and the mileage would be great. From the politician's standpoint these advantages would probably outweigh the objections that might be made to opening the door to the Chinese and Japanese laborers of the islands who would like to become Californians.—Tulare Times.

"Bill" Anthony's salute to Captain Sigsbee at the time of the blowing up of the Maine, which has gone into history as "Sir, I have the honor to report that the vessel has been blown up and is sinking," has recently undergone material revision. Captain Sigsbee's version of it is as follows: "I beg your pardon, sir, for running into you. The ship has been blown up and is sinking." The correction comes too late to be of any use, as the encyclopedias, child's histories and story books have incorporated the more picturesque form of expression and it will probably survive.—Chronicle.

The Agricultural Department is about to publish a soil map that will enable the farmer, wherever he is located, to determine just what crops will bring him the largest returns in money. The map is to cover the whole of the United States, and will be on such a scale that every ten-acre patch will be represented by one-eight of an inch square. But each farmer will be able to procure a chart of his own neighborhood on a larger scale, so that he can arrange his planting in accordance with the suggestions which it conveys.

It is expected that California will this year produce between 80,000 and 100,000 tons of beet sugar, while the refineries of the State have contracted for 100,000 tons of Hawaiian cane sugar. The production of beet sugar last year was 35,000 tons, and this year's output will establish a new record for the State. The value of the beet sugar production will be between $8,000,000 and $10,000,000, and it is expected to meet the entire requirements of the coast, leaving the cane sugar for shipment to the middle west.

J. Sterling Morton, who has long been an authority on tree-planting, says in a recent number of the Conservative that every twenty-four hours the consumption of wood in one form or another in this country equals all that can be produced on 25,000 acres, and that the new acreage planted every day does not exceed twenty-five acres. On that showing it will not be long before we begin to feel a shortage.

Since viewing the Sacramento, Feather and Yuba rivers, the River and Harbor Committee has reached the conclusion that the restraint of debris is a proper function of the United States government, because of its effect upon river navigation. They should also learn that the control of water has also its direct effect upon river navigation and, therefore, is within the proper province of the general government.

Press dispatches say that the gigantic steel trust has set aside a fund of $8,000,000 for the purpose of fighting strikers. It is easy for them to do that, but to allow shorter hours to the labor that created that money, never! We suggest that the trades union men come out west, raise hogadie for themselves and let those nice ducks do their own work.

The present San Pedro breakwater contractors are now dumping very nearly the amount of rock called for by the government specifications. In ten months they have dumped three times as much rock as the former contractors did in two years. That looks like business.—Herald.

Was it not a mistake to let that Ohio Republican convention be too unanimous? When an Ohio faction has no chance to crack heads in its own party, it goes off and votes the other ticket.—Call.

The Modoc lynchers are in jail as well as the witnesses. Bail has been denied them on habeas corpus proceedings. This much satisfaction, at least, outraged justice will receive.

Locators and owners of unpatented mining claims on forest reservation lands must get a permit to cut timber on the mining claims for mining use.

The quartz extracted from the Australian and California gold mines would be enough to build 150 pyramids of Cheops.

Alfalfa Should Not Be Pastured.

On many of the ranches along the Sacramento river foxtail grass is ruining the alfalfa and making it valueless as feed and pasture. Stock will not eat this grass, while the alfalfa is continuously cropped close to the ground and in course of time the foxtail chokes out the alfalfa entirely. When this grass is mixed with any other feed its beards work their way into the stock's eyes and glands and in many instances injures the stock permanently. It often blinds hogs.

It is generally argued that alfalfa should be mowed and fed to stock instead of pasturing it and the conditions referred to prove the correctness of this theory.—Sutter Farmer.

This is what the "Sun" has been preaching for years. When there has been a good stand obtained, enough pains should be taken to keep the weeds and foxtail out. To do this no pasturing should be done, especially in the early part of the season when the weeds are growing. It is self evident that if the stock eats the alfalfa and leaves the weeds the latter will get the advantage of the former. It will pay to cut the grass and feed it green if desired. It pays to exercise the intellect on any of the affairs of life.—Colusa Sun.

Wyoming is to have the first automobile stage line in America. It will run between Sheridan and Buffalo. It will not be long before there will be dozens of such lines. Wherever they are put on there must be something better than a poor road; it must be at least fairly good. As these lines are so much swifter, more comfortable and all ways desirable than horse coach lines, the people will demand their establishment and logically will demand good roads for them. Hence the introduction of the automobile is a distinct good roads advance. Let us congratulate one another that something has come along to rouse us from our apathy concerning the economy of good highways.—Sac. Record.

Good roads on this side of the mountains would develop traction freight lines, to be followed by electric railroads, for which primary power supplied by the mountain streams is absolutely unlimited.

"Lieutenant Hobson has just filled an heroic engagement at Richmond," says the Washington Post. "President Schwab of the steel trust kissed 200 women in one evening recently," states the Los Angeles Herald.

Professor Joseph Le Conte died suddenly at Yosemite on the morning of the 6th instant. He was the most venerated man of science and philosophy of the present age.

Tulare county is booked to pay out this time $2529 for 84,300 squirrel tails, the total for June. The bounty law has been repealed.

The railroad is so crowded with freight business that some changes in its service seems almost imperative. Nearly every up train is compelled to drop a number of loaded cars, and south-bound trains are also heavily loaded. Specials to relieve the congestion of traffic from Laws north are sometimes necessary. Ever since the first of the year freight business has greatly exceeded that of previous seasons. Whether the situation will bring about such improvement as people here earnestly wish remains to be seen.—Register.

The Breeder and Sportsman of the 6th instant, in "Snap Shots at the Sacramento Track," gives an excellent picture of "Osito 2:13½, b. s. by McKinney; owned and driven by I. H. Mulholland."

The Reno smelter, new last fall and since lying idle, has again changed hands and it is said that work will commence inside of two weeks. M. D. Young, representing a million dollar syndicate and the recent bonder of the Pyramid Lake mines, is the alleged purchaser.

Under a law which went into effect July 1, the collection agent is no longer permitted to sue debtors on assigned claims. The creditor must now bring suit himself if he wishes to use that mode of collecting debts.

Irv. Mulholland is working Osito 2.13¾ at Sacramento and has him in good condition. The 2:14 trot in which he is entered at the Breeders will have a good list of starters.—Breeder & Sportsman.

July 1, 1901.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days, and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

INYO MERCANTILE CO.

Ordinance No. 71.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. It shall be unlawful for any person to hunt, pursue, take or kill or have in his possession within the two years next after the Twenty-third day of January, A. D. 1901, any Japanese or Mongolian Pheasant, within the County of Inyo.

SECTION 2. Every person who, in the County of Inyo of the State of California, within two years next after said 23d day of January, 1901, hunts, pursues, takes, kills or destroys or has in his possession any Japanese or Mongolian Pheasant is guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment in the county jail not exceeding fifty days or by a fine of not more than fifty dollars, or by both such fine and imprisonment.

SECTION 3. This ordinance shall take effect fifteen days from and after its passage, and all ordinances and parts of ordinances of said Board of Supervisors of the said County of Inyo in conflict herewith are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week, said publication to be made for said time and before the expiration of said fifteen days.

JAMES JONES,
(SEAL) Chairman of the Board of Supervisors of the County of Inyo State of California.

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance No. 71 was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board, on the 8th day of January, A. D. 1901, by the following vote:

Ayes: N. J. Cooney, T. C. Boland, J. A. McKenzie, W. P. Yaney, James Jones.

Noes:——

JAMES JONES,
(SEAL.) Chairman of the Board of Supervisors of the County of Inyo, State of California.

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

(Endorsed;

Ordinance No. 72.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male person over the age of twenty-one and under fifty-five years of age, found in each Road District in the County of Inyo, State of California, between the first day of March, 1901, and the thirty first day of December, 1901, excepting all persons who were honorably discharged from service in the army or navy of the United States, at any time between the first day of April, in the year A. D. 1861, and the first day of September, A. D. 1865, and who have not paid the same in some other road district, must pay to the said County of Inyo, a Road Poll Tax of Two Dollars provided the same be paid before the first Monday in July, 1901, but if not paid prior to the first Monday in July then it shall be Three Dollars.

SECTION 2. Said Road Poll Tax shall be collected by the Assessor of the said County of Inyo, in the same manner that State Poll Taxes are collected, and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the several Road Districts of the said County of Inyo from which said Road Poll Tax was collected.

SECTION 3. This ordinance shall take effect and be in force from and after fifteen days from its passage, and all Ordinances and parts of ordinances of said Board of Supervisors in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of said Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time and before the expiration of said fifteen days

JAMES JONES,
(SEAL) Chairman of the Board of Supervisors of the County of Inyo, State of California.

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

The above and foregoing ordinance, No. 72, was duly passed, enacted and ordained by the Board of Supervisors of the County of Inyo, State of California, at a regular meeting of said Board on the 10th day of January, A. D. 1901, by the following vote:

Ayes: W. P. Yaney, N. J. Cooley, T. C. Boland, J. A. McKenzie, James Jones.

Noes: None.

JAMES JONES,

Ordinance No. 73.

The Board of Supervisors of the County of Inyo, State of California, Do Ordain As Follows:

SECTION 1. Every male inhabitant of the County of Inyo, State of California, over the age of twenty-one years and under sixty years of age, except paupers, insane persons and Indians not taxed, and who have not paid the same in another County of this State, must annually pay to the said County of Inyo a Hospital Tax of Two Dollars; provided, the same be paid between the first Monday in March and the first Monday in July, but if not paid prior to the first Monday in July, then it shall be Three Dollars.

SECTION 2. Said Hospital Poll Tax shall be collected and shall be paid to the Treasurer of the said County of Inyo, and shall be placed to the credit of the Hospital Fund of the said County of Inyo for the care and maintenance of the Indigent sick or otherwise dependent poor of the said County of Inyo.

SECTION. 3. This ordinance shall take effect and be in force on and after fifteen days from and after its passage and all ordinances and parts of ordinances of the said Board of Supervisors, of the said County of Inyo in conflict herewith, are hereby repealed.

SECTION 4. This ordinance shall be published with the names of the members of the Board of Supervisors voting for and against the same, in the Inyo Independent, a newspaper published in the said County of Inyo, at least one week; said publication to be made for said time, and before the expiration of said fifteen days.

JAMES JONES,
(SEAL.) Chairman of the Board of Supervisors of the County of Inyo, State of California.

Attest: J. E. MERONEY,
Clerk of said Board of Supervisors.

Real Estate Transfers.

Recorded since last report:

Estate of Eleanor Spencer to Mrs. M. M. Hutchinson—SW¼ Sec. 1, T. 7 S., R. 32 E. Consideration, $3200.

Spencer Estate to E. C. Varney—NE¼ of Sec. 10, T. 7, R. 32; $4350.

Spencer Estate to Cyrus Harbour—The SE¼ of Sec. 2; $4400.

Spencer Fstate to Thos. Thompson—The Spencer residence property, West Bishop; $900.

Spencer Estate to S. S. Allen—The Spencer Hall, town of Bishop; $585.

L. A. Burton to Richard Day—⅛ interest in Mollie McGuire mine, $200.

L.. A. Burton to S. Breckenridge—⅛ interest in Mollie McGuire mine; $200.

Hugh J. and May W. Cannon to Geo. Q. Cannon Association—Confidence and Mendocino Consolidated mining claims, Amargoza range; $12,000.

A. P. Meyers to L. A. Burton—⅛ interest in Mollie McGuire mine; $200.

Wm. Moragan to Samuel and Josephine Meredith—5 acres land near Big Pine; $118.

Fruit shipments in order.

J. R. Moffit hos returned from Panamint.

P. H. Mack, Esq., left on Monday last for Los Angeles.

The Black Eagle mill will resume ore-crushing next Monday.

Ed. Elder is now running the Charley Green saloon at Lone Pine.

Foreman Reynolds of the Hirsch mine is in town, health-recruiting.

Miss Maggie Hutchison, of Bishop, was a visitor in Independence last week.

Note the professional card of Dr. J. D. Blair, County Physician, elsewhere in this issue.

Miss Addie Lewis is here from San Francisco, visiting her relatives at Camp Independence.

T. N. Stebbins, a mining man from the Ballarat section, spent a couple of days in town last week.

Mrs. D. Holland, accompanied by her little neice, Irene Conklin, arrived from Bakersfield last week.

Under the handling of Charley Mulholland, our local equine "Quoins" last week won two races at Rocklin.

Robt. O'Neal, Esq., and Mrs. J. G. Birchim were down from Bishop last Monday, in attendance upon legal matters.

We are pleased to learn that Mrs. Thos. Callow of Big Pine, who has been very ill for some time past, is rapidly recovering.

Miss Adaline Meysan is home from Los Angeles on a visit to her parents, Mr. and Mrs. Chas. Meysan of Lone Pine.

Mrs. J. J. Gunn and daughter Helen were outgoing passengers on Tuesday's train. Miss Helen returns to her school in Santa Rosa.

Geo. McConnel returned last Tuesday, having left Mr. Tweedy at Bodie. The Mining Bureau assistant visited Copper Mountain and then departed for San Francisco.

Lester Shepherd is home from Bakersfield on his summer vacation, having completed his grammar school course and received his diploma. We extend congratulations.

Mr. E. H. Edwards has gone to Los Angeles to meet the Misses Ella and Sara Weiser of New York and may be absent several months on a trip to the Yosemite and San Francisco.

Miss Lou Landrum, who has been visiting in Independence a while, departs on the train this evening. We understand that the chime of wedding bells in the Angel City have a peculiar charm for her.

Supervisor MacKenzie reports that Darwin is very quiet at present, but few men being employed in any of the mines. He adds, however, that affairs are likely to assume an altogether different appearance in the near future.

Supt. McIver of the Inyo canal reports that the high water of this year exceeds any maximum for the past ten years between recurring dates from June 9 to July 7. On the 4th the water was three fourths of an inch higher than ever.

Last Monday evening Supervisor Wm. P. Yaney received a telegram from home announcing the serious illness of his little daughter, Mildred. He started immediately for Bishop, returning at noon to-day, reporting that while his child was better it was not entirely out of danger.

Board of Supervisors.

The current session of the Board of Supervisors began on Monday, the 1st instant, all the members being in attendance throughout.

With the exception of adjournment enforced by the intervening holiday, the first week was occupied by their work as Board of Equalization, which involved a searching examination of the assessment roll. Last Monday orders and action commenced, with the following results:

Tax-payers were cited to appear and show cause why additional property should not be assessed:

C E Johnson, merchandise.....			$ 100
M Julien, 60 head sheep.....			135
J C & F M Crocker, 50 head cattle..			600

Thos. Webb, Geo. Gilliam and S. A. Fraser appeared before the Board of Equalization and were sworn and examined relative to the proposed raise in the number of their cattle.

During yesterday morning's session the Board heard and examined the tax-payers appearing in answer to the number of cattle to be assessed. Ben. H. Yandell, attorney thereof, appeared on behalf of the C. B. Rawson Estate, and E. Robinson for himself.

Supervisors Boland, Cooley and MacKenzie were appointed committee to examine County Hospital affairs. The report says:

"We found 15 men and 1 woman maintained at hospital, all in about usual condition, some apparently in improved health. The quarters were clean and generally satisfactory. We recommended some sanitary changes, which we were assured would be put into effect at once. The patients were uncomplaining and generally satisfied with their treatment.

"It would seem to your committee that it would be to the advantage of the inmates, and the people generally, if the contract system could be abandoned and a suitable place purchased and maintained as a county home for our unfortunate poor, at some time in the near future when our finances will warrant the expenditure."

Moved by Supervisor Cooley that four sets of the annotated cpdes be purchased for the used of county officers. Ayes—Supervisors MacKenzie, Cooley and Chairmen Jones. No—Supervisor Boland.

Thos. Webb, Geo. McConnell and Norman Mairs appeared before the Board and asked that a bridge be placed across Rock Creek, at upper end of Round Valley. No action by the Board at this time.

O. I. Mairs appeared and was sworn and examined in regard to proposed raise of 150 head of cattle on his assessment.

Adjourned until this morning. It is not probable that the work of the session can be completed before some time next week.

Jack Halpin swore out a warrant yesterday for the arrest of Clarence Johnson for stealing a tent. When the case was called up before Justice of the Peace Peters, the complainant Halpin was under the influence of booze to such an extent that the justice discharged the defendant and assessed the costs to the complainant.—Tonopah Bonanza.

The Fourth.

The celebration of our natal day was, as always, a very enjoyable event.

The program in the morning was well rendered and redounded much credit to our local talent.

The games in the afternoon went off pleasantly, and afforded joy to old children as well as young.

Under the clever direction of Dr. Blair the grand ball in the evening was the greatest success of its kind in many months, and the excellent supper served at the Norman House makes us wish for something of the kind again very soon.

Celebration Finances.

We are indebted to Treasurer Geo. Wood for the following statement of the finances of the Fourth:

Amount received by Committee..	$147 30
" expended.....	139 65
Balance.....	$ 7 65
Prizes paid.....	$ 65 50
Ball committee.....	42 50
Ice cream committee.....	21 00
Decoration.....	5 85
Incidentals.....	4 80
Total.....	$139 65

The Adams Oil Company of Bakers field had the first experts in the Inyo field after a discovery had been such as the world had never seen before, viz.: oil sufficiently refined in its natural state to burn well in an ordinary lamp. The men had observed the field where that was found (Placerita Canyon) and they all agree that the belts lying west and south of Owens Lake have strong proofs of the existence of the same thing. The lands selected by the Adams company comprise 7000 acres, situate just south of the lake. This high grade oil is worth about twelve times as much as fuel oil The capitalization of the company, only 100,000 shares, as compared with the value of its land shows that it was not organized ior stock selling purposes but to develop oil. And we believe that the company will do so.

Messrs. Baverstock & Staples, of Los Angeles, publish a card in the Mining Review of that city in which molybdenite is described and the statement is made that they have inquiries from Europe for a supply of it. They say "it has qualities making it desirable to steel manufacturers, and prices for it vary from $150 per ton upward. The demand is small, but a regular supply is desired." Now, let certain of our Big Pine mining friends send down some samples and find out how many tons a week or a month they want, at that rate. No trouble about the supply.

Acting as committing magistrate Justice of the Peace Davidson was for a couple of days during the week engaged in hearing a case of alleged selling liquor to Indians, which has occasioned considerable talk around town, pro and con. As we have been informed that the Justice has taken the matter under advisement and reserved his decision until next Thursday we will not mention names until the next issue.

The State Mineralogist has issued a report showing the yield and value of the mineral substances of California for the year 1900, compiled from returns made to the State Mining Bureau. The total product is valued at $32,622,945, against $29,313,460 in the previous year, showing an increase of $3,309,485. Among the "banner" counties Inyo "leads" in lead, $38,840; antimony, $700; and soda, $50,000.

Messrs. Wm. E. Cox of Los Angeles and J. W. Newly of Pasadena are registered at the Norman House. It is understood that these gentlemen are of the Wm. Penn Colonization Company, which has successfully negotiated for the Inyo Canal. Eastside lands will be bought and experimental trials made, having in view culture of the sugar beet. Work is expected to be started up this month.

Prof. J. E. Reynolds is home on a vacation from his school duties at Ventura. Accompanied by his brother Silas and by Mr. Ness, he has gone on a camping tour through the High Sierras. The party will take photographic views and do an illustrated "write-up" for the Los Angeles Herald.

A shipment of placer gold was made by George Thorpe on Wednesday, from his claim, the Gold Dollar, in Mazourka Canyon. There were 13½ ounces, worth $243.62. The claim is on ground to be developed by the 4000-foot tunnel which has been run by Giles, Cook & Thorpe.

Forest Supervisor Price left yesterday for a trip northward along the reservation, intending to go far as Mammoth. Rangers Bunney and Naylor returned a few days ago from Coyote Valley, where they found no sheep, but evidence that bands have been there.

The Epworth League of Big Pine sends Miss Grace Hall as delegate to the convention in San Francisco. Rev. and Mrs. Rosen, Miss Maggie Peterson, W. G. Eldred, James Steward and J. P. Bourland are also going down to attend the great gathering.

The Tonopah Bonanza records that the brothers of the late John R. Weeks have founded a library in the new camp by the contribution of his books, some 200 volumes. Now the miners will build a school house. Credit marks are due all round.

An extension of the Randsburg Railway about seventeen miles northeast to tap the coal fields looks probable. This would bring it very close fo the Inyo line and cross an alleged right of way set up by the Southern Pacific Company.

The report is published that the Southern Pacific Company has concluded not to extend the C. & C. to its natural terminus. Railroad war scenes lie away to the east of us. There no fools like big ones.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal,

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere.

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J E. MERONEY, Clerk.

[Endorsed;] Superior Court, County of Inyo.

J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

MACK & FORBES and W. J. HARRIS, Attorneys for Plaintiff, Independence, Cal.

Notice to Creditors.

D. Pratt, deceased, in the Town of Big Pine, County of Inyo, State of California, the same being the place for the transaction of the business of said estate in the county of Inyo, State of California.

Dated April 11th, 1901.

MERCIE T. COE,
Administratrix of the Estate of F. D. Pratt, deceased.

MACK & FORBES, Attorneys for Administratrix.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 27th day of May, 1901, an assessment, No. 34, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 31, 10th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leav promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

Women Must Sleep.

Avoid Nervous Prostration.

If you are dangerously sick what is the first duty of your physician? He quiets the nervous system, he deadens the pain, and you sleep well.

You ought to know that when you ceased to be regular in your courses, grow irritable without cause, and pass sleepless nights, there is serious

MRS. HARTLEY.

trouble somewhere, and nervous prostration is sure to follow.

You ought to know that indigestion, exhaustion, womb displacements, fainting, dizziness, headache, and backache send the nerves wild with affright, and you cannot sleep.

Mrs. Hartley, of 221 W. Congress St., Chicago, Ill., whose portrait we publish, suffered all these agonies, and was entirely cured by Lydia E. Pinkham's Vegetable Compound; her case should be a warning to others, and her cure carry conviction to the minds of every suffering woman of the unfailing efficiency of Lydia E. Pinkham's Vegetable Compound.

No Pegs.

Beerbohm Tree had a comical experience on his first appearance as the corpulent Falstaff. In the last act he had arranged that Falstaff, disconcerted by gibes and buffets of the fairies in Windsor forest, should make one herculean effort to climb the oak tree. The pegs that were to serve as supports for that tree were always conspicuous by their absence. On the morning before the performance Mr. Tree was told they should positively be fixed on the tree. The morning came, but with it no pegs. Eloquence was stifled; even invective faltered. He pointed to the tree and with the calm of despair blurted out to the defaulter, "No pegs!"

Such an ejaculation, spoken more in sorrow than in anger, would, he hoped, appeal to that last remnant of conscience which even the papier mache bosom of a property man might be supposed to retain. In the evening there was a dress rehearsal, but still no pegs could be seen. Mr. Tree's form quivered—beneath the padding—with pent up emotions, and in a torrent of passion and a voice shaken by righteous wrath he exclaimed:

"Where are those pegs?"

"Pegs—pegs!" exclaimed the property master, with exasperating affability. "Why, guv'nor, what was your words to me this morning? 'No pegs.' And there ain't none!"—London Tit-Bits.

Howells' Advice to Writers.

One day at Lakewood while sitting at a little table in the big rotunda hall drinking afternoon tea I met Mr. W. D. Howells and had a delightful conversation with him. After knowing the personality of this famous author one enjoys his writing ten times more—he is so magnetic and his conversation so interesting and breezy. "Yes," he said, "I always advise any one who has an inclination for it to try to write. One shouldn't expect to have the first things one does published, but one must keep on trying. It is an excellent plan to set down something one has seen in everyday life and try to get a story out of it. Indeed, it's the best way to practice.

"Writing is mostly drudgery," he continued. "I have to force myself to go into my library to work, and I find myself putting off the hour as long as possible."

"But when you once sit down?" I ventured.

"Even then it's hard work for awhile until I get into the swing. Let no one imagine the muse comes without a summons and without a good deal of urging! At least she never does to me!"—Anna Wentworth in Woman's Home Companion.

The geographical divisions of the United States are the north Atlantic group, the south Atlantic group, the north central group, the south central group and the western group.

CLEVER "CON" GAMES.

TWO OCCASIONS WHEN SWINDLERS USED THEIR BRAINS.

English Pair Appreciated Their Own Smartness and Could Not Resist the Temptation to Boast—French Method of Getting a Visitor's Money.

After carrying through a clever swindle which netted them $1,400 recently, two London "crooks," named Grainger and Rice, became so puffed up over their smartness that they boasted of their exploit and through boasting came to grief. They began operations by forging a check for £280, signing it with the name of a man who had a big balance in his bank. Then Grainger "made up" to resemble the person whose name was being used and, waiting until the man had gone out to luncheon, slipped into his office and into the telephone box. At the same minute Rice appeared at the bank and presented the check. He said he was a new clerk of the man whose name was on the check, but the cashier refused to give the money to him until he was identified. Rice said his employer wanted the money right away and suggested that he be called up over the telephone at this office. This was done and Grainger, at the other end, answered the telephone bell and said, of course, that the check was all right and "please hurry and give the man the money." Then he left the office without it being discovered that he was not the proprietor of the place, and, meeting Rice, the two divided the money and made off.

The fraud was not discovered until the victim returned from luncheon. It is probable that the two crooks would not have been caught had they not boasted indiscreetly of what they had done, which boasting reached the ears of the police, with the result that both swindlers are now in jail.

A camera enabled two hard-up "confidence men" to reap the comfortable sum of $4,000 in Paris last summer. Their victim was a Frenchman, who had returned from abroad with this sum to spend a pleasant holiday and see the exhibition. The swindlers found out all about him and began operations by taking a snapshot of him as he stood looking up at the Eiffel tower. Pleased at finding himself the object of their art, he asked them if he could have a copy of the photograph. They gave him a card and asked him to call. The picture was an excellent one, and the victim asked the photographers to dine with him. This gave to them the opportunity to discover where his money was. He had it sewn in his waistcoat-lining. When he left he had promised to visit their studio next day, and pose for them as Henry IV. On his arrival he laid aside his modern garments for the splendid costume that awaited him. He then posed before the camera. The bell rang, and the photographer said: "Excuse me one minute. Don't lose that pose; it is splendid." The Frenchman posed in solitude for several minutes before it occurred to him that there was anything wrong. Then he turned. His clothes were gone. He rushed into the street, shouting, "Thieves!" The police arrived; but his fantastic garb caused his arrest as a lunatic. Meantime the swindlers escaped.

PARIS NOT COMMON.

A City of Strange Experiences and Incredible Paradoxes.

There are people who assert that of late years Paris has become common. What an error! It is still as picturesque, as romantic, as extravagant, as in the best days of its past. Paris remains the strange town where the most incredible paradoxes are verified, where the most foolish dreams are realized, and where all that is good, bad and indifferent may still be found. The other day a madman was found in a hollow pillar that supported the principal gate leading to the exhibition. Recently the police discovered a Diogenes testing the cold on the Place de la Concorde, looking for the cold, with the thermometer registering eight degrees of frost. A rich, well-to-do Diogenes!

In contradistinction to this, there are hundreds who live in huts outside the city, huts that a Kaffir would scorn to live in. There are the hundreds of vagabonds who have, as Ruy Blas, "God for their host," and who seek a shelter in buildings under construction, in any and every nook not already occupied. Why, only a few days ago, when some men pitched a basket into a wagon at the Central market out rolled a man. "It is I, Jean," growled the voice, "didn't you know me?" They did not know him. The man had slept in a basket at the market for the last ten days.

For people to talk of Paris as having become common is absurd. Paris is still Paris.—Paris Messenger.

Freak Talk.

"There's your true Pharisee," said the fat woman.

"Who? The double-headed man?" asked the living skeleton.

"Yes; he's your real Pharisee."

"He doesn't go up to the temple to pray."

"No; but he's always saying how glad he is he is not like other men are. He'd lose his job, you see."—Buffalo Enquirer.

Superstitious Herring Fishermen.

Herring fishermen are, many of them, remarkably superstitious. For instance, on some fishing boats whistling is forbidden, and neither milk nor burnt bread is allowed aboard. Furthermore, not even the name of that unlucky animal, the hare, may be mentioned, and a common method of punishing the enemy is to throw a dead hare into his boat.

An Ambition to Rise.

"I refuse to give you any more than a nickel, sir. You look like a drinking man."

"I must have at least 15 cents. I am burning with ambition to get into the high-ball class and I beg you to reconsider."—Indianapolis News.

The widow's might may be the result of practical experience.

GONE TO THE VERGE.

He Thought He Had Reached Friendship's Limit.

This young man is not so confiding as he was, and his ideas of friendship are not so exalted. Yet he takes it philosophically and is willing to place a heavy credit in favor of experience.

"I started in a small way," he tells, "and I had an idea that my business would expand rapidly. But I find a good many leaks and drains. Of course you know Jones. He is my friend and knows about horses. So when my one horse went lame I consulted him as being the one friend I had who, I thought, could help me out.

"'Pretty bad shape,' he said as he looked the nag over. 'Need him on your delivery wagon, don't you?'

"I need him or some other horse and asked Jones what I could get for the lame one. He looked him over, felt his legs, examined his eyes and teeth and finally said that, being a friend of mine, he'd give me $40 for the horse. I took it. That same afternoon he sold the horse for $80, a fact I learned about a week later.

"'Now,' said Jones, 'I'm not the man to leave a friend in a scrape. I'll just rustle around and find you another horse.'

"'Thank you, but keep within a hundred. I can't afford to pay more.'

"Next morning my friend showed up with a horse he told me I could have for $98, though he was really worth more. He was sound, gentle, 7 years old, according to Jones.

"He had bought that horse for $60. He had spavin and ringbone, was knee sprung and 13 years old. So Jones had made $78 off me and left me with one of the worst old crowbaits you ever saw. I'm not saying much about it, for Jones is my friend, you know. But an old codger that buys groceries from me says friendship ceases in a horse dicker."—Detroit Free Press.

A Kindly Joke.

Judge Braxfield, famous in England for his love for hanging criminals, when on circuit always put up near Perth with a crony who was devoted to chess. The laird had rather the better of his lordship at the game. In the revolution of the circuits Braxfield found himself trying his hospitable friend, who had got awkwardly mixed up in some abduction of cattle. The evidence was clear, the panel was convicted and the judge passed the solemn sentence of death. Then, bending down, he chuckled to the unfortunate prisoner—the accommodation in the provincial courts was cramped—"And now, Donald, my friend, I think I've checkmated you for once." But Braxfield delighted in a kindly joke.

Trifling With Charon.

Just as Charon was about to make the ferry slip the ex-distiller nudged him in the ribs.

"If it isn't too much trouble," said the latter, "I wish you would put me with the arrivals from Boston."

"But you are from St. Louis," protested Charon. "Wouldn't you feel out of place among so much culture?"

"No, indeed. I always feel at home in the midst of refined spirits."

Thereupon the ancient ferryman tossed the ex-distiller in the Styx.—Chicago News.

Belated.

"I understand that Frailman has come to the conclusion to contest his wife's will."

"Well, what is there courageous about that? She's dead, isn't she?"—Richmond Dispatch.

No man is truly great until he is willing to use a small word when he knows a big one that means the same thing.—Chicago Record-Herald.

There is something uncanny about a boy who can save money.—Atchison Globe.

Millions for Baseball.

A million of dollars are spent every year upon the game of baseball, but large as this sum is, it cannot begin to equal the amount spent by people in search of health. There is a sure method of obtaining strength, and it is not a costly one. We urge those who have spent much and lost hope to try Hostetter's Stomach Bitters. It strengthens the stomach, makes digestion easy and natural, and cures dyspepsia, constipation, biliousness and weak kidneys.

Wealth makes kleptomaniacs; poverty makes thieves.

Scrofula

Few are entirely free from it.

It may develop so slowly as to cause little if any disturbance during the whole period of childhood.

It may then produce irregularity of the stomach and bowels, dyspepsia, catarrh, and marked tendency to consumption before manifesting itself in much cutaneous eruption or glandular swelling.

It is best to be sure that you are quite free from it, and for its complete eradication you can rely on

Hood's Sarsaparilla

The best of all medicines for all humors.

Roses and Turks.

"It would give a genuine and religious Turk a fit if he saw how little appreciation Americans show for the rose and what little reverence they have for it," spoke a florist as he wrapped the foil about the stems of a boutonniere.

"The rose is beyond question the prettiest flower that blooms, and it was so considered by the Turks many years before the conquest of Granada. There is a religious legend generally believed in throughout Turkey that the red rose sprang from a drop of the great prophet Mohammed's blood. Everything beautiful in nature is ascribed to him. The Turks, therefore, have great reverence for the flower and allow it to bloom and die untouched, except on state occasions and for the purpose of making rosewater.

"After the conquest by the Turks they would not worship in any church until the walls were cleansed and washed with rosewater and thus purified by the blood of the prophet. It is used on the body for the same purpose. A Turk whose conscience is stung by some act or deed he has committed will caress and pay reverence to the rose to appease the wrath of the prophet and Allah.

"With these ideas inculcated in him from youth it would shock him severely to see the pretty flower strewn in the path of a bridal couple, thrown on the public stage or banked up in hundreds at a swell reception or party to be crushed and spoiled in an evening."—Exchange.

A VETERAN

Tells of a Thrilling Experience in the Civil War and How a Newspaper Article Saved His Life.

From the Beacon, Leonardstown, Md.

Many veterans of the Rebellion can recall incidents as thrilling as the cavalry charge in which the narrator of the following experience nearly lost his life and, unfortunately, many of the old soldiers have disabilities that are unpleasant reminders of their days in the army. To all such this story will have a peculiar interest and may show the way to restore health, strength and energy. Mr. William H. Whiting, of Mt. Holly, Va., says:

"When the Civil war began I was living in Buffalo and there I joined Co. F, of the Tenth New York Cavalry. In 1863, while serving with my company, I received a sabre cut that caused paralysis. For eight months I was obliged to lie in the hospital at Washington, D.C. I afterwards tried many doctors, but the paralysis remained as bad as ever. I suffered from chills and my general health was not good.

"This continued until about eight years ago when I read in a newspaper of the cures effected by Dr. Williams' Pink Pills for Pale People. I began taking the pills and soon found they were doing me good. In six months' time I was completely cured. The paralysis has not returned and I never have the chills now. My general health is also better than when I began taking Pink Pills for Pale People. I always keep them with me and, in the eight years that have passed since I first took them, I have never had occasion to call on a doctor.

"I have recommended Dr. Williams' Pink Pills to many people, and good results have always followed their use."

Signed, WILLIAM H. WHITING.

Subscribed and sworn to before me this 14th day of January, 1901.

JOHN L. BEALE.
[Seal] Notary Public.

Dr. Williams' Pink Pills for Pale People are sold by all dealers, or will be sent postpaid on receipt of price, 50 cents a box, or six boxes for $2.50 (they are never sold in bulk or by the hundred), by addressing Dr. Williams Medicine Company, Schenectady, N. Y.

Got Grip? Try Fryer's Abietene Cough Balsam

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Taken before bed time Gilt Edge Whiskey will break up any cold. Wichman, Lutgen & Co., San Francisco, Cal. Sole proprietors for U. S. A.

BOSTON'S BARBER REGULATIONS.

Board of Health Orders Sterilization of All that Barbers Use on Customers.

A special dispatch from Boston, May 5, 1900, to the N. Y. Sun gives us new regulations of the Boston Board of Health as to barber shops: "Mugs, shaving brushes and razors shall be sterilized after each separate use thereof. A separate, clean towel shall be used for each person. Material to stop the flow of blood shall be used only in powdered form, and applied on a towel. Powder puffs are prohibited." Wherever Newbro's "Herpicide" is used on face or scalp after shaving or hair cutting, there is no danger, as it is antiseptic, and kills the dandruff germ.

For Consumption try Fryer's Abietene Cough Balsam.

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Mem. for Good Health.

Today drink some "Castlewood" Bourbon, or Rye Whisky. Highest grade Kentucky goods. Cartan, McCarthy & Co., sole distributers, San Francisco.

Requirements of a Good Stroke Oar

During practice a good stroke is one who is regular in his rowing and easy to follow. He must give the big men plenty of time to finish the stroke out. He must keep them swinging steadily, and in a trial over the whole or any portion of the course he must get every possible ounce of work out of them, so that they are completely rowed out without having got short or flurried on the way. In a race he must know the capabilities of his crew and must be able to feel how they are going, when they want easing off and when they are capable of higher pressure, while above all he must have that degree of generalship which will enable him to decide in a well contested race when to put the pressure on in order to take the advantage of station at a certain point of the course, when to ease off if he is holding his opponent at a slower rate of stroke, how far it is necessary for him to save himself for an effort at the end and especially in a really close contest the exact moment at which he should make the "grande attaque."—Saturday Review.

Land Crabs.

One of the commonest and the largest of the Christmas island land crabs is the well known robber crab, which is found in most of the tropical islands of the Indian and Pacific oceans. It sometimes reaches a length of two feet and may measure seven inches across the back. Its colors are of a very gaudy description, the ground color being a bright red, upon which there are stripes of yellow, but in some cases a purplish blue is the prevailing tint.

The eyes are fixed on stalks which can be moved independently of one another, and there are two pairs of feelers, one long, the other short. The latter pair are continually jerked up and down. There is a pair of powerful claws, then several walking legs. In general appearance these animals are much more like rather stout lobsters than crabs, and one's first encounter with one of these creatures in the middle of a forest far from the sea is productive of much astonishment on both sides.

Another species of land crab common in Christmas island is a little bright red animal which in general shape is much like the common shore crab. This variety makes burrows in the ground, and in some places the soil is honeycombed with hundreds of holes. The crabs spend most of their time collecting dead leaves, which they carry in their claws, holding them up over their heads, and drag down into their burrows, into which they scuttle at the least alarm.—Pearson's Magazine.

Crabs In Disguise.

Human beings are not the only creatures that have discovered the appetizing, though indigestible, qualities of crabs, and some of these animals have been compelled to resort to various defensive measures. Disguise is one of these and is practiced with great effect by spider crabs.

These deliberately bite up seaweeds and plant them on their backs, very soon establishing a growth which harmonizes perfectly with the surroundings and deceives many an enemy. Should the weeds grow too vigorously, the crab industriously prunes them with his claws and every now and then scrapes the whole lot off and starts a fresh garden on his roof, so to speak.

The sponge crab behaves in a similar manner, nipping off little bits of living sponge and sticking them on his back, where they grow vigorously. The same end is served as in the other case. It is very amusing to keep crabs of one or other of these kinds in an aquarium and deprive them of the usual means of concealment.

They get very nervous and agitated and try to cover themselves with bits of paper or anything else that may be provided. One such captive is said to have had a little greatcoat made for him, which he put on in a hurry as soon as it was handed to him.

The Earl and the Highwayman.

One night when the Earl of Stanhope was walking alone in the Kentish lanes a man jumped out of the hedge, leveled a pistol and demanded his purse.

"My good man, I have no money with me," said Lord Stanhope in his remarkably slow tones. The robber laid hands on his watch.

"No," Lord Stanhope went on, "that watch you must not have. It was given to me by one I love. It is worth £100. If you will trust me, I will go back to Chevening and bring a £100 note and place it in the hollow of that tree. I cannot lose my watch."

The man did trust him. The earl did bring the note. Years after Lord Stanhope was at a city dinner, and next to him sat a London alderman of great wealth, a man widely respected. He and the earl talked of many things and found each other mutually entertaining. Next day Lord Stanhope received a letter, out of which dropped a £100 note. "It was your lordship's kind loan of this sum," said the note, "that started me in life and enabled me to have the honor of sitting next to your lordship at dinner." A strange story; but the Stanhopes are a strange race, and things happen to them that never did or could occur to other people.

To Be Cheerful.

The sovereign, voluntary path to cheerfulness, if our spontaneous cheerfulness be lost, is to sit up cheerfully, to look around cheerfully and to act and speak as if cheerfulness were already there. If such conduct doesn't make you soon feel cheerful, nothing else will on that occasion. So, to feel brave, act as if we were brave, use all our will to that end, and a courage fit will very likely replace the fit of fear. Again, in order to feel kindly toward a person to whom we have been inimical, the only way is more or less deliberately to smile, to make sympathetic inquiries and to force ourselves to say genial things. One hearty laugh together will bring enemies into closer communion of heart than hours spent on both sides in inward wrestling with the mental demon of uncharitable feeling.

BISHOP HANDY SAYS

"I Cheerfully Recommend Peruna to All Who Want a Good Tonic and a Safe Cure for Catarrh."

Prominent members of the clergy are giving Peruna their unqualified endorsement. These men find Peruna especially adapted to preserve them from catarrh of the vocal organs which has always been the bane of public speakers, and general catarrhal debility incident to the sedentary life of the clergyman. Among the recent utterances of noted clergymen on the curative virtues of Peruna is the following one from Bishop James A. Handy, D. D., of Baltimore:

"I take great pleasure in acknowledging the curative effects of Peruna. At the solicitation of a friend I used your remedy and cheerfully recommend your Peruna to all who want a good tonic and a safe cure for catarrh."—James A. Handy.

OTHER NOTABLE CURES.

A Husband Escaped the Pangs of Catarrh of the Lungs.

Most Cases of Incipient Consumption are Catarrh.

Edward Stevens.

Mrs. Edward Stevens of Carthage, N. Y., writes as follows:

"I now take pleasure in notifying you that my husband has entirely recovered from catarrh. He is a well man today, thanks to you and Peruna. He took six bottles of your medicine as directed, and it proved to be just the thing for him. His appetite is good and every thing he eats seems to agree with him. His cough has left him and he is gaining in flesh, and seems to be well every way. I hope others will try your medicine and receive the benefits that we have."—Mrs. Edward Stevens.

When the catarrh reaches the throat it is called tonsilitis, or laryngitis. Catarrh of the bronchial tubes is called bronchitis; catarrh of the lungs, consumption. Any internal remedy that will cure catarrh in one location will cure it in any other location. This is why Peruna has become so justly famous in the cure of catarrhal diseases. It cures catarrh wherever located. Its cures remain. Peruna does not palliate; it cures.

Mrs. Frederick Williams, President of the South Side Ladies' Aid Society of Chicago, Ill., writes the following words of praise for Peruna from 973 Cuyler avenue, Chicago, Ill.:

Mrs. Fred Williams.

"My home is never without Peruna, for I have found during the past six years that there is no remedy that will at once alleviate suffering, and actually cure, as Peruna does. Four bottles completely cured me of catarrh of the head of several years' standing, and if my husband feels badly, or either of us catch cold, we at once take Peruna, and in a day or two it has thrown the sickness out of the system."—Mrs. Frederick Williams.

Mrs. W. A. Allison, of 759 Sheffield avenue, Chicago, Ill., is the Assistant Matron of the People's Hospital. She has the following to say about Peruna: "I have had frequent opportunities to observe the wonderful curative effects of Peruna, especially on persons suffering with a congested condition of the head, lungs, and stomach, generally called catarrh. It alleviates pain and soreness, increases the appetite and so tones up the entire system that the patient quickly regains strength and health."—Mrs. W. A. Allison.

Mrs. W. A. Allison.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, O.

Judicious silence is an eloquent indication of wisdom.

Adams' Sarsaparilla Pills

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Utilizing the Ad.

"Now, if you will show me where the burglars got into your shop," said the detective, "I will see if I can find a clew."

"In a moment," said the proprietor. "I am working at something a little more important than hunting for a clew just now."

And while the detective waited the merchant wrote as follows at his desk:

"The burglar who broke into Katzenhefter's shop on the night of the 15th and carried away a silk hat, a pair of French calfskin boots, a fur trimmed overcoat, a black broadcloth suit and two suits of silk underwear was a black hearted villain and scoundrel, but a man whose judgment cannot be called into question. He knew where to go when he wanted the finest clothing the market affords."

"Jacob," he said to the bookkeeper, "send a copy of this to all the papers and tell 'em I want it printed in big black type, to occupy half a column, tomorrow morning. Now, Mr. Hawkshaw, I am at your service."—London Answers.

Thrift In Children.

A savings bank account is a great incentive to thrift in children. If one is begun for the baby, even with a very small sum, and added through childhood and youth with a certain proportion of the money that otherwise would be spent carelessly and thoughtlessly by the child, there will be a very respectable amount on the credit side of the ledger when the depositor is 18 years old. The habit of self denial is not the least of the substantial benefits that follow a wise economy of money.—Exchange.

The Blood HEALTHY OR DISEASED

When there is a natural and healthy circulation of the blood, the entire quantity, estimated at one-eighth the weight of the body, passes through the heart every five minutes. This rapid flow of the blood through the system prevents the entrance of disease germs and impurities of every description. It filters out all that is not necessary or good for the growth and development of the body and nourishing and strengthening the muscles, tissues, nerves and bones. But, unfortunately, few persons can rightly claim an absolutely pure blood supply and perfect and unpolluted circulation, and in consequence are exposed to innumerable diseases. Contagious Blood Poison, the greatest enemy to mankind, enters the system through the blood, and Cancer, Scrofula, Rheumatism, Catarrh, Eczema, Salt Rheum, Psoriasis, Tetter—in fact the majority of human ailments—are caused by poisons or humors that are engendered and fostered in a sluggish and impoverished blood. Old sores, chronic ulcers and rheumatic pains are common, especially among old people, whose blood naturally grows thin and pale because of the lack of the red corpuscles that give color and strength to youthful blood. Sallow complexions and rough, oily skins evidence some constitutional or blood trouble, which salves, lotions, powders nor any external treatment can cure. Diseases that originate in the blood, whether they manifest themselves as ulcers, tumors, itching eruptions, muscular or bone pains, require a tonic and blood purifier such as S. S. S., which not only antidotes and neutralizes blood poisons and humors, but possesses health-giving tonic properties that no other blood medicine does. It goes down to the very foundation of the disease and eliminates from the system everything of a poisonous character or that obstructs and clogs the circulation. It builds up and imparts new strength and vitality to the old innutritious blood, and when the arteries and veins are once more filled with new rich blood, the general health begins to improve, muscles grow stronger, and sores and eruptions of every kind disappear.

The Blood is the Source of All Strength

Polluted Blood Breeds Disease

S. S. S. is the only guaranteed purely vegetable blood purifier, and the purest and most reliable in all blood diseases. It has been tested in thousands of cases during the past fifty years and is more popular today than ever. We will be glad to send you our book free, and if in need of medical advice write our physicians all about your case; this information will cost you nothing and comes from experienced and educated doctors. All correspondence is conducted in strictest confidence.

THE SWIFT SPECIFIC COMPANY, ATLANTA, GA.

Valuable Almanac Free.

We have received a copy of the new almanac for 1901 published by the Royal Baking Powder Co. It is an artistic and useful book and will be of interest to housekeepers. A noteworthy feature of the almanac is a prediction of the weather for every day of the year, by Prof. De Voe, who correctly prophesied the great Galveston cyclone and other important meteorological events. We are authorized to say that any woman reader of this paper can secure a copy without cost by sending a request to the Company, at 100 William St., New York.

SUNSET ON THE FARM.

Down behind the western hill the red sun sinks to rest.
All the world is weary, and I am weary, too.
The partridge seeks its covert, and the redbird seeks its nest,
And I am coming from the fields, dear heart, to home and you.
Home when the daylight is waning;
Home, when my toiling is done;
Ah! down by the gate, sweet, watching eyes wait
My coming at setting of sun.

The sheep from off the hillside haste to the shepherd's fold,
For death lurks in the mountains and darkness comes apace.
The fleeing sun looks backward and turns the sky to gold,
Then folds the mantle of the night across its crimson face.
Home when the daylight is waning;
Home, when my toiling is done;
Ah! down by the gate, sweet, watching eyes wait
My coming at setting of sun.

Lay aside the hoe and spade, and put the sickle by;
All the world is weary, and I am weary, too.
Gently fades the rosy light from out the western sky,
And I am coming from the fields, dear heart, to home and you.
Home when the daylight is waning;
Home, when my toiling is done;
Ah! down by the gate, sweet, watching eyes wait
My coming at setting of sun.
—American Agriculturist.

Ned's Wife

EVERYBODY but Captain Marvin liked handsome Ned Grayling, the most popular hand on board the old Vanguard.

Ned never shirked his duty, but it was known to a few that he was dead in love with pretty Cora, the skipper's daughter, who was engaged to a man named Audley, a junior partner in the firm of owners, whom she had never seen. Hence, the old man's dislike for Ned.

Cora was on board, going home from Shanghai to her future husband, as we supposed.

"Ned," said I to him one morning. "I've a good mind to get off this rail and give you a toweling on the spot. You orter have it good and solid. You orter know what chance a common sailor has with the captain and act like somebody. Come, give up the idea."

"Never."

"You'll be sorry for it some time."

Ned looked over his shoulder and saw Cora standing in the waist and had work there instantly. I was vexed, for I knew that the old man was watching him, and I was afraid he would get into trouble. He only said a word or two and passed on, but the old man saw him speaking to her and bore up to him.

"Look here, my lad," he said, "didn't you speak to my daughter just now?"

"Yes, sir," replied Ned. "Any orders to the contrary?"

"Yes," growled the old man. "You dare speak to her again and I'll have all the skin off your back."

"Give your orders, Captain Marvin, and I will try to obey them."

"You must never speak to the girl again. She's a fool and forgets that I've promised her to the best young man in Philadelphia; leastways every one says so. But I never saw him. Now you must come and make trouble, blame you!"

"I love Cora," said Ned, quickly. "If you were to kill me you couldn't change that. But I'm a gentleman, and if she is promised to some one else and cares for him I'm not the man to stand in her way. I give you my word not to speak to her unless you give me leave."

"Go forward, then; I believe you will do as you say," said the captain.

He didn't speak to Cora again, but the old man forgot to tell him not to write, and I believe they wrote enough letters to fill a mail bag.

We made Calcutta by daylight and ran in with a pilot, and just as he took the ship in charge the captain ran below to get a glass of grog and found his daughter reading Ned's last note. Well, he tore around the cabin and swore until you'd have thought he'd start off all the deck planks. Then he came on deck on the jump and ordered me to put Ned in irons.

"I'll have you towed ashore on a grating, you confounded lubber," he roared.

"No, you won't, captain!" cried Ned. "What have I done now?"

"You promised not to speak to Cora."

"I kept my word, sir."

"Yes, and she's got a stack of letters from you as high as the mainmast. I ought to seize you up to the rigging and give you forty lashes."

"I wouldn't do that," said Ned, with a peculiar look in his eyes. "You've got the right to send me ashore, now we are in port, but no flogging, if you please. Now, I'll make you an offer: You let me stay on board until we get to Calcutta, and after twelve hours, if you do not take back all you have said, I will agree never to speak to Cora, write to her or see her again."

"That's fair," said the old man. "Old Seth Audley comes aboard there, and I'll tell him what a sea lawyer I've shipped."

The pilot took us in safely, and two hours later we were boarded by a shore boat, carrying a passenger, just such an old blower as our old man and with as little bite in him. They shook hands and dragged each other up and down the deck, and then the old man asked him into the cabin and showed his daughter, whom the old chap had never seen.

"She'll do," said old Audley. "Clean-built little clipper as ever I see. If my boy Ned objects to acting as convoy for such a craft as that I'll have him up at the grating. But where is he?"

"I don't know anything about him," said the captain. "But I've got a man on board who swears he'll marry Cora, and blame my eyes if I don't think he will if your son ain't smart."

"If he can weather on Ned Audley, give him the girl!" roared the passenger. 'My boy is smart, I tell you. He went up to Shanghai to—why, there he is!"

The door swung open and Ned Grayling walked in.

"That's the man!" cried Captain Marvin. "He says he will have her, and I'll give my consent. But I'll see him hanged!"

"Don't swear, Captain," said Ned, slapping him familiarly on the shoulder. "I'm Ned Grayling Audley, the son of that old fellow there, and I shipped in the Vanguard to see how I liked Cora before I married her. And I loved her from the start, and unless you order me ashore——"

"Shut up!" roared Captain Marvin. "Steward, bring on the wine while I drink the health of my future son-in-law. But I was very near flogging you, my boy, very near it."—New York News.

Spectacular Figure in Wall Street.

James R. Keene, one of the foremost figures in the public eye during the recent skyrocket flights of railroad and industrial stocks, has earned the title of the "Prince of Plungers." Conspicuous in that group of operators famous in Wall street for the last fifteen years, he has made and lost at least four fortunes in the battle of speculation. During his career, and often with his back to the wall, Mr. Keene fenced with the late Jay Gould and such other masters of the game of stocks and money. His recent deals, it is declared, have outdone anything that Gould ever attempted.

Mr. Keene has a habit of speaking of millions of winnings as lightly as if he were a farmer gratified over a good horse trade. This man, who has built up and toppled over fortune after fortune since his entry in Wall street in 1877, was born in England in 1838, the son of a merchant. Meeting with financial losses, his father removed his family to California in 1852, and James R. Keene, then but 14 years of age, began earning his first salary by caring for the cattle and other animals kept at Fort Reading, then in the Indian country.

He later tried mining and stock raising. He secured property near the celebrated Comstock lode in Nevada, went to San Francisco, plunged into mining speculation, and made a fortune. In the crash which followed he lost every cent. A friend bought him a seat on the San Francisco Stock Exchange, and by a lucky purchase a few years later he cleared up $6,000,000. In 1877, en route to Europe, he took his first "flyer" in Wall street. He operated cautiously, selling out his holdings two years later for $9,000,000. This grew to $15,000,000, and in the early '80s all was swept away in an attempted wheat corner. He made and lost another fortune, and then, in 1898, backed only by an indomitable will, he aided in cornering tobacco. He made a million and a quarter. In two months sugar stocks yielded him $2,000,000. Recently he got on the "right side" of the market, and his fortune to-day is estimated at $12,000,000.

MAN'S SPHERE IN NATURE.

Evolution Theorists Declare He Has Attained It by Slow Degrees.

Since Huxley's pioneer work in 1863 a host of investigators have carried forward the study of structural resemblances connecting the genus man with lower genera and orders, says Prof. W. J. McGee in his address as retiring president of the Anthropological Society of Washington. To-day the physical similarities are among the commonplaces of knowledge, whatsoever the background of philosophical opinion concerning cause and sequence. During the last decade or two the investigators themselves, with scarce an exception, have gone one step farther and now include sequence of development from lower to higher forms as among the commonplaces of opinion, whatsoever the background of metaphysical notion as to cause. There the strictly biologic aspect of the question as to man's place in nature may safely be considered to rest.

The chief advances in anthropology have related to what men do and what men think, and the progress has been such as to indicate with fairly satisfactory clearness the natural history of human thinking, as well as that of human doing. As is shown by the latest researches, the mental workings of the human are analogous with those of the lower animals, while the range from the instinct and budding reason of higher animals to the thinking of lowest man would seem far less than that separating the beast-fearing savage from the scientist and statesman. In short, the evident tendency of the science of anthropology is, according to Prof. McGee, toward the establishment of a mental as well as a physical evolution of man from a prototype of lower rank in the animal kingdom.

Booms in Suicide Mania.

In one of the Philadelphia asylums for the insane there are certain apartments known as "suicide rooms." These are set aside as harbors of refuge for those patients who manifest a strong desire to end their lives. Everything in these rooms is round. There are no knobs or posts to the beds, for the maniac would tie a sheet around any such projection and hang himself. For the same reason there are no gas fixtures and no inside shutters. There are not even door knobs, while the doors themselves are made to open outward. When the men undress their clothes are carefully removed from the room, so that they may not be used for strangling their owners. All the edges of bureaus, the backs of chairs, etc., are carefully rounded, so that there may be no points upon which the inmates might beat their heads. No canes or sticks are allowed in the rooms. The doors are left open at night and a keeper parades incessantly up and down before them.

Little Blanche Is Meditative.

Blanche is the little 5-year-old daughter of an East Side newspaper man. She has lately been meditating on the problems of existence. Yesterday she got something in her throat which caused her to cough. When she got through she said: "I guess I will cough my head off some day." Then she went on: "If I should cough my head off, papa, would God make me a new one?"

Her papa answered: I am afraid not. I never heard of such a case."

She pursued her thought a step further and said: "I suppose it would be just as cheap for him to make a whole baby as to make just a head." Her father answered that he thought it would.—Cleveland Leader.

Her Father's Fault.

Jorker—I hear you have broken of your engagement with Miss Prettiface Munnyseeker.

Munnyseeker—Yes; it was her father's fault.

Jorker—How was that

Munnyseeker—Why, the idiot failed —London Tit-Bits.

Would Seem That Way.

Mrs. Meddergrass—The paper says that most o' the Rooshians is ignorant people.

Mr. Meddergrass—Well, now, I sh'd think they'd have to be purty smart to understand their own language.—Baltimore American.

TAX COLLECTION IN CHINA.

Frauds Perpetrated Upon the People and Upon the Government.

The Chinese plenipotentiaries are objecting, of course, to the amount of indemnity demanded by the powers, and representing that it will cripple the resources of China for years to come; but examination shows that the interest and sinking fund of the capital sum can be easily met with a very elementary reform in the financial system of the empire. An enormous saving can be made by doing away with the tribute rice system. At present two great rice-growing provinces, Anhai and Kiangsu, are obliged to send up to Pekin annually something over 1,000,000 tons of rice. This is supposed to be collected in kind from the farmers, but the officials really collect the tax in money, fixing the rate at which the farmers commute at about two and a half times the market price. The required quantity of rice is then bought in the market by the officials, and here the Government begins by losing three-fifths of the money actually paid by the farmers. This rice is then shipped in junks by the Grand Canal, and in steamers by the sea route to Tien-tsin, and 30 per cent is allowed for waste and damage on the way.

A further loss accrues to the Government in that the crews of the junks always take a quantity of general cargo on their own account, on which they pay no duties, the junks being protected by the imperial flag. When it gets to Pekin the rice—what is left of it—is put in the imperial granaries and is freely pilfered by the officials, good rice being taken out and old grain, mud, and rubbish of all kinds being substituted. The pensioners of the Government and the troops do not get this rice, as they are supposed to do; they get warrants for a certain quantity, which they are obliged to exchange at the rice shops, where they are given, perhaps, 30 per cent of the face value of the warrant. The ingenious can calculate what the Government would save if it still collected the tax in money in these provinces, and then paid its pensioners and troops in money, allowing them to buy their rice in the open market. A much larger saving could be made if the present system of taxation and distribution of salt were abolished, and the salt were bought by the Government where it is cheapest and sold at the present average price. At present enormous "squeezes" are made by the officials out of salt as well rice. There will be another great economy to the Government when the likin is merged in the duties collected by the imperial maritime customs, as will, it is hoped, be arranged.—Shanghai correspondence London Standard.

FREDERICK LUST IS DEAD.

Composer of "My Rosary" Passes Away in Poverty.

Of thousands who have thrilled to the tender melody of "My Rosary," few know of the pathetic inspiration of the song. It was the last effort of a dying musician, dedicated to a beautiful girl who had brightened his sad life by her sympathy.

Frederick Lust, the composer, came from Germany about thirty-five years ago, pursued then and to his death by the sorrow of a lovers' quarrel and separation. In his art he made a splendid success. He became organist of a

LUST AND HIS INSPIRATION.

Vermont church at $3,000 a year, an opera of his was produced, and his other compositions won wide popularity, the famous "Trilby Waltz" alone bringing him a small fortune. He traveled widely, and spent his money with a free hand.

But as he grew older his health failed and his fortune shrunk until he had nothing left. He lived for a time in San Francisco, then in Colorado Springs, in Chicago and Boston. In this last named city he was instructor for a large choral society. Finally, he became conductor for the Marie Bell Opera Co. But the season was not a success, and the company disbanded in Clarksville, Tenn. Lust was left without money, broken in health and spirit. Attracted by his gentle patience, strangers who met him became his friends. They obtained pupils for him, and also contributed personally to his support.

Among those he taught was the beautiful Rosa Walker, whose picture appears here. Often she used to send him flowers to brighten his lonely studio, or delicacies to tempt him when he was ill. One day last fall, while playing an accompaniment to her singing, he fell in a swoon. When he revived the girl was bending over him. The thought of her kindness overcame him.

"Your name is Rosa," he said. "I shall write a song to you. It will be my last. When it is finished I shall go."

When he reached his studio he began work on the composition and toiled all night, despite his weakness. At dawn he had completed "My Rosary," and carried the manuscript to the girl's home, where she sang it for him. Then he went back to his room to die.

While he lay ill the song traveled far, and was sung from one end of the country to the other. The young girl sent him flowers every day, and was with him when he died. She sang "My Rosary" at his funeral, and on the grave of her dead friend placed a mound of the roses that he had loved in his last days.

OUTDOOR PANTRY.

Fresh Air Food Safe Conducted in Peculiar Southern Style.

Pantry requirements are a trifle paradoxical, in that they are air and light and darkness. A pantry window is essential, even if it be no more than a tiny two-light sliding sash, set anyhow in the outer wall. A regular window is much better. It need not waste wall-space-shelves, but can be so placed across it as to admit its working. But if a pantry can be allotted as much as six feet of house wall it is better to have the window set crosswise, with the lower edge a little more than breast high. Then, by making one sash of glass, and filling the other with wire-gauze, the pantry can have a handy outdoor closet. Have a tight deal partition running out from the sash division, as far as the space permits. Put shelves around three sides of the

A FRESH AIR FOOD SAFE.

two compartments thus formed, and close them with tight light deal doors. Thus the indoor pantry can subserve its proper purposes, and the outside closet banish the iceman for six months in the year.

People with plenty of ground space, yet constricted houses, may profitably take a leaf from the book of south country household economy. It is common there for country folk to have a sort of outdoor fresh air closet, a small detached structure set in the shadiest place possible, standing upon four tall legs, with a flat shingle roof of barely enough pitch to shed rain. The floor is at least four feet from the ground, and the whole structure hardly big enough to reach well across. There are shelves all around, and the weatherboarding up next the roof is full of tiny auger holes. The door fits tight, and fastens with a lock. Around each of the four legs is commonly a tar bandage, applied six inches above the ground. This traps venturesome ants, spiders and their kidney, thus keeping the inside clear. The structure is whitewashed inside and out twice a year. In hot weather floor and shelves are washed every morning, and scoured twice a week. Such a fixture should not cost over three or four dollars, even if one hires it built, and it is certainly among the handiest things on can have about the house or yard.

Books of Great Price.

A rare collection of old books and autographs was offered for sale recently by a London auction house. One of the most remarkable of the collection was an argument in favor of Henry VIII.'s divorce from Catherine of Arragon, printed by Wynkyn de Worde, a pupil of Caxton. Only three other copies of this book are known to be in existence. The first Greek grammar printed in Latin, in 1497, was another of the curiosities of the collection. Tyndale's New Testament, dated 1552, with a picture of Satan with a wooden leg. Cranmer's Bible, printed four years later at Rouen, and Cromwell's act of 1652, putting down bear-baiting and wrestling on Sundays are equally of interest. Autographs of Pitt, Fox, Burke, Warren Hastings, Voltaire, and King Edward VII. were included.—London Daily Mail.

A Cautious Millionaire.

Mr. Midas (about to make a will)—In disposing of my estate, while I am anxious that my son shall have the benefit of a goodly share of it, I do not wish him to become possessed of it in bulk.

Lawyer—Excuse me for saying it, but the inference of that instruction seems to do your son injustice. He has always seemed to me to be a young man absolutely free from any tendency to dissipation.

Mr. Midas—Very true, but you cannot tell to what channel ambition for notoriety may lead him; he may take into his head to become a United States Senator.—Richmond Dispatch.

American Footwear.

American-made boots and shoes are driving British-made goods out of Australia and the British colonies in the East and West Indies and Africa, where they have always had a monopoly.

Improving Grant's Tomb.

The grounds around Grant's tomb at Riverside are to be beautified. The trees will be planted, the steep embankment terraced and asphalt walks laid.

Texas Oil-Pipe Line.

A pipe line will be built in the oil belt of Beaumont, Texas, with a company backing it for $10,000,000.

There are not many people smart enough to tell the difference between a hoodoo and a mascot.

Children's Corner

The Game of Buried Treasure.

It is probable that on some occasion a number of boys were idly kicking a can about, and the game of buried treasure just evolved itself without any particular effort on their part. It is certainly a good game, and those whom I have watched play it seem to enjoy themselves immensely.

The equipment for the game is not difficult to procure; cans are always available. Decide by counting out who shall be "it," or the miser who must guard his treasure.

The miser will take a position directly over the can, his treasure, one foot on each side. At least, this is the position usually chosen as being the best suited for guarding the can. There is no rule, however, about this, and some

A GAME IN PROGRESS.

boys prefer other defenses, as standing just behind the can or continually moving about it.

The rest of the boys are robbers, and circle about, attempting to steal the treasure, or, in other words, kick it away without being tagged. If one succeeds, another immediately kicks it, and away goes the can down the street with a crowd of yelling robbers after it, doing their best to prevent the poor miser from regaining his position over the treasure. If the miser succeeds in tagging any boy who has kicked the can before another boy kicks it, the boy tagged becomes the miser and must stand over the treasure.

Of course the boys who are attempting to get at the can will help each other. One should attract the miser's attention in front while another creeps up from behind, or vice versa. If the distracted guardian of the treasure turns his attention to the man behind him, the man in front will immediately dart in, and so on. I think you will find that the game, simple as it seems, offers numerous chances for judgment and quick maneuvering.

Our Weights and Measures.

Perhaps you have heard that the government is establishing a "standardizing bureau" at Washington. It may not have meant anything to you when you read it, but it really is an important step toward setting up in business wholly for ourselves. Why, do you know, if every weight and measure in the United States had been destroyed a few years ago, we should have had to send to the standardizing bureau of England for patterns to make the new ones by.

We pride ourselves upon being a nation of business men, but still we are unconsciously a very careless people about the weights and measures we trade by. They are made after all imaginable designs, and, differing as they do in shape, they easily deceive purchasers—if the seller so wishes. But when the standardizing bureau gets into thorough working order all this will be changed. Weights and measures will not only be uniform throughout the country, but they will be absolutely correct. This standardizing will include scientific instruments, so that surveying will be done more accurately, gas and electricity will be measured exactly, physicians' prescriptions filled with greater exactness and all measurements, in fact, from dry goods to machinery, will be made with greater care.

Mr. Nobody.

I know a funny little man,
As quiet as a mouse,
Who does the mischief that is done
In everybody's house.
There's no one ever sees his face,
And yet we all agree
That every plate we break was cracked
By Mr. Nobody.

'Tis he who always tears our books—
Who leaves the doors ajar;
He pulls the buttons from our shirts
And scatters pins afar.
That squeaking door will always squeak,
For, prithee, don't you see,
We leave the oiling to be done
By Mr. Nobody!

The finger marks upon the doors
By none of us are made;
We never leave the blinds unclosed
To let the curtains fade.
The ink we never spill; the boots
That lying round you see,
Are not our boots! They all belong
To Mr. Nobody!

A Tinshop on a Bicycle.

A tinshop in a wagon has been a common sight on country roads for years. It seemed as if there was no limit to the amount of tinware the peddler could store into the many openings and "cupboards" in the great boat-like vehicle. But the bicycle may take the place of the old tinshop wagon. By means of it, thanks to modern invention, the peddler can now travel much more quickly and at the same time have his wares on exhibition. The new vehicle, however, in point of steadiness is perhaps better adapted to city use than to the country.

Extending beyond the handlebars of the bicycle in front and behind the saddle, in the back, is a rod to each end of which is fastened a skeleton cone of wires. All up and down the wires are numerous hooks, to which the various cooking utensils are hung. The whole thing is but another contrivance to gain trade, for of course, many persons will buy that which is brought to them, who hesitate to seek it for themselves.

All Children Should Learn.

To swim.
To run.
To sew on their own buttons.
To be neat.
To be punctual.
To be respectful.
To be truthful.
To be obliging.
To be unselfish.
To be observant.
To be studious at study times.
To be merry at play times.

A Not Uncommon Remark.

Harry, aged 5, went to church one Sunday, and on his return home his grandmother asked him what the minister said

"I don't know, grandma," replied Harry, "he didn't speak to me."

A good many older people who attend church seem to think the same thing.

Why She Was Sweet.

A foud mother who was caressing her 3-year-old daughter exclaimed: "Nellie, I wonder what makes you so sweet?"

After a moment's profound thought the little miss replied: "I guess God muust have spilt some sugar in my dust."

CAREERS CHOSEN BY CHILDREN

Most Girls Want to Be New Women When They Grow Up.

"What would you like to be?" is a question that has been put to the children of different nations during the past year, with some startling results. The replies to the inquiry among French children are now being published, and some are quite as amusing as those received from English and American youngsters.

Judging from the replies of the girls, it looks very much as if the new woman will have things pretty much her own way over there in another generation. Who would have believed, for instance, that of these 442 little girls, more than one-half aspire to what are called in French parlance liberal careers, asks the Philadelphia Telegraph. The first French woman to be admitted to the bar had scarcely got into her new robes of office when these questions were sent out. Yet fifteen little girls declare their intention of following her example.

The small boys, of course, have the primitive small boy susceptibility to drums and gold braid and bang! bang! Says one:

"I want to regain Alsace and Lorraine."

"I'm already a good deal of a soldier. I have a sword and four or five guns," says another.

"When the trumpet sounds," writes a third, "I feel my heart beat faster."

"I want to be a soldier because I am tall, strong, not stupid, and not a coward."

Only one of these 264 belligerent youths owns up to a bit of vanity in his choice of a career, but it is safe to believe that, being human and French, the others are not insensible to the charms of gold braid and spurs and brass buttons. Says the honest one.

"The uniform is very pretty, so that my sister's girl friends will look at me."

The would-be farmers have a touch of poetry in their natures, not surprising in lovers of the country. Says one:

"I shall be a vine grower. It is my father's occupation. A good worker is esteemed by all the world."

"Agriculture," says another, "is the most noble of the professions. I don't want to be a routine farmer, but an educated agriculturist."

"I am 13 years old," remarks a philosophical youth. "If Bonaparte had been alive I should have enrolled myself under his flag. But not having a sword, I shall take a plow."

Danish Export of Eggs.

In 1895 we scarcely knew Denmark as an egg producer; but in that year was founded the first Danish co-operative society for the export of eggs. The same system which had succeeded with butter was now to be applied to eggs. The country was divided up into districts; each district had in some railway station a collecting depot, and all members of the society were bound to deliver three times a week at the depot. The depot agent refused, or had a right to refuse, all eggs more than four days old, and every producer of each district had a distinctive number branded on the egg. Thus, in the event of an egg proving bad, the depot which shipped it would be proceeded against, and by means of the distinctive number the depot agent would be able to detect the producer, on whom the loss would finally fall.

By thus guaranteeing absolute freshness and making good any occasional loss, the Danes established a high standard, and so created a continuous demand. And what is the result? In 1895—the first year of the experiment—there were established six local egg societies, with an aggregate of 2,000 members; in 1900 there were actually no fewer than 837 separate co-operative societies, with a total membership of 130,000 producers! Is it surprising that Denmark should send to England alone 300,000,000 of eggs annually?—London Mail.

But for adversity lots of men would never find out whether they were honest or not.

None but the grave deserves the monument.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

Issued Every Friday

INDEPENDENCE, CAL.,

FRIDAY, JULY 19.....1901

A movement is on foot among some capitalists at Bakersfield and Los Angeles to mine the immense salt beds in the southern part of Death valley. D. J. Cook of Bakersfield is at present in Death valley looking the ground over to determine as near as possible the amount of salt available and the quality of the salt. Some years ago a large quantity of salt was taken from the Death valley beds. In those days the United States held the title to the land, but recently a new law was enacted whereby the salt land could be located the same as oil and mineral lands. Immediately after the passage of this law some wide-awake oil magnates of Bakersfield located the land and the location notices are at present on file in the County Recorder's office. The people who now have control of the land intend to construct a narrow-gauge railroad seventeen miles long, extending from the salt beds to the main line tracks of the Santa Fe company. When the salt mines were operated before great difficulty was experienced in bringing the salt to the market. Traction engines were used to haul the compound from the mines to the railroad. This means of transportation cost $5 a ton and even then good money was made from the sale of the salt. By having a private railroad it will be possible to place the salt in the market at less than a dollar a ton. Salt is said to exist in large quantities in the southern part of Death valley. Some time ago a shaft was sunk to a depth of thirty-five feet and a ledge of pure rock salt was encountered. D. J. Cook is one of the most prominent of the promoters of the scheme. H. T. Austin of Bakersfield is another one of the promoters.—Los Angeles Herald.

One of the most pitiful stories of modern times is that of the death of Colonel Larken M. Ford. At one time a millionaire, he had lost his fortune through bad investments and had then set himself to the task of discovering a method of treating ores of a smelting grade without the expense of smelting, and had at last succeeded, after twelve years of experimental work. He was on the eve of making known his great discovery to an expert from the Carnagie steel company, who had watched the results, but was not taken into the secret. This expert was satisfied with all he saw and was ready to pay millions for the secret. Before it was revealed Colonel Ford was stricken with apoplexy, and during the hours which he lay unconscious the expert stood by his bedside, waiting in hopes of a moment of consciousness when the secret would be revealed and a fortune paid for the knowledge. But the moment never came and the discoverer died with his secret—died because of the long years of toil in search of it.

A rush of speculators to fatten on the distress of the poor farmers in the corn and wheat belts is now the chief spectacle in the great marts of Chicago and New York. The combination of intense heat and prolonged drought has ruined a large percentage of the farmers' product. That means a great shortage of marketable supply, with much higher prices. And so the speculators in human food are making the best of the oppurtunity to pocket money out of the misfortunes of their fellow men. It is "business," of course, and quite legitimate in business ethics, but it seems to emphasize the hardship suffered by the unfortunate farmers, the burning up of their crops in the fierce rays of the sun, without a drop of rain to mitigate the effect of the heat, and the hard labor of months gone for naught. And then they read how their misfortunes have enabled food speculators to line their pockets, reaping the only real harvest of the season.

As if the heat were not enough for mortals to bear, the terrors of this summer in the East have been augmented by the reappearance of the kissing bug. One of them stung a Chicago man while sitting in a park and he died within a few hours.—S. F. Call. If the aforesaid bug, while sitting in a park, were to sting a San Francisco man he couldn't live one minute.

The Randsburg Railway and the Randsburg-Santa Fe Reduction Co., owning the 50-stamp mill and reduction works at Barstow, have been consolidated as one corporation which will operate the railroad, mining and custom milling enterprises of the owners as one. The company has mines of its own and has also established sampling works at Johannesburg.

President Hays has outlined a policy which calls for the expenditure of $40,000,000 in improvements on the main line of the Southern Pacific. The company which two years ago adopted a 76-pound has made the 80-pound rail its standard, and the latter will be used on all new and reconstruction work hereafter.

It is noticeable that the European war-clouds rise less frequently than they did before the Spanish-American war, the South-African war and the trouble in China occurred.

China has agreed to pay $315,000,000 for the satisfaction of civilization, but what she wishes now is to find some white man to take up the burden.

A check drawn in New York for $12,000,000 was dated two days ahead in order to save the 2-cent revenue stamp.

It is estimated that one crow will destroy 700,000 insects in one year.

HOME GROWN ORANGES.

The Little Kumquat the Latest Fad In Potted Plants.

There's a new orange that has jumped into New York popularity all of a sudden, the little Kumquat, a little thing that looks like a plum dressed in orange skin. They are used for garnishing and for salads, and then they are preserved and candied. Three years ago it was almost impossible to sell fresh Kumquats there save to confectioners, but some of the caterers

THE OVAL KUMQUAT.

took them up as salad relishes, and the swells fancied them, and now any quantity of them are sold.

The picture of this citrus fruit is taken from one of a specimen which The Rural New Yorker grew on its grounds under the most ordinary conditions. The journal mentioned says further:

The Kumquat is a native of southern China and forms a large bush or small tree when grown on its own roots in a locality free from frost. It is extensively cultivated in Japan and has lately been planted in considerable quantity in Florida and California.

The little fruits are much prized for preserving and are eaten fresh to a large extent. A sweet gelatinous layer is found between the sour central pulp and the thin, pleasantly flavored rind and forms an agreeable combination when the fruit is eaten whole. Two varieties are grown, one having round fruits and somewhat thorny branches and the other plum shaped fruits an inch in diameter and 1½ to 2 inches long. The trees bearing the oval or plum shaped fruits are almost thornless. For pot culture Kumquats are grafted on hardy orange (Citrus trifoliata) stocks, which dwarfs them very much and is said to render them hardier when grown in the open.

Little trees less than two feet high bear as many as 100 fruits, which come to full maturity and flavor in a window or under glass if given plenty of sunlight and a temperature sufficient to keep geraniums in a growing condition. They require about the same treatment as the dwarf orange, but those grafted or budded on hardy stocks often become quite dormant after fruiting and can be stored in a light, frost proof cellar until spring if the soil about the roots is kept moderately moist.

During the flowering period, in June or July, the trees should be placed outside, so that bees and other insects can have access to the blooms and insure pollenization. If plunged in ashes or other sharp material and faithfully watered, these dwarfed citrus plants may well spend the summer out in the sunshine, but should be taken inside before the nights turn very chilly, especially if well set with fruits.

Notes on Clematis.

The large flowered clematises are among the most showy of all climbing plants, and with their blooms several inches across overlapping each other on a vigorous plant in June and July the display is a source of mingled surprise and pleasure. These are hybrid varieties, of which Clematis jackmani, known by its velvety purple, large floral leaves and central tuft of pale green stamens, is the most popular.

In the region of New Jersey various kinds of clematis are hardy and in every way to be recommended. Professor Earle states that the Jackman clematis succeeds in Alabama only in shaded situations. "When protected in New Hampshire, it is fine," according to Professor Rane, while in Colorado it is the usual plan to lay plants down and cover with earth or straw for winter. In Iowa "it succeeds with winter protection," and for Missouri "it is as hardy as others." Clematis paniculata is not safe in many localities.

Horticultural Brevities.

Lilacs should be pruned after flowering. If done in the spring, it would destroy most of the flowers.

The newer variety of deutzia, the lemoinei, it is thought, may supplant the gracilis. Its flowers when open are cross shaped, and it is still more showy than gracilis.

The American Pomological society will meet at Buffalo Sept. 12 and 13, 1901, the exhibition being held in the horticultural building at the Pan-American exposition.

Potted strawberry plants have appeared in the florists' windows this season, with the fruit just beginning to color.

For curculio jar peach and plum trees every day or so for two or three weeks after the fruit has set. There is considerable apprehension of trouble with curculio this season.

Flushings, lacings and shaded effects indicate the latest tendency in the production of rose novelties which are marvels of beauty.

Fruit Notes.

Road dust, air slaked lime or wood ashes dusted over small cherry trees is an effective remedy for the cherry slug.

Tomato plants grown from cuttings from plants which had fruited are said to have produced over 30 per cent more fruit than those grown from seed.

Pomona is the best flavored red currant and White Imperial the best among the white sorts, according to one of the stations.

In general, especially in small vineyards, a thousand vines are pruned too little for one that is pruned too much.

For apple scab use bordeaux mixture every three weeks up to the middle of July or 1st of August.

Currant worms that appear when the fruit is half grown should be treated with pyrethrum, a tablespoonful to a gallon of water.

Look out for bugs on the melons and sprinkle freely with tobacco dust.

WATER GARDENING.

Don't Plant Too Early and Avoid the Use of Fresh Manure.

The latter part of May and beginning of June, according to locality, is the time for planting out the tender nymphæas. These should be started in April, allowing from six to eight weeks' growth in a temperature of from 70 to 75 degrees, always giving the plants the full benefit of the sunlight and ample ventilation. It will be found of great advantage to procure tubers of such nymphæas and grow them on the place in preference to buying plants at the time for planting. Small tubers will produce flowering plants in a few weeks and can be safely sent by mail, whereas plants would have to be shipped by express, and there would be more or less of a check to the plants besides the expressage.

Every season there are some complaints of nelumbiums not growing. The weather should be settled warm and the conditions favorable for growth at once; therefore don't plant very early.

There are other dangers besides planting too early. The tubers are sometimes difficult to keep in place, especially if the water is deep. No better method can be adopted than to start the tubers in pots or seed pans, thus securing a ball of soil and roots. Tubers started thus will make good plants in a few weeks, and when the season is late for planting so much additional time may be gained, besides far better and more satisfactory results.

Another cause of failure is planting the tubers in tubs, using a quantity of fresh manure with the soil. Before the tubers can make a fair start fermentation takes place. Under such conditions the new growth is almost sure to decay, and the result is failure. Thus writes such good authority as W. Tricker in Gardening.

The Pretty Garden Forgetmenot.

One of our loveliest flowers is the garden forgetmenot (Myosotis palustris), but there are very few gardens where it will flourish for more than a season. Plenty of moisture is what it wants, and it is said that in Germany and other parts of Europe it grows along every stream, and apparently it needs very little encouragement to do the same in New England, says a writer in an exchange.

Knowing of two cases where beds of it are established in the fields, I set out two or three slips (rooted in water) last summer, and already these have increased to a thrifty mat of budded shoots as large as a handkerchief. It begins to blossom about the 1st of June and continues in flower until frost, seeding freely as well as spreading rapidly by its creeping stems, and it is a perennial, perfectly hardy under favoring conditions. Nothing is prettier for indoor decoration than big bowls of forgetmenots, which will last for a fortnight, the sky blue blossoms and rosy buds growing a little paler, however, as they open in the house.

Picking Strawberries.

The less berries are handled before marketing the better condition they will be in. For this reason they should be picked, graded and crated with one handling. This can be done where the picker understands grading. A handy device is a carrier made to hold four of the quart crate boxes. This is made of a board about 10 by 16 inches long, with a handle nailed through the mid-

CRATE FOR HOLDING BERRY BOXES.

dle. Two boxes will sit each side of the handle, and strips of thin boards three inches wide nailed across the ends and sides will prevent them from slipping off. The picker grades as he picks, putting each size in its proper box. With one of these in each hand a person can carry eight boxes after picking, saving time and needless trips to the crating room.—Ohio Farmer.

Spraying Peach Trees.

Bordeaux mixture containing three pounds of bluestone to a barrel of water applied the last of May is likely to injure peach foliage somewhat, but in our experience the injury is not enough to do any serious harm. The same is also true of bordeaux containing two pounds of bluestone applied the last of June.

Black spot was almost entirely prevented and the texture and size of the fruit were decidedly improved by two and three applications.

The spraying should be continued well up to the time of ripening of the fruit.—Maryland Station.

All Round Good Plant.

One of the most useful ornamental shrubs in cultivation is the Japanese barberry. For the purpose of a dwarf hedge it is the best known plant in use. It makes a pretty specimen singly on a lawn appropriately located or in masses bordering shrubbery plantings. The foliage is small, neat and colors richly in autumn, when the plant is further ornamented by scarlet berries. Further, it is very hardy and stands almost any position. It is undoubtedly an all round plant, says Meehan.

Tobacco Decoction.

Tobacco decoction for use as an insecticide can be made by reducing some of the extracts now on the market or by boiling cut or broken stems until a thick brown extract is obtained. One pound of tobacco stems should yield one gallon of extract in two hours' boiling. If it boils down to less, add water to make up before using. Strawberry plants may remain in this mixture for several minutes and need not be washed off after being taken out.

Hardy Phlox.

The hardy phlox, the same that our grandmothers used to grow in their gardens, has been greatly improved of late years both in size of flower and coloring, there now being a wide range of color. Phlox is of the easiest culture and should have a place in every garden.

BALCONY PLANTS.

Large Foliage Plants, Cannas and Hydrangeas Are Effective.

The floral decoration of the balcony is a growing custom, and truly "hanging gardens" are refreshing to the sight of city dwellers. Vines for this purpose go without saying, but there are other plants which may be added to give distinction to balcony, porch or piazza.

Large foliage plants such as Ricinus gibsoni (the bronze castor oil), Japanese maize and palms are some of these, while other foliage plants, producing, too, handsome flowers, are also desirable.

For the central group, or those arranged opposite the windows, cannas are very effective, for their foliage is handsome and distinct, while their glowing blossoms in crimson and gold make a fine display of color. The dwarf large flowered cannas, such as Queen Charlotte, Egendale and Hypolite Flan-

WHITE HYDRANGEA.

drin, are the best for the purpose, but the dark bronze foliage of Bihorelli purpurea, with brilliant crimson flowers, and the canary yellow blossoms of Austria, borne on taller stems, make a grand show also behind the rest.

With these richly colored plants a few hydrangeas may be grouped. The white hydrangea is one of the very best, being compact and highly floriferous, blooming even in a tiny pot during its first year.

Hydrangeas are most accommodating plants, only requiring a shift into a pot two inches larger in diameter after blooming, unless of large size, and a rich top dressing just as they start into growth in the spring.

An abundance of water and biweekly supplies of soot water should be given directly the plants begin to grow. In fact, when in flower they can scarcely have too much water, and any failure in the supply will cause the floral bracts, which are naturally of snowy whiteness, to turn brown, thus spoiling the beauty of the plant.

A special point in the cultivation of these flowers is that they should stand all the summer after blooming in the full sunshine to ripen their wood, for without this they do not bloom well.

The Low Headed Tree and the Hog.

The low headed tree bears earlier. The fruit is easier gathered. The fallen fruit does not bruise so much. The only way to cultivate low branched trees is by the hog. He works for his board and always brings the rosy apples where he is allowed to root. Cultivate we must. If not by the hogs, then the plow or harrow must be used. No other fertilizer will take the place of cultivation. We have grown the past year on a gravelly soil and not much soil at that nice apples. The hogs did the work. The sheep's foot may bring fertility to the farm. In the orchard the hog is to be preferred. An excess of nitrogenous manures is not beneficial. It brings bareness and blight unless supplemented with potash. Let me repeat. Cultivation, shallow cultivation, with proper spraying, is the essential in apple culture. The best fertilizer is cultivation of some kind.—A New Jersey Orchardist.

The Kerr Plum.

Of the Kerr plum F. S. Earle of Alabama says: This is a remarkably good plum, whose valuable qualities seem to have been overlooked by nurserymen and orchardists. It is the earliest of our really good plums, ripening here about the first of June. It is large, rich, yellow, with firm flesh of high quality. It blooms rather late, and the tree is a good grower. It is strongly recommended for "both home use and market." On the other hand, a northern grower has pronounced it "fit only for the brush heap." You "pays your money and takes your choice."

Cover Crops In Peach Orchards.

When a system of tillage is followed in the orchard at the last cultivation, say the middle of July, the cover crop ought to be sown. The trees have completed most of their growth by this time and do not require as much plant food as earlier in the season, so that taken by the growing catch crops will seldom be required by the trees if they have had an abundant supply earlier in the season.

Raspberries and Blackberries.

Head back the young canes of raspberries and blackberries to three feet and the laterals also when they get longer. They may be pinched with the thumb nail and finger in a small patch, but this soon makes the fingers sore, and where there are many bushes to go over it is better to use a pair of shears or a sharp sickle.—Bailey.

Mushroom Growing.

Although any one with a good, dry cellar or outhouse who is within reach of a horse stable can grow mushrooms, yet those who would find most pleasure and profit in raising them are suburban and rural people—farmers, truckers, florists—in fact, any one living at or near a place where horses are kept.

Fruit Pulp Bricks.

Experiments are being made in the manufacture of fruit pulps in a brick form. The pulps being mixed with a large percentage of sugar, they are about the consistency of a gum drop and retain the flavor of the fruit admirably. Being wrapped in oiled paper, they are said to keep well and be fit for use at least from 18 months to two years after they are made.

The Geranium as a Bedding Plant.

The geranium leads all the other plants in the good graces of the planter, and well it may with the improvements that have been made in colors and ability to withstand our hot midsummer suns. It would seem that nearly or quite as many geraniums were grown and sold last spring as all other bedding plants together.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days, and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

INYO MERCANTILE CO.

29. W. G. Bennett
80. W. A. Powers.

Real Estate Transfers.

Recorded since last report:

Harrold Preston, Administrator, to S. S. Allen—Lot 8 in Block O W, Clarke's Addition, Bishop; $585.

Martin Halvey to Wm. Concannon—Undivided ½ interest in the New York, Idaho and Emerald mining claims, Tuba Canyon; $1.

Sam'l Meredith and wife to J. C. Miller—5 acres land near Big Pine; $100.

Chas. W. Dodenhoff and wife to Fred Yoern—480 acres land near Lone Pine station: $10.

W. H. Adams to F. J. Syvertson—120 acres oil land near Olancha; $10.

J. R. Berry to J. R. McKee—20 acres oil land near Olancha; $1.

W. H. Adams and one hundred and seventeen others to Adams Oil Company—7000 acres oil land near Olancha; consideration, stock in company.

J. G. Adams et al to Adams Oil Company—oil lands near Olancha; stock.

H. H. Moore et al to Adams Oil Co.—oil lands near Olancha; stock.

B. T. Bailey to Adams Oil Co.—oil lands near Olancha; stock.

Maggie McFall to Adams Oil Co.—oil lands near Olancha; stock.

A. O. Collins of Poleta was in town yesterday.

Dance at the Georges Creek Hall tomorrow night.

Note the new "ad." of A. W. Eibeshutz this week.

Last Saturday Fred Burkhardt, of Lone Pine, was in Independence.

Summer exodus to the mountains has set in. Fish stories after while.

So far we have heard of no parties going over to Saline Valley after fish.

State exchanges are about as dull as they generally make 'em at this season.

Dr. J. S. McQueen will arrive from Bishop this evening, on a professional visit.

Thos. Leatherdale came up from the Darwin and Ballarat country the other day.

T. W. Hill of the Big Pine contingent was here for a few days during the past week.

The Big Pine merchants have agreed to close their stores on Sundays. Good enough.

The Misses Laura and Edith McBride of Reno are the guests of Mr. and Mrs. John Baxter.

John Dodge, Horace Elder, C. M. Green and others were up from Lone Pine on Tuesday last.

Dr. R. E. McDonald has left Ballarat to locate in Randsburg. The Randsburgers are the gainers thereby.

Pat. Clinton, the stand by of the Cerro Gordo mines, is enjoying a vacation here while looking after property interests.

Dr. Clifford Baxter, accompanied by two of his college friends from Berkeley, is making a tour of the Kern-Kings river country.

Mr. La Doux, a general agent of the Singer Mnf'g Co., has been looking up sewing machine business through all the valley towns, accompanied by the local agent, T. W. Parker. It is probable that the latter will accept the Reno agency.

Board of Supervisors.

All the members of the Board of Supervisors were present on Friday and Saturday last.

Reports of Auditor and Treasurer examined and approved.

The old Bishop Bond Fund was ordered transferred to the Salary Fund and that ancient myth about $990 indebteness of the old General Fund was ordered canceled.

Supervisor Cooley was instructed to investigate the Rock Creek crossing in Round Valley and to construct a bridge if necessary.

The application of A. W. Eibeshutz for a reduction on his assessment on merchandise from $3000 to $1500 was rejected.

The Clerk was instructed to notify the County Surveyor to have the township maps completed and mounted according to contract by the next regular meeting of the Board.

The Assessor was instructed to enter on the assessment of C. E. Johnson merchandise to the amount of $100, and on the assessment of M. Jullien 60 head of sheep, and to add to the assessment of the following persons cattle and calves as follows:

J R Turner 16 head of cattle; S A Fraser 10 head of cattle and 8 head of cales; Thos Williams 20 head of cattle; W H Mitchell 10; Thos Webb 25; Frank Whitmore 25; O I Mairs 40 head and 22 calves; Chas Summers 17; C N Rose 90 head and 20 calves; T B Rickey 100; Geo Gilliam 25; Mrs A Steward 10; J C Crocker 20; E Robinson 20 calves; A E Fitzgerald 15 cattle; Gustav Sanger 15; F R Smith 18; R W Ford 20; F Shaw 25; J S Turner 25; John Symons estate 15. So corrected, the assessment roll was accepted.

The order passed Jan. 14, 1901, to publish a list of the tax-payers of the county together with the assessment of each, was rescinded.

The Auditor and Treasurer were instructed to transfer from the General Expense Fund $1000 to the Hospital Fund and $400 to the Bridge Fund.

Following bills were examined and allowed on the Salary Fund:

N J Cooley	$80 40
W P Yaney	61 80
Jas Jones	72 30
T C Boland	60 00
J A McKenzie	24 00
N J Cooley	57 00
T C Boland	75 60
J A McKenzie	82 80

On Saturday evening the Board adjourned, to meet Monday, Sept. 16, 1901.

Fred Crocker passed through town yesterday on the way home to Big Pine. He says that the mountain ranges around Whitney are fine this year and that the work on the trails by the U. S. Reservation authorities has been away up—up-to-date business.

T. C. Boland maintains regular shipments from Cerro Gordo, mostly fluedust concentrates. Clinton has lately made a shipment of 18 tons of fine ore from the Newtown mine.

The business of mining and quartz-smashing all over and around the Panamint country is pretty generally suspended for the time being, out of deference to the weather.

Four men are engaged in rebuilding the road in Surprise Canyon, being employed by the new owners of the old Panamint mining properties.

Charley Robinson says that some persons have been taking any quantities of trout from the headwaters of Little Pine (Kearsarge) creek by means of turning the streams, and that those who did so had not even the decency to turn the water back into its natural channels toward the lakes. A local club should be organized and pay rewards for the detection and punishment of such outrageous vandalism.

It is expected that the 30-stamp mill of the Yellow Aster company, which has been idle for repairs, will begin operations again on Monday next. It will require some ore to keep the 130 stamps running, but such is the condition of the mine and the facilities for getting it to the mills that it is not contemplated to put on more men now. The two mills will require close on to 500 tons of ore daily.—Randsburg Miner.

There are no potatoes in town. Why don't some of those starving farmers of Owens River valley haul in a few loads? Instead of their crying hard times why don't they get a hustle on themselves. —Tonopah Bonanza.

Who said our farmers were crying hard times? There is an abundant crop of everything this year and the Tonopah demand will doubtless be supplied.

Frank Butler, who controls the water supply of Tonopah, went to Mason Valley last week and purchased a half interest in the 20-animal team of Bill Arcularius. This team, which is said to be the finest in the State, will be put on the road between Soda and Tonopah.—Hawthorne Bulletin.

Excursion trains are rushing through Reno at the rate of one an hour. Thirty-five thousand Epworth Leaguers are en route for San Francisco.—Reno Gazette.

Boston has a new terror called the "brown-tailed moth." He is said to have bitten and poisoned sixty people in one night.

MIGNONETTE IN POTS.

How to Grow and Flower Fine Large Specimen Plants.

Two sowings of seeds should be made, the first about the middle of June and the second about the middle of July. Take as many six inch pots as there are specimens required and after draining them well fill to within an inch of the top with a mixture of loam and well decayed manure well broken up. Press it down rather firmly, sow the seed thinly and cover with finely sifted soil. Place them in a frame or under hand lights. After the seedlings are up give more air night and day.

The plants will soon become strong enough for the first thinning to take place, which should consist of the weakest plants. In a short time a second thinning will be required, leaving from five to seven of the strongest plants at regular distances over the surface of the pot.

The plants may be allowed to grow until they have rooted well, but at the same time must not be allowed to get pot bound, as if so the stems become hard, and they will attempt to bloom, and their future growth will be checked in consequence. At this stage they will be fit to put into the pots in which they are intended to flower. This large shift is necessary, because mignonette does not thrive well when frequently shifted. Eight and one-half or ten inch pots will be found a good size for specimen plants. The pots should be perfectly drained and quite clean.

As to soil, nothing is better than turfy loam well decayed. This will without any addition grow the plants well. Pot them firmly and water at once. Keep the sun from them and stand the pots out of doors or in a cold frame on a cool bottom of ashes and protect from strong winds. Stake each plant firmly, and when they have grown an inch or two pinch out the top of every shoot. This will cause them to break two inches or three inches down in the stem. These shoots in due time will need stopping and tying as the plants advance until they have formed the outline of good specimens, when they may be allowed to flower.

At the latter part of the summer, when the plants are taken under cover, they should have a light, airy place in greenhouse temperature. When the plants are well set with bloom, give occasional waterings of weak liquid manure.

Remarkable Crossbred Apples.

What is regarded as an epoch making event in the pomology of the United States is the recent crossing of the Newtown Pippin, one of the finest of American apples, with Rhode Island Greening, Northern Spy and Russet. All of these crosses have proved to be long keepers, and this, in combination with other excellences of quality, size and attractive appearance, makes their future a matter to be watched with eager interest by apple growers. These apples are the work of Mr. Underhill, a Hudson river grower, who recently exhibited and gave an account of them before the New York Horticultural society.

Horticultural Brevities.

Hardy hydrangea stands drought well.

A special exhibition of sweet peas at the Pan-American is announced for July 23 to Aug. 2.

One of the taking little novelties of the spring trade have been small pots of four leaved clover.

Leading fruit growers have claimed that where lime and sulphur are used as a wash for trees there will be no pear blight.

Fashion rules in flowers as well as dress. It is said that English leaders in floral matters have decreed the downfall of incurved chrysanthemums.

J. H. Hale speaks a good word in Rural New Yorker for Italians from northern Italy as laborers on fruit farms. Politeness and attention, smiles, music, a willingness to work and an enduring ability to work hard are leading characteristics. Many of them are expert in tree pruning, fruit thinning, picking and packing.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal,

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere.

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed;] Superior Court, County of Inyo.

J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

MACK & FORBES and W. J. HARRIS, Attorneys for Plaintiff, Independence, Cal.

Notice to Creditors.

ESTATE OF F. D. PRATT, Deceased.

NOTICE is hereby given that the undersigned, MERCIE T. COE, Administratrix of the estate of F. D. Pratt, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them, with the necessary vouchers, within four months after the first publication of this notice, to said Administratrix at the late residence of said F. D. Pratt, deceased, in the Town of Big Pine, County of Inyo, State of California, the same being the place for the transaction of the business of said estate in the county of Inyo, State of California.

Dated April 11th, 1901.

MERCIE T. COE,
Administratrix of the Estate of F. D. Pratt, deceased.

MACK & FORBES, Attorneys for Administratrix.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 27th day of May, 1901, an assessment, No. 34, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 21, 19th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

OFFICE—Room 31, 10th Floor, Mills Building, San Francisco, Cal.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains on Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,16 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office Reno.

aug-tf

Our Working Girls.

Life to the most favored is not always full of sunshine, but to the average American girl or woman who is obliged to work for her living, and, perhaps to help others at home, life is often a heavy drag in consequence of illness.

Women who work, especially those who are constantly on their feet, are peculiarly liable to the development of organic troubles, and should particularly heed the first manifestations, such as backache, pains in the lower limbs and lower part of the stomach, irregular and painful monthly periods,

MISS ELLA BRENNER, E. ROCHESTER, OHIO.

faintness, weakness, loss of appetite and sleep.

The young lady whose portrait we publish herewith had all these symptoms, and in addition leucorrhoea, and was cured by Lydia E. Pinkham's Vegetable Compound. First, she wrote a letter to Mrs. Pinkham's laboratory at Lynn, Mass., describing her trouble, received in reply accurate instructions what to do to get well, and now wishes her name used to convince others that they may be cured as she was.

The same helping hand, free of charge or obligation, is extended, to every ailing woman in America. If you are sick you are foolish not to get this valuable advice, it costs you nothing, and she is sure to help you. Don't wait until it is too late—write to-day.

Edison and Platinum.

A story will serve to throw light upon Edison's character. At one time there was a great fear in the scientific world that the deposits of platinum were about to become extinct. Edison thereupon organized a correspondence bureau and sent letters to every American consul upon the globe, to British consuls in ports where the United States had no representative and to scientific men in every land. The letter gave a clear statement respecting the metal, how and where it was found and might be found, how it could be identified and treated and much other information.

In each letter were inclosed samples of platinum as found in the various rock beds. This may seem to be a small undertaking, but when it is remembered that the letters were sent off by the thousands, that the postage was 10 cents to each letter and that the pieces of platinum inclosed were almost as valuable as metallic gold, the cost of the achievement is readily seen. While he did not succeed in greatly increasing the output of platinum, he set at rest all fear of its extinction and thus earned the gratitude of every scientific investigator.—Frank Leslie's Magazine.

The Place Was Filled.

At a seance the other day, when the lights had been turned low, the medium was describing a tall, dark eyed, handsome spirit, with long moustaches and his hair parted carefully down the center, that was hovering round a middle aged but elderly looking man, when he burst suddenly into tears. Heart-rending sobs shook his thin frame.

"George, George!" he cried. "Why, oh, why did you leave me to the misery of these past years?"

"Then you knew him?" asked the medium.

"Knew him?" murmured the downhearted man. "I saw him daily for months and months. Oh, George," he continued, "why did you die?"

"My good man," pleaded the medium, "you must pull yourself together. "Though his loss to you must have been a great one, you may yet meet another friend who will fill his place."

"No, no!" he cried. "His place is filled."

"Filled! Why, what do you mean?" asked the medium, astonished.

"He was my wife's first husband!"—Pearson's Weekly.

Fattening English Quails.

A curious account of how quails are fattened for the market is given in a London paper. It appears that quails, being regular in their habits, always feed directly they wake up in the morning. They are therefore put in a large cellar lit only by electric light. In the dark they go to sleep, but directly the light is turned on they wake up and breakfast. This process is repeated time after time, and the birds, always laboring under the delusion that morning has arrived, once more breakfast, over and over again. They have been known to do so six times in an afternoon.—Philadelphia Record.

The ordinary beer glass is regulated by law in Bavaria and must hold exactly half a liter, or nearly nine-tenths of a pint.

Use Wellington Egg Food.

It never pays a man to admit his mistakes to his wife, nor to admit them to any other woman.

WHERE YOUR HATS ARE MADE.

New York Produces Most of Those Worn in This Country.

"The business of manufacturing men's and boys' hats is one of the most thriving industries in the United States," said a leading wholesale hat dealer in New York to a Washington Star reporter recently. "Some idea of the enormity of the trade may be formed when it is known that there are at present in this country over 200 manufacturing plants producing hats and caps for men and boys. The hat factories give employment to 25,000 persons who turn out a finished product valued at $25,000,000 annually. Of the gigantic business New York has the lion's share, there being about $6,000,000 invested in the manufacture of hats and caps, and fully 2,500 hands employed. The value of the trade in New York was last year between $9,500,000 and $10,000,000.

"New York leads in the manufacture of fine silk hats, while most of the derby hats are made in Danbury, South Norwalk, Bethel and other Connecticut towns. The cheap soft hats are manufactured at Orange, N. J., while the wool hat is the product of factories at Peekshill and Newburg in New York State. There are 100 salable shapes in the soft hat line, while the silk and derby hat styles are, as a usual thing, limited to half a dozen different grades. The most popular and largely sold hat throughout the United States is the derby. This hat is worn commonly in Northern, Eastern and Western cities. In the South the prevailing head covering is the soft hat; perhaps to the extent of 80 per cent.

"There is practically very little importation of men's and boys' hats. Of course, there are a few Anglophobic people who must wear hats because they are made in London, but the quantity imported for their benefit is very small. We not only supply our home market, but we have some left over for export. Many thousands of American hats are now sold in Canada and also in Mexico and the neighboring countries, and there are numbers sold in South America, largely in the Argentine Republic. Considerable numbers are sold in South Africa, excluding the soft hats bought by American and other herders and miners. The number exported to Europe is not great, but it is enough to count. It has doubled within a year, and is still increasing."

Miss Myrtle Reed has been accused eleven times in one week of being the author of "An Englishwoman's Love Letters," and many people have written her about it. It is safe to say she did not write the book.

G. W. Dillingham publishes another historical romance by Mrs. John Ellsworth, called "The Toletec Savior." Mrs. Graham is a native of Wyoming Valley, Pa., and a relative of the late Alice and Phoebe Cary.

Paul Laurence Dunbar, the colored author, is keeping steadily at work to win recognition as a novelist. Dodd, Mead & Co. will soon publish his third novel, "The Fanatics." He has outgrown the ambition to be known solely as the teller of stories of his race.

Flora Annie Steel's new novel, "The Hosts of the Lord," is published by the Macmillan Co., uniform with this author's other works, which include "Voices of the Night," "On the Face of Forgiveness," "In the Permanent Way," "Red Rowans," "In the Tideway" and "Tales of the Punjab."

One would think that on the subject—"Napoleon"—so much had been written by eminent writers, that there was nothing more to be said. Yet Miss Ida Tarbell's "Napoleon" has reached a sale of 100,000 copies. It has even been revised and reissued by McClure, Phillips & Co., quite recently, under the title of "Napoleon and Josephine."

Literary records are always interesting. Of English works the largest circulation of any work in copyright has been reached by "Enquire Within," of which a million and a quarter copies have been sold. The largest circulation of any English novel in copyright is that of "East Lynne," of which the public have bought nearly half a million. The earliest published work still in copyright is Tennyson's "Poems," which dates from 1837. The largest amount ever given for serial rights is £7,000 for George Eliot's "Romola." The largest check ever given to an English author is £20,000, received by Lord Macaulay for his "History." The most expensive single volume lately issued is Morris' "Chaucer," published at £20. The thickest single volume in print is the "Catalogue of Current Literature," which measures 10½ inches across the back. The highest price given for a first edition is 545 guineas for an uncut copy of the "Kilmarnock Burns."

A Melancholy Wit.

That laughter is by no means an infallible symptom of a merry heart is proven by the story of Carlini, at one time the drollest buffoon on the Italian stage at Paris. A French physician, being consulted by one who was subject to the most gloomy fits of melancholy, advised his patient to frequent scenes of gaiety and particularly the Italian theater. "And," said he, "if Carlini does not dispel your gloom, your case must be desperate, indeed."

"Alas, sir," said the patient, "I am Carlini; while I divert all Paris with mirth, I myself, am actually dying of melancholy."

Requires Little Sleep.

The distinction among animals of requiring least sleep belongs to the elephant. In spite of his capacity for hard work the elephant seldom, if ever, sleeps more than four, or occasionally five, hours.

Brakemen are unusually smart about some things, but you can get them to pay $40 for a $20 watch by having an engine engraved on it.

HARD ON SMOKERS.

Old Time Legislation Against the Use of Tobacco.

It is one of the curiosities of old time legislation that the use of tobacco was in early colonial days regarded by the magistrates and elders as far more injurious, degrading and sinful than that of intoxicating liquors. Both the use and the planting of the weed were forbidden, the cultivation of it being permitted only in small quantities, "for meere necessitie, for phisick, for preservation of the health, and that the same be taken privately by auncient men." But the "creature called tobacko" seemed to have an indestructible life. Mrs. Alice M. Earle writes of these early restrictions about tobacco in "Stagecoach and Tavern Days:"

Landlords were ordered not to "suffer any tobacco to be taken into their houses" on penalty of a fine to the "victualler" and another to "the party that takes it." The laws were constantly altered and enforced, and still tobacco was grown and was smoked. No one could take it "publicquely" nor in his own house or anywhere else before strangers. Two men were forbidden to smoke together.

No one could smoke within two miles of the meeting house on the Sabbath day. There were wicked backsliders who were caught smoking around the corner of the meeting house and others on the street, and they were fined and set in the stocks and in cages.

Until within a few years there were New England towns where tobacco smoking in the streets was prohibited, and innocent cigar loving travelers were astounded at being requested to cease smoking.

Mr. Drake wrote in 1886 that he knew men, then living, who had had to plead guilty or not guilty in a Boston police court for smoking in the streets of Boston.

In Connecticut in early days a great indulgence was permitted to travelers—a man could smoke once during a journey of ten miles.

None of His Business.

While waiting for the train the bride and bridegroom walked slowly up and down the platform.

"I don't know what this joking and guying may have been to you," he remarked, "but it's death to me. I never experienced such an ordeal."

"It's perfectly dreadful," she answered. "I shall be so glad when we get away from everybody we know."

"They're actually impertinent," he went on. "Why, the very natives"—

At this unpropitious moment the wheezy old station master walked up to them.

"Be you goin to take this train?" he asked.

"It's none of your business!" retorted the bridegroom indignantly as he guided the bride up the platform, where they condoled with each other over the impertinence of the natives.

Onward came the train, its vapor curling from afar. It was the last to their destination that day, an express. Nearer, nearer it came at full speed. Then in a moment it whizzed past and was gone.

"Why in thunder didn't that train stop?" yelled the bridegroom.

"Cos you sed 'twarn't none of my bizness. I has to signal if that train's to stop."

And as the old station master softly stroked his beard there was a wicked twinkle in his eye.—London Spare Moments.

Roofs and Chimneys.

There is no doubt but the form of a roof has much to do with the draft of a chimney. The flat roof offers no resistance to the passage of air, but as the pitch is increased the current is more and more disturbed until with a high pitched and many gabled roof it is broken into innumerable eddies, some of which are sure to curl down and force the smoke and gases in the flue into the rooms below. Chimneys on such roofs should be built higher than ordinary.

Bunching the Hits.

Case and Comment tells a story of an Illinois attorney who argued to the court one after another of a series of very weak points, none of which seemed to the court to have any merit until the court finally said, "Mr. ——, do you think there is anything in these points?" To which the attorney replied, "Well, judge, perhaps there isn't much in any one of them alone, but I didn't know but your honor would kind of bunch them."

Touched a Sore Spot.

"Do you find it difficult, senator," she asked, "to keep in touch with your constituents?"

"I beg your pardon, ma'am," he replied, with a scared look, "but really I must ask you not to use that expression with reference to my affairs. Touch is a word that I can't stand since the papers used it in explaining why I voted for that street railroad bill four years ago."—Chicago Herald.

What a Singer Must Know.

For a singer to succeed it is necessary that he should have more than a voice or be a vocalist. Wagner has set a higher standard, and to him we owe it. Not only the cultivation of the voice, but the higher education is necessary. The voice alone is not sufficient, even in the concert room. Singing has grown to be quite another art. The singer must be an impersonator.

I myself studied for five years at the university. But that, as a rule, holds one too long. But at least a good general knowledge of literature and of science is necessary.

The day is past when a fiacre driver, because he has a beautiful voice, is accepted as a singer; so also is the day when a concert in costume is regarded as an opera. The standard of impersonation has been immeasurably raised by Wagner. History, literature, knowledge of the plastic arts, are all necessary to the singer.

American women have, many of them, beautiful voices. Again, many of them go abroad to study. That is a mistake. It is at home that they should lay the foundation. Build by degrees. Do not aim to be a star, but a good artist. Study always, be content with small roles. The rest will come of itself.—Ernest Van Dyck in Saturday Evening Post.

Sold at Last.

A traveling man who is absent from the city about 60 days on each trip carried a pair of shoes to a German shoemaker to be half soled before leaving on a tour through the country towns. The shoemaker was accustomed to selling articles left with him for repairs if not called for in 30 days. The drummer stated to the shoemaker he would be absent from the city for at least 60 days and would not leave the shoes to be repaired unless he was assured that they would not be sold.

The traveler's trip was prolonged to 90 days. When he returned, he went immediately to the shoemaker for his shoes.

The shoemaker's inability to distinguish between have and half came near resulting in his receiving a thrashing.

"Have you sold my shoes?" asked the drummer.

"Ya, I haf soled them," replied the shoemaker.

"What in blazes did you do that for?" yelled the traveler.

"You told me for to do it."

And then the drummer engaged in a bit of shocking profanity and threatened to clean up the ranch.—Memphis Scimitar.

What Our Flag Stands For.

Wherever the American flag is raised in token of sovereignty, it stands for liberty and independence. What the flag is to the nation, Hostetter's Stomach Bitters is to the individual. It gives you freedom and protection from your ailments. When your stomach gets out of order, causing dyspepsia, indigestion and biliousness, or when you are nervous and unable to sleep, you should try it. It will strengthen your stomach, steady your nerves and induce sound sleep.

No man should ever make excuses to a woman who loves him. Let him say he is sorry and loves her and she will make the excuses and accept them, too.

TO CURE A COLD IN ONE DAY
Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

It is hard for a man's pride to think that he has not enough brain to do more than attend to his own business.

Difficult Digestion

That is dyspepsia.

It makes life miserable.

Its sufferers eat not because they *want to*, —but simply because they *must*.

They know they are irritable and fretful; but they cannot be otherwise.

They complain of a bad taste in the mouth, a tenderness at the pit of the stomach, an uneasy feeling of puffy fulness, headache, heartburn and what not.

The effectual remedy, proved by permanent cures of thousands of severe cases, is

Hood's Sarsaparilla

HOOD'S PILLS are the best cathartic.

Fully Explained to John.

"John," she said as she toyed with one of his coat buttons, "this is leap year, is it not?"

"Yes, Mamie," he answered as he looked fondly down on her golden head that was pillowed on his manly bosom.

"This is the year when the proposing is done by the young ladies?"

"Yes."

"I hope you don't expect me to propose to you?"

"Why, Mamie, dear, I never gave the matter a thought. I—er—to tell the truth, I've only known you for—that is to say"—

"I'm glad you didn't expect me to propose. I'm not that kind, I hope. No, John, dearest, I couldn't be so immodest. I'm going to let you do the proposing yourself in the old fashioned way. The old fashioned way is good enough for me." And the gentle maiden gave her lover a beaming smile, and the young man rejoiced that he had found such a treasure of modesty.—London Tit-Bits.

ST. VITUS' DANCE.

HOW ONE LITTLE SUFFERER WAS PERMANENTLY CURED.

Words of Gratitude and Praise from Parents for the Remedy that Saved the Life of Their Child.

From the Traveler, Arkansas City, Kan.

Rapid as has been the advance of medical science along many lines, it is only in recent years that a remedy has been discovered for one of the most dreadful of nervous diseases that afflict children—St. Vitus' dance.

This, and other nervous disorders that cause the pale and wan faces and peevish, irritable dispositions of so many children, can now be scientifically treated by a remedy that strikes at the root of the disease by renewing the impoverished blood and strengthening the nerves.

Words of commendation for this remedy come from all parts of the civilized world. This is the interesting story told by Mr. and Mrs. Christopher Armstrong, of Jefferson, Okla.:

"Our youngest daughter was for three years afflicted with St. Vitus' dance, and we almost despaired of finding relief in medical treatment. She was so helpless that she had to be fed and would fall over at times and be unable to rise.

"We had heard and read a great deal about Dr. Williams' Pink Pills for Pale People, and as a last resort, determined to try them. The effect was almost miraculous. From the first box there was a noticeable improvement and by the time she had taken six boxes she was almost well. Altogether she took about a dozen boxes, and by the time she was thirteen years of age, was strong and healthy, weighing 114 pounds."

CHRISTOPHER ARMSTRONG,
MARY ARMSTRONG.

Subscribed and sworn to before me.
W. D. KRAMER, Notary Public.

The power of Dr. Williams' Pink Pills for Pale People in the vast number of diseases due to impure blood or to derangements of the nervous system has been demonstrated in thousands of instances as remarkable as the one related above. No one who is suffering can rightfully neglect this way to restore health. Dr. Williams' Pink Pills for Pale People are sold by all dealers, or direct from Dr. Williams Medicine Co., Schenectady, N. Y., 50 cents per box, or six boxes for $2.50.

Is is easy enough to forgive when you are quite sure it is the most provoking thing you can do.

Coated with chocolate, very small and easy to take as sugar, are Adams' Sarsaparilla Pills, for sick headache, constipation, biliousness, dyspepsia, sallow complexion. They purify the blood. 10c, 25c. Druggists

For Consumption try Fryer's Abietene Cough Balsam.

Fryer's Abietene Cough Balsam saves Doctor Bills

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

YOU KNOW WHAT YOU ARE TAKING
When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

DANDRUFF WON'T WASH OUT.

The Germ That Causes It Has to Be Destroyed to Cure Dandruff.

Many a woman spends an hour twice a week scouring her scalp, thinking scrubbing off the scurf will cure the dandruff. Two hours a week, at the age of 40 years, she has spent 260 days of 12 hours each, or two-thirds of a year of her life, in that vain hope; vain, because you can't cure dandruff without killing the dandruff germ, and the only hair preparation on earth that will do that is Newbro's "Herpicide"—also a delightful hair dressing, and thorough antiseptic against all contagion from use of others' hair brushes. It is also a delightful hair dressing.

Preachers don't realize how much religion the pews need to make them patient with the pulpit.

Blood Poison

THE MOST DESTRUCTIVE OF ALL HUMAN DISEASES.

The poison ejected from the fangs of the rattlesnake is not more surely fatal than the virus of Contagious Blood Poison, which pollutes and vitiates the blood, destroys the tissues and bones and eats like a canker sore into the flesh.

This horrible disease appears first in the form of a little sore or blister; soon the glands begin to swell, pimples break out on the body, the mouth and throat become sore, making it painful to eat or swallow; dreadful ulcers appear on the tongue, copper colored splotches and other characteristic signs of Blood Poison come as the disease progresses, and the destructive virus takes deeper hold upon the system. The medical men are as sorely perplexed over the character of this blood poison as ever; they tell you to take mercury and potash alternately for three years, but the stomach of no human being can stand this treatment long; besides, they do not cure the disease permanently, as thousands who have tried it know.

WELLINGTON, KAS., Sept., 1900.
I contracted Blood Poison two years ago this fall, and was persuaded to try a medicine widely advertised by a remedy company in Chicago. I was required to pay a large amount in advance, and can truthfully say that I was worse when the treatment was left off than when I began. Reddish pimples would break out and fill with yellowish matter; copper-colored splotches of all sizes would appear on my body; my throat was so sore I could scarcely swallow, and my mouth and tongue were seldom free from ulcers; tonsils were swollen, and my hair was coming out rapidly. This was my condition when I began your S. S. S. I have used twenty-two bottles, and am feeling splendid. Every sore on my body has healed, and my appetite good. JAKE MARTIN.

S. S. S. is the only guaranteed purely vegetable blood purifier, and the only antidote for this particular virus; it purifies the blood and builds up the constitution. The appetite improves almost from the first dose, the sores soon show signs of healing, and the unsightly, dirty splotches and eruptions grow paler and paler, and finally disappear.

S. S. S. is not a new medicine; for nearly 50 years it has been known and used for this dreadful disease. It has brought new life and hope to thousands all over this land; it will cure you as it has others. Send for our free book on home treatment and write our physicians about your case. We will help you if you will let us; we make no charge for advice, and all correspondence is conducted in strictest confidence. **THE SWIFT SPECIFIC COMPANY, ATLANTA, GA.**

EDUCATE YOUR BOWELS

Don't neglect the slightest sign of irregularity but see that you have at least one natural, easy movement a day. Pills, salts and black draughts are dangerous because they strain and weaken the bowels. What you want is a mild but sure tonic laxative, that tones and strengthens the bowels and stimulates their movements. Such a laxative is CASCARETS, and when you try them, you will find that it is the easiest thing in the world to make and keep your bowels clean and regular, strong and healthy. Sample box 10c. Month's treatment 50c. By keeping the bowels clean, all serious disorders are

PREVENTED BY

Cascarets
LIVER TONIC
BEST FOR THE BOWELS

10c. 25c. 50c.
ALL DRUGGISTS.
NEVER SOLD IN BULK.

CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking CASCARETS to-day, for you will never get well and be well all the time until you put your bowels right. Take our advice; start with CASCARETS to-day, under an absolute guarantee to cure or money refunded. 450

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith and will sell CASCARETS absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied, after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of CASCARETS. Book free by mail. Address: STERLING REMEDY CO., NEW YORK or CHICAGO.

POWERFUL UNITED STATES BATTLESHIP OHIO.

The battleship Ohio, recently launched at San Francisco, is the newest "pride of the American navy." She is forty feet longer than the Oregon and 2,000 tons greater in displacement. She is twenty feet longer than the Iowa and 1,000 tons greater in displacement than that ship. Her largest rifle will be twelve inches. Her secondary battery will contain sixteen 6-inch rifles. The Ohio's dimensions are: Length on the water line, 388 feet; width, 72 feet 5 inches; mean draught, 23 feet 6 inches; maximum draught, 25 feet 3 inches; displacement, 12,500 tons; speed, 18 knots; maximum horse power, 16,000; total coal supply, 2,000 tons. She will carry one flag officer, one commanding officer, sixteen wardroom officers, twelve junior officers and five warrant officers. In many respects the Ohio will be the greatest of all marine fighting machines. The works of the ship will be of the most approved kind. Her engine room will resemble a great workshop, fitted with the finest tools that can be made. The ship herself, with her windings and alleyways, her broad decks and hundreds of apartments, will be like a small city behind walls of steel. She will have her telephone system, her lighting plant and her water works. In this steel-girt city will be nearly 1,000 incandescent lamps and telephone communications between all parts. The filling of one water-tight compartment at any time need be no cause for alarm. The touch of a button in the central station will close every water-tight door in less time than would take to give the order. Her complement will be about 500 men.

SIXTY THOUSAND A YEAR.

Chicago System Has Largest Salaried Telephone Official in the Country.

John I. Sabin, president of the Pacific States Telegraph and Telephone Company, has entered upon his duties in a larger field of activity as the manager of the Chicago system of telephones. There have been promotions all along the Pacific coast line to fill the places made vacant by the transfer of experts from San Francisco and Spokane to Chicago. Mr. Sabin receives a salary of $35,000 per annum from the Chicago company. He also retains the presidency of the Pacific States company, receiving from the latter corporation $25,000 per annum. His

JOHN L. SABIN.

compensation is, therefore, $60,000 a year.

John I. Sabin was born in New York Oct. 3, 1847. When 15 years of age he left the public schools of Brooklyn to enter the messenger service of the Independent Telegraph Company of New York. After an apprenticeship of five months he was sent to New Brunswick, N. J., to open an office as operator on the new line then building between New York and Philadelphia. He remained but three months in this position, being transferred to White Plains and from there to New York, where he became night operator on the Western press lines of the United States Telegraph Company.

In 1864 Sabin entered the army as military telegraph operator, and was stationed with the headquarters of the Fifth Army Corps at Fort Petersburg, Va. He served through the war, and when the struggle ended he settled at Raleigh, N. C.

The young operator was restless, and saw in the West the opportunity for advancement which the East seemed to deny him. He joined the Collins overland telegraph expedition, formed for the purpose of building a line overland from San Francisco to the mouth of the Amoor river in Siberia. He was stationed at Plover Bay in Siberia for over a year. In the fall of 1867 Mr. Sabin returned to San Francisco, and for several years was an operator in the employ of the Western Union, being stationed at Salt Lake, Helena and other places. Since then he has gradually risen to his present position.

It has been his principle to make the telephone popular and profitable by making it so cheap as to be within the reach of all. He has achieved this result by establishing various classes of service, ranging in price from $1.50 to $5 monthly. As a result of this policy there are about five times as many telephones on the sparsely settled Pacific coast as there are in the densely populated middle West.

His Explanation.

The explanations some authors are compelled to make to readers of literal or immature mind—when they are obliging enough to make them at all—are often as good literature as the passage which called them forth. Elizabeth Cady Stanton says, in her "Eighty Years or More," that she once wrote Dr. Holmes, at the request of a young nephew of hers, to ask an important question. Did the doctor really have a servant who almost laughed himself to death, as described in "The Height of the Ridiculous?" Dr. Holmes replied:

I wish you would explain to your little nephew that the story of the poor fellow who almost died laughing was a kind of dream of mine, and not a real thing that happened, any more than that an old woman lived in a shoe, and had so many children she didn't know what to do, or that Jack climbed the beanstalk and found the giant who lived at the top of it.

You can explain to him what is meant by imagination, and thus turn my youthful rhymes into a text for a discourse worthy of the Concord School of Philosophy. I have not my poems by me, but I remember that "The Height of the Ridiculous" ended with this verse:

Ten days and nights, with sleepless eyes
I watched that wretched man,
And since, I never dare to write
As funny as I can.

But tell your nephew he mustn't cry about it, any more than because geese go barefoot, and bald eagles have no nightcaps.

Washing a Wild Tiger.

A story copied from "La France du Nord" illustrates the lengths to which perfect fearlessness may carry a man. The famous lion-tamer Pezon hired at Moscow a poor Cossack, who was as ignorant of the French language as of fear, to clean the cages of his wild beasts.

Instructions were given to the man by means of gestures and dumb show, and apparently he thoroughly understood what he was expected to do.

The next morning he began his new duties by entering with bucket, sponge and broom, not the cage of a tame beast, but that of a splendid untamed tiger, which lay asleep upon the floor. The fierce animal awoke and fixed his eyes upon the man, who calmly proceeded to wet his large sponge, and, unterrified, to approach the tiger.

At this moment Pezon saw what was going on, and was struck with horror. Any sound or motion on his part would increase the danger of the situation by rousing the beast to fury; so he quietly waited till the need should arise to rush to the man's assistance.

The moujik, sponge in hand, approached the animal, and perfectly fearless, proceeded to rub him down, as if he had been a horse or a dog; while the tiger, apparently delighted by the application of cold water, rolled over on its back, stretched out its paws, purred, and offered every part of its body to the moujik, who washed him as complacently as a mother bathes her infant.

Then he left the cage, and would have repeated the hazardous experiment upon another savage from the desert had not Pezon with difficulty drawn him off.

Free Mustard.

James Russell Lowell said, "All deacons are good, but there are odds in deacons," and it may be added that there are odds in other varieties of men.

Squire Blank, according to Harper's Bazar, was not only the richest man in his village, but the stingiest as well. Nothing gave him such keen delight as to get something for nothing.

One day he and several of his neighbors had been in conference with a manufacturer who contemplated establishing a mill in the town. The conference was held in the one store of the village, and at its close the manufacturer stepped up to a showcase containing cigars, and said:

"Have a cigar, gentlemen."

All the men selected a cigar except Squire Blank. He didn't smoke. Therefore he said:

"Thank you, sir, but I don't smoke; but as the cigars are a dime apiece, I'll take a dime's worth o' mustard if you say so."

Of course the astonished gentleman "said so," and the squire went home jubilant over "a hull half-pound o' mustard that never cost me a red cent."

The Pigeons of St. Mark.

Venice has asserted the right of ownership over the famous pigeons of Saint Mark. Some enterprising street boys who had made a business of killing the birds, when brought up in court, pleaded that the pigeons had no legal owners, and they were fed by the public on the Piazza San Marco. The city authorities maintained that the pigeons were the ward of the old republic, and therefore of the present municipality, a view that was adopted by the court.

Uprooted Trees Still Live.

The "life tree" of Jamaica grows and thrives for months after being uprooted and exposed to the sun.

Man proposes—and the girl sends him around to papa to see if he opposes.

LORD HUGH, THE HOPE OF THE CECILS.

Lord Hugh Cecil, who at a recent Irish demonstration in the House of Commons, advocated the imprisonment of rebellious members of Parliament, is the "rising hope" of Lord Salisbury's "festive circle," as Lord Rosebery recently called the Prime Minister's family. Lord Salisbury's eldest son is not looked upon as a likely successor to the political position of his father, and it is Lord Hugh, the youngest, who is viewed as the coming man of the Cecils. He is the only unmarried son, and has lived all his life with his father, whose disciple he is. He is the only Cecil who raises any enthusiasm, or who wants to be enthusiastic. To him, as to his father, politics is an essential part of religion, and he speaks to the House of Commons as if he were preaching from his brother's pulpit at Hatfield. He is earnest enough to revolt from party ties when they interfere with freedom of thought and conviction, and intense enough to propose a revolution in parliamentary procedure which no other member of the House dare support. He is 31 years old.

Sole songster of the city street,
Standing where clashing currents meet,
With lungs of brass and throat of mail,
Our truly urban nightingale;
How wags our world to-day?
How runs your roundelay?
(Horrible! Extry! Horrible!)
Battle and slaughter and death,
Kings that are short of breath,
Scandal and fire and flood,
Ruin and wrack and blood!
(Horrible! Extry! Horrible!)
Piercing the city's sullen din
With vocal volleys, sharp and thin.
(Horrible! Extry! Horrible!)

Before the milkman wakes the sun
Your morning carol has begun,
All day you're racing with the clock,
To thrill us with an hourly shock!
'Till even in our dreams
We seem to hear your screams.
(Horrible! Extry! Horrible!)
Bacon and coffee and crime,
Ready at breakfast time.
"Many lives lost" at lunch,
Served as we madly munch.
(Horrible! Extry! Horrible!)
And when we dine at eventide,
"Double murder and suicide!"
"'Horrible! Extry! Horrible'!"

Our ears are shattered by your cries,
We see red spots before our eyes!
At night we dream of fearful things,
With slimy tails and fiery wings!
They perch upon our chests,
Cold-fingered, clammy guests.
(Horrible! Extry! Horrible!)
We wake and start in sudden fear,
Catarrhal voices still we hear,
Shrieking the tale of frenzied rage,
That bleeds across the gory page.
(Horrible! Extry! Horrible!)
Till haggard-eyed, with nerves that shake,
We start for Bedlam or the lake.
(Horrible! Extry! Horrible!)

Is there no deed of nobler worth,
No sweeter music left on earth?
Are there no sunbeams, birds, or flowers?
No quiet days, no happy hours?
That you must tune your song
To ruin, shame and wrong?
(Horrible! Extry! Horrible!)
Is there no hero left to sing
Whose story has a truer ring?
Must the whole world be searched in vain
To find a braver, clearer strain?
(Horrible! Extry! Horrible!)
Is this the climax of the years,
Of human interests, hopes and fears?
(Horrible! Extry! Horrible!)
—Chicago Tribune.

EVERYTHING IS MAGNIFIED.

Artist La Farge's Impressions of Hawaii's Lake of Fire.

There is now only vapor; sulphurous fumes that float up and obscure the distance and go up into the skies. But as the twilight begins fires come out and the space is edged with fire that sometimes colors the clouds of vapor. At one side a small cone stands up that burns with an eye of red fire. From time to time this opening spits out to one side a little vicious blotch of fire. The clouds of vapor rise so as to blur the distance, but near by the rocks are clear enough, and either black, or farther off where they are cliffs, are greenish-yellow with sulphur. Sizes become uncertain. I could swear that this lake was a thousand feet long; but Awoki and the guide walking along reduce the lake to real proportions, writes John La Farge in Scribner's. Then it is only a small lake of some 150 or 200 feet, perhaps. But the impression still remains—all is so thrown out of reference. The hole is so uncanny; the sky above, purple in the yellow of the afterglow and partly covered with the yellowish tone of the hellish vapor, looks high up above us. I sit (and sketch) on the absurd rocks, and then we wait for something to happen. It has become night; we determine to give up hope of the breaking up of the lake and we start. We have lanterns, but gradually these go out, and we have only one that has to be cherished and we scramble along. By and by we halt, and looking back see greater lights, and the guide says that the lake has broken out. Still we are disinclined to return on the chance, for the vapors exaggerate everything, and after much scrambling we get back to the edge of the crater after a seven hours' tramp. As we go up the ascent the fire seems larger, and our host and the guides say that there is some breaking out. Still we are in doubt; we are disappointed and tired. And still I should not go back unless the most extraordinary conflagration occurred. Besides the undefined terror and spookiness of the thing, there is great boredom. There is nothing to take hold of, as it were—no center of fire and terror—only inconvenience and a faint fear of one thing—but what?

How Canyons Were Formed.

The secret of the great denudation and of this wonderful achievement of the Colorado in carving out of rock a series of canyons about 500 miles long and, in one place at least, more than a mile deep, with a multitude of tributary chasms and gorges, is very simple when you know it. The old lake bed slowly rose. At first the Colorado River and its tributaries, or some nameless monstrous ancestors of these, sweeping over the slowly rising surfaces, planed them down in most relentless fashion, and then began wearing out broad shallow stream beds. But then the country rose more rapidly, and the water had to cut deeper channels in the rocks in order to get out and away to sea. Owing in part to the wear of the water itself, but more to the ceaseless bombardment of the suspended sand which it bore from the up country, or picked up as it went along, and to the thump of pebbles and bowlders which it swept on in flood time, the river kept cutting down as the strata rose, until finally, when what was left of our inland sea bottom got thrust up so that, towering far above its erstwhile rocky shores, it had to be called a plateau, the Colorado and its auxiliaries found themselves at the bottom of a series of colossal canyons and gorges, where they are to-day.—Harper's Magazine.

Spends His Life in Prison.

Count Rocco Dianovitch has made the getting into prison the chief business of his life for thirty-four of the forty-seven years he has lived, for a book he is anxious to write on the subject. At 13 he left his home and went into Prussia, where he was arrested for trespassing and sent to prison for three months, working at chair-making. From that time to this he has never been free from the desire to continue his prison explorations.

From 13 till he was 20 he was in and out of more than twenty prisons in Belgium, Prussia, Poland and Russia. His first experience of jail life in England was in Liverpool, which was one of the worst he was ever in, filled with drunken sailors from all over the world. He stayed there six days, when he paid his fine and got out, the first time he failed to serve his sentence. Then he went to Ireland, France, Spain, Italy, Greece and Turkey, then to Egypt, where the jails are the worst in the world except Australia; next to India and Japan, and then to America, where he remained for more than a year, spending most of his time in jails and penitentiaries. — Pittsburg Dispatch.

Fact and Fiction.

Mr. Jenkins, on returning home in the evening, was pleased to find that the heavy snow which had fallen during the day had been carefully shoveled from the front walk.

"Who did it, Lucy?" he asked.

"I was about to tell you," replied his wife. "I never put in such a day in my life. I've been besieged by a whole army of men, all wanting to clean that walk. They drove me absolutely crazy. The snow was falling like great guns all the time, too. As soon as it quit, though, I gave the job to a poor man who was a perfect living skeleton. There wasn't a thing of him but skin and bone—"

"Lucy," interrupted Mr. Jenkins, with a groan, "you're reading these popular historical novels again!"

"Why do you say that?"

"Because you've contracted the historical novel disease. I can't tell where your fact leaves off and your fiction begins."

An Artificial Man.

A doctor has calculated how much it would cost to make an artificial man. He estimates that a pair of arms cost $90, or, with the hands articulated, cost about $175; a pair of legs, also articulated, cost about $140; a false nose in metal from $80 to $100. For $130 he believes that he could get a pair of ears just like nature's handiwork, fitted with artificial ear drums and resonators. A complete set of teeth, with palate in platinum, costs from $40 to $90, and for a good pair of artificial eyes about $30 would have to be paid. Thus the actual cost of restoring a battered veteran who has lost most of his separable parts would be about $600.

Why Pounds Are Sterling.

Business men are always talking about so many pounds sterling; yet probably not 1 per cent of them are aware of the origin of the term. It dates back to the time of Richard Coeur de Lion, when money coined in the east part of Germany came into special request in this country on account of its purity, and was called Easterling money, because in those days all the inhabitants of those parts were called Easterlings. In the course of time some of these Germans were brought to London, and the pieces they minted soon became known as sterling, from the word Easterling.—London Express.

Distressing.

"How did you come out at the card party?" asked Miss Frocks of Miss Kittish.

"Blanche and I cut for the first prize, and she won it."

"That was the unkindest cut of all."

VETERAN OF TWO WARS.

General Fitz-John Porter, Who Died Recently.

Gen. Fitz-Hugh Porter, who died recently at his home in Morristown, N. J., in his 80th year, was a veteran of two wars and at one time was the most discussed man in military circles in America.

He was born in Portsmouth, N. H., in 1822 and in 1845, on graduating from the United States Military Academy, was assigned to the Fourth artillery. He participated in the Mexican war, receiving the brevet of captain for services at Molino del Rey and that of major for distinguished conduct at Chapultepec. After the war he was for a time a military instructor at West Point. In 1860 he became assistant inspector general and on the outbreak of the Civil War was made brigadier general of volunteers. The following year he took part in the Virginia peninsular campaign and then succeeded to the command of the Fifth Army Corps, participating in the battles of Mechanicsville and Gaines' Mills. His command at the battle of Malvern Hill offered the main resistance to the Confederate assaults on that day. Already he had been breveted brigadier general in the regular army for meritorious conduct at Chickahominy. He was

GENERAL FITZ JOHN PORTER.

now made major general of volunteers and was temporarily attached to Gen. Pope's army of Virginia. His corps was unable to move forward at the second battle of Bull Run, Aug. 29, 1862, but in the afternoon of the 30th it was actively engaged and to its obstinate resistance it is mainly due that the defeat was not a total rout.

For his inaction on the first day Gen. Porter was court martialed and cashiered the service, being disqualified for holding any office of trust or profit under the government. This verdict was much discussed at the time and since and Gen. Porter labored long and steadfastly to have it set aside. In 1882 a bill for his relief was introduced in the Senate, but failed of passage. President Hayes, however, under the finding of an advisory board, remitted that part of the sentence which disqualified Gen. Porter from holding any office of profit or trust under the government. During President Arthur's administration a bill removing the further disability was vetoed, but under Cleveland Gen. Porter was restored to the army as colonel. Gen. Grant after an examination of the matter expressed his belief in Gen. Porter's innocence.

After his forced retirement from the army Gen. Porter engaged in business in New York. In 1884 he became a police commissioner, serving until 1888. In 1869 he had an offer from the Khedive of Egypt to become commander of his army, but declined.

SELLING A CHILD'S BLANKET.

The Auctioneer's Last Sale Brought Back Tender Memories.

It had been a very busy day at the exchange, says the New Orleans Picayune, and the auctioneer had grown a trifle weary over the repeated trials which had beset and worried even this Trojan son of the stump. The continual refrain of "Going, going, g-o-n-e!" echoed in his brain.

For many years he had been a prominent figure in the auction mart, and under his hammer had often gone the fruits of a lifetime of accumulation; gone for a song, treasures over which the miser had crooned, the lover sighed, the mother wept—all gone.

"How much am I offered?" had sent to the four corners of the earth so many things that day that the auctioneer hoped there was nothing left; but there was. His indefatigable assistant had raked from a corner a bundle of bedding and handed it up.

"What can I get for this?" he cried, force of habit forcing him into the rut again. "Another opportunity." As he unrolled the bundle some one bid "Fifty cents."

Then not another voice broke the stillness which had settled over the crowd as a child's blanket hung before their gaze. Why? Did the sight of that small woolen cover tell to them, the callous crowd, a pitiful story?

The busy man forgot to cry his refrain as he dropped his eyes upon the little square. Here and there on it small stains, as if tears, had fallen, met his eye, and his mind went back to a scene he never would forget.

The bedchamber had been darkened. About the blinds the gleams of sunlight crept into the room and fell like golden shafts upon the little cot over which his wife hung in an agony of bitter pain. He saw again the little white hands—hands that had crept so often about his neck at night as he lay by his side—pick falteringly at just such a cover as he now held in his grasp. He saw the little head with its mass of tangled curls moving restlessly on the pillow, and he felt again the hot touch of the red lips upon which he had pressed his own in loving caress, eager to soften the pain and woo back into health the loved little form slowly drifting, drifting away.

The crowd was gone. This busy man saw nothing but the child who had grown into his very being and then loosed his little grasp on the world and had gone drifting, drifting out into a sea which promised infinite love, but left bitter desolation and despair for those left behind. The tears falling upon his bearded cheeks woke him from his dream.

"Gone for 50 cents to the only bidder."

The auctioneer sighed heavily as he got down from his stand and watched the crowd depart, and then he went home to his wife, his heart filled with sorrow at the thought of his own dear little one, and the empty cradle.

Habits of the Cat.

All the cat's habits show it to be by nature a solitary animal. Even in early life, when family ties bring out the instinct of association, this is apparent. If you compare the play of puppies with that of kittens you will find that in one case companionship of some kind is essential, for if a puppy has no playmate of his own species he will try to make use of the nearest biped; whereas a cork or a bit of string, is all that is necessary to satisfy the requirements of the kitten. The way in which the cat takes its food is a sign that in its natural state it is not in the habit of associating with greedy companions.

When given something to eat it first carefully smells the morsel, then takes it in a deliberate and gingerly way and sits down to finish it at leisure. There is none of that inclination to snatch hastily at any food held before it which we observe in well-trained dogs, nor does a cat seem in any hurry to stow its goods in the one place where thieving rivals cannot interfere with them. Indeed, no greater contrast in natural table manners can be observed anywhere than when we turn from the kennel or the pigsty and watch the dainty way in which a cat takes its meals. That a cat allows people to approach it while it is feeding without showing jealousy proves that it does not attribute to human beings like tastes with its own.—Wild Traits in Tame Animals.

Spontaneous Eloquence.

Not unfrequently the Irish peasant utters a saying which amounts to genuine spontaneous eloquence.

When Charles Gavan Duffy, defeated in his struggles to make Ireland independent, was about to sail for Australia, a number of Irishmen gathered about him to say good-by. One of them brought an old prayer-book, on a blank page of which he asked Duffy to write his name.

One of his companions, who was provided with a more presentable volume said:

"It's a shame, Tom, to offer such a book to Mr. Duffy for his signature."

"Arrah," retorted Tom, "why shouldn't I offer it to him? Isn't it like himself, tattered and torn in the service of God and the people?"

It is an utter impossibility for a short man to fall in love with a tall woman. He simply has to climb for it.

INYO INDEPENDENT.

IRV. H. MULHOLLAND.

INDEPENDENCE, CAL.,

FRIDAY, JULY 26.....1901

The conservative Pittsburg Dispatch, which has the advantage of close touch with both sides of the great labor-capital contest, says:

"The judication afforded by the action of the men in these [iron] plants is that combination of the manufacturers has inspired rapid organization on the part of the men, which is but natural. It increases astonishment that Mr. Morgan's combination should have taken the impolitic course of inviting a conflict with labor on so untenable a ground as the assertion that its employes shall not be permitted to find protection in union. * * * It is too late for Mr. Morgan to avoid serious consequences, but he may still avert the most dire results to his enormous aggregation of interests by requesting another conference and taking the logical view that labor has precisely the same right to combine that capital has. Certainly the securities of the United States Steel corporation cannot maintnin their standing in the face of prolonged idleness of plants on which they are based."

The fact that the California crude oil is now being successfully refined for the production of illuminating oil, as well as for asphaltum and other products, is very encouraging to oil producers. There have been many experiments during the last twenty years with a view to refining the product of the California fields, but the best results were not achieved, and it was necessary to mix the local product with the refined oil from the eastern fields to bring the oil up to the required standard. Now illuminating oil refined at Obispo, under a new process, by the Sunset Oil Refining company is on the local market, and it is declared to be the equal of eastern oil by experts. This achievement ought to solve to a great extent, the problem of the uses of California oil, adding another great field for its use.

Sacramento County is going to try oiled roads, and the Record-Union, the staunchest good-roads advocate in the State, seems to think that such roads are no longer experiments. It says: "The road is not as good the first season as the second. Re-treated at the opening of the second season, the roadway becomes practically an asphaltum highway, smooth, firm, not cutting under narrow-tire wheels, bearing heaviest burdens, never accumulates mud, for it sheds water; is dustless, needs no water sprinkling, and with very little care becomes a good approach to the ideal road."

Races around the earth may be a coming fad of the twentieth century. The record time of the journey has just been reduced to *sixty days, cutting off 25 per* cent of the time required for the imaginary trip of Jules Verne's hero. But within a year or two it may be possible to make the circuit in nearly half the time of the latest record. When the great Russian railway across Siberia is completed and a fast steamship line is established between one of our Pacific ports and the Russian railway terminus, here will be "rapid transit" all the way.

The recent reduction in the price of sugar means a great deal more than the consumer suspects. It means a determined effort of the cane sugar trust to either control the beet sugar industry or drive it from the market. The great reduction in the price of cane sugar must be met, of course, by the beet sugar producers. The purpose of the trust in forcing down prices at this time is evidently to discourage sugar beet growing in the United States. King Trust is tough.

The Government is inconsistent. Properly condemning lotteries and gift enterprises, it resorts to the lottery for the disposal of the Oklahoma lands. It is a lottery also with blanks, not a mere award by lot, but a distribution of rights of entry for a few acres of public lands among a very large body of applicants, most of whom must draw blanks.

Not a single case of yellow fever has appeared in Havana in the month of June, and it is said to have been the first time there has been such a clean bill of health for more than a hundred years. Such is evolution, dating back to the blowing up of the Maine.

Merced County has a coyote bounty law, but there is not leeway for wealth getting. The coyote must be taken before the Supervisors or Justice of the Peace to be scalped, and 25 cents of the $1.50 bounty must be paid the official who witnesses the scalping.

There are 1,017,653 persons in the employ of the railroads of the United States. This would be quite a respectable addition to the patronage of a political party if the railroads belonged to the government under present conditions of government service.

Mineralogists estimate that the two most abundant of the known metals are aluminum and iron. According to a recent statement the former constitutes eight per cent of the earth's crust and the latter six per cent.

Electric searchlights are to be placed at Yosemite Falls. It will require some $10,000 of California tax-payers' money to do it.

It is said that we will have a treaty with England in regard to the Nicaragua canal by the time Congress meets in December.

Transportation Problem.

In the bygone prosperous days of Nevada, when numerous silver camps all over the State were pouring forth their treasure, freighting was a business which employed the energies of hundreds of men and animals, a business which was reduced to a fine art by those engaged in it. But with the retrograde movement which set in upon the decline of silver mining the freighting business declined also, and at various points in the neighborhood of once prosperous mining camps can be seen the monster freight wagons, standing idle, mute monuments of the boom days of the past. The reviving influences which have of late been at work all along the line in Nevada, and especially in this part of the State, by the recent discovery of new mines and otherwise, are bringing into requisition all the transportation facilities of the surrounding country. But these facilities are unable to keep up with the development in other lines. Like a man who has just been aroused from a sound slumber, the freighting business after years of lethargy is not yet fully awake to the situation, and does not realize the work that is before it. The above remarks apply with equal force to the railroad upon which from necessity this part of the world must depend for its supplies. The greatest drawback to the advancement of Tonopah to-day is lack of proper transportation facilities. If this camp is to prosper, the ore which the camp produces must be shipped and realized upon without tedious delay. If the town is to grow, lumber must be had with which to build it. If the mines are to be worked, material must be at hand when it is necessary to use mining operations. The situation at present is briefly this: There is not a piece of lumber in the town, for sale, with which to construct a ladder, and certain leasers are being retarded in taking out ore worth $500 a ton because they are unable to secure a few two by fours. Other supplies are scarce or not to be had at all. On the other hand freighters who have recently arrived from Sodaville state that the railroad platforms are piled up with ore awaiting shipment to such an extent that it is impossible to pile any more on them. This condition of affairs will grow worse instead of better, as, from all indications, the ore production of this camp will be enormously increased within the next few months. The lack of freight teams, we are informed, will be supplied to a certain extent in the near future. Feed for these teams may have to be shipped from California, as the supply of the agricultural valleys nearer home has already been exhausted. Whether the railroad will prove equal to the emergency remains to be seen. For the future prosperity of this camp we hope that it will be.—Tonopah Bonanza.

The Minister's Reply: When he departed for a short vacation, a Missouri editor left a minister in charge of his paper. The latter had been superintending things only a few days when a letter came from a "way back" subscriber which read:

"You know damned well I paid my subscription the last time I was in Lexington. If I get any more such letters I will come down and maul hell out of you."

The minister replied: "I have been trying to maul that thing out of the editor for ten years, and, if you really come down and maul it out of him, then, my dear sir, I have twenty members of my church you can operate on."

Editors are first to hear gossip or scandals, indiscretions of men or women, things unfit for publication, intrigue, clandestine meetings, night buggy rides, girls gone astray, flirtations of married women, amours of married men, and in fact all of the neighborhood scandals. Editors generally know of the naughty doings of a community, no matter how secret. If only half they hear was published divorce suits would follow, in some cases ostracism, in others shot gun and gore, imprisonment, lynching, desolated homes, shame, misery, humiliation. Some people who abuse the editor the loudest owe their standing in society to his forbearance.—Exchange.

Saline Valley salt is now on sale in quantities to suit. From numerous tests and comparisons made by eminent chemists and analysts, this salt has no rival on earth for purity. It is an Inyo product, and some day its marketing will be one of the many important industries which will flourish at our doors. Buy Saline Valley salt, and in getting the very best, patronize home industry. —Register.

Senator W. A. Clark has a way of doing things that causes astonishment to those who do not see things as he does. He thought a railway from Los Angeles to Salt Lake City would be a good thing to have, and he is building one. He wanted a particular kind of granite with which to build his New York house, and he bought the quarry that had it.

The fifty-eighth United States Congress appropriated $1,544,733,014 for various purposes. Of this $4,377,220 was appropriated to the Agricultural Department but not one cent to foster the mining industry. Yet the mining industry of the United States added about $1,400,000,000 to the wealth of this country last year.

Cattle men are considering the advisability of reseeding the Black Hills and Eastern Wyoming ranges, where native grass has been nearly killed by overcrowding of cattle. It has been found that five grasses and two alfalfas will grow in that section without irrigation.

Editorial View of It: Assistant—Here's a man writes to ask how to make farming pay.

Editor—Well, I think myself that the only trouble with the farmers is that they don't advertise.

July 1, 1901.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days, and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

INYO MERCANTILE CO.

Real Estate Transfers.

Recorded since last report:

Harrold Preston, administrator, to Cyrus Harbour—160 acres land near Bishop; consideration, $4500.

Harrold Preston to Thos. Thompson—5 acre tract in West Bishop; $900.

J. E. Jenkins to Norah Bonham—20 acres oil land near Olancha; $10.

W. H. Greenleaf et ux to V. E. Stockwell—Monarch, Surprise and Welcome mines, in Argus District; $10.

A. S. Kilpatrick to Fred B. Merithew—E½ of Lots 1 and 4 in Block 9 of the Keough Addition to Bishop; $10.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

JULY 25, 1901.

The People v. Frank E. Helling—Defendant charged with selling intoxicating liquors to an Indian; plead guilty and was sentenced to three months imprisonment in the county jail and a fine of $100.

Margaret Ann Green v. Chas. M. Green—Plaintiff granted decree of divorce.

Manuel Diaz was in town from Lone Pine yesterday.

Miss Adalina Meysan of Lone Pine visited Independence for several days this week.

E. H. Edwards, the Lone Pine merchant, and John H. Dodge were up from that quiet burg yesterday.

Jas. G. Birchim, Henry Jackson and James Holden of Round Valley are in town to-day on land business.

Mr. J. D. Mairs and his sister, Mrs. P. McFarlane, with her son, are fishing and enjoying camp life at Onion Valley.

A. M Squire, General Superintendent of the Mazourka Mining Company, arrived from Los Angeles on Tuesday last.

Mrs. Thos. Callow of Big Pine, accompanied by Miss Mattie Wallace, has gone to Los Angeles and will remain there for some time.

The editorial staff is indebted to some of our local fishermen for a lovely mess of trout. We hope they will fish again, even though it were Sunday.

John Shober's freight train arrived from Mojave last Sunday, loaded with beer and barb wire. His return load from Bishop will consist of flour.

Dr. Woolsey and Dr. Gaskell, on their outing through the mountains, came over to this side with their friend Dr. Baxter, and are paying Independence a visit.

The Tonopah Bonanza says: "The ranchers of Owens Valley can sell their produce in Tonopah without paying a license. Bring on your vegetables."

The social dance given at Georges Creek last Saturday evening was a very enjoyable affair. Some of our townspeople and a number from Lone Pine attended.

Eldred & Pitman, lessees of the Bunker Hill mine, have received a check for $860, net proceeds of their last shipment of ore. Their new jigger-concentrator goes right along.

The Mono County Supervisors are in session yet, having been granted time until August 2 to finish up "equalization," for which purpose they go about "to look over the lands."

Mr. and Mrs. Marshall Naylor, Mrs. Jas. R. Moffitt, Miss Lulu Moffitt, Miss Susie Roughney and Lester Laird returned Monday from a camping trip in the Bubbs Creek country.

Tuesday next the trial of the Indians charged with killing a Chinaman at Bishop will begin. Thirty trial jurymen have been drawn and summoned to be in attendance upon the Superior Court.

Wednesday last the eastern side of the Inyos opposite Independence received a heavy downpour of rain, lasting for hours. Curious fact that the summer showers generally go around that way.

Mr. Jno C. Irwin, Mrs. J. C. Irwin, Miss Nettie Irwin, Miss Addie Lewis, H. P. Cartier and J. D. Lewis, Esq., for their summer vacation have gone through the Sierras and to the Big Trees.

Last week County Surveyor Dixon, with several assistants, was up at the lakes at the head of the town creek, getting data and making a survey for the government in relation to a reservoir system. Should some future Congress authorize such work the cost of dams in this instance would be very light compared to the enormous public benefit that would ensue.

The Sunshine Recorder.

One of the ingenious instruments in the local Weather Bureau office is very busy these days recording automatically the sunshine. Shortly after the sun peeps over the Inyo range of mountains to the eastward the little machine begins to click every minute during the day until the sun dips below the jagged peaks of the Sierras to the westward. Very few days during the summer is the continuity of the record broken by clouds. Let a cloud sufficiently dense to obscure the sun's disk come up, the click of the zigzag record is stopped and the record is nothing but a straight line.

The instrument is a specially constructed thermometer. It is partially filled with mercury, alcohol and dry air in certain proportions; this thermometer is inclosed in a glass case. The instrument is mounted on a stand so as to command a complete sweep of the sun from its rising to its setting. As the sun warms the mercury it expands and the expanded column should touch two electrodes, or wires immersed midway in the instrument. As soon as the mercury touches these wires the message is sent over the wires from the electric battery through the minute armature of the clock, the circuit being broken and closed by the clock movement. Theoretically, as stated, the instrument should record automatically every minute the sun is above the horizon, and unobscured by clouds; but practically the movement of the mercurial column is rather sluggish, and it is sometimes an hour before the record begins, and the same defect occurs, but not to such an extent, just before the sun disappears below the mountain peaks. These defects, however, are fully compensated for in the absolute knowledge the observer has of the total amount of sunshine per diem, less the time due to obstruction by clouds, and in making up the record daily—the possible sunshine being known—the percentage is found by comparison with the actual. The record, after tabulation, gives the total amount of sunshine.

There are very places in the United States where the actual amount of sunshine exceeds that we enjoy in this valley and in this particular locality. To get perfect records from this machine is almost impossible on account of the varying heat and the varying angle of adjustment, but these imperfections are fully compensated for by the minute corrections and comparisons with the possible total sunshine for each day in the year. Improvements are continually being made in this and several other self-recording machines at the station.

Bob. Troeger, one of the brothers owning the old Dunphy mining property at Cerro Gordo, and who is well known here, about two weeks ago had an almost miraculous escape from death. It is the old story about a defective fuse. He was working in the Gray Eagle mine near Mojave, of which his brother is Superintendent, and had loaded and fired seven holes. It was not until some three hours later that he returned and began removing the dirt from around one hole that had failed. At that moment, as he was stooping beside it, the shot went off Beyond some severe bruises and cuts about the head and face he escaped without permanent injury—a case of wonderful luck.

Geo. Montgomery and Clair Tyler returned during the week from a long trip out into Lincoln County, Nevada, and for a hundred miles up and down the northern Amargoza wash. As may be imagined was the case, they report the desert as quite warm at this season. But Mr. Montgomery saw and bonded a gold mine away out there somewhere, and incidentally made an examination of the Tonopah mines. Of them he says that it is the greatest strike, the Comstock excepted, ever made; that, which fact he demonstrates by actual figuring on the ore in sight, the immense property would have been "a good buy" at $4,500,000.

Mr. C. C. Walter of Fresno County, accompanied by his brother, Dr. Frank Walter of Tombstone, Arizona, passed through Independence last Sunday, on their way to Mt. Whitney and Kern river. Mr. Walter, associated with some members of the Sierra Club, are endeavoring to have a law passed that none but the ladies shall have the privilege of catching the "golden trout" for which the Whitney creek is noted, making it a misdemeanor and breach of honor for any gentleman to be caught fishing in the stream reserved for the ladies. We hope that the law will pass.

Forest Supervisor Price has returned from a tour of inspection through Coyote Valley and northward to Long Valley. He reports that everything along the Reserve line is in excellent shape, except that near Coyote some parties have been cutting timber, probably for derrick poles. In such matters the Government regulations are very strict and involve severe penalties unless an official permit be granted before any cutting whatever is done. No doubt farmers can obtain such permits, but the possession of one is an absolute prerequisite.

The United States Land Office held the crowd this week, in the matter of E. B. Smith vs Patrick J. Shaw, involving the right of the latter to make final proof on the SE¼ of Sec. 27, T. 9 S., R. 34 E., lying southeast of Big Pine. Among the many witnesses examined were Gus. Goodale, Wm. Utter, Gustav Sanger, George Cornell and Jonathan McMurry. P. W. Forbes, Esq., appeared for contestant Smith while Ben H. Yandell, Esq., represented Mr. Shaw.

In the matter of getting ranch supplies out to Tonopah, Big Pine has a royal advantage in the Deep Spring road over the Inyos. It is the last of a long line of toll roads and the county should have bought it—when it could.

During the heated term in the East the drivers of teams have been placing large straw hats upon their horses' heads, greatly to the relief of the animals.

Haystack Burned.

On Thursday of last week R. P. Hession lost a stack of new alfalfa hay, containing between 60 and 70 tons. The fire started about 10 o'clock in the morning, and a messenger was sent to Big Pine for help, but the best assistance was rendered by nearer-by haying crews soon as they saw the blaze. The Lem Meyers crew boarded a wagon immediately and with others stayed there for that day and night and the next day and night.

The object of the fire-fighters was to save the other stacks in the same corral. A notable piece of fire engineering was performed by Vernon Smith, with a plow and his team; he ran furrows from the main irrigating ditch to and between the stacks and entirely around the one that was burning. The horses evidently comprehended the situation and rose equal to the occasion; they snaked that plow through the hard, packed sod with a celerity and strength impossible under ordinary circumstances. While the team got scorched Vernon escaped minus eyebrows and some hair.

It is supposed that the fire originated through a match or a bunch of matches accidently dropped near the stack and ignited by being tread upon; it does not seem otherwise accountable.

A Wedding.

Leon Nathan Marx, of Globe, and Miss Anna Henrietta Schabbell, of Inyo Co., Cal., were quietly married last Thursday night, July 11, in the presence of a few witnesses, Rev. E. O. McIntier officiating.

There was sufficient romance in connection with the happy event to give it more than ordinary interest. The friendship began and ripened into love in California, and early in the present year Mr. Marx left the Golden State and came to Globe. He is an employe of the Old Dominion Copper Company, and being unable to obtain a leave of absence to go to California, Miss Schabbell showed her courage and good sense by coming here, unattended, to wed the man of her choice. The ceremony was no sooner over than the irrepressible Globe urchins gave them the customary charivari, which, however, did not mar the happiness of the wedded couple.

On the following evening Mr. and Mrs. Marx were serenaded by some of the ladies of the Rebekah lodge, of which order the bride is a member. They are very pleasantly domiciled in the home made ready by the groom, and the Silver Belt hopes that their married life may be one of unalloyed happiness.—Globe (A. T.) Silver Belt.

A rich strike, and sale of the property, have been made in the last two weeks near the old Redlands mill, to a Mr. Brackenridge. A payment of $5000 has been made, and work on the property will commence immediately. I was fortunate enough to be on the ground at the time, examining other properties, and I pronounce this new strike simply wonderful. It lays in a large dyke on which some of the very best prospects on the desert are located, among them being the claims owned by the King Con. M. & M. Co., also the Bonanza at Redlands mill, owned by Messrs. King & Stannard. In this new strike ore crops from 25 to 100 feet in width, averaging about 80 feet wide. Stratified with very rich ore, gold shining all through it. It will, in my opinion, prove a big competitor to the late strike at Tonopah in Nevada, and very similar to the ore in that camp. —Ballarat cor. L. A. Mining Review.

Leases will be given by the Tonopah Company as heretofore, time expiring January 1, 1902. We believe that the leasing or tribute system is the best for the general prosperity of a mining camp that has been devised, especially where the local merchants are able to carry the leasers for the first month or so. Nevertheless, it is hardly probable that the new company will lease any of the main ledge when the time comes for renewals.

At the suggestion of Supervisor Kelly the Board will not hereafter meet principally to count squirrel tails. The bounty was declared off from the 15th of July, this month. In the past three years the county of Kern has paid out nearly $20,000 bounty for squirrel tails, an amount sufficient to buy more than half the land on which they were killed, as they are only troublesome on high, dry land contiguous to timber, or uncultivated land. —Randsburg Miner.

Philip McGrath, agent and railroad telegraph operator at Mound House station several years, has been promoted to a position in the office of Superintendent Laws of the Carson & Colorado railroad at Hawthorne. Herbert Coffin has been appointed agent and operator at Mound House.—Virginia Chronicle.

Strikes will never end until employers recognize the fact that employes have just as much right to live and organize as anybody else. This principle stands with all the great newspapers and there are now no clashes with the Typographical Union, the oldest of all.

Andrew Carnagie refuses to run for Mayor of New York. If elected he would have to deal with his own library proposition. Beside, the working men, in the remembrance of Homestead, would beat him anyhow.

Sir Thomas Lipton's sailors have struck for more money. They believe a pound note in their hand is worth more than the America's cup in Uncle Sam's hand.

The San Francisco Truckmen's revolt will create some hilarity when a few thousand country yahoos get to yanking big trucks around the city.

The great Epworth League Convention has adjourned, whereat the San Francisco papers will immediately backslide.

JAPANESE PLUMS.

In Great Favor Everywhere—Varieties For Market and Home Use.

For the past decade interest in the Japan plum has steadily increased, and, although many of the varieties are inferior in quality to some European varieties, their great beauty, freedom from disease, ability to resist the attack of the curculio and heavy cropping qualities have brought them into favor with growers. Some are proving of fair to good eating quality and are superb for canning or preserving.

Nearly all the Japan plums are vigorous growers, with long, forked

ABUNDANCE PLUM.

branches, the fruit buds setting in clusters instead of singly or in pairs, as with the European plum.

These plums are nearly allied to our native plums, and we may the more reasonably expect them to do well on that account on the theory that similarity of environment has produced similarity of attributes.

The propensity to overbear must be continually guarded against, as the quality of the plums on an overladen tree is very inferior, and, having neither quality nor size, they will be difficult to dispose of and of very little value. If two-thirds of the bearing wood is trimmed off the tree and the plums which set on the remainder are thinned to about four inches apart, we shall have on a mature tree from one to two bushels of plums from 2 to 2½ inches in diameter and as attractive as they are large.

The rot is the most troublesome enemy of the Japan plum unless it be its tendency to overbear. Eternal vigilance is the price of plums, picking off and burning the rot whenever it appears.

The yellows of the peach is also able to thrive on the Japan plum and should be guarded against.

The black knot and curculio are not serious enemies of the Japan plum, the knot only occasionally attacking the tree and the eggs of the curculio seldom hatching.

For market and amateur planting the Abundance, Burbank, Chabot, Wickson, Red June and Satsuma seem best suited. Lutts, Hale and Normands might also find a place in large collections.

Abundance is perhaps the best known and most widely planted of the Japanese plums.

Roses For All Summer.

Culture is all in all with hybrid perpetuals. A hybrid which in common garden soil is left to shift for itself may perhaps never yield more than its June crop of flowers, but keep the soil well enriched—it cannot be too rich—keep it stirred and mellow and do not allow the plant to stop growing and note the result. This is the only way to bring out the good points, for the flowers are formed in the new wood. Given a well drained bed, from 18 inches to 2 feet deep, under above treatment, and the plants of this class of roses will make a surprising growth of wood and yield the same proportion of noble flowers. Added to this, the branches must be kept well cut back. Remove all wood that does not show strong, healthy buds. It is sometimes necessary to cut back to two or three eyes before a bud is reached from which we may expect a new growth. When branches are developed from such buds, they will almost always bear roses, but not with the freedom during late summer that they displayed in June and July.—Vick.

Begonias Out of Doors.

The past year or so much use has been made of the many species and varieties of begonias as bedding plants in open air gardening. Under the shade of a wall or fence or where the soil is rather moist they do admirably, according to Meehan's. The species bruantii is dwarf and remarkably floriferous. Semperflorens does well in partial shade and keeps up a supply of flowers all summer.

A Notion For the Amateur Gardener.

The amateur gardener can often adopt modes of culture, favorable to excellence, that would be hardly profitable for the market gardener. In strawberry culture, according to Meehan's Monthly, it is said that much finer and more toothsome berries can be obtained by setting the plants out on ridges than when grown on the level ground. The earth is thrown up into a wedgelike form a foot or so in depth and then flattened on the apex by the back of a spade so as to be only about nine inches deep. The plants are set out about a foot apart along this narrow table on the top of this ridge. The result is said to be a surprise to those who are familiar only with the ordinary flat culture.

Kieffer Pear Improving.

"Is It Advisable to Plant More Kieffer Pear Orchards?" was a topic discussed at the recent New Jersey Horticultural society's meeting, and Mr. D. D. Denise said that from the remarks made of this fruit since the last crop was gathered this was a hard question to answer, as we cannot tell what will take place in the future. The quality of the Kieffer is improving each year, and the canners are using it to a greater extent than formerly, and this is largely in its favor. Notwithstanding the low prices last fall, his orchard yielded $100 per acre, clear of all expenses, and while this is the case it will be advisable to continue to plant.

The Flower Shows at Buffalo.

Dates in the series of flower shows at the Pan-American exposition are as follows: Hardy roses, June 18 to 25; sweet peas, July 23 to Aug. 2; gladiolus, Aug. 6 to 17; asters, Aug. 27 to Sept. 7; dahlias, Sept. 17 to 27; chrysanthemums, Oct. 22 to 31.

PRUNING SHRUBS.

To Prolong the Flowering Season. The Right Time to Prune.

That a good deal can be accomplished in the way of prolonging the flowering season of shrubs by judicious pruning I have often observed. Some years ago a neighboring florist had a row of Hydrangea paniculata grandiflora badly mutilated by a heavy hailstorm about midsummer, when the young growth was about a foot in length. Practically the plants lost nearly all their tops. As the growing season was still on a new growth started, and a late crop of flowers was the result, perfecting their heads nearly a month later than usual. The late summer blooming spiræas, such as tormentosa, billardi, nobleana, paniculata and callosa, will often flower freely in the fall if cut well back in spring. Let alone, they flower in June and July, but under the pruning plan flowers come in September.

Nurserymen sometimes make late plantings of shrubs, among them weigelas, planting them after growth has well started. Their plan then is to cut down the shrubs nearly to the ground. Strong shoots are the result, and with weigelas it is not uncommon for these shoots to be graced with flowers quite late in the season. Those who wish to try this plan should have more than one shrub of a sort, as it is not worth while destroying the spring display, which pruning back does, for a lesser one in the fall.

The proper time to prune early flowering shrubs is in spring as soon as flowering is over. I do not claim to have been the first to call attention to this, says Joseph Meehan in Country Gentleman, but I was certainly not the last, and it has been kept before the public for many years. It is a pleasure to find the practice now general, whereas some years ago shrubs were pruned in winter or early spring, and with it went most of the shoots which would have given flowers. Now a good cutting back is given as soon as flowering is over. Strong young shoots are then developed, which are those we look to for our next season's display.

The Fameuse Apples.

Of all the types among our cultivated American apples the Fameuse is one of the most prominent, persistent and important. Fameuse itself is known over a large part of the country, is a favorite dessert apple almost everywhere and is one of the most profitable commercial varieties in several important apple growing districts. It has been

THE SHIAWASSEE APPLE.

called the Chimney apple in Vermont and is still known as the Snow apple on lakes Erie and Ontario. The longer than type of apple seems also to be somewhat related to the Fameuse, and such varieties of Fameuse as McIntosh, Shiawassee and Scarlet Pippin promise to extend the range of the Fameuse type into sections where Fameuse itself has not taken the lead.

The apples in general are finely colored, with rather tender skin and flesh, the latter extremely white and usually strongly marked with red, very subject to scab, ripening in late fall and early winter. The trees are usually fine, clean, rather spreading growers, come into fruitage early and bear heavily and regularly. Crops are secured usually in alternate years, but this is simply because the trees are allowed to overbear in years of plenty. These facts are gathered from a recent interesting report by F. A. Waugh of Vermont on this important commercial type of apple.

Rudbeckia Golden Glow.

One of the first hardy plants to push through the ground as soon as the frost is fairly out is this valuable new double form of Rudbeckia laciniata, says Rural New Yorker. It has proved one of the most useful and ornamental of all hardy plants. When established, it will grow from six to eight feet high, the branching stems being covered with masses of golden yellow double blossoms, large and perfect and without the stiffness peculiar to sunflowers, which they most resemble. The flowers last in perfection many weeks and are produced in the greatest freedom through August and September. These flowers are coming in demand for decoration, as in appearance and finish they are more like yellow cactus dahlias or chrysanthemums than rudbeckias. The Golden Glow rudbeckia is entirely hardy, furnishing its own protection in the forest of flowering stems that remain throughout the winter and arrest the drifting leaves and snow. A little plant soon spreads into a large clump that will hold its own with any native vegetation.

Sturdy Little Plants.

Dwarf nasturtiums grow only about one foot high. They will thrive through the hottest weather and in poor soil. They bear a profusion of flowers—cream, pink, golden, scarlet and very rich dark hues. Seed should be sown in the open ground when the weather is settled.

Spraying Fruit Trees In Bloom.

Professor Lach recently discussed before a beekeepers' convention the spraying of fruit trees when in full bloom. Generally speaking, his conclusion seemed to be that spraying during blooming time was not only wasteful, but decidedly harmful as well, cutting down the supply of fruit to an extent that, if generally practiced, would amount to thousands of dollars to the fruit men all over the state.

Transplanting Seedlings.

Transplant seedlings of annuals to the open ground in May early or late, according to the season, at the north. Do this after sundown and just after a rain if possible. If without rain, make a cup shaped hole for each plant, pour in water, then fill up with earth and set plant in this. Give shade for two or three days, removing it at night. Give water every night until the roots have become established.

LEGAL.

SUMMONS.

In the Superior Court of the County of Inyo, State of California.

J. J. WALL, Plaintiff vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal.

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere.

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] Superior Court, County of Inyo. J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant. MACK & FORBES and W. J. HARRIS, Attorneys for Plaintiff, Independence, Cal.

Notice to Creditors.

ESTATE OF F. D. PRATT, Deceased.

NOTICE is hereby given that the undersigned, MERCIE T. COE, Administratrix of the estate of F. D. Pratt, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them, with the necessary vouchers, within four months after the first publication of this notice, to the administratrix at the late residence of said F. D. Pratt, deceased, in the Town of Big Pine, County of Inyo, State of California, the same being the place for the transaction of the business of said estate is the county of Inyo, State of California.

Dated April 11th, 1901.

MERCIE T. COE, Administratrix of the Estate of F. D. Pratt, deceased.

MACK & FORBES, Attorneys for Administratrix.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 7th day of May, 1901, an assessment, No. 14, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 1, 10th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON, Secretary.

OFFICE—Room 31, 10th Floor, Mills Building, San Francisco, Cal.

NOTICE FOR PUBLICATION.

DEPARTMENT OF THE INTERIOR. LAND OFFICE AT INDEPENDENCE, CAL., July 5, 1901.

NOTICE IS HEREBY GIVEN THAT THE following named settler has filed notice of his intention to make final proof in support of his claim and that said proof will be made before the Register and Receiver at Independence, Cal., on August 17th, 1901, viz.:

HIRAM C. HAMILTON,

for the SE¼ SW¼ Sec. 29, E½ NW¼, SW¼ NE¼ Sec. 32, Tp. 14 S., R. 36 E., M. D. M.

He names the following witnesses to prove his continuous residence upon and cultivation of said land, viz: Fred B. Stewart of Lone Pine, and Arthur Shepherd, Henry Glade and Albert W. Simonson of Thebe, Cal.

S. W. AUSTIN, Register.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office, Reno. aug3-tf

The Duty of Mothers.

What suffering frequently results from a mother's ignorance; or more frequently from a mother's neglect to properly instruct her daughter!

Tradition says "woman must suffer," and young women are so taught. There is a little truth and a great deal of exaggeration in this. If a young woman suffers severely she needs treatment, and her mother should see that she gets it.

Many mothers hesitate to take their daughters to a physician for examination: but no mother need hesitate to write freely about her daughter or herself to Mrs. Pinkham's Laboratory at Lynn, Mass., and secure from a woman the most efficient advice without charge.

Mrs. August Pfalzgraf, of South Byron, Wis., mother of the young lady whose portrait we here publish, wrote in January, 1899, saying her daughter had suffered for two years with irregular menstruation—had headache all the time, and pain in her side, feet swelled, and was generally miserable. She received an answer promptly with advice, and under date of March, 1899, the mother writes again that Lydia E. Pinkham's Vegetable Compound cured her daughter of all pains and irregularity.

Nothing in the world equals Lydia E. Pinkham's great medicine for regulating woman's peculiar monthly troubles.

Gave His Address.

The following from an English paper will be enjoyed by speakers who have found themselves called upon to address audiences already wearied by excessively long speeches:

A certain man was invited to speak at a local gathering and, being nobody in particular, was placed last on the list of speakers. Moreover, the chairman introduced several speakers whose names were not on the list, and the audience was tired out when he said, introducing the final speaker, "Mr. Bones will now give us his address."

"My address," said Mr. Bones, rising, "is 551 Park Villas, S. W., and I wish you all good night."

A Tutor Who Maintained His Dignity.

Dr. Chalmers always had a high sense of personal dignity. When a young man, he was engaged as tutor in a private family. His young lady pupils resented his strictness, and the mother foolishly took sides with her daughters. In petty spite when company was invited to the house young Chalmers was shut out from the table, and dinner was sent to his room.

He made no protest against the treatment, but when it was attempted again he told the servant he had ordered a dinner at a neighboring town and should need nothing. When this had been done a few times, an explosion came. The master of the house called Chalmers to account for insulting his family. Chalmers replied that he had been insulted by banishment from the table. The young teacher conquered and ever after held his place as one of the family at all social gatherings.

No Apparent Cause For Offense.

It was the third day out on an ocean liner, and some of the passengers were just getting acquainted. A lady who had made the trip many times lay comfortably in her steamer chair, when the pretty and stylishly clad daughter of a newly rich family stopped near her, and they drifted into conversation. Presently the lady bowed to a pale faced man who walked by.

"Who was that?" inquired the girl.

"That was Signor Slambangski, the famous pianist," replied the lady, who then went on to speak of the probable performers at the inevitable concert at the journey's end.

"Oh, are there any musicianers on board?" eagerly inquired the girl.

"I beg your pardon?" said the lady interrogatively.

The girl gazed at her inquiringly.

"What for?" she asked.—New York Mail and Express.

How She Rules Him.

"Skinphlint's wife certainly has remarkable success in managing him. I wonder how she does it."

"When he undertakes to deny her anything she really wants, she threatens to sue him for divorce."

"Does he care so much for her, then?"

"Oh, no, it's not that, but he figures that it is cheaper to let her have her own way than it would be to either defend the suit or pay alimony."—Chicago Post.

A Question of Salutations.

"What is your favorite salutation?" she asked the dilatory youth.

"Eh! Why, I don't know. What's yours?"

The fair girl yawned wearily.

"It would have been good night," she said. "But in about two minutes it will be good morning."

"Goodby," said the dilatory youth.—Cleveland Plain Dealer.

GIVE THE POTATO ITS DUE.

Apotheosis of the Humble Tuber that Is Found on Every Table.

A writer in one of the monthlies undertakes to enumerate the good things which America has given to the world. He lists maple sugar, the turkey, the tomato, Indian corn, tobacco and a host of other things, but totally neglects the potato, which is in more general use than any other vegetable. And this reminds us that one of the lesser encyclopedias gravely declares that the potato is a native of Great Britain, and that it was "brought to the American settlements from Ireland"—a half truth which is quite as reprehensible as a full falsehood.

When the Spaniards penetrated Mexico they found the natives eating, as one of the chroniclers of that day quaintly said, "certain roots or bulbs which grow at the ends of stems in the ground, and which are called 'batata.'" The standard encyclopedias note that the potato is a native of South America, Mexico and other tropical American countries, and that it made its first appearance in Europe when carried there from Peru by Spanish explorers at the beginning of the sixteenth century. It also was found in Florida, and from there it was carried to Virginia and thence to England by Sir John Hawkins in 1565. A century later we find the Royal Geographical Society laboring for its introduction into Ireland on the supposition that it would afford a certain means of forestalling famine, and a few years later it came from Ireland into the settlements of New England—a fact which gave rise to the encyclopedic error which we have noted. And this circuitous route from Virginia to New England shows how little there was in common between the "rakehellies" of Virginia and their puritan neighbors on the north.

The potato is probably dispersed more widely among the people of the earth than any other American product with the single exception of tobacco. Indian corn, now grown to be our greatest agricultural staples and one of the best of life-sustainers known, is little used by the world at large. But tobacco, with no life-sustaining qualities whatever, is known in every land and clime. Its widespread and enormous consumption is one of the wonders of the world, for no drug, food or other substance ever came into such general use in so short a space of time.—Kansas City Journal.

EATING HORSEFLESH.

Experience of M. Decroix with Emperor Napoleon III.

M. Decroix, the founder of the French Anti-Tobacco League, who died suddenly, though at the ripe old age of 80, was a man of many anecdotes. Most of them bore on the difficulties which beset the path of the reformer who, when he is not treated with contumely, is woefully misunderstood. Under the second empire, and before he began his campaign against tobacco, M. Decroix, in whom the missionary spirit was indeed strong, started a crusade in favor of eating horseflesh. His ideas, in spite of the untiring energy with which he promulgated them, seemed to make little or no headway. In his despair at his scant success he decided to appeal to Napoleon III. in person. He addressed a long report to the Emperor, setting forth in detail the undreamed-of advantages of a horse-meat diet, and humbly requesting the sovereign to give the matter his attention and to intervene in favor of ideas which would redound to the well being of his subjects. He recalled how Louis XVI. had established the reputation of the long-despised potato by wearing its flower in his button-hole; a word of approbation from his majesty might dispel the prejudice against the horse.

M. Decroix was a veterinary surgeon in the army at the time, and a very few days after the dispatch of his report he was summoned to appear before Marshal Valliant, the master of the imperial household. He found the Marshal beside himself with rage and indignation. "So you, sir," he roared, as Decroix entered his room, "are the person who purposes that the Emperor should eat horse meat! You must be out of your senses. The Emperor eat horse meat!" The Marshal was at a loss for further words in which to express his stupefaction, and he motioned Decroix out of his presence with a gesture which indicated that he might be thankful he had escaped being placed under arrest for a grave breach of discipline.—Paris correspondence Pall Mall Gazette.

Women and Paris.

Paris is adored by all the fair votaries of fashion, whatever their nationality. Her caprices in fashion are received by the wives and daughters of the universe as laws, and obeyed with an unwavering faith, a mute obedience that few religions have commanded. Women who yawn through Italy and the East have, when one meets them in the French capital, the intense manner, the air of separation from things mundane that is observable in pilgrims approaching the shrine of their deity. Mohammedans at Mecca must have some such look. In Paris women find themselves in the presence of those high priests whom they have long worshiped from a distance. It is useless to mention other subjects to the devotee, for they will not fix her attention. Her thoughts are with her heart and that is far away.

Love, Not Flattery.

Whether to paint to please posterity or the present generation is no doubt a vexed question, for it belongs to few to achieve both. The artist is so largely exposed to criticism from the friends and relatives of the sitter that his position is a difficult one, for demands are made upon his brush which he may be personally unwilling to fulfil. A subtle story is told of an artist, now dead, to whom it was remarked that he flattered his sitters. "No," said the master, smiling, "I only paint Truth lovingly."

Uses of the Banana.

An acre of bananas will produce in weight 133 times as much as an acre of wheat. Banana flour is coming into use. Brewers are experimenting with bananas as a substitute for barley. From the fiber of the plant rope, canvas and thin clothing are being made.

DREGS.

The fire is out and spent the warmth thereof
(This is the end of every song man sings)!
The golden wine is drunk, the dregs remain
Bitter as wormwood and as salt as pain,
And health and hope have gone the way of love
Into the drear oblivion of lost things.
Ghosts go along with us until the end;
This was a mistress, this, perhaps, a friend.
With pale, indifferent eyes we sit and wait
For the dropt curtain and the closing gate;
This is the end of all the songs man sings.
—Ernest Dowson in Decorations.

WANTED A SHAVE ONLY.

But He Got More, Paid For It and Didn't Kick.

"Well, I feel better, anyhow," remarked an out of town guest to the clerk of a lower Broadway hotel.

The clerk, not being busy, saw there was something weighing on the guest's mind and with a benign smile waited for a bunko story.

"First class barber shop you have here in the house," ventured the guest, a little more forcibly.

"Pretty good," said the clerk sympathetically.

"Y-e-e-s," continued the guest, warming to the subject. "I had a shave there awhile ago—that is, I went in there for a shave three hours ago. The man who got hold of me was an artist, I could see that. As soon as I got into the chair he didn't wait for me to say what I wanted, but tucked a towel around my neck and began running his fingers through my hair.

"'Shave behind and around the edges?' he inquired, getting out his shears with his other hand.

"'Nop. Shave,' said I.

"'Certainly, sir,' he replied briskly, 'but I'll just take a little off around the edges here. It needs it.'

"He seemed to know his business so well that I let him go ahead, and he entertained me with stories on dermatology and hair treatment.

"He had almost finished his scissor work when he stopped short and stood aghast. 'Your hair is splitting badly, sir,' he said, with deep concern.

"'Splitting?' said I. 'Ha, is that so?'

"'Indeed it is, sir. It requires singeing at once.' The man had a wax taper lighted by this time.

"'Ah, all right,' said I, and for another 20 minutes the shop in my vicinity smelled like a mattress factory on fire, while the barber really alarmed me about my hair. It was getting frightfully thin, he said; seemed to be inclined to drop out about the temples and near the apex of the crown. After I had had my shampoo he said he thought he had better apply some 'hairline,' a preparation which he alleged every man's hair required at last. I hadn't thought of a shampoo, much less 'hairline,' but as I had already lost an hour I let him lead me over to the water tank and shampoo me; then he opened a brand new bottle of 'hairline' and applied it liberally, after which he wrapped the bottle in paper and laid it aside.

"Then came the shave, which was delayed every few seconds by the manipulator pausing to examine and toy with what he finally confessed were tiny eruptions caused by an unsatisfactory condition of the skin. I had always considered my skin in perfect condition, but this man shocked me. He asked me who shaved me last. I couldn't remember, and he confided to me that I had run a terrible risk in allowing every Tom, Dick and Harry to shave me. My skin was in a shocking condition and cried out for an application of a preparation which luckily he had on hand. He applied this lotion as a matter of course and within another half hour had turned me out completely rejuvenated, but with the loss of an afternoon practically. Here is the bill:

Shave	15
Hair cut	50
Singeing	25
Shampoo	25
One bottle hairline	$1 00
One bottle cremaline	1 00
Total	$2 90

"I only wanted a shave," concluded the guest ruefully, "but, as I say, I feel better. Will you please lay these bottles over behind the desk. I may call for them later."—New York Times.

The Appeal to the Record.

Little Tommy returned sore and trembling from the torture room.

"Doesn't your papa ever thrash you?" he asked his chum, who is the son of a cabinet minister.

"I should say not!" replied the other loftily. "Every time he threatens to cane me I read him an extract from his great peace at any price speech in which he said: 'These barbarians are like wayward children, but have we on that account the right to take away their heaven sent privilege to do as they please? Let us treat them as we would our own wayward children—plead with them, beseech them, but never coerce them with either gun or rod.'"

"That's a good deal to remember," remarked Tommy.

"Yes, but now he's got so used to it that he drops the cane as soon as I start."—London Answers.

Pride of the Riding Academy.

Rowell—There goes Withers on horseback. He is a living illustration of the saying, "A merciful man is merciful to his beast."

Snaffle—In what way?

Rowell—Don't you see? He lets his weight rest on the horse only once in a while. The most of the time he is in the air, going up or coming down.—Boston Transcript.

STANDARD TIME.

To Ascertain and Promulgate It Is a Costly Task.

"What time is it?" Few questions are more common than this, and yet each day the United States government goes to a great expense in giving it an official answer. To ascertain the instant when it is noon on the seventy-fifth meridian and to send that information all over the country is a great and a costly task. The astronomical observatory in Washington computes the true time, which is thence transmitted by electricity to every important city and town.

About five minutes before the Washington noon the telegraph companies cut off all their regular business except on lines where they have more than one wire. They then connect all important points, from which there may be numberless ramifications, with an electric wire going into the great clock in the observatory so that all over the country its tickings may be heard. For the ten seconds just before 12 o'clock there is silence, which is broken by the "noon beat." Regular business is then resumed.

In some cities the wires connect with a time ball which drops with the noon beat. The time ball in Washington over the state, war and navy department building is three feet in diameter and can be seen from all parts of the city. Crowds frequently gather about to see it fall, a distance of 21 feet, high in the air. The man whom some of the spectators suppose to be dropping the ball is merely there to hoist it again to its place.

In the building beneath are 23 clocks which are each day automatically corrected by it. An electrical device "sets" them, placing hour, minute and second hands exactly vertical at the instant the ball drops. The hands that are too fast are pushed back, and those that are slow are thrust forward.

Although Washington is on the seventy-seventh meridian, the noon hour is for convenience computed for the seventy-fifth, the time standard for the eastern part of the United States. In the central belt, which is governed by the ninetieth meridian, the signal from Washington means 11 o'clock, in the Rocky mountain belt it is 10 o'clock, and on the Pacific coast line it is 9.—Youth's Companion.

Most Curious Thing.

Mrs. Quizzer (who wants to know everything)—Now, what do you consider to be the most curious thing you ever saw, professor?

Professor Trotter—A woman, madam.—Harlem Life.

The New Bicycle.

Bicycle manufacturers state that the bicycle for this year will be practically the same model as 1900, as improvement seems to be impossible. Precisely the same is true of Hostetter's Stomach Bitters. It represents the limits of science, and it is impossible to make a better medicine for the stomach, liver, kidneys and blood. Try it for dyspepsia, indigestion, constipation, flatulency, or sour stomach, and you will be convinced. Never take a substitute.

The new directory of Rockefeller's linseed oil company doesn't seem to be at all slippery.

Hoitt's School,

At Menlo Park, San Mateo County, Cal., with its beautiful surroundings, perfect climate, careful supervision, thorough instruction, complete laboratories and gymnasium, easily maintains its position in the front rank of schools for boys on the Pacific Coast. Ira G. Hoitt, Ph. D., Principal.

Dr. F. J. Bethel

Has opened a Dental office at 1170 Market street, Cor. Taylor, over Weinstock, Lubin & Co., top floor, San Francisco.

Got Grip? Try Fryer's Abietene Cough Balsam

Fryer's Abietene Cough Balsam saves Doctor Bills

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

A dentist says a woman loses her teeth sooner than a man. Probably she wears them out with her tongue.

Catarrh

Is a constitutional disease.

It originates in a scrofulous condition of the blood and depends on that condition.

It often causes headache and dizziness, impairs the taste, smell and hearing, affects the vocal organs, disturbs the stomach.

It is always radically and permanently cured by the blood-purifying, alterative and tonic action of

Hood's Sarsaparilla

This great medicine has wrought the most wonderful cures of all diseases depending on scrofula or the scrofulous habit.

HOOD'S PILLS are the best cathartic.

SINKING SPELLS.

ALARMING SYMPTOMS DESCRIBED IN A SWORN STATEMENT.

Mrs. W. T. Clark of Rome, N. Y., Tells Why She Is Now Recommending a Well-known Remedy to Her Friends.

Indigestion and stomach trouble have many results that are not always readily traced to their real cause. Sometimes the kidneys are apparently affected, but more often an irregularity of the heart's action produces a far more alarming symptom. The cause is easily explained and is removed when the stomach trouble is cured. A case in point is that of Mrs. W. T. Clark, of 318 West Thomas street, Rome, N. Y. She says:

"To begin with, I had gastritis, which brought on sinking spells for about an hour every morning. I was very weak and nervous and finally was compelled to take to my bed. My illness began in the spring of 1897, and continued for about four months. For about half this time I was confined to my bed. I suffered greatly from the stomach trouble and nervousness, but what alarmed me most was the sinking feeling at the heart.

"I had read about Dr. Williams' Pink Pills for Pale People and when some of my friends recommended the pills very highly, I decided to give them a trial. I bought one box and by the time this was used up the sinking spells had ceased. I felt better but continued taking the pills until I had used twelve boxes. I still keep the pills in the house for I believe that they are a splendid medicine. I always recommend Dr. Williams' Pink Pills to my friends who are ailing, for I know that they will do all that is claimed for them."

Signed, MRS. W. T. CLARK.

Subscribed and sworn to before me this 9th day of April, 1900.

BENJ. S. BROWN, Notary Public.
[Seal]

No discovery of modern times has proved such a blessing to women as Dr. Williams' Pink Pills for Pale People. Acting directly on the blood and nerves, invigorating the body, regulating the functions, they restore the strength and health in the exhausted patient when every effort of the physician proves unavailing. These pills are sold in boxes at 50 cents a box or six boxes for $2.50, and may be had at all druggists, or direct by mail from Dr. Williams Medicine Co., Schenectady, N. Y.

Some railroads advertise to carry passengers through without change. But they make a fellow pay just the same.

Coated with chocolate, very small and easy to take as sugar, are Adams' Sarsaparilla Pills, for sick headache, constipation, biliousness, dyspepsia, sallow complexion. They purify the blood. 10c, 25c. Druggists

It is easy to find a lover and retain a friend; what is difficult is to find the friend and retain the lover.

For Consumption try Fryer's Abietene Cough Balsam.

CASTORIA

The Kind You Have Always Bought has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision for over 30 years. Allow no one to deceive you in this. Counterfeits, Imitations and "Just-as-good" are but Experiments, and endanger the health of Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought

Bears the Signature of

Chas. H. Fletcher.

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

CATARRH

A Constitutional Affection.

Sprays, washes, powders, salves, medicated tobacco and cigarettes, however long and persistently used, do not cure Catarrh. They relieve temporarily the inflammation in the throat and nose, and enable you to breathe more easily and freely, but the continual rush of impure blood to these parts keeps up the irritation and ultimately produces ulceration of the glands, when the breath becomes exceedingly offensive and the soft bones of the nose are frequently destroyed. The catarrhal inflammation extends over the entire surface of the mucous membrane, or inner skin; the stomach, kidneys and lungs are often involved; the whole system soon becomes affected by the rapid absorption of poisonous matter into the blood, and the disease that you had hoped to cure with simple local remedies, assumes a dangerous form.

I had Catarrh about 15 years, and tried during the time everything I could hear of, but nothing did me any good. At last I came to the conclusion that Catarrh must be a blood disease, and decided to give S. S. S. a trial. I could see a little improvement from the first bottle, and continued it three or four months, or until I was cured. Have not taken anything for six years, and am just as well as I ever was.—M. MATSON, Lapeer, Mich.

I had Catarrh so bad was entirely deaf in one ear, and all the inside of my nose and part of the bone sloughed off. The physicians gave me up as incurable. I determined to try S. S. S., and began to improve at once. It seemed to get at the seat of the disease, and after a few weeks' treatment I was entirely cured, and for more than seven years have had no sign of the disease.—MRS. JOSEPHINE POLHILL, Due West, S. C.

Catarrh is a constitutional disease—a blood disease which is frequently inherited, and only a blood medicine, such as S. S. S., can remove the hereditary taint, destroy the poisons that have been accumulating in the system for years perhaps, and restore the blood to a healthy and pure condition. The inflamed membranes and diseased glands are healed by the rich, pure blood which is carried to them, and the offensive discharges from the nose, and the terrible headache and neuralgic pains cease. Chronic cases of the most desperate character and apparently hopeless, have been cured completely and permanently by the use of S. S. S.

Write our physicians fully about your case and they will cheerfully assist you by their advice. We charge nothing whatever for this service. Book free on application.

THE SWIFT SPECIFIC CO., ATLANTA, GA.

DEATH

begins in the bowels. It's the unclean places that breed infectious epidemics, and it's the unclean body—unclean inside—that "catches" the disease. A person whose stomach and bowels are kept clean and whose liver is lively, and blood pure, is safe against yellow fever, or any other of the dreadful diseases that desolate our beautiful land. Some of the cleanest people outside are filthiest inside, and they are the ones who not only "catch" the infections, but endanger the lives of all their friends and relatives. There's only one certain way of keeping clean inside so as to prevent disease and that is to take CASCARETS. Perfect disinfectant and bowel strengtheners. All diseases are

PREVENTED BY

Cascarets

LIVER TONIC

BEST FOR THE BOWELS

ANGLERS' SONG.

Away, away, to the brookside green,
In the morning's earliest flush,
To the purling brook where the alders lean
Gracefully o'er the water's rush,
And the golden sun, with its many-hued sheen,
Makes the tinted wavelets blush.

The lancewood rod, with its supple tip,
Is sound and strong as a pine;
But, arching, it bends with a dainty dip
When the brook trout strains the line,
And the spray flies high when the fish's lip
Is pierced by the hook's sharp tine.

The tackle's strong and the water's right,
So there's chance for luck to-day;
With the wind in the south and the sun not bright,
Our creels will surely weigh,
Ere with weary feet, by the gloaming's light,
Homeward, we wend our way.

And where the mossy bank is sprayed
By the water's roaring fall,
'Neath the slender birches' flickering shade,
We'll rest and thankful, recall
That, of sports the Fates for men have made,
Angling's the best of all.

—National Sportsman.

A WORKING GIRL

THE sentiments you have been expressing, my dear Roy," observed Albert Lestrange with the patronizing manner justified by his seven years' seniority, "would be excellent in a novel, or might even be suitable for a city clerk, but they are quite inapplicable to us."

"Why so?" inquired the younger brother.

"Because rank and wealth have duties as well as privileges," replied Albert. "And foremost among them is that of making a suitable matrimonial alliance, and not——"

"That's all bosh, Bertie!" interrupted Roy. "A suitable matrimonial alliance! Poof! the sound of it makes one feel ill."

"You are young, my dear Roy," said his brother, pityingly. "Wait until you are my age and you will look differently at things."

"I shall never agree with you on that point, that's certain," answered the younger man, "for it's my opinion and always will be that a man who marries a woman that he doesn't love ought to be kicked."

"There is displayed the rashness of youth," remarked Albert, sententiously. "And believe me, my dear Roy——"

What he was about to add will never be known now, for at that moment a loud cry for help was heard from a meadow on the other side of the hedge that skirted the line down which the brothers were walking.

"Come along, Bertie," cried Roy, "there's a stile a few yards higher up."

In two minutes the young men had jumped the rails and were on the scene of action, where a couple of tramps were standing on either side of a well-dressed young lady.

"You take the little one, Roy," exclaimed Albert, "I'll tackle the other."

The taller tramp lifted the stick he was carrying, but before he could use it Albert's fist caught him under the chin, and he found himself sitting in the hedge, while a moment later Roy knocked his companion into a bed of nettles close by.

"How can I thank you?" observed the girl, whom the young men now had time to notice was uncommonly pretty. "I had no idea that tramps were so dangerous."

"Pray don't mention it," replied Albert as he wiped his knuckles, "it was really nothing."

"It was a great deal to me I can assure you," said the girl with a merry, rippling laugh, "for unfortunately I was carrying all my worldly wealth with me."

"Are you returning to Tormouth?" inquired Albert, without noticing the latter part of her speech. "Can we have the pleasure of seeing you home?"

"I shall be grateful indeed if you will accompany me as far as the Anchor Hotel," was the reply, and then as they walked across the fields she further explained that she had been ordered down to the little seaside town by her doctor for the recovery of her health; "not that there's much the matter with me, only overwork, you know."

During the three-mile walk Albert became more and more reticent, while Roy, who at first had been quite overcome by the unexpected vision of beauty, gradually thawed out under the influence of her smiles until when they parted outside the hotel he had made an appointment for the following morning to show her the famous Smuggler's Cave.

For a few minutes Albert was silent, and then he observed gravely, "If you take my advice, Roy, you will not see that young person again. I do not consider that she is a desirable acquaintance."

"Why not?" asked Roy, astonished. "She is evidently a lady."

"That she has been well educated I will not deny," answered Albert, "but she works for her living, Roy. Did you not hear her say that she was overworked, and that she carried all her worldly wealth in her pocket?"

"She is a charming girl," retorted Roy, "and I am going to see her to-morrow in spite of you or any other old woman."

This reply hurt Albert's feelings and caused a coolness between the brothers, but Roy kept his word, and every day for three weeks he accompanied Miss Lefroy to one or other of the many natural beauties of the neighborhood.

At length came the fatal day of her departure, and after seeing her off Roy returned home more depressed than his brother had ever seen him.

"So your fair friend has gone away at last," said Albert at dinner time. "Thank heaven that she did not entangle you in a 'matrimonial alliance.'"

"It wasn't her fault, I can assure you," replied Roy. "She wouldn't have me."

"You actually proposed to her?"

"Yes, I did, and she has put me off for a month, as she says she does not believe I know my own mind, but I've got her address in London and permission to call on her the first week in October."

The hours dragged themselves away, and on the first day of pheasant shooting, in spite of his brother's remonstrances, Roy left home for the great metropolis.

Two days later Albert followed him to town. It was but a forlorn hope, but it occurred to him that he might pursuade the girl—for a consideration of course—to be merciful and release his brother from any foolish promises he may have made.

As Albert did not know much about London, he determined to seek the assistance and advice of his uncle, Lord Torchester, but on his arrival at Torchester House he found that a garden party was in full swing.

Lady Torchester greeted him with a few kind words of welcome and he passed on to his uncle.

"Hello!" exclaimed the latter, "what has brought you up to town?"

"Why, to tell you the truth, Roy has been inveigled by some typewriting girl, and I've come up to see if I can get him out of the mess, and as I thought you would be able to help me, I——"

"Certainly, certainly," interrupted his uncle; "but here comes Miss Garrick, the famous actress; shall I introduce you?"

"Nothing I should like better, I have read so much of her that— What! Miss Lefroy!"

"The same, Mr. Lestrange," answered the smiling girl. "And perhaps you will permit me to present my future husband, Mr. Roy Lestrange! By the way, will you be best man?"—Ally Sloper.

TURKEY BANISHES THE TYPEWRITER.

The customs authorities have prohibited the entry of typewriters into Turkey, and 200 machines in the custom house have been ordered returned to the consignor. The authorities have taken up the peculiarly characteristic attitude that there is no distinct feature about typewriting by which the authorship could be recognized or a person using a machine be traced, and that, consequently, anyone is able to put in type seditious writings without fear of compromising himself. Hektographic paste and fluid also are prohibited for similar reasons. The embassies are making representations on the subject with the view of inducing the Turkish government to take up a more reasonable attitude.

Youngest and Oldest of Kings.

Europe has a new little King who has a double claim to distinction. He is the youngest of ruling kings, and at the same time the lineal representative of the oldest reigning family in Europe. His name and title is Grand Duke Franz IV. of Mecklenburg-Schwerin, and he ascended to the throne on which his fathers have sat for twenty-five generations less than a month ago. The young king is 19 years old, and it is his cousin who is prince consort of Holland. His kingdom is one of the petty German States, and comprises only 5,000 square miles of territory, with a total population of 60,000. The total revenue of the kingdom is barely $10,000,000 a year, but it has a "man-sized" national debt of nearly $30,000,000. Franz IV. was the second king of the new century to ascend the throne, the first being Edward of England. He is a near relative of the Czar of Russia, and has connections with almost every royal family of Europe.

FRANZ IV.

Where Were They?

Mrs. Jones—I am sorry I could not come along with Henry to your house last night. What! Wasn't my husband at your house all last evening?

And these few words led to a revelation which Jones and Brown will have trouble to explain.—Ohio State Journal.

Clean Sydney.

In Sydney the streets are thoroughly cleaned every night, and any one throwing refuse or waste material of any sort on the street is arrested and fined. All the kitchens in the larger residences are on the top floor, and all the clothes are dried on the roof.

AMERICAN HALL OF FAME IN NEW YORK.

The American Hall of Fame was dedicated in New York recently in the presence of a distinguished assemblage of representative citizens from many parts of the country.

The idea of the Hall of Fame was conceived by Chancellor MacCracken, to whom it was suggested by the need of a building which would round out the beauty of the university quadrangle. This space the chancellor proposed to devote to an institution similar to Westminster Abbey, the Pantheon in Paris and the "Ruhmes Halle," Munich. Twenty-nine tablets were decided upon by a plan of selection, designed with every regard to fairness, by a jury of eminent Americans. This number of names will be added to every five years throughout the twentieth century, when five new tablets will be unveiled in the Hall provided the electors, under the rules, can agree on so many. The dimensions of the building are as follows: Total exterior length of the colonade, 504 feet; height, 20 feet; breadth, 16 feet; length of museum, exclusive of entrance corridors, 200 feet; breadth, 40 feet; height, 16 feet.

THE OLD-TIME TOWN.

HAS GONE WITH OTHER OLD-FASHIONED THINGS.

Overtaken by the Rapid March of Progress and the Old Scenes of Rusticity No Longer Exist—Even the Church Affected.

Like so many other old-fashioned things, the old-time town is going down before the march of progress. Nothing is like it used to be. Invention, discovery and education of the people up to a taste in better things and ambition for conveniences are what have led to the change. To-day one sees the village maiden arrayed in clothes that would come near taking first place in a procession in the main cities. The abundantly if not artistically carved boxes no longer stand in front of stores, ready lounging places for the discussion of the world's events. No sign extends across the main street near the tracks cautioning the people to "Beware of the locomotive." Modern gates are let down to prevent collisions between trains and teams. No tin-starred constable in overalls swells about the station platform any longer. A uniformed marshal, every bit as important, struts there to meet all trains. The old inn, with its slanting porch extending over the sidewalk, supported by posts off which country horses have long been dining, has given way to a hotel with some humming name imported from some metropolis. Lamp posts adorn the corners and the merchants display their wares behind plate-glass windows. All these the traveler sees—signs of progress—a great difference to the passing eye.

Twenty years, even ten years, ago the village store was the spot where all the earth centered. In the winter time the prominent citizens sat around an abundantly provided stove. Messengers boarded the passing trains, pumped the passengers for news, managed to pick up any kind of an old paper and hurried back to the store to tell the tidings and to join in their discussion. Between arguments the debaters nipped at dried peaches and other delicacies from the hospitable barrel of the storekeeper, who made up on the customer by manipulating the scales at the next purchase. A stranger in the town was an oracle, reverenced and respected. He had the best seat near the stove and the townsmen nursed their knees in their arms as they drank in from him his recitals of affairs in the rest of the world. Then there was the Town Hall, with its spelling bees, its occasional lecture or its debate.

In the summer the wise men took to the boxes in front of the store, or to the hitching rail, on which they poised, and talked and "whittled." They were out in their shirtsleeves before breakfast to learn what had happened during the night. Then they strolled over to the old frame station to see the train go by. How different now in the matter of acquiring information. It is a poor town, indeed, that hasn't its own paper to record, and brightly, too, the local happenings. And as the trains go by they drop off bundles of papers, fresh with all the news of the earth, all the latest periodicals, illustrated papers and the newest books. The village store is no longer the loafing place for the gossips, but an up-to-date business establishment. The town hall has developed into a public horary or theater.

Progress Everywhere.

Ten years ago the country clothing store, which was also the hardware store and the dry goods store and the grocery store and the millinery establishment all in one—a bucolic trust—made a specialty of ready-made suits, that were so tightly packed away on the shelves that you couldn't get the creases out of them any more than you could get the wrinkles out of a corrugated iron roof. And what wonderful patterns and styles. Now in front of the clothing store Chauncey Depew and Mark Hanna and Gen. Miles and Admiral Schley and George Dewey, all in wax, stand in all the glory of blue serge and corkscrew, with double-breasted and bewildering vests and a crease down their trousers legs. The shoe store is in the next block, the milliner is across the way with a fascinating display of daily hints from Paris, the hardware man is in business for himself over next to the brewery, and the grocer occupies the modern store-room under the office of the evening Tell-Tale, the rattle of whose linotypes makes a merry race with the clicking of the keys manipulated by the entrancing and up-to-date product of civilization, the blonde typewriter girl across the hallway in Skinnum's law office.

And over in the church the minister no longer simply tells the good story of the man who went down to Jericho and fell among thieves. He thunders against the trusts and talks Browning or evolution. No cottage organ's sweet refrain leads the doxology and Old Hundred any more. A huge organ, with blue and gilt pipes, big as stove pipes, is manipulated by some fidgety professor and a quartette sings the most modern sacred music. The minister's clothing is not shiny with the years. No great bowed spectacles afford him vision. Trim side-whiskers and neat mustachios mark him, instead of the sanctimonious smoothness the razor achieves or the austere abundance of whiskers. It is safe betting that he is the best golf player in the section, a bicycle expert and a wonder at whist and progressive cinch. He preaches simplicity of life. Then he summers at Narragansett Pier, or ferries over to Europe, instead of going into the hay fields as his predecessor did.

Quilting bees and sewing circles are likewise of bygone days. The women do their darning and sew on the buttons of the men at home. If they neglect it the men do the darning both at home and abroad. This feature is unchanged. But the women meet at their 5 o'clock teas and the Saturday afternoon club, and instead of discussing each other (altogether) they discourse on Zoroaster and the Zendevesta, theosophy, George Meredith, Browning and other abstruse propositions. For the men there is a club. Instead of the old store box on which they sat they loll in comfortable chairs around a table, on which rest steins or bottles. Formerly to relieve their nerves they whittled. Now they shuffle and vie with each other to see which can come into the possession of the greatest number of certain blue, red and white discs of ivory or celluloid.

No longer does the dweller in the country town go to bed at nightfall just to be certain where he is at, for electric lights make the streets as light as day. And the streets and sidewalks are of macadam or asphalt. The telephone is everywhere. It is more numerous than in the greatest cities, because the cost is much lower.

Indeed, things have changed. The man who goes back to his old "country town" nowadays on his vacation misses the smoke and the oleomargarine and the hall bed-room and the crowding of the large city, but the luxuries of the latter are all there, and most of the modern improvements. But the pure air is there, too, and the flowers that thrive in the open air and not in glass houses, and the old folks and old scenes.—Utica Globe.

TYPE OF COUNTRY LIFE THAT IS RAPIDLY PASSING AWAY.

EATING HORSEFLESH.

Experience of M. Decroix with Emperor Napoleon III.

M. Decroix, the founder of the French Anti-Tobacco League, who died suddenly, though at the ripe old age of 80, was a man of many anecdotes. Most of them bore on the difficulties which beset the path of the reformer who, when he is not treated with contumely, is woefully misunderstood. Under the second empire, and before he began his campaign against tobacco, M. Decroix, in whom the missionary spirit was indeed strong, started a crusade in favor of eating horseflesh. His ideas, in spite of the untiring energy with which he promulgated them, seemed to make little or no headway. In his despair at his scant success he decided to appeal to Napoleon III. in person. He addressed a long report to the Emperor, setting forth in detail the undreamed-of advantages of a horse-meat diet, and humbly requesting the sovereign to give the matter his attention and to intervene in favor of ideas which would redound to the well being of his subjects. He recalled how Louis XVI. had established the reputation of the long-despised potato by wearing its flower in his button-hole; a word of approbation from his majesty might dispel the prejudice against the horse.

M. Decroix was a veterinary surgeon in the army at the time, and a very few days after the dispatch of his report he was summoned to appear before Marshal Valliant, the master of the imperial household. He found the Marshal beside himself with rage and indignation. "So you, sir," he roared, as Decroix entered his room, "are the person who purposes that the Emperor should eat horse meat! You must be out of your senses. The Emperor eat horse meat!" The Marshal was at a loss for further words in which to express his stupefaction, and he motioned Decroix out of his presence with a gesture which indicated that he might be thankful he had escaped being placed under arrest for a grave breach of discipline.—Paris correspondence Pall Mall Gazette.

TRANSSIBERIAN ROAD.

Cars Luxuriously Furnished, but No Water for a Good Wash.

The first and second class cars are luxuriously upholstered, and, by a curious contrivance, the upper bed turns over and becomes, not "a chest of drawers," but the back of the seat by day. The only real lack of a Siberian railway is suitable lavatory accommodations. The little toilet-room is often a wretched, filthy closet with a single wash basin and a very limited supply of water, and it answers for all, men and women alike. This fault is shared by all Siberian hotels and steamboats that I have seen. The one cramped and dirty spot is the washroom (for many hotels have a common lavatory, and no water is brought to the rooms), and the one scarce article is fresh, cold water. Beer, wine, vodka, tea, especially tea, flow freely, but to order a glass of water to drink, or a basin of water, much more a tub of water for a bath, creates a commotion, and the water desired is often unattainable, except after strenuous effort. A Siberian writer remarks naively, that "Englishmen have the bad habit of washing themselves all over every day. As a consequence of this habit their bodies emit an unpleasant odor."

Besides the cars already mentioned, a baggage car and a dining car completed our train equipment. Pullman would scarcely own the diner as an offspring of his invention. A long table down the middle, at which perhaps twenty people can sit at one time, and a bar at the end, at which all kinds of light and strong drinks are served and toothsome delicacies dear to the Russian heart, like caviare, sardines and other little fishes "biled in ile" are eaten. At the long table, table d'hote meals are served, consisting of three or four courses, and one can also order what he chooses, at a fixed price.—Harper's Weekly.

A Tempting Offer.

A recent issue of a musical journal published at Leipsic, Germany, contained the following curious advertisement: "Wanted—A skilled musician, who can compose before warm weather begins a tragic opera in one act. The author of the libretto will place at the disposal of the composer a house, which is furnished with a piano, and which is situated near the sea in a most idyllic and romantic country; furthermore, the composer will be well fed and supplied with all necessary fuel. A poor but gifted artist ought to be able to make his fortune in a place like this and under conditions such as are here proposed. Those who apply for the situation are requested to send biographical notices of themselves to the office of this paper."

Distingue.

"She comes of a grand old family, I believe?"

"Yes, very! An ancestor of hers was beheaded in the Tower during the reign of the fourth Edward!"

"How perfectly lovely!"—Detroit Journal.

How many level headed people do you know?

STOMACH OF A DOG.

Reason Why the Canine Species Swallows Stones, Sticks and Grass.

Dog fanciers in Baltimore do not agree with the able physician who is quoted as saying that the presence of foreign substances, like pebbles, glass and feathers, in a dog's stomach makes it certain that the animal was affected with the rabies. Mr. Thomas J. Sheubrooks, who has made an international reputation as a raiser of St. Bernards, was asked for his opinion on the subject, and said:

"The presence of the foreign matter is by no means an indication of rabies. On the contrary, it shows that the dog was suffering from some stomach trouble, which may have given it convulsions and caused it to act in a manner which gave rise to the belief that it was rabid. When a dog is suffering from one or a complication of the disorders of the stomach and intestines, it will swallow bits of most anything that come to hand, hoping to find a counter-irritant which will bring relief. It is really surprising to know what they will swallow under such circumstances and live. I have known several cases where large pieces of glass were swallowed without doing any damage."

One of the best and most successful dog experts and raisers in the country is Mr. Luke W. White. He was, as he says, "born in the kennels," his father having been a famous kennel-keeper in Ireland. For the last thirty-three years he has been an acknowledged authority on matters canine, and has had much to do with rabies, not only from the standpoint of a dog expert, but as a graduate of medicine. He said:

"My opinion is that the mere fact of finding foreign substances in the stomach is almost a positive proof that the dog did not have rabies. If it indicates any brain trouble it indicates cerebro-spinal meningitis, which in its outward forms is much like violent rabies, and is apt to make the dog behave more in accordance with popular conceptions of rabies than the rabies themselves. The fact that a dog swallows grass and occasionally a small stone does not indicate a radically disordered system. The acids in the stomach of dogs are very strong and very plentiful. Sometimes the lining of the stomach becomes so charged with these acids in excess of that required to digest the food upon which it has been living that the dog seeks an irritant which acts upon the walls of the stomach and causes an artificial flow of the acid. Grass is the counter-irritant provided by nature and the one the dog prefers. It does not select smooth grass, but that which has prickly edges and tickles the little vessels containing the acids. If grass is not at hand it will take hair, which never kills. Lacking grass, or hair not being effective, it takes other substances, of which wood is the most dangerous."—Baltimore Sun.

Women and Paris.

Paris is adored by all the fair votaries of fashion, whatever their nationality. Her caprices in fashion are received by the wives and daughters of the universe as laws, and obeyed with an unwavering faith, a mute obedience that few religions have commanded. Women who yawn through Italy and the East have, when one meets them in the French capital, the intense manner, the air of separation from things mundane that is observable in pilgrims approaching the shrine of their deity. Mohammedans at Mecca must have some such look. In Paris women find themselves in the presence of those high priests whom they have long worshiped from a distance. It is useless to mention other subjects to the devotee, for they will not fix her attention. Her thoughts are with her heart and that is far away.

Toad Found in a Bowlder.

A remarkable flint bowlder has been discovered at Lewes, England, and is now in the possession of Charles Dawson, F. G. S., of Uckfield. In a cavity within the bowlder was found a full-grown toad, which must, when young, have entered the hole in the stone by a small aperture. There the unfortunate prisoner waxed to adolescence, and probably he may have died of chagrin on finding that he had delayed his exit too long, for the hole afterward became silted up. The bowlder, which is shown in section and also with the pieces replaced, was exhibited at the last meeting of the Linnaean Society, and is eventually to be placed in Henry Willett's collection at the Brighton Museum.

Fable.

Now the Horse, being sensitive to ridicule, paused as they were about to enter the gates of the city.

"You look so like 30 cents!" protested the Horse, regarding painedly the woman driving.

"Well, money's supposed to make the mare go!" retorted the woman, with a loud laugh.

Saying which she belabored the beast vehemently.

This fable teaches that the gift of speech is not of necessity fortunate.—Detroit Journal.

Love, Not Flattery.

Whether to paint to please posterity or the present generation is no doubt a vexed question, for it belongs to few to achieve both. The artist is so largely exposed to criticism from the friends and relatives of the sitter that his position is a difficult one, for demands are made upon his brush which he may be personally unwilling to fulfil. A subtle story is told of an artist, now dead, to whom it was remarked that he flattered his sitters. "No," said the master, smiling, "I only paint Truth lovingly."

If a man is making a living, and not interfering with your affairs, let him alone.

$3 PER YEAR.

INDEPENDENCE, CAL.,

FRIDAY, AUGUST 2.....1901

BUREAU OF FORESTRY.

On the 1st of July the Division of Forestry and three other scientific divisions of the United States Department of Agriculture were advanced to Bureaus. This was provided for by the last session of Congress, which appropriated for the expenses of the Bureau of Forestry during its first year $185,440. The appropriation for the Division of Forestry during the year just ended was $88,520. For the year 1898-99 it was $28,520.

These figures show how rapidly the forest work of the Government has expanded of late, and also how well it has commended itself to Congress. There was a time when the practical value of the scientific investigations carried on by the Government was not fully understood, and farmers were inclined to think that the money spent on experiment stations and chemical laboratories was of but little benefit to them. Now the case is very different. The improvements in agriculture due to the work of the department have increased the value of the farm products of the country by many millions of dollars annually. As this kind of work has proved its practical utility, Congress has shown itself generous toward it. The readiness with which Congress has increased the appropriations for the Division of Forestry is the best evidence that forestry has proved its importance from a business standpoint.

The change from a Division to a Bureau, and the larger appropriation, will make possible both an improved office organization and more extended field work. The Bureau will be provided with a much larger office force and will be organized in three divisions. But field work, and not office work, is what the Bureau exists for. This work has been going on during the last year from Maine to California and from Georgia to Washington. It includes the study of forest conditions and forest problems all over the country, the giving of advice to owners of forest lands, and the supervising of conservative lumbering operations which illustrate forest management on business principles. This work can now be greatly extended. Private owners of some 3,000,000 acres have applied for this advice, which in every case requires personal examination, and about 177,000 acres have been put under management. This land is in many tracts, large and small, and is owned by individuals, clubs and corporations. Several State governments have also asked the aid of the Bureau. But the greatest demand is that of the Department of the Interior of the National Government, which has asked for working plans for all the forest reserves, with the enormous total area of about 47,000,000 acres.

Those who have studied the resources and possibilities of the West realize fully that agriculture, as it is and will be worked out on the irrigated lands, is but an incident of the gigantic production of which the West is capable, and the possibilities of which are to-day really so little known. The mineral resources of the arid region are so vast, including the great production of oil, which is now beginning to be developed, that agriculture will be more a stimulous to mining development than anything else. In the arid West, where living and transportation as a rule are expensive, only the comparatively high grade ores can be profitably worked. The tremendous mining resources of the country can never be fully developed without cheap food and cheap transportation, and these the West will never have until it has irrigation. Nothing could possibly benefit the East more than the development of the wealth of the Western mines.

Scientists do not believe in the existence of such a thing as a petrified body, and those connected with the government investigations find cause to confirm this disbelief. The latest case came from New Jersey, where an enthusiastic young geologist claimed to have found a sure-enough petrified man. On forwarding it to Washington it was found to be only a limestone boulder curiously fashioned into features resembling a man. Professor W. J. McGee says on this subject: "No such thing as human petrifaction has ever been discovered, but that is no reason to say that it cannot exist. It may be possible. I doubt it, and everybody else doubts it who has investigated or inquired into it. The human flesh has never been known to become petrified, but nevertheless any reported case is always inquired into."

Sir David Barbour recommends that a tax of 10 per cent. be placed on the net profits of the mines in the Transvaal and Orange River Colony which, he estimates, will yield about 450,000 pounds per annum, to help defray the cost of the war. This would only pay interest on £15,000,000 at say a 3 per cent basis, which would be a small proportion of the total cost. It is intended to apply all revenues from sale of lands and mining rights to war liquidation. The owners of mines in the Transvaal will realize in peace what the cost of a war which they were so anxious for means to them.

The grasshopper has become a pest in several sections of the northern part of the State. Along Trinity River the insects raided the meadows and hay fields and all but ruined crops. They attacked orchards, destroying the foliage and fruit.

Last week, at Cleveland, Ohio, the stallion Cresceus lowered the world's trotting record for a mile to 2:02¾.

CLARK'S ROAD.

Floating news concerning the railroad to be known as the San Pedro, Los Angeles & Salt Lake is interesting to Inyoites only in the fact that a spur therefrom must in time be built westward to tap the great mineral belts of the eastern part of this county. Senator Clark, en route to Los Angeles, was in San Francisco on the 25th ult. and is quoted as saying:

"Despite all reports to the contrary, we are to build our railroad between Salt Lake and Los Angeles. It will be about 770 miles long. So far we are paying cash for the work. A bond issue may come later on. Considerable work is in progress. In Nevada 300 men are grading sixty miles of railroad in the district known as the Meadow Valley wash. This is some forty miles west of the Utah line. The sixty miles being graded run almost south toward the California line. Three surveying parties are at work in Utah. One party is surveying in the Tintic district, near Bolter Summit. The two other parties are running a line out from Salt Lake by the way of Garfield Beach, Stockton and the Rush Valley, in Tooele county.

"In California we will soon have surveys made through the Cajon and Morongo passes; the latter pass is northeast of Redlands. Cajon pass is north of San Bernardino, and the Santa Fe already has a road through it. We are about ready to begin building out from Los Angeles to Redlands. Ties ond rails have been ordered and excepting in spots the right of way has been secured. We hope soon to close condemnation suits for the remainder of the right of way. On the road already built between Los Angeles and San Pedro seventy-five pound rails have been put down.

"The plan of Mr. Harriman to extend the Oregon Short Line to Los Angeles does not in any way hamper us. Once our line is completed we will have no fear of not getting an eastern outlet at Salt Lake. Our road will develop a good volume of local traffic because it will penetrate rich mining sections of Utah, Nevada and this State."

Judge Morrow of the United States Circuit Court has issued an order which will be of great interest to sheep men who use mountain ranges during the Summer. Several of the northern mountain counties have a special tax of 10 cents per head on all sheep and lambs in the county owned by non-residents. The case in question was brought by P. J. Flannagan against Sierra county and August Burch, License Collector of that county, for an order restraining them from collecting this tax on 30,000 sheep owned by plaintiff. Judge Morrow granted the order on the ground that the tax is unconstitutional, as it discriminates in favor of resident owners and does not impose a license on hogs, cattle or horses grazing in that county and owned by non-residents. Sierra should copy the lines of the Inyo and Mono license ordinances on the subject, which have withstood all manner of attack.

One of the questions that Easterners cannot understand readily is how California people can afford to pay so much for water for irrigation. If they would stop a moment and estimate what it costs back East for fertilizers, something not required in California, they would come to the conclusion that it is cheaper to have water when it is wanted than it is to reinforce their land every year with guano and other stuff that must be bought from the stores. The loss of the corn crop in Missouri and Kansas this year represents an amount of money that would go a long way toward building irrigation works.

What would the San Francisco papers do for sensations if there were no Southern Pacific Railroad offices there? The idle gossip daily put forth there about railroad officials must be both amusing and annoying to those interested. The latest announcements are that Wm. H. Mills is about to retire from the Land Department and that Stephen T. Gage has been retired and given a pension. There is absolutely no truth in either of the statements.—Record-Union. THE INDEPENDENT hopes that the Record is correct.

It took Admiral Schley but a few hours to destroy the Spanish fleet commanded by Admiral Cervera, but he will likely have to fight the rest of his life to protect his good name from the attacks of his enemies. It is hardly conceivable, however, that the President and his Secretary of the Navy will regulate the sensational inquiry in any other than a perfectly fair manner, there being no practical politics in it. The hero of Santiago is not likely to be turned down before the American people.

"The manufacturers of the United States, now sustaining a trust relation almost as broad as all industry, will not permit the Republican party to re-enact the Chinese exclusion law."

So says the San Francisco Post, a Republican organ close enough to the corporate interests to speak authoritatively. That is just as expected, but how do Republican workingmen like the prospect?

The Board of Supervisors appropriated $250 to aid in the construction of a trail from Sequoia Park into Kings River Canyon. The money will be expended by the Visalia Board of Trade. We approve of it. If people will go to our own mountains the money will stay in the country.—Tulare Register.

The story goes that once upon a time the greatest ambition that Mr. J. Pierpont Morgan, the world's mighty financier, was to be a poet. He tried his hand at some verses, and then concluded that he was not born to be a poet. After that he tried his hand at something else.

CELERY BLIGHT.

Completely Controlled by Spraying. Shading Is an Advantage.

Many failures with celery are due to blight or rust. The most favorable condition for the fungus which causes it is a period of drought accompanied by considerable heat and followed by damp weather. The Maryland station has made a study of this trouble, and from its reports the following is learned:

With one plat of celery in 1899 a framework 18 inches high was built

SHADED PLANT. UNTREATED PLANT.

over the plat, and over the framework was spread a single thickness of muslin. The shading was begun about the middle of July, as soon as the plants were placed in the beds, and was continued throughout the entire hot season of July and August. Early in September the weather turned cooler, and the shading was then discontinued, since it has been learned that the celery blight fungus will not thrive in cool weather. Just how far the shading prevents the fungus from growing or renders the celery plants more vigorous and resistant it is difficult to determine.

In spraying experiments the same year the best results were obtained with the ammoniacal carbonate of copper. This fungicide not only kept all the healthy and new leaves free from the fungus, but the plants grew better than with any other treatment employed.

Bordeaux mixture gave results that were in every way satisfactory except that the plants were somewhat retarded in their growth. This is of course a serious objection to the use of this fungicide, but it is not probable that the dwarfing of the plants would have been so great if the sprayings had been less frequent, and it is possible that the results in controlling the disease would have been just as satisfactory.

While shading is of considerable advantage to the plants, it does not prevent the attacks and development of the blight fungus. It is an interesting question in this connection to know what results could be obtained by a combination of shading and spraying.

It is not probable that there is danger of spraying too early, and it is important to keep the leaves free from fungus, which can only be done by spraying before they are attacked. Experience shows they cannot be saved after they are attacked.

The ammoniacal carbonate of copper used was prepared by placing one ounce of copper carbonate in just enough water to dissolve it and then diluting to nine gallons with ordinary water from the well or the hydrant. The amount of ammonia water required to dissolve an ounce of copper carbonate is about one-half pint, and this should be diluted with from one and one-half to two quarts of water before the carbonate is placed in it. It is impossible to state just how much commercial ammonia water will be required, but any excess of ammonia is liable to burn the foliage.

Similar experiments were made in 1900, and, summing them all up, it appears that—

Celery blight may be kept under complete control by spraying either with ammoniacal carbonate of copper or with bordeaux mixture.

The spraying should be begun while the plants are still in the seed bed and

SPRAYED WITH AMMONIACAL CARBONATE.

should be continued at intervals of from one to two weeks after the plants are transplanted until the cool weather prevents further development of the fungus.

Shading will retard the progress of the disease, but will not entirely prevent it from doing more or less damage.

A number of reports of excellent success with ginseng come from Kentucky.

Government Whitewash.

The whitewash which the United States government puts on its lighthouses is made as follows: Slack one-half bushel good stone lime in boiling water, keeping it covered while slacking; strain and add one-half peck salt dissolved in warm water, three pounds ground rice boiled to a thin paste, one-half pound powdered Spanish whiting and one pound clear glue dissolved in warm water. Mix this all thoroughly with the strained slacked lime and let stand for several days. Apply as hot as possible with a clean brush. Dry pigment can be added to make any desired color.

Lime and Sulphur Dips.

Lime and sulphur dips should never be used. Some large buyers of wool refuse to buy the wool from sheep which have been dipped in lime and sulphur.

July 1, 1901.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days, and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

INYO MERCANTILE CO.

JOHN J. MCLEAN,
Observer.

*Record beginning March 6th 1898.

BORN.

WILLIAMS—At Whitier, Los Angeles Co., Calif., July 21, 1901, to Mr. and Mrs. R. H. Williams, a daughter.

According to the Hawthorne Bulletin, Parke Barnes has gone into the real estate business at Reno.

The reward miners enjoyed a "lay off" for a day or two, on account of necessary clearing of the canal-power which runs the mill. They are all on shift now.

For a short holiday Sheriff Given and Clerk Meroney have ascended adjacent elevations to shoot bear. They can do that all right and their places happen to be well filled in the meantime.

The Lyon County, Nevada, Times will next week be issued at Yerington, thus removing from Dayton, the county seat, to a comparatively new mining town in the same county. Both places, however, have agricultural and mining interests, but the copper business promises to outlast urban Comstock. We will be able to steal considerable news from the Times *poco tiempo*.

A project is complete consolidating all the producing oil companies in the San Joaquin Valley into one company, the object sought being to maintain the price at a profit-earning point. The general features of industrial combinations are to be followed. The new absorbing company is to issue its stock in exchange for the stocks of the existing companies, probably at valuations made by each company in its own interest, with a large amount of "water" for the promoters.

It looks as though the oil territory about Randsburg is to be exploited. A prominent Pennsylvania company has secured a lot of land and agreed to sink a well within the next ninety days. They have made a thorough investigation of the field and pronounced themselves well pleased with its indications. Tests show the oil found in the rock to be of a high grade and if on drilling it is secured in paying quantities a boom will strike the "desert" such as never been known before.

Justice's Court.

As appeared in the Court notes given last week the Superior Court granted Mrs. Margaret M. Green a decree of divorce from Charles M. Green.

Justice of the Peace Harvey of the Fourth (Lone Pine) Township declining hear the matter, Mrs. Green appeared before Justice Davidson of Independence and swore out a warrant for the arrest of C. M. Green, charging him with the utterance of threats to take her life, etc., and after a hearing Green was placed under a $200 bond to keep the peace for thirty days.

During the past week Mrs. Green appeared again and entered against Green a charge of disturbing the peace. On a warrant he was brought up by Deputy Sheriff Elder, and upon arraignment entered a plea of not guilty. The trial has been set for next Monday, before the Justice and a jury. A conviction will, of course, work a forfeiture of the prior bonds.

Although the matter is not yet in Court, Green alleges that Mrs. G. attempted to furnish a job for the Coroner with himself as a subject, by taking a shot or two at him. In that case it is expected that the Judge or Justice, acting as committing magistrate, will hold a matinee sometime during the coming week.

Another Land Contest.

The U. S. Land Office has been busy nearly all week hearing testimony in the protest of William D. Roberts against the final timber culture proof of James G. Birchim for the SW¼ SW¼ Sec. 10, Tp. 6 S., R. 31 E., M. D. M., in Round Valley, California.

The protestant claims that Birchim failed to comply with the requirements of the timber culture law as to planting trees and cultivation. Henry Jackson, James W. Holman, Frank J. Inman and William F. Williams have been present as witnesses. The protestant is represented by B. H. Yandell, Esq., while the interests of the entryman are being attended to by P. W. Forbes, Esq.

The matter has been submitted, but the local land officers say that probably no decision will be rendered for a month yet.

Methodist Church.

Regular service will be resumed Sunday evening. Services held out of doors where it is cool.

All invited.

The People vs. Johnny McGee and Jake Jones.

The rather abrupt ending of the case against the Indians, in the Superior Court on Wednesday last, will leave the papers and the general public as much in the dark as ever as to details, inasmuch as a transcription of the evidence so far as taken will not be required.

January 3d last the remains of a Chinaman, Chin See, were found in his cabin at Bishop. The Coroner held an inquest, resulting in a verdict to the effect that the deceased had come to his death at the hands of unknown parties, but there was no expert medical testimony taken to show what injury had been the direct cause of his spirit taking flight to the flowery land.

Subsequently evidence was accumulated sufficient to cause the arrest of two young Indians named Johnny McGee and Jake Jones. Justice of the Peace T. H. Woodworth held an examination and held them to answer before the Superior Court, where information was filed charging them with the crime, duly arraigned and on Tuesday last the trial begun.

District Attorney Dehy had the valuable assistance of S. E. Vervilyea, Esq., while the defendants were ably, as it proved, represented by Attorneys J. White Smith and Robert O'Neal. The jury accepted and agreed to were: W. A. Powers, Wm. T. Baker, W. C. Bennett, A. A. Porteous, L. E. Young, Geo. A. Clark, J. E. Epperson, R. W. Thomas, Ed. Reinhakel, G. W. Melone, J. C. Bell, W. H. Mitchell. Court Reporter J. E. Laird came up from Kern for the occasion and citizens had been called as witnesses as follows: J. H. Bulpitt, F. W. Bedford, T. H. Woodworth, Edward Schober, D. A. Bradshaw. There were also two Chinamen and eight Indians on hand to tell what they knew about it.

After securing a jury on the first day, Court adjourned until the followlng Wednesday morning. The preliminary opening statements being made, witnesses proved that the Chinaman was found dead; that blood-stains were discovered on and under his bed; that the entrance was locked from the outside, together with other circumstances.

During the afternoon Hin Kee was on the stand giving evidence for the State. He was asked "Did you see the defendants in the vicinity of Chin See's hut on the evening of the 13th day of December, 1900." This question was objected to by Mr. O'Neal for the defense, for the purpose of raising the point that the *corpus delicti* had not been proven; that the foundaiton of the offense had not been shown, or that, in other words, the deceased died through foul means, and that therefore the defendants could not be legally connected.

After an extended argument from both sides Judge Lamar sustained the objection. The prosecution stated that they had no stronger evidence to adduce and rested the case. The Judge advised the Jury to render a verdict of not guilty, which was accordingly done.

From the Tonopah "Bonanza."

Inyo ranchers can sell all the produce they can haul into the camp, provided they pack it right and not bring it in like they would a load of wood. There is a demand here for all the chickens they can haul in. It remains to be seen whether they will continue to cry hard times or endeavor by a little labor to make an honest dollar.

* * * Will brother Chalfant please tell us the reason why the farmer does not bring his produce into Tonopah. We are all craving vegetables.

The C. & C. R. R. will in the near future put on a daily train to handle the freight and passenger traffic that this camp has created.

The postoffice name of Butler will be changed to Tonopah very shortly.

The firm of Turner, Edwards & Cutting have instituted a bank here and will transact a general banking business.

Three different shafts have been started during the past week on the bench at the foot of Oddie mountain. It will not be many moons before the question as to whether the ledges go under this mountain or otherwise will be finally determined. Every effort in that direction so far has met with success.

Shipping ore is accumulating on the dumps here faster than the teams now on the road between here and Sodaville can haul it away. At the present time by actual count 7527 sacks of ore is awaiting shipment. It is more than the present force of teamsters can move in the next six weeks, even if not another ton should be mined. The fact, however, that from now on the mines will put out ore faster than ever makes the transportation question a pressing one. A large number of teams can find employment here with freight both ways at good rates.

Three whims have been received this week and three more are en route.

Rice, raw eggs and boiled venison are the easiest things to digest. At the other end of the scale are pork, cabbage and hard-boiled eggs, which take four hours to digest.

The time made by Reno wheelmen in covering fifty miles in a relay race was was years, hours seven minutes and about two-thirds of a second.

The chronoscope will register the velocity of a bullet sixteen times in 100 feet. It registers the millionth of seconds.

Ice melts at 32 degrees, water boils at 212, lead melts at 594, and the heat of a common coal fire is 1,140.

It is estimated that the Colorado river carries sufficient water for the irrigation of 8,000,000 acres.

"The San Francisco mint thief has not yet been located." Precisely.

Even the great Brooklyn bridge came near collapsing from the heat.

Notice to Cattlemen.

All cattlemen wishing permits to graze their cattle in the Forest Reserve, or foothills of the Reserve, for Spring and Summer of 1902 should make application at once, to

ANDREW PRICE,
Supervisor Forest Reserve.

Eastern Division Forest Reserve,
Independence, Cal., Aug. 1, 1901.

Some New Laws.

A number of changes in the State law went into effect on the 1st of July.

Collectors will be debarred from suing in their own names on bills assigned to them.

Professional jurors will be done away with; the revised section states that jurors must not have served within a year.

The mere filing of an affidavit of prejudice will be sufficient for the purpose of transferring a case from one department of a Superior Court to another.

Instructions to jurors will be handed to them, instead of being read by the Court.

Married women may sue and be sued alone, without being joined by their husbands.

Letter press copies are made equal in law to an original.

The words "So help you God" are omitted from the oath.

The fortifying of San Francisco at Golden Gate is to be pushed forward at once. All preparations have been made and the work is going forward. In speaking of the contemplated work Col. Rawles said: "We will place on all eligible eminences the latest improved ordnance. The number, together with those already mounted, will approximate 100, I should judge. Many rapid-firing guns are to be placed, and the submarine mining of the bay and its approaches will hereafter be under the supervision of the artillery instead, as formerly, under the engineer corps. Much work is ahead of us, but our growing trade with the Orient and outside world has made it imperative that San Francisco should be protected with the latest improved defences."

The Oregon Short Line expects to break the record for track laying through Lincoln county on the Salt Lake & Los Angeles Railroad. To accomplish it the company will have to lay over ten miles of steel per day, which was the record made by the Central Pacific in constructing this end of the transcontinental railroad from Lucine to Promontory station in 1869. Track is now down on the Oregon Short Line to within twelve miles of Clover Valley Junction and the road is in running order twenty-eight miles this side of the Utah line. Extending the line through Clover Valley to Pioche will follow.—Virginia Chronicle.

The carp are being dragged out of Lake Chabot, near San Leandro, because they destroy the trout. If there could be found some way to exterminate carp from the waters of the State there would be general rejoicing. The Fish Commission made an egregious blunder when it brought these almost useless and terribly destructive fish to California. It is said that striped bass will drive out the carp. In their warfare the bass will have the sympathy of every lover of good fish. —Stockton Mail.

The total number of casualties to persons on account of railway accidents during the year ending June 30, 1901, was 58,185. The aggregate number of persons killed in consequence of railway accidents during the year was 7865, and the number injured was 50,320. Of railway employes 2550 were killed and 39,643 were injured.

Nearly 200 men are now employed at the big copper mine near Yerington, and they have barely commenced as yet. The Carson News says that two other mines in that vicinity will soon be in operation on as large a scale as this one. If this is the case there will be a good-sized town there before long.

In commenting on the attitude of Eastern Republican papers toward the extension of the Chinese exclusion act the Redlands Citrograph mournfully remarks: "Thoughtless and ignorant and heedless Eastern Republicans seem determined to drive California out of the party."

Next Winter the Turlock canal in Stanislaus county is to carry eight feet of water seventy-four feet wide. Something is likely to get wet up that way when that volume is turned over the plains.—Tulare Times.

Lions and Tigers.

There is nothing odd or peculiar about the sleep of the lions and tigers. In captivity they show the same indifference to danger that they manifest in the jungles and by day or night will slumber through an unusual tumult, unmindful or unconscious of the noise. Their sleep is commonly heavy and peaceful.

She Believed.

Hester—I hope you don't believe what Fred Saunders says. He has been in love with every girl in town, first and last.

Bertha—That's why I value his judgment, you know. A man of his experience may be trusted to know a good thing when he sees it.—Boston Transcript.

Not Needed.

He was obviously anxious, and she seemed almost willing.

"I shall refer you to papa," said she, with a becoming blush, "before giving you a final answer.

"But I am perfectly willing to take you without any reference," said he magnanimously.—Indianapolis News.

THINNING FRUIT.

Profitable but Unusual Practice. Done After the "June Drop."

This operation is much recommended, is favored by many of the growers, but as a matter of fact is not generally practiced, though it is done more in some sections than in others.

A peach tree under normal conditions will assimilate a certain quantity of food material during the time it is developing a crop of fruit.

Peach trees are inclined to overbear—that is, set—more fruit than they can properly mature with the amount of food material it is possible for them to assimilate. Hence it is that the fruit all remains small, not reaching the size that will bring satisfactory prices in the markets.

Thinning the fruit will reduce the strain upon the tree. There will be, so to speak, a smaller number of mouths to feed, and the remaining fruit will be correspondingly larger.

As the severest strain upon the tree is occasioned by the development of the seed the thinning should be done before the seed begins to harden. This will be while the fruit is still quite small. It will be safe to begin as soon as the "June drop" is passed.

The objection that many hold to thinning is the expense of the operation. But unless there are severe storms very little of the fruit which remains on the tree after the "June drop" will fall off. It then follows that it is only a question between picking the fruit off in June and throwing it on the ground and picking it off a little later and putting it in a basket.

If the fruit is thinned to from four to six inches apart, it will be better than if it is closer. It is a common experience that trees so thinned will actually produce a greater bulk of fruit than unthinned trees, and the fruit from such trees is practically all first grade. Even if the bulk of fruit is somewhat less than from unthinned trees the amount of high grade fruit is sufficient to commend the operation.

The fruit may be thinned considerably by keeping the tops properly pruned, but much of it must be done by hand. In this way the imperfect fruit can be removed, leaving only that which is likely to develop into the best specimens. This method will greatly lessen the work of grading the fruit when it is marketed.

As a rule growers experience considerable difficulty in getting their men to thin their fruit sufficiently, but it is important that the matter be followed up closely.—H. P. Gould, Maryland.

The Buff Breeds.

The buff fowls of various breeds seem to be one of the poultry fashions of the present.

Buff Plymouth Rocks are a comparatively new variety, but one which has come rapidly to the front on its own merits. Beauty and utility combine to

BUFF PLYMOUTH ROCK.

make these a fine general purpose fowl for farmers. Weights and points are the same as for Barred Plymouth Rocks, but the plumage should be an even shade of golden buff.

Golden Wyandottes are newcomers and very popular, not in such numbers yet as the whites or silver laced. Their characteristics are much the same as those of the other Wyandottes and standard weights the same.

The buffs are probably the most numerous and best liked of the Cochin family.

Buff Leghorns, a comparatively new but very popular variety, have taken a foremost position solely on their merits. The eggs of the hens are large and white; chickens are quick growers.

About Buckwheat.

In central Illinois about the first week in July will be a good time to sow buckwheat. It requires a rich soil, a half bushel of seed per acre being the right quantity to sow. Stiff clay and wet soils are not so good for buckwheat. We could not say whether it can be made a profitable crop or not. This is a matter that has to be regulated by market conditions and demands. It makes excellent bee pasture, but the period for collecting is short, and in order to get the most good out of it succeeding crops should be grown—that is, sowing some buckwheat every week through the season beginning early in the spring. If wanted solely for bees, it can be plowed under when the blossoms have been used and again put to buckwheat. Three crops of blossoms have been known to be raised on the same ground in a single season, says Iowa Homestead.

Agricultural Brevities.

In orchards badly infested with cankerworm late spraying with some form of arsenic, which is most safely used in bordeaux mixture, may do good if the worm is still feeding.

A great deal depends upon how water is put on. If you begin your irrigation before it is very dry, you don't need so much water, but if you let your ground get very dry and then put on your water you need a great deal more of it.

For field culture for the canneries good strong tomato plants should be ready for the field from the middle to the latter part of June, the time which they are usually set in New Jersey and Maryland.

Queer Grafting.

A French horticulturist claims to have successfully grafted the maple upon the lilac, the kidney bean upon the castor oil bean and the cabbage upon the tomato, a proceeding in contradiction to the accepted opinion that only plants of the same botanical family can thus be treated.

A Rose Novelty.

An indescribable mixture—red and gold shades and flushings, such as have been already typified in the Sunset and Sunrise roses—is the Lady Dorothea, a rose of fine round form which is receiving much admiration.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal,

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere.

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] Superior Court, County of Inyo.

J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

MACK & FORBES and W. J. HARRIS, Attorneys for Plaintiff, Independence, Cal.

Notice to Creditors.

ESTATE OF F. D. PRATT, Deceased.

NOTICE is hereby given that the undersigned, MERCIE T. COE, Administratrix of the estate of F. D. Pratt, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them, with the necessary vouchers, within four months after the first publication of this notice, to said Administratrix at the late residence of said F. D. Pratt, deceased, in the Town of Big Pine, County of Inyo, State of California, the same being the place for the transaction of the business of said estate in the county of Inyo, State of California.

Dated April 11th, 1901.

MERCIE T. COE,
Administratrix of the Estate of F. D. Pratt, deceased.

MACK & FORBES, Attorneys for Administratrix.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 27th day of May, 1901, an assessment, No. 24, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 21, 19th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

OFFICE—Room 31, 19th Floor, Mills Building, San Francisco, Cal.

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug3-tf

The Duty of Mothers.

What suffering frequently results from a mother's ignorance; or more frequently from a mother's neglect to properly instruct her daughter!

Tradition says "woman must suffer," and young women are so taught. There is a little truth and a great deal of exaggeration in this. If a young woman suffers severely she needs treatment, and her mother should see that she gets it.

Many mothers hesitate to take their daughters to a physician for examination: but no mother need hesitate to write freely about her daughter or herself to Mrs. Pinkham's Laboratory at Lynn, Mass., and secure from a woman the most efficient advice without charge.

Mrs. August Pfalzgraf, of South Byron, Wis., mother of the young lady whose portrait we here publish, wrote in January, 1899, saying her daughter had suffered for two years with irregular menstruation—had headache all the time, and pain in her side, feet swelled, and was generally miserable. She received an answer promptly with advice, and under date of March, 1899, the mother writes again that Lydia E. Pinkham's Vegetable Compound cured her daughter of all pains and irregularity.

Nothing in the world equals Lydia E. Pinkham's great medicine for regulating woman's peculiar monthly troubles.

FEASTED ON SPARROWS.

A Diet That Did Not Agree With the Crane.

"Some time ago I had occasion to observe an interesting change in the habits and temperament of a crane which had been picked up in the swamps of Arkansas," said a gentleman from one of the towns on the Mississippi river, "and the change was startling too. The crane was placed in a small park which was literally filled with English sparrows. These pests did not like the visitor from the lowlands, and they made daily assaults on the poor bird. The crane was a pretty fowl, long, slender, pure white and with the stately stride of a tragedian. The sparrows would systematically swoop down on the crane in droves, and the attacks were fierce and vicious.

The crane stood the assaults with indifference for awhile, but finally the fowl from the swamps figured out a method of retaliation, and it was effectual. In some way the crane learned that sparrow was a pretty sweet morsel. From the time she learned it she feasted on sparrows. She would slip up cautiously on these pesky twitterers and throw her yellow beak out like a gig. She never missed the mark. She always landed a sparrow, and a singular part of the thing is that she would swallow them whole, feathers and all. But the crane would always dampen the bird by dipping it in one of the water basins of the park.

"The diet evidently did not agree with the crane, and she became a trifle droopy and showed signs of indisposition. She finally died, and the keeper of the park believes that the crane's death was caused by a severe case of indigestion brought on by eating sparrows."—New Orleans Times-Democrat.

Saved the Dog.

Some time ago there was a shipwreck at St. Margaret's bay, England, and the life line brought sailor after sailor to shore amid the cheers of the rescuers. At last only the captain remained on board. The line was ready, the signal was given, but the answering jerk did not come. Again and again for a quarter of an hour the question passed along the rope without reply. At last, when hope was nearly dead, the signal came, and the captain was hauled dripping ashore. He picked himself up, drew a small, wet, quivering dog from his breast pocket and set it tenderly down. Then he looked round and said in simple apology, "I couldn't find the little brute anywhere!"

An Ounce of Prevention.

"As you went out," whispered the observing boarder, "I saw you pick up something from the floor, tear it in a dozen pieces and throw it in the range. Was it a love letter?"

"No," responded the practical boarder, "it was a little booklet telling how to prepare prunes in 99 different ways. I was afraid it might fall into the hands of the landlady."—Philadelphia Record.

Suited to a Tee.

Fox (to bear)—Come over tomorrow, and we'll play a game of golf on the links.

Bear—All right. I don't know what the game is, but if there's any job you can put up on the lynx I'm in with you.—Boston Herald.

The orange came to Europe from Africa in the eleventh century. Sir Walter Raleigh brought it to England in the sixteenth century. It was first planted in Australia in 1788.

GOOD Short Stories

Henry James was once praising the work of a fellow-author. "You are very kind to him," said some one present, "for he says very unpleasant things about your work." "Ah," said Mr. James, "but, then, both of us may be wrong!"

When a popular young author came to see William M. Evarts while he was Secretary of State, in behalf of a consulship for which he was an applicant, Mr. Evarts congratulated him on the fame he had acquired, but hastened to add: "Although you have laurels on your brows, I suppose you can't browse on your laurels."

The late Augustin Daly took the names of his plays from every conceivable source, and always had a string of them for plays and characters. In her "Reminiscences," in Scribner's Magazine, Mrs. Gilbert says: "We got so that we were all on the lookout for them, as we went through the streets, and would often call out: 'There's a queer name, governor!' He found some very funny ones for 'Jimmie' Lewis and me. 'Dollars and Sense' was one of his best titles, I think. I know when he was trying to find a name for that particular piece, he wrote a whole list of titles to us once at breakfast, and I said: 'Oh, I like that one.' Then it was spelled 'Dollars and Cents,' and it was Judge Daly who suggested the change. 'Let the old man keep his dollars,' he said, 'but the old woman has the sense.'"

When Thomas Hart Benton, the noted Missourian, wrote his famous work, "Thirty Years in the United States Senate," which every one praises and no one reads, his publishers, D. Appleton & Co., wrote to him asking how large a first edition should be printed. His reply was: "Sir: They can ascertain from the last census how many persons there are in the United States who can read, sir." And that was the only suggestion he would ever condescend to make. Benton was massive in body and muscular. No man in public life was his equal in physical strength, endurance, and courage. In reference to a quarrel in the Senate, he once said: "I never quarrel, sir; I sometimes fight, sir; and when Benton fights, sir, there is always a funeral sir." Benton was sturdily devoted to the Union; he broke with many friends in consequence. He bore the cognomen "Old Bullion," because of his support of bimetallism.

It is said that once when Musin was touring the United States at the head of a concert company, they all got caught in a railroad wreck which did not amount to much. When the jolt came, Musin himself was eating a piece of pie with the aid of his pocket-knife. Naturally, the jolt made the knife slip, and Musin was cut—one of his precious fingers was disabled. Nobody else was hurt, except the business manager, who was rather shaken up, but nevertheless when they reached the city Musin ordered everybody to bed, canceled their engagement, and did his own injured member up in an immense amount of bandages. The only person left about was the poor business manager, who had to do the work. Musin himself secured five hundred dollars on the strength of that cut thumb, and every member of his company got three hundred dollars—pretty good payment for a three-days' rest in bed! And in the end they filled their engagements, too, and so got that money as well.

Illuminated Manuscripts.

When man first discovered how to convey his thoughts to others by writing he must have felt the want of some means of embellishing his work, and so the art of illuminating was begun. The earliest work known is the Egyptian papyra, containing portions of the ritual, or "Book of the Dead," which is ornamented with many drawings and colored pictures. Excepting the above, no other manuscripts of antiquity were, strictly speaking, illuminated. The Greek and Roman manuscripts of the first century that have been preserved to the present day were only written. The oldest illuminated manuscripts, of which there are two, are of the fourth century, the Virgil of the Vatican and the Dioscorides of Vienna. These are ornamented in the Byzantine style with vignettes.

The use of gold and silver letters is supposed to have been derived from Egypt, but there are no records to show that this was so. The first mention of the use of gold and silver was as early as the seventh century. The oldest manuscript known in this style is the Codex Argenteus of Ulfilas, 360 A. D. Through the middle ages, when literature was only produced in the form of manuscripts, this art was of the greatest importance, and was highly developed. In the different epochs of that period it was marked by great diversities of style, and appears to have received no less attention than any of the fine arts. But when printing superseded written books, illuminating languished and finally became extinct. This beautiful art has again been brought into notice, and much has been produced that might compare with that of the medieval period.—Art Amateur.

Mongol Idea of the Ark.

There has been discovered in China a curious picture, evidently of great antiquity, which is supposed to represent Noah's ark resting on the top of Mount Ararat. As is well known, the religious literature of almost every nation and race contains an account of a deluge, but a Chinese manuscript recently unearthed follows very closely the story as recorded in the Bible. It is particularly interesting in that the roof of the Chinest ark is of the gable variety associated with the Noah's arks which prove such enterprising toys for youngsters. The Chinese picture, however shows a double-storied vessel, and, so far from there being only one window in the roof, there are windows in every possible space. It would be interesting if some Chinese scholar or antiquarian could discover the exact date of the drawing.

A man of few words and many deeds is like a garden of many vegetables and few weeds.

Queer Indian Beliefs.

There is an odd feature in the theology of the small Indian tribe of the Bella Coola, which inhabit British Columbia in about latitude 52. They believe that there are five worlds, one above the other, and the middle one is our own world, the earth. Above it are two heavens, and under it are two underworlds. In the upper heaven is the supreme deity, who is a woman, and she doesn't meddle much with the affairs in the second world below her. The zenith is the center of the lower heaven, and here is the house of the gods, in which live the sun and the rest of the deities.

Our own earth is believed to be an island swimming in the ocean. The first underworld from the earth is inhabited by ghosts who can return when they wish to heaven, from which place they may be sent down to our earth. If then they misbehave again, they are cast into the lower of the underworlds, and from this bourne no ghostly traveler returns.

The Bella Coola are sun worshipers, for Senex, the sun, the master of the house of gods, who also is called "the father" and "the sacred one," is the only deity to whom the tribe pray. Each family of the Bella Coola has its own traditions and its own form of the current traditions, so that in the mythology of the tribe there are countless contradictions. When any one not a member of a clan tries to tell a tradition which does not belong to his clan, it is like a white man trying to tell another's joke—he is considered as appropriating the property right which does not belong to him.

Hard Ducks to Kill.

The screaming walloon is a hard duck to kill. Its hide is very tough and is thickly covered with feathers and down. Besides the bird is a great diver, one of the kind that used to "dive at the flash" when hunted with the old arm that flashed when fired. It is of very little value for table use, being so tough. The only way to manage it at all is to skin it and parboil it in a big pot with plenty of water. The negroes make caps of walloon skins.

"They are great ducks for diving," says a well known Tred Avon river progger.

"They can dive quicker, go down deeper, remain under water longer and come up farther away than any other duck that frequents our waters. I remember once I succeeded in killing a walloon, and, being short of game for the table, I determined to cook my bird. I got a negro to skin it, giving him the hide for his trouble. After being cleaned we put it in a great pot full of water and under it kindled a hot fire. After awhile I wanted to see how the cooking of my duck progressed and lifted the top off the boiling pot, but there was so much steam escaping I could not see into the pot and struck a match over it. The blamed walloon, sir, dived at the flash of the match. It disappeared and has never been seen since."—Baltimore Sun.

A Lesson to Humorists.

One cannot safely assume in these days that there is any region in which such and such a journal is not read. Recently a certain humorist needed a rest and went and stopped in a cottage in a remote village by the sea. His sitting room opened on the kitchen, where his landlady, a woman widely esteemed as a person of great acumen and a maker of phrases, was wont to receive the neighbors. He listened and put both landlady and neighbors into some amusing sketches which were promptly published in a London magazine. A month or two went by. Then one afternoon he came back to the cottage to meet and cower before an indignant matron, who told him, among other things, that he had one hour in which to pack his traps and quit the village. She was not going to have an eavesdropper in her house, and she added a significant hint to the effect that the people of the village were of the same opinion and might be betrayed into an attempt to give a forcible demonstration of their views.—London Post.

Now They Are Married.

A bashful young man went three times to ask a beautiful young lady if he might be the partner of her joys and sorrows and other household furniture, but each time his heart failed him, and he took the question away unpopped.

She saw the anguish of his soul and had compassion on him. So the next time he came she asked him if he had thought to bring a screwdriver with him.

He blushed and wanted to know what for.

And she, in the fullness of her heart, said she did not know but that he would want to screw up his courage before he left.

He took the hint and the girl.—Pearson's Weekly.

Daisy was originally the eye of day, or day's eye.

MY MORTALITY.

"Tis writ, "Mortal, thy life is but a span,"
And yet I feel that pain and earth and sky
Are ever mine, even forevermore
That I and mine can never, never die.

And yet I know, how well, how well I know,
That in the future somewhere hidden lies
A day, the day of days, which has for me
A moment supreme, when I shall close my eyes

To open them on this my world no more,
When friends will fold my hands upon my breast
And sadly say: "Dear soul, her work is done.
Let us now lay her gently to her rest."

Springtime with bud and bloom will come and go;
The busy world will still rush madly on;
The earth and air and sky will be for those
Who will not know that I have come and gone.
—Dr. Grace Peckham Murray in Harper's Bazar.

GUNS FOR OLD GLORY.

The First Foreign Salute Given to the American Flag.

The little Ranger ran slowly between the frowning French frigates, looking as warlike as they. Her men swarmed like bees into the rigging, and her colors ran up to salute the flag of his most Christian majesty of France, and she fired one by one her salute of 13 guns, says Sarah Orne Jewett in The Atlantic.

There was a moment of suspense. The wind was very light now. The powder smoke drifted away, and the flapping sails sounded loud overhead. Would the admiral answer back or would he treat this bold challenge like a handkerchief waved at him from a pleasure boat? Some of the officers on the Ranger looked incredulous, but Paul Jones still held his letter in his hand. There was a puff of white smoke, and the great guns of the French flagship began to shake the air—one, two, three, four, five, six, seven, eight, nine—and then were still save for their echoes from the low hills about Carnac and the great Druid Mount of St. Michael.

"Henry Gardner, you may tell the men that this was the salute of the king of France to our republic and the first high honor to our flag," said the captain proudly to his steersman, but they were all huzzaing now along the Ranger's decks, that little ship whose name shall never be forgotten while her country lives.

The captain lifted his hat and stood looking up at the flag.

"We hardly know what this day means, gentlemen," he said soberly to his officers, who came about him. "I believe we are at the christening of the greatest nation that was ever born into the world. The day shall come when America, republic though she may be, will salute no foreign flag without receiving gun for gun!"

The New Bicycle.

Bicycle manufacturers state that the bicycle for this year will be practically the same model as 1900, as improvement seems to be impossible. Precisely the same is true of Hostetter's Stomach Bitters. It represents the limits of science, and it is impossible to make a better medicine for the stomach, liver, kidneys and blood. Try it for dyspepsia, indigestion, constipation, flatulency, or sour stomach, and you will be convinced. Never take a substitute.

The new directory of Rockefeller's linseed oil company doesn't seem to be at all slippery.

Holtt's School,

At Menlo Park, San Mateo County, Cal., with its beautiful surroundings, perfect climate, careful supervision, thorough instruction, complete laboratories and gymnasium, easily maintains its position in the front rank of schools for boys on the Pacific Coast. Ira G. Hoitt, Ph. D., Principal.

Catarrh

Is a constitutional disease.

It originates in a scrofulous condition of the blood and depends on that condition.

It often causes headache and dizziness, impairs the taste, smell and hearing, affects the vocal organs, disturbs the stomach.

It is always radically and permanently cured by the blood-purifying, alterative and tonic action of

Hood's Sarsaparilla

This great medicine has wrought the most wonderful cures of all diseases depending on scrofula or the scrofulous habit.

HOOD'S PILLS are the best cathartic.

SINKING SPELLS.

ALARMING SYMPTOMS DESCRIBED IN A SWORN STATEMENT.

Mrs. W. T. Clark of Rome, N. Y., Tells Why She Is Now Recommending a Well-known Remedy to Her Friends.

Indigestion and stomach trouble have many results that are not always readily traced to their real cause. Sometimes the kidneys are apparently affected, but more often an irregularity of the heart's action produces a far more alarming symptom. The cause is easily explained and is removed when the stomach trouble is cured. A case in point is that of Mrs. W. T. Clark, of 318 West Thomas street, Rome, N. Y. She says:

"To begin with, I had gastritis, which brought on sinking spells for about an hour every morning. I was very weak and nervous and finally was compelled to take to my bed. My illness began in the spring of 1897, and continued for about four months. For about half this time I was confined to my bed. I suffered greatly from the stomach trouble and nervousness, but what alarmed me most was the sinking feeling at the heart.

"I had read about Dr. Williams' Pink Pills for Pale People and when some of my friends recommended the pills very highly, I decided to give them a trial. I bought one box and by the time this was used up the sinking spells had ceased. I felt better but continued taking the pills until I had used twelve boxes. I still keep the pills in the house for I believe that they are a splendid medicine. I always recommend Dr. Williams' Pink Pills to my friends who are ailing, for I know that they will do all that is claimed for them."

Signed, MRS. W. T. CLARK.

Subscribed and sworn to before me this 9th day of April, 1900.

BENJ. S. BROWN,
[Seal] Notary Public.

No discovery of modern times has proved such a blessing to women as Dr. Williams' Pink Pills for Pale People. Acting directly on the blood and nerves, invigorating the body, regulating the functions, they restore the strength and health in the exhausted patient when every effort of the physician proves unavailing. These pills are sold in boxes at 50 cents a box or six boxes for $2.50, and may be had at all druggists, or direct by mail from Dr. Williams Medicine Co., Schenectady, N. Y.

Some railroads advertise to carry passengers through without change. But they make a fellow pay just the same.

Coated with chocolate, very small and easy to take as sugar, are Adams' Sarsaparilla Pills, for sick headache, constipation, biliousness, dyspepsia, sallow complexion. They purify the blood. 10c, 25c. Druggists

It is easy to find a lover and retain a friend: what is difficult is to find the friend and retain the lover.

For Consumption try Fryer's Abietene Cough Balsam.

MRS. MARY GREGOVICH,

Of Philipsburg, Montana, Tells How She Was Cured of Dandruff.

Mrs. Mary Gregovich, of Philipsburg, Montana, under date of Nov. 26, 1899, writes: "I had typhoid fever this summer, consequently was losing my hair terrible, and my head in places was perfectly bald. Newbro's Herpicide had just come into use in Philipsburg, and the doctor strongly recommended it to me. After 3 or 4 applications my hair stopped falling out, and is coming in again quite thick. I used to be troubled greatly with dandruff, of which I am now quite cured." Kill the dandruff germ with Herpicide.

Necessity is called the mother of invention, but it is the cruel stepmother of the fairy tales.

CASTORIA

The Kind You Have Always Bought has borne the signature of Chas. H. Fletcher, and has been made under his personal supervision for over 30 years. Allow no one to deceive you in this. Counterfeits, Imitations and "Just-as-good" are but Experiments, and endanger the health of Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

The Kind You Have Always Bought
Bears the Signature of
Chas. H. Fletcher.
In Use For Over 30 Years.
THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

CATARRH

A Constitutional Affection.

Sprays, washes, powders, salves, medicated tobacco and cigarettes, however long and persistently used, do not cure Catarrh. They relieve temporarily the inflammation in the throat and nose, and enable you to breathe more easily and freely, but the continual rush of impure blood to these parts keeps up the irritation and ultimately produces ulceration of the glands, when the breath becomes exceedingly offensive and the soft bones of the nose are frequently destroyed. The catarrhal inflammation extends over the entire surface of the mucous membrane, or inner skin; the stomach, kidneys and lungs are often involved; the whole system soon becomes affected by the rapid absorption of poisonous matter into the blood, and the disease that you had hoped to cure with simple local remedies, assumes a dangerous form.

I had Catarrh about 15 years, and tried during the time everything I could hear of, but nothing did me any good. At last I came to the conclusion that Catarrh must be a blood disease, and decided to give S. S. S. a trial. I could see a little improvement from the first bottle, and continued it three or four months, or until I was cured. Have not taken anything for six years, and am just as well as I ever was.—M. MATSON, Lapeer, Mich.

I had Catarrh so bad was entirely deaf in one ear, and all the inside of my nose and part of the bone sloughed off. The physicians gave me up as incurable. I determined to try S. S. S., and began to improve at once. It seemed to get at the seat of the disease, and after a few weeks' treatment I was entirely cured, and for more than seven years have had no sign of the disease.—MRS. JOSEPHINE POLHILL, Due West, S. C.

Catarrh is a constitutional disease—a blood disease which is frequently inherited, and only a blood medicine, such as S. S. S., can remove the hereditary taint, destroy the poisons that have been accumulating in the system for years perhaps, and restore the blood to a healthy and pure condition. The inflamed membranes and diseased glands are healed by the rich, pure blood which is carried to them, and the offensive discharges from the nose, and the terrible headache and neuralgic pains cease. Chronic cases of the most desperate character and apparently hopeless, have been cured completely and permanently by the use of S. S. S.

Write our physicians fully about your case and they will cheerfully assist you by their advice. We charge nothing whatever for this service. Book free on application. THE SWIFT SPECIFIC CO., ATLANTA, GA.

DEATH

begins in the bowels. It's the unclean places that breed infectious epidemics, and it's the unclean body—unclean inside—that "catches" the disease. A person whose stomach and bowels are kept clean and whose liver is lively, and blood pure, is safe against yellow fever, or any other of the dreadful diseases that desolate our beautiful land. Some of the cleanest people outside are filthiest inside, and they are the ones who not only "catch" the infections, but endanger the lives of all their friends and relatives. There's only one certain way of keeping clean inside so as to prevent disease and that is to take CASCARETS. Perfect disinfectant and bowel strengtheners. All diseases are

PREVENTED BY
Cascarets
LIVER TONIC
BEST FOR THE BOWELS
10c. 25c. 50c.
ALL DRUGGISTS.
NEVER SOLD IN BULK.

CURE all bowel troubles, appendicitis, biliousness, bad breath, bad blood, wind on the stomach, bloated bowels, foul mouth, headache, indigestion, pimples, pains after eating, liver trouble, sallow complexion and dizziness. When your bowels don't move regularly you are getting sick. Constipation kills more people than all other diseases together. It is a starter for the chronic ailments and long years of suffering that come afterwards. No matter what ails you, start taking CASCARETS to-day, for you will never get well and be well all the time until you put your bowels right. Take our advice; start with CASCARETS to-day, under an absolute guarantee to cure or money refunded. 466

GUARANTEED TO CURE: Five years ago the first box of CASCARETS was sold. Now it is over six million boxes a year, greater than any similar medicine in the world. This is absolute proof of great merit, and our best testimonial. We have faith and will sell CASCARETS absolutely guaranteed to cure or money refunded. Go buy today, two 50c boxes, give them a fair, honest trial, as per simple directions, and if you are not satisfied, after using one 50c box, return the unused 50c box and the empty box to us by mail, or the druggist from whom you purchased it, and get your money back for both boxes. Take our advice—no matter what ails you—start today. Health will quickly follow and you will bless the day you first started the use of CASCARETS. Book free by mail. Address: STERLING REMEDY CO., NEW YORK or CHICAGO.

DOINGS OF WOMEN

SELF-HELP FOR NERVOUSNESS.

BEFORE nervousness has been established and become a habit is the time to attack it. Once it has got possession, more severe measures must be taken to eject it—and advice will have to wait till the war is over. "To read the riot act to a mob of emotions is valueless, and he who is wise will choose a more wholesome hour for his exhortations. Before and after are the preacher's hopeful occasions, not the moment when excitement is at its highest and the self-control we seek to get help from at its lowest ebb."

The woman who suffers from nervousness must try to study for herself her life, habits, environment, temperament, in order to discover whence the trouble springs. Oftenest some departure from proper ways of living will be found at the starting point. It may have been unavoidable when it occurred, or have been thought so at least, or more likely not thought about at all until the mischief was done.

Few things will more certainly insure a future disastrous result upon the character than a habit of yielding to or cultivating to excess the expression of all the emotions. Tears for trifling pains, or loud complaints about small annoyances—physical, social or what not—may give at first momentary relief to the weeper, but soon become a habit which weakens the power of self-control, and lessens the possibility of endurance in all forms. It is not within the ability of every woman to absolutely suppress all manifestations of suffering; it is surely within the power of everyone to make up her mind—and to teach her children—to endure the smaller necessary woes of existence without an outcry, and thus aid in the acquisition of control over larger forms of trouble.—Dr. John Mitchell in Harper's Bazar.

Million from a Cousin.

For a few more than twenty years Miss Ellen Rigby has lived on a small farm in Hickory Township, near Sharon, Pa. Her life has been a quiet one, and she has had few ambitions, certainly none to be the owner of a million dollars. Several weeks ago Miss Rigby got a letter from a firm of lawyers in Philadelphia, asking for the first names of her father and of her paternal grandfather. The letter also asked if she had ever heard of a relative named Peter Rigby. Miss Ellen answered, giving the names, and stating that she knew of no Peter among her relatives. More recently she got further advices from the lawyers to the effect that one Peter Rigby, once a resident of Philadelphia, had died recently in Rio Janeiro, Brazil, leaving a fortune of something over $2,500,000, of which amount she is heir to more than one-third. Peter Rigby, the cousin of whom she had never heard, ran away from home when a boy and made a big fortune in the coffee trade. He left his money to be divided among such of his relatives as could be identified.

MISS RIGBY.

Boston's Girl Cigar Dealers.

"Goodwin Sisters, dealers in cigars and tobacco," is the sign which hangs over flourishing cigar stores in Boston. The proprietors of the business are two extremely pretty and bright young women who chose to make their living by going into business rather than by putting on spectacles, cutting their hair short, and setting up as "school ma'ams" in the regulation way. The sisters have been successful and their success has brought with it some degree of embarrassment. A few weeks ago a brief account of their unique enterprise was printed in a Boston paper, and since that time they have been almost overwhelmed with offers of marriage. These offers come from all sorts of men and from all parts of the country. Miss Hattie, the youngest sister, has already filed away thirty-six offers, and every mail adds to the list.

MISS GOODWIN.

Education Has an All-Round Value.

A good college education stands for the investment of power, says a writer in Success. The student invests power, and power he takes out; for education creates and increases power. Two forms it specially promotes, which modern life demands; the power to think, and the power to will. The power to think is the greatest intellectual power. The power of knowledge is the power of the granary, which gathers up and holds the harvests of many a field; the power of thought is the power of the mill which grinds those harvests into flour for the use of men. The power of thought is the power to see, to foresee, to reason, to judge, to infer. It is the power which every study of the college helps to train. Language gives discrimination, science, observation, analysis and synthesis—the taking apart and the putting together of elements of thought; history, comprehension, and philosophy, self-repletion and self-discovery. In some ways—and the exact way is still unknown—the man who pursues these and the other studies of the college four years becomes a thinker. When he entered college, he knew little and could think less; when he leaves college, his knowledge is still limited enough; but he has gained a distinct power to think.

Interested in Silk Culture.

Mrs. Blackburn Hughes is the head of a committee of Southern women arranging for an exhibit illustrative of silk culture at the South Carolina and West Indian exposition, which opens, next December, at Charleston. These ladies purpose showing the silk worm in its various stages of development, the cocoons, the raw silk, the spun silk and the rarest productions of the loom. One of the interesting features of the display will be the silk dresses and other articles made from silk manufactured in South Carolina, in the days long past, when Gov. Broughton planted mulberry trees at "Mulberry castle" on Cooper River, and Sir Nathaniel Johnson tried similar experiments at "Silk Hope," in South Carolina.

MRS. HUGHES.

The Clothes Make the Woman.

It is simply a matter of dress, I say,
And the feminine half of the race to-day
Might hold in our history just as great
A place as the lords of high estate
Had they been permitted to wear the clothes
And follow the selfsame styles of those
Who, having been born of the opposite sex,
Had never a worry their minds to vex.

Had Columbus and all of his valiant crew
Worn hats that the ladies of our times do,
They wouldn't have sailed in those damp, old ships—
'Twould have taken the curl from their ostrich tips,
And I'm more than delighted brave Paul Revere
Didn't say on that night when the foe drew near;
'I'd like to go warn all the folks, I declare,
But I haven't a thing that is fit to wear."

Had Wellington dared but five minutes to wait
In trying to fasten his hat on straight
(While Napoleon's hurrying forces came)
He wouldn't have climbed to the heights of fame.
And had Washington lingered to "frizzle" his hair
The night that he ferried the Delaware
He couldn't have gotten his army away
Till the British had gobbled them up next day.

And so, I say, in the race of life,
The woman has more than her share of strife,
And man would find 'twould be hard to gain
The prize if he had to manage a train,
A shopping bag and a parasol,
And high-heel shoes a size too small—
Am me, oh my! Why he'd have a fit,
And he'd never, no never! come out of it.
—Nixon Waterman, in Good Cheer.

How to Polish the Windows.

The action of the sun, moisture and the carbonic acid in the air on the soda or potash in the glass produces an opaqueness more or less pronounced. To remove this wet the glass with diluted hydrochloric acid, and after a few minutes go over the glass with powdered whiting. Pour the acid slowly into the cold water, using four ounces of the acid to twelve ounces of water (one pint and a half). Polish with chamois or soft paper. It must be remembered that this acid will attack metals and should not be allowed to touch them, nor should the bottle be left open an instant longer than necessary, as the fumes are very destructive.—Ladies' Home Journal.

Baby Triumphed.

Mrs. Travees Ralston was the wife of Lieutenant F. W. Ralston, a Philadelphia millionaire and famous athlete. They lost their money. Then they quarreled. He went away to the war, and his society wife opened a millinery shop. She got a divorce. Every day a small boy asked, "Where's papa?" Every night he said his little prayer and closed with, "Please God, bring papa back to me." Friends arranged a meeting, love triumphed again. Lieutenant Ralston is going back to the Philippines, and this time wife and baby will go with him.

MRS. RALSTON.

A Necessity in Summer.

The white linen or pique skirt is a necessary article in the summer wardrobe, and the pure white shirt waist is the correct thing to wear with it. It may be plain, tucked or embroidered, but it should be white and worn with a white belt and a white stock. White waists are also worn with the beige colored linen skirts, and some of them have the embroidered ecru batiste collar.

LAMPLIGHTER ON WHEELS.

Up-to-Date Servant of the Public in a Chicago Avenue.

Down Indiana avenue way if things are not aristocratic the folks will not have them. The houses, the lawns, the very paving blocks are all that might be desired in that line, and when the trolley car bunted its way into the thoroughfare the cars were not the vulgar, flaunting yellow caravans which tear through Clark street and Wentworth avenue and other plebeian highways. They were of a subdued shade, and upholstered; they were full of cushions and content; the conductors were suave and polite, and the motormen apologized when a passenger was staggered by the sudden starting of the car.

To follow out this rule in all things, they have a lamplighter down there in the region of Thirtieth street who does not trot around the streets in greasy jeans with an ill-smelling torch over his shoulder, leaving light and cheer in his wake, as is the case in less favored neighborhoods. This particular lamplighter on whom Indiana avenue dotes rides a wheel as he makes his rounds, lights his lamps from the saddle, and is a thing of beauty to the first people, who are present in large numbers on Indiana avenue. Pedestrianism may be well enough for Blue Island avenue or eke Halsted street lamplighters, but Indiana avenue, where even the baby cabs have rubber tires and everything is filled with sweetness and light, demands a modern Mercury mounted on a swift-flying wheel and bearing his flaming torch high in air.

THE MODERN LAMPLIGHTER.

Until the time comes, which it doubtless will, when the entire city is lighted by electricity and the lamplighter becomes a thing of the past, the Indiana avenue man will doubtless stand as the model for the correct in lamplighters. It is hard to improve on him. He is as far ahead of the walking lighter as the latter is ahead of the gasoline lamp men or the link boy of ancient London. He is thoroughly modern, and as such is a type of life in that aristocratic section where everything is as nearly as it should be as it is possible to have it under our civilization.—Chicago Chronicle.

TO TELL DISPOSITIONS.

Carrying of Umbrellas a Means of Character Reading.

The man who sat nearest the window said he didn't mind the wet weather.

"It gives me a chance to see how people carry their umbrellas," he said. "I have such firm faith in my umbrella deductions that I wouldn't be afraid to choose a wife with them for a guide."

The woman on his left smiled.

"I'm glad I'm not out there in the street," she said. "You'd be picking out all the kinks in my disposition along with the rest of them."

"Oh!" said the man. "I sized you up a long time ago. You carry your umbrella when it's furled just like that woman across the street. You grab it in the middle and go forging ahead with the end of the handle digging into the unfortunate pedestrians who go before and follow after."

"And what does that signify?" asked the woman on the left.

"Alertness, activity, selfishness and inconsiderateness."

"Um-m-m," said the woman.

"But just look at the third woman in the procession," said the man. "I pity the men folks about her house. I'll warrant they have to get their own breakfasts about six mornings out of seven. I never yet saw a woman who dragged her umbrella along so that you could track her by the trail of the tip who wasn't dilatory and careless. She never sews on a button, or darns, or mends, and her breakfast dishes are seldom washed before 2 o'clock.

"That other woman who is hustling along holding to the top of the umbrella handle like grim death and pointing the tip down and forward in a kind of south-by-southwesterly direction is altogether different. She would set the world on fire if it wasn't waterlogged. I am not sure that I'd want to be married to her, either. She'd be too energetic. She'd push everything before her, and when she took a notion to clean things up a mere man would have nowhere to lay his head. What she is good for is serving on committees.

"That woman in the gray skirt is a yea-and-nay sort of person. She wants to agree with everybody and follows wherever led. Woman who carry their umbrellas with the point backward and downward are always unassertive.

"But just look at that girl who spins along spinning her umbrella around in a circle as if it were a magic wand. I like her. She's jolly and good-natured and gets more pleasure out of life than ten ordinary people. There's a woman carrying her umbrella swung across her shoulders like a shotgun. She's a true soldier of fortune, and was never known to say die. I can't think of anything that would feaze her."

The man paused.

"And what would you say," asked the woman, "about that girl who carries her umbrella horizontally across the small of her back and catches either end into the crook of her elbow?"

"Well," admitted the man, "she is a new one on me. I never saw her before, but I wouldn't be afraid to wager that she is conscientious to a degree and has a heart as big as all outdoors. But here," he added, "comes the most even-tempered woman of the lot. She cuddles her umbrella protestingly under her arm, as if she doesn't want even it to get hurt in the crowd. That woman is gentle and thoughtful and kind."—New York Sun.

RANK SMELL OF THE ONION.

There Is a Scientific Reason for the Vegetable's Pungent Odor.

It is interesting to make inquiry into the cause of this unfortunate quality of the onion. It is simply due to the presence in some quantity of another mineral matter in the bulb—sulphur. It is this sulphur that gives the onion its germ-killing property and makes the bulb so very useful a medicinal agent at all times, but especially in the spring, which used to be—and still is in many places—the season for taking brimstone and treacle in old-fashioned houses, before sulphur tablets came into vogue. Now sulphur, when united to hydrogen, one of the gases of water, forms sulphureted hydrogen, and then becomes a foul-smelling, well nigh a fetid, compound. The onion, being so juicy, has a very large percentage of water in its tissues, and this, combining with the sulphur, forms the strongly scented and offensive substance called sulphuret of allyle, which is found in all the alliums. This sulphuret of allyle mingles more especially with the volatile or aromatic oil of the onion. It is identical with the malodorant principle found in asafoetida, which is almost the symbol of all smells that are nasty.

The horseradish, so much liked with roast beef for its keen and biting property, and the ordinary mustard of our tables both owe their strongly stimulative properties to this same sulphuret of allyle, which gives them heat and acridity, but not an offensive smell, owing to the different arrangement of the atoms of their volatile oils.

This brings us to a most curious fact in nature, that most strangely, yet most certainly, constructs all vegetable volatile oils in exactly the same way—composes them all whether they are the aromatic essences of cloves, oranges, lemons, cinnamon, etc., of exactly the same proportions, which are 88¼ of carbon to 11¾ of hydrogen, and obtains all the vast seeming diversities that our nostrils detect in their scent simply by a different arrangement of the atoms in each vegetable oil.—Rural Californian.

Why He Doesn't Work.

"For a man who doesn't work," said the housekeeper, "you have a pretty good appetite."

"Yes, ma'am," replied Hungry Higgins; "dat's why I don't work. If I did, dey wouldn't be no satisfyin' me."—Philadelphia Record.

FEW FAMILIES ARE LARGE.

Births in Great Britain Have Decreased in Recent Years.

There have been many surprises in the census of Great Britain recently taken, and much concern has been manifested throughout the kingdom over evidences it presents of national retrogression. While the emigration from Ireland increases from year to year, a curious phenomenon is observed elsewhere in the United Kingdom. The number of marriages is increasing and the number of births decreasing. There never were so many marriages in England as there were in the year 1899. But the records of the birth rate run down to the lowest figure. England, that was so proud of her increase in population, from 12,000,000 to 40,000,000 since the commencement of the French revolution, while during the same period the population of France increased only from 25,000,000 to 38,000,000, now finds her population diminishing.

But the strange thing about it is that the same phenomenon is observed in Australia, in New Zealand and in all the countries inhabited exclusively by Anglo-Saxons. The London Daily Telegraph gives a cause for the phenomenon which may perhaps be a true one, and this cause is none other than the rebellion, often noticed by close observers, of the Anglo-Saxon women against maternity—a rebellion which is the consequence of their passion for independence and that constantly increasing desire to become equal, if not superior, to men in the intellectual occupations and in physical exercises. In saying this we refer particularly to American women. For the ladies of the law, and the medical, and journalistic ladies maternity is a nuisance, just as it is for those whose greatest delights are bicycle riding, tennis, golf and hockey.

Coming back to Ireland, it is found, according to the official figures, that 47,107 emigrants abandoned in the year 1900 the country to which they are so deeply attached. These figures represent 10.5 per thousand of the population. They show an increase of 3,347 over the figures for 1889 and 13,000 over those of 1898. Since the beginning of the reign of Victoria the population of Ireland decreased from 8,000,000 to 4,500,000. The laws in favor of the farmers, the establishment of elective county councils and the numerous lines of railway have had no effect upon emigration.

The Wonders of the Farm.

Now the country has a charm
For the boarders on the farm
And, delighted, they its mysteries explore, plore, plore.
And the wonders grow apace
As with wise and solemn face
The old farmer stuffs them full of rural lore, lore, lore.

In horse-chestnut trees around
There are mare's nests to be found,
And the axle-trees have iron nuts to crack, crack, crack,
And the milkweed churned at night
Makes the buttercups so bright
And the ducks to little gooseberries say "quack, quack, quack."

Where the cattails hide away
Do the pussy-willows play
Till the dogwood tree affrights them with its bark, bark, bark.
And the cornstalks in their ears
By the weeping willow's tears
And potatoes shut their eyes when it is dark, dark, dark.

With pine needles from the trees
Farmers sow the seeds with ease
And the honey combs the rows of cabbage heads, heads, heads.
And the rooster turns to crow
And the egg plants hatch, you know,
All the chick-weed that is running on the beds, beds, beds.

Motherwort and poppy stout
Let their small sunflowers out
When the dande-lions are no longer there, there, there;
And they shoo the hens alway
In the summer, strange to say,
For in winter, when it snows, their feet are bare, bare, bare.

Thus the farmer, lank and lean,
Stuffs his city boarders green
With the wondrous things that happen on the farm, farm, farm;
But he doesn't tell about
Being buncoed when he's out
Or the golden brick he buys without alarm, larm, larm.
—Chicago Daily Sun.

When Patti Laughed Alone.

When Adelina Patti laughs the heartiest it is at the recollection of her first appearance as Lucia in London. She was very anxious to dress the part correctly, so she studied her Walter Scott, and, finding that Lucia in the earlier scenes was described as wearing a scarlet cloak, she discarded the traditional pearl-gray silk and tartan scarf of the Italian prima donna and came before her audience in the guise of the original bride. But the audience had accustomed itself to tradition and did not recognize Lucia in such homely attire. "They didn't know what I was about!" laughs Patti. "I do believe they really thought I was going to play Little Red Riding Hood, and was making game of them."

Her Hidden Motive.

Mrs. Henpeck—If you marry Dick you need never expect me to come to see you.

Daughter—Just say that into the graphophone, won't you, please?

Mrs. Henpeck—What for?

Daughter—I want to give it to Dick as a wedding present.—Washington Star.

Tile Stoves.

Stoves made of tiling are in general use in Austria. They are said to be superior to iron stoves on account of the great economy of fuel possible by their use.

AMERICAN IDEAS IN FAVOR.

England Is Fully Awake to the Value of Electric Force.

England is beginning to catch up with this country in the general use of electricity, the movement being sufficiently pronounced to be regarded as an electrical awakening. The idea has forced itself into the stubborn and ultraconservative British mind that the success of American commercial travelers against their English rivals is in great measure traceable to the prevalence of cheap electric power in the United States. One result of this discovery is that a large demand for American electrical appliances has sprung up in England. Already an American electrical manufacturing company is building a large factory in London. In the matter of underground rapid transit of electricity, however, London will soon be far ahead of all cities in this country. The line from Shepherd's Bush to the Bank of England—six and one-half miles under the busiest part of the capital—is completed and passengers are being carried the distance named in twenty-five minutes, stopping at thirteen stations en route. Fresh air is pumped into the electrically lighted tunnels. Two other underground electric lines are being constructed and another is in operation carrying passengers under the Thames.

These underground railroads are important enough, but much more important, so far as manufacturers are concerned, is the electrical development embodied in several bills before Parliament asking permission for the establishment of power companies to supply large districts with electric power at low prices. Heretofore Parliament has held that electricity, like water, and often gas, ought to be provided by municipal rather than private enterprise. Consequently many English towns manufacture their own electric light and power. But it is contended that electricity can be manufactured and transmitted, even to a long distance, much cheaper in quantities large enough to supply half a dozen towns. Consequently several companies, each intending to sell power to large manufacturing districts, are besieging Parliament and if their requests are granted it will not be long before the total of electric power produced in England will be increased by a third, and, according to the applicants, reduced in price by a third.

NEW ELECTRIC LOCOMOTIVE TO BE USED IN LONDON.

EGYPTIAN MEN AND WOMEN.

What Can Be Learned of Them from Ancient Drawings.

In face the men and women were very much alike, but there is a subtle charm about the female faces that is replaced by a placid dignity in the male. In both the features are delicate and of a somewhat aquiline type, and the figures are tall and slight. There is very little indication of muscle, but the men are broad-shouldered and thin-flanked, while the women, in spite of their stiff attitudes, are graceful and refined. In both the forms are soft and rounded. The resemblance between the men and the women is, of course, increased by the men being always clean-shaven.

In the paintings and bas-reliefs there are certain conventions which do not apply to the statues, and for these due allowance has to be made.

In early times all drawing and painting on the flat (and bas-relief is but a form of this) had to serve two purposes, says a writer in the London News. One was to convey information, the other to be ornamental. It is doubtful which is the earlier of the two. The man of the stone age, when he scratched his realistic mammoth on a piece of reindeer bone, either wanted to convey to his brother man that he had seen a fine specimen of this interesting animal, or else he did it because he thought it pretty, or he may have had both motives. In any case, we have here the common origin of art and writing.

The information picture dwindles down through hieroglyphics to mere symbols of sounds, the pictorial origin of which is entirely lost. The decorative picture gradually loses all wish to convey information, and subsists entirely for its pleasure to the eye. But the Egyptians had not got so far as that; when they drew a man, there had to be no mistake what it was. He had all to be displayed, as it were, to the best advantage. The legs were shown sideways, so as to give the whole length of the feet, and one leg was put in front of the other, so that neither should be concealed. Then there came a difficulty about the body; if that were sideways, too, one shoulder would be lost, so that the body must be seen frontways. The arms, again, are best seen sideways; fortunately, as both shoulders are shown, they do not interfere with one another. Again, a profile is more characteristic than a full face, but a profile eye is a poor, foreshortened thing.

So in this profile we insert an eye seen to its full extent, and then we really have done the man justice. This eye, seen full face while the head is profile, gives naturally a peculiar expression, which makes people talk of the long, narrow eyes of the ancient Egyptians. They very likely had nothing of the kind. Then, again, the twisting of the body makes the shoulders seem too broad. The ideal is certainly broad-shouldered, but not so much so as this would make it appear.

ABOUT THE FEET OF GIRLS.

At Certain Ages the Pedal Extremities Are Abnormally Large.

A fashionable shoemaker, whose custom comes from the best circles of society, declares that girls between the ages of 16 and 18 generally have big feet. "Their feet are," he says, "at such periods of their lives disposed to be fat and flabby, but at 22 a remarkable change takes place. The foot then completely subsides, the flabbiness disappears, the flesh of the foot becomes firmer, the muscles and tendons get stronger and the bones become well set. Altogether a great difference is noticeable.

"Yes, we have great difficulty with girls of about 17 or thereabouts, for then they require a shoe large as a full-grown woman. When they get older and the foot becomes settled new boots made on the old last will be found too large, and it is only when the young ladies complain that their new shoes are too big that we know the foot has undergone the change just described. Then explanations have to be given, but the shoemaker doesn't mind that so much, for a woman as she grows older likes to be told that her foot is getting smaller.

"After 40 the feet of a woman go back to the fat and flabby state, and herein grows the trouble of the shoemaker, who has to state in explanation why the last pair of shoes do not fit—that the cause lies in the fact that her feet are getting bigger.

"No, I don't think that cycling increases the size of a girl's foot. True, one or two of our lady customers have asked us to make their new boots a shade larger, but this difficulty is gotten over by making them 'full.' We have never altered the length."—Chicago Chronicle.

Tobacco and Tennyson.

Mr. Justice Brown, of the United States Supreme Court, in the recent "cigarette law" decision, asserted that no other vegetable has contributed so much as tobacco to the comfort and solace of the human race. On the subject of tobacco and its votaries here is a pretty story which the death of Prof. Max Muller has brought to the front again. As is well known, Max Muller was a warm friend of Tennyson, and once when he was staying with the poet the after-dinner talk turned to tobacco. The professor confessed he had formerly been the slave of his pipe, but had asserted his independence by making an entire renunciation. The poet said, "Anybody could do that," and, his words being doubted, proceeded to deeds. He threw his pipes defiantly out of the window. The next day he was placidly self-righteous, the day after he was moody, on the third day he was impossible. On the fourth day he was seen in his garden gathering up the discarded gods, never again to be cast out.—Buffalo Commercial.

His Proper Introduction.

"Really, your face is very familiar, sir; but you seem to have the advantage of me in names."

And she looked at the distinguished stranger with a puzzled air.

"I fancied," he said, "that you would know me. My name is Bangs and four years ago I had the honor to be your butler."

The face of the lady blazed.

"But a remarkably lucky series of stock investments," he went on, "have enabled me to become your next door neighbor."

The lady's face softened.

"So pleased to renew our acquaintance, Mr. Bangs," she smilingly said.—New York Telegram.

An Achievement.

"Did you suceced in arousing any interest in your recent political campaign?"

"I did better than to arouse interest," answered Senator Sorghum. "I managed to stir up a few dividends."—Washington Star.

Corsets on School Girls.

Prussia has issued an edict against school-girls wearing corsets; to which the Alliance of German Corset Makers retorts that corsets worn by girls under 14 years are harmless, as they are never tightly laced.

Excelsior.

The shades of night had fallen fast
As o'er the stage there proudly passed
A chorus in glad togs arrayed
And of what was this chorus made?
Excelsior.
—Baltimore American.

A Penalty.

The man who tells the simple truth
Perhaps is doing right;
But all the world will censure him
For being impolite.
—Washington Star.

A very pitiful condition exists in Atchison. An Atchison woman is kept so busy with her babies that she doesn't find time to read the doings of Mothers' Congresses.

FRIDAY, AUGUST 9.....1901

"A TON OF GOLD."

A correspondent asks the Pacific Coast Miner for the value of a ton of gold, "to settle a controversy." This is a frequent topic of inquiry and dispute, and many different and confusing statements are made about "a ton of gold." The confusion arises from the difference between troy and avoirdupois weights, but confusion is unnecessary.

A ton contains 14,000,000 grains. A grain of fine gold is worth $.043066322. Hence a ton of fine gold is worth $602,-928.508.

Gold as it mined or used by man is practically never fine, and the value of a ton of gold as it comes from the mine or the mint would have to be calculated from the degree of fineness. A ton of $20 pieces, or other U. S. gold coin, being 900 fine, would be worth 90 per cent of the fine gold value, or $542,635.65721. No account is taken of the slight theoretical value of the alloy. Gold worth $18 per troy ounce, the price paid by merchants and bankers in many California districts, is 871 fine, and at this market rate a ton would be worth 87.1 per cent of the fine gold value. Klondike gold comes down by the "ton" frequently, according to newspapers. In generally runs from 700 to 850 fine.

Our correspondent and others will probably want a further explanation of this solution. Gold is now usually computed by troy weight, although the carat as a measure of its weight, as well as fineness, survives. The value of a troy ounce ounce of fine gold is calculated by the U. S. Mint, for purposes of computation, to nine decimal places and is $20.-671834625. This value is calculated from the weight of gold, 900 fine, arbitrarily described by law for gold coins. From this is calculated the value of a fine grain given above.

Now comes the "ton" proposition. There is no troy ton. A ton in this connection must be the standard ton of 2000 avoirdupois pounds. When a "long ton" is meant it is specified, unless it is understood by custom, as in weighing coal. To calculate a ton as 2000 troy pounds would be to create a new measure of weight. The ton must be calculated as though the value of a metric ton, pood or kilogram was sought. The clearest method of calculation is to start with the grain. A grain, the most ancient unit of these weights, is the same in both troy and avoirdupois weights, the difference in the latter arising from the different number of grains in the ounces and pounds. A troy ounce contains 480 grains and a troy pound 5,760 grains. An avoirdupois pound contains 7000 grains, and 2000 pounds, or a ton, 14,000,000 grains. Gold is worth just so much in terms of American money at all times, and the only question is the quantity. As explained, a ton as it is properly to be taken in this connection is the ordinary one of 14,000,000 grains. If some other names than "ounce" or "pound" had been used to name these avoirdupois quantities, no mental confusion would arise.

There is a reasonable confusion about a "pound of gold." How much is a pound of gold worth? In technical works and elsewhere may be found tables giving the comparative values of pounds of different metals, including both precious and base. Here they must be measured by the same pound, and the pound of gold given is naturally the avoirdupois pound. It may be simply said that in speaking of a pound of gold the weight taken should be specified. But the troy pound is not customarily used in connection with gold. The output of the gold fields is always given in thousands and millions of troy ounces, and even here confusion arises when the troy ounce is not specified as "fine" or "standard." In the absence of specification "a pound of gold" is generally understood as an avoirdupois pound. A troy pound of fine gold is worth $248 063888, and an avoirdupois pound $301.4641.

Gold values are not usually carried out fractionally so far as given here. For all ordinary purposes $20.67 is taken as the value of an ounce of fine gold. A gold dollar contains 23.22 grains of fine gold, and 2.58 grains of alloy; total, 25.8 grains. A double eagle weighs 516 grains, and contains 464.4 grains of fine gold, and 51.6 of copper. The fine gold in a $20 piece is worth $19.9992. The alloy combined with 5½ ounces of gold at the Mint is worth 2 cents.

A ditch immediately on its completion has a less coefficient of water delivery than after it has been in use for one or more years. The loss by seepage is much greater at first. In time two results are obtained—silt works into the crevices and joint planes and stops the leakage of water through them, and the material, rock or earth, of the wet perimeter becomes saturated with water and receives less from capillary flow. A new ditch should not have its full head turned into it at the start. The turn-in should be small and gradually increased through several weeks, or even months, to the maximum. It is desirable to turn muddy water in at first, and until the maximum quantity is reached, to rid in closing up the seepage lines.

There is a difference of opinion among experts as to whether the life of a pneumatic tire is best expressed in years or miles. It is often said that with ordinary use, a rubber tire of this type will last two or three years. But some experienced builders assert that a tire will not last more than two years on an average, if never used. The rubber tire loses its life in this length of time, so it is said.

TIOGA WAGON ROAD.

In the following article, which we quote in its entirety from the Sacramento Record-Union, that excellent journal errs somewhat in the assumption that the Tioga road will ever prove of much material availability to the people of Inyo. It is too far north, and the prospect of any good connecting roads altogether too remote. But it will be great for southern and southwestern Mono, on which account the report given is interesting:

The probabilities are strong that the extension of the Tioga wagon road lead into Mono county will be completed within a year, and an outlet given to the people of Mono and Inyo counties who have been completely shut off from the rest of the State by the hights of the Sierra Nevada Mountains, which wagons could not traverse.

Every since California became the property of the United States any resident of Inyo or Mono counties having personal business to transact in any other part of the State has been obliged to pass through the State of Nevada by way of Carson and Reno to obtain entrance into California, making a roundabout journey of hundreds of miles, which could have been saved by the building of a few miles of wagon road through one of the canyons of the mountains that intervene between those counties and the rest of the State.

The evident necessity of the road had been repeatedly brought to the attention of the Legislature and became so apparent that during the session of 1899 that body passed a bill bearing an appropriation of $25,000 for the survey and construction of the road, and the people of Mono and Inyo counties were delighted to know that at last they were promised easy access to other parts of the State.

Last Summer ex-Highway Commissioner J. L. Maude organized a large survey party and spent two months in making the survey for the proposed wagon road, but in doing this he chose the route through Bloody Canyon that leads directly through the Government Yosemite Valley Reservation, and as it was a foregone conclusion that the United States Government would not concede the State a right of way through the reservation, a piece of property held in trust for the people of the entire United States, the six or eight thousand dollars of the people's money expended seems to have done very little good.

At the end of Maude's term of office he was succeeded by N. Ellery, the present Highway Commissioner, who has just returned from an examination of the four feasible wagon routes into Mono county. Mr. Ellery has been absent about two weeks and has personally inspected the entire intervening country between the end of the Tioga road and the Mono-Inyo country, and has fully satisfied himself that the road can be constructed without infringing on the Government reservation in any way.

Mr. Ellery said: "I have looked over all four of the routes by which a wagon road can be constructed over the mountains, and in my opinion the best and cheapest route will be by way of Levining Creek Canyon. This is by far the most practicable route and will enable us to avoid the United States reservation altogether.

"I shall start the survey over this route as quickly as possible and will rush it to completion rapidly in order to avoid the early snowfall in these high elevations, and will begin the construction work early next Spring. I fear, however, that I will be greatly hampered in the construction of the road by the small amount of money at my command. My predecessor expended six or eight thousand dollars on the survey he made, and this has reduced the fund to a little over $17,000.

"As the route he chose is totally impracticable owing to the fact that it leads through the United States forestry preserve, I will be compelled to make another survey, and this will probably cost $1500, and the fund will be depleted that much more. I will go ahead with the construction of the road, however, as rapidly as possible and will endeavor to complete it with the funds in hand.

"This road will be the first road constructed and owned by the State, and should be made a model road. I have one thing in my favor and that is that the cost of construction in Levining Canyon will be far less than that on the route proposed by Mr. Maude, as it will require less engineering features and will be more practicable owing to the fact that the snow melts earlier in Levining Canyon than on any of the other routes."

The elements and the richness of the Earth conspire to help on the prosperity of the State of California. The oil fields of this State have been a great factor in the latest development of financial expansion and their influence is certain to be felt further, inasmuch as the defined field are constantly expanding by continuous new discoveries. We are, it seems, on the threshold of a stupendous wealth-producing age, which promises to have a beneficial effect on the masses of the country through the abolition of poverty.—S. F. Mining Review.

The magazine part of the Los Angeles Sunday Herald is growing more popular every day. It is not too much to say that The Herald Sunday Magazine contains the finest collection of popular and instructive reading matter published in connection with any Sunday paper in the United States. It has already gone far ahead of any of its rivals, and promises to go further still. The typographical make-up of the Herald's Sunday Magazine is excellent. It could hardly be improved upon.

Following lines occur in articles given by the San Bernardino Times-Index:

—Which is doubtless interesting if only understood.

THE HORSE BREEDERS

Timely warning of the mare's approaching parturition is usually given by the accumulation of the characteristic wax on the end of her dugs, says The Breeder's Gazette. When that appears, the foal may be expected very soon. We have known mares to work all day in the harness and shortly after coming home at evening lie down and bring forth healthy foals. We have even known them to foal at noon when not 30 minutes out of the harrow chains, but as a rule it will be better to let the mare have some rest before she brings forth her foal.

Every sensible man will keep track of the day on which each mare's eleventh month is up. If she shows by the loosening away of the bones, even if she is not waxed, that she is very close to her foaling, give her a comfortable box to herself and feed her less heavily, but on the same sort of soft food she had before being retired. She should have some exercise every day, and she should also be turned out by herself. Often mares have been seriously injured by being turned into wet, dirty, slippery yards at such times. See that the yard is smooth and dry and that there is nothing to plague the mare. Keep her as quiet as possible, and without letting her know it keep an eye on her all the while.

When the hour of foaling is obviously close at hand, do not "stay right with the mare." The writer has known a mare to be sedulously watched all night long by a too conscientious boy and drop her foal in the morning when he went to get his breakfast. Some one ought to be near her, but she ought not to know it. Assistance must of course be rendered if necessary, but the mare should have first the opportunity to get through with it herself. After she is through and up on her feet again she will start to work on the foal, and the first thing she will crave most likely will be a drink of water, which should be given her, not perhaps in great quantities, but liberally and with the chill off. Later let her have something to eat, and let it be soft and very nourishing.

Breaking Colts.

All colts should be broken to lead and should be accustomed to have their feet and legs handled so that they will stand to have their feet trimmed, says T. P. Moren. Every colt should be broken to harness by the time it is 3 years old, for as a rule the older they get the harder they are to break. Of course a colt 3 years old should not be compelled to do the work that a matured horse can do, but when worked their muscles will be fuller, harder and of better tone, and you will see the colt gain in muscular strength and general stoutness and every day become more and more a horse. Every good sized, sound, healthy 3-year-old colt should be capable of earning his keep, and if he is not capable of doing so he is not bred as he should be, or else he has not been properly fed and cared for. It certainly is not good farm economy to allow the colts to run idle until they are 5 or 6 years old.

Shoes For Farm Horses.

Farm horses should go barefooted until there is a necessity for shoeing to preserve the hoof. Like farm boys, they should wear no shoes except on special occasions until they are about 14 years old. Many horses can serve a lifetime on the farm without being shod.

Breed Good Horses.

It is within the reach of every farmer to breed good horses.

Veterinary

When a horse gets a nail in his foot, the best thing to do is to cleanse the wound as quickly as possible, having the smith rim out the hole sufficiently to permit of the cleansing being done right. This washing should be done with carbolic water, and it is no bad thing to make the horse stand in the water for a little while. A teaspoonful of the carbolic acid in a bucket of lukewarm water will be all right. Then after the wound is well cleaned out pack a little pledget of good lint with a little tar next to the wound. Over that place oakum and go ahead.

Horse Distemper.

Give horse one dram of iodide of potassa once a day for two weeks and take equal parts of turpentine, liquid ammonia, tincture of cantharides and olive oil; mix and rub on his throat twice a day till it is well blistered. Let the horse have plenty of grass along with his other feed, and do not let him warm, if you can help it, and he may get over it in time.

Greased Heel In Horses.

Poultice the heel with linseed meal; change once a day and continue it for a week; then apply pure carbolic acid to it with a brush or a feather once; let it alone for three days; then apply the polutice for one or two days, and then mix two ounces oxide of zinc with four ounces vaseline and apply a little once a day.

Warts on Calves.

Take a blunt knife and scrape the top of the wart and apply a little terchloride of antimony to it with a feather. Repeat every third day until it is lower than the skin. Then mix one ounce of oxide of zinc with two ounces of vaseline and rub on a little once a day.

Concerning Hogs.

Hogs should never sleep under the corncrib or under any building whatever. Dust and parasites will absolutely ruin their chances of future usefulness.

A Useful Climbing Shrub.

Lycium chinense (Chinese Matrimony vine) is a graceful climbing shrub which is very useful for covering rocks, stumps of trees or anything else where a tall growing vine is not required. Neither the leaves nor flowers are particularly ornamental, but the graceful habit of the plant commends it, together with the fact that in the autumn the bright scarlet fruit gives it a very attractive appearance. There is a variety, macrocarpum, which is an improvement on the ordinary form in that the fruit is larger and hence more conspicuous.

JOHN J. MCLEAN,
Observer.

*Record beginning March 6th 1898.

SUPERIOR COURT.

Hon. Walter A. Lamar, Judge.

AUGUST 8, 1901.

J. S. Stotler, Pltff., v. M. A. Newmark et al., Dfts.

Trial of cause postponed until Saturday, Sept. 14, 1901.

Real Estate Transfers.

Recorded since last report:

D. V. Burton to L. A. Burton—Mollie McGuire mine near Ballarat; consideration, $.00.

Harrold Preston, Admr., to E. C. Varney—160 acres land near Bishop; $4350.

Harrold Preston to Mrs. M. M. Hutchison—160 acres land near Bishop; $3200.

Chas. M. Green to C. H. Reynolds—Univided ½ int. in S½ Lot 7, Block 5 in Lone Pine; $500.

C. H. Reynolds to Margaret A. Green—Property as above; $500.

Sarah A. Cobb to J. S. McGee—160 acres land in Pleasant Valley; $700.

Julian Eibeshutz is home again.

Wells Barnes says the Inyos have been a little too warm for him.

Milt. Levy has attained the full-fledged honor of Deputy Sheriff.

"Cloudburst" is literal nonsense, but word-makers have supplied nothing else.

Bell's Oak Creek Flouring Mills have been put in perfect shape for the Fall run.

Norman Mairs has gone down to Mountain Springs, acting as special Deputy Sheriff.

County Clerk Meroney left this morning, on a business visit to Bishop for a few days.

Mr. and Mrs. John E. Jones of Round Valley are visiitng relatives at Camp Independence.

J. S Stotler, the Ballarat merchant and mining man, has been in town for several days on law business.

Mrs. Irv. H. Mulholland, Miss Ruth and Master Jack arrived on the belated train yesterday, all glad to get home.

The Methodist Episcopal Conference for the current year will be held at Big Pine, convening on the 29th instant.

W. O. Meroney, wife and daughter, arrived from Bishop a few days ago, and are visiting with many friends and relatives.

Hunters should remember that under the law only fifty doves may be killed in one day, while only three deer may be killed in one season.

Miss Birdie Levy has returned home, after having attended the Grand Lodge of Rebekahs and visiting a month or so with relatives in San Francisco.

Sheriff Given and Clerk Meroney returned last Monday from a mountain deer and bear hunt, with a lot of rabbits and quail. Of such is luck, sometimes.

J. Walter Hanby, of Bishop, was in town yesterday. He has been engaged as teacher for the ensuing term of the Independence school, which will begin September 2d.

Fred. Crocker, of Big Pine, returned from Monache last Wednesday. He says that the pines and meadows are full of tourists, most of whom got more rain than they really wanted.

The Misses Clara, Nellie and Yrene Reynolds, and Miss Mary Mulholland, left last Saturday for a month's sojourn over on the wilds of Kern River. Others of the outing party are J. E. Reynolds, Geo. Wrinkle and Mr. Glade.

During the week James Holland has been in town, doctoring a badly swelled face. While at his ranch below Lone Pine he was stung by some sort of an insect, possibly a genuine "kissing bug," causing damages that looked serious for a time.

The Lone Pine troubles mentioned last week by this paper have been tided over by the purchase and transfer of certain property interests; a complaint was withdrawn and it is to be hoped that the present quietude on the Potomac will continue indefinitely.

Every acre of anywhere near level land in Owens Valley overlies practically inexhaustible supplies of water. These are fed by powerful streams that rise in the mountains thousands of feet above. By their aid electric power could be supplied to run pumps anywhere, when all land values would become alike. Moreover, thus utilized the natural power would do all other things that machinery is created for.

CLOUDBURSTS ALL AROUND.

Railroad Knocked Out—Kecler Deluged—Symmes Creek Swamped.

According to that oft-quoted "oldest inhabitant" since the first settlement of this valley along in 1860 there has been only one year in which occured such a downpour of Summer rains on the surrounding mountains as that of the past week. Ancient channels that have long been dry on account of diverson of water for irrigation proved inadequate to carry a tenth of the falling floods, even when the canyons and watersheds above were not under the storm centers.

Owing to the long interruption of the mails no reports have been received from the outlying eastern and southern ranges rising from the dry vallevs, but it is to be presumed that some of them received a few shocks; in fact it is almost a certain occurrence that one or the other of the numerous gorges leading down the Telescope mountains will get a Summer washout, and in such event now great loss of property and perhaps life will be heard of.

The country in the vicinity of Sodaville and the White Mountains has been the center of some of the violent storms of the past week, and as a result the track of the Carson and Colorado Railroad near the Summit and the State line has been badly washed out. A cloudburst occurred there on Tuesday afternoon—washing out nearly half a mile of track and leaving a space all the way from two to eight feet under the rails.

The crew on the regular train Wednesday side-tracked the train at Queen and tried to get the road repaired, but they soon realized that the task was more than they could handle—so they cut the telegraph wire, attached an instrument and wired to Hawthorne for help. The wrecking train started for the scene of the trouble but was itself delayed by another washout near Sodaville and did not reach the Queen until 5 a. m. Thursday. The trainmen and passengers had accepted the situation philosophically and made themselves fairly comfortable in the reclining chairs with which the cars are fitted up.

The "wrecker" brought food and a goodly supply of timbers, ties, Chinamen, etc., and at 8 o'clock p. m., just twenty-fours late, the train swung down the line from Esmeralda into Inyo county. For a length of fifty miles the track showed the effects of the big storm, and that the train pulled through without accident was undoubtedly due to the watchful care and indefatiguible efforts of Conductor Woodruff and his crew. Superintendent Laws accompanied the gang of section men and acted as overseer.

A "burst" broke at Cerro Gordo Monday afternoon, doubtless tearing out the steep road completely, if not washing away some of the old town. All canyon roads in this county have points designated as the "Narrows" and the "Devil's Gate," but in this case, if those places are left about as they were before being filled in for a road bed it will be an expensive job to again get teams up to the mines, as in seven miles there is an ascent of 4000 feet. Thos. C. Boland and wife, while driving down from the Hill, had a narrow escape with their lives even after reaching the foothills. The torrent raged down the short mesa and swept away a section of the railroad track at Keeler, and partially undermined a building near the main corner of the town. The railroad track through the sand dunes from old Swansea to Keeler was covered with debris, so that the train hands had to "shovel their way through."

The distance between the washouts near Queen station and that at Keeler is 110 miles, both by side of the same mountain chain, showing wide range of the pluvial "disturbance."

It was a fortunate thing that there were no fishing parties camped along the usually quiet course of Symmes Creek last Tuesday night. When there is water enough in it to reach that far, as in this season, it crosses the main road about four miles south of Independence. Away up on the Sierra sides it has, through branching canyons, a watershed not exceeding four square miles. On this the precipitated vapor of the upper air fell in a body, leaving results to show force immeasureable. Let the tenderfoot geologists who have claimed that no one knows why great boulders are found so far down the gentle slopes, or how they got there, go up a ways on Symmes Creek and study the torrential power there just exemplified. The silt has filled hollows and apparently on top of the mud deposited boulders from ten to 100 tons in weight. It is calculated that the wall of water must have been at least fourteen feet in hight.

Every vestige of the dense growth of birch and willow trees is gone; pine logs have been dropped along new channels miles below. The fish are, of course, all destroyed; they are buried in the conglomerate of mud, sand, rocks and brush, to make trout fossils for the inspection of four-eyed scientists in the ages and ages to come. But for the present generation the old camping spots, as well as the fish, are gone.

Four miles further south Shepherd Creek, a much larger and longer stream, was swollen so as to submerge and ruin grain fields, washing away portions of other crops. Georges Creek, a mile or two further on, was not materially affected, while the creek here in town showed only the results of a heavy rain at headwaters.

There are over 9000 sacks of ore piled up awaiting transportation. This makes it hard on the leasers. At least twenty 12-animal teams can find steady employment.

Ten barrels of whisky and fifty barrels of beer was received by our wet goods merchants this week.

As we go to press there is nos a sack of flour in town.

—Tonopah Bonanza.

We pass.

Carbonic Hydrogen Gas.

Under recent date Mr. J. F. Holloway writes from Cottonwood Ranch as follows. Although the letter was not written for that purpose, general interest in the phenomena of Owens Lake warrant its publication, and we regret that it is impossible to reproduce the excellent photo referred to:

* * * "Replying, will say that I discovered the first gas springs some time in December last. I wrote about them to friends in Bakersfield and my son, E. C. Holloway, brought over from San Francisco a gas expert by the name of Cook. He made a test of the gas and pronounced it carbonic hydrogen.

"On the east side of the lake there are quite a number of gas springs; they will burn by touching a lighted match to the gas. I inclose you a photo of one of them, taken last month by Mr. E. S. Hoyt of Bakersfield."

"We found bubbles in the lake a year ago, but as stated I found the first spring in December last."

The Inquiry for Molybdenite.

LOS ANGELES, Cal., July 27, 1901.

EDITOR INDEPENDENT—In the Review of 20th is a reference to an editorial note in your paser re. "molybdenite."

I would feel much obliged if you would thro' your valuable paper let owners of property and prospectors know that we are in a position to contract for a small but regular supply of the clean metal at good prices, and shall be glad to receive samples for experiment and testing. Will be glad to give your readers any information on the subject.

Yours, sincerely,
BAVERSTOCK & STAPLES.
No. 322 West First street.

Last Monday Frank Lawrence, the well-known teamster-rancher, encountered an experience that for a few long seconds must have looked frightful. A wild horse had managed to get his tail over a barb wire. Mr. Lawrence undertook to hold the frenzied animal while the boys cut away the wire. Both horse and wire got lose but hung together, the latter swishing around the man. The perversity of all inanimate things ever created will not equal the devilishness of barb wire. Lawrence was dragged and rolled for some distance, receiving gashes over his head and shoulders; one came within an eighth of an inch of tearing out an eye. Under the attentions of Dr. Woodin Frank is now able to navigate, but the scars left will prove a lasting reminder of the incident, if there were ever any danger of his forgetting it.

In Orange county a member of the County Board of Education brought suit as a test case against the Board of Supervisors for services rendered as a member of the Educational Board, charging $5 per day while attending sessions. Superior Judge Ballard upheld the opinion of the District Attorney and decided to the effect that members of the Board of Education are not entitled to pay for their services, but they are entitled only to mileage in attending such meetings. The decision affects our county of Inyo, where the question has never been raised, as well as other counties in the State, and the result of certain appeal will be watched with interest. In all cases of the kind the various County Auditors of California should have a system of interchanging information.

The Southern Pacific Company is about to issue from $10,000,000 to $15,000,000 of new bonds to be used largely for making the change in motive power on the Texas and California lines from coal to oil, for constructing pipe lines to transfer oil and for oil properties which the company has acquired, or is about to acquire, in order to guarantee abundant supplies for years to come.

The coyote-scalp cases against the State, involving about $300,000, have been begun before Judge Shields at Sacramento. An incorporation under title of San Francisco Law and Collection Company will get thirty per cent of whatever amount that may be collected. We do not know how much the legislators got for passing the bill which authorizes the suits.

Notice to Cattlemen.

All cattlemen wishing permits to graze their cattle in the Forest Reserve, or foothills of the Reserve, for Spring and Summer of 1902 should make application at once, to

ANDREW PRICE,
Supervisor Forest Reserve.

Eastern Division Forest Reserve,
Independence, Cal., Aug. 1, 1901.

DIED.

BUTCHER—At the County Hospital, July 7, 1901, Andrew J. Butcher, a native of Indiana, aged 75 years.

NEW ADVERTISEMENTS.

SHERIFF'S SALE.

BY VIRTUE OF AN EXECUTION, ISSUED out of the Superior Court of the County of Inyo, State of California, and to me directed and delivered, for a judgment rendered and entered in said Court, on the 23d day of May, 1901, in favor of Friederike Rhine and against George Vornberg, I have levied on the following property, to wit:

The "Corona" Mining Claim, situated in Mountain Spring Canyon, about one half mile northwest of Wild Rose Canyon and about one-fourth mile north of the Canyon Wagon Road, in what is sometimes called Argus Mining District, in Inyo County, State of California.

Notice is hereby given that on the THIRTY-FIRST day of AUGUST, 1901, at 10 o'clock a. m. of that day, in front of the Court House, in the County of Inyo, I will sell all the right, title and interest of sai' George Vornberg in and to the above described property, at public auction, for cash lawful money of the United States in hand, to the highest and best bidder, to satisfy said execution and all costs.

A. M GIVEN,
Sheriff.

Dated the 6th day of August, 1901.

There is no argument more convincing than one whose premises are supported by dollars and cents, and the following account of an experiment at the Iowa Agricultural college clearly demonstrates the difference in cash returns that may be expected from feeding an animal of the most improved beef type, such as the Hereford, and in feeding a scrub. While in this incident the two extremes perhaps are used, the result is not an unusual one.

A Hereford steer made a gain of 2 3-100 pounds per day under feed and was sold at 24 months, weighing 1,624 pounds. A high grade Jersey steer fed under like conditions was sold at 33 months, weighing 1,300 pounds, and for the nine months fed made a gain of two pounds per day. The amount of feed given each of the animals was practically the same, and the feed lot results were practically equal. The gain in weight depends solely on digestion, and the digestion of the unimproved steer or scrub may be just as good or even better than the digestion of the highly improved beef breeds. There is no reason that the latter should give greater returns for the feed. But when these steers were marketed there was a great difference. The comparison was by altogether a different standard. The Jersey sold at $2.12½ below the top of the market and the Hereford for 10 cents above, making a difference of $2.22½ per 100 pounds. In the sale of the two types the Hereford netted 67½ per cent of beef and the Jersey 57½ per cent, the beef type having 10 per cent more beef.

When the carcasses were hung up, that of the Jersey weighed 763 pounds, with 190 pounds of internal tallow and 55 pounds of suet, while the Hereford carcass weighed 888, with 95 pounds of internal tallow and 38 pounds of suet, the per cents of these as compared with the carcass being respectively 32.1 and 15, the proportion of tallow and suet in the Jersey being more than twice as much as in the Hereford. A great point was in the gain of the choice cuts in the beef type, the power of these animals to make the kind of product the market demands, instead of the Jersey putting the gain in tallow while there was not enough flesh on the back to cover decently the bones. The market returns from the Hereford carcass were 49 per cent more than from the Jersey carcass. The tallow price was 4 cents, while the high priced cuts were 19 cents.

Forcing a Bull Calf.

Use of corn, oats, bran and middlings equal parts for concentrates, says The Breeder's Gazette. If the animal is somewhat delicate, make liberal use of oats and bran, more freely than the other articles named. Do not overfeed, but if possible endeavor to have the animal consume and utilize a pound and a half of concentrates for each 100 pounds of live weight. For roughage feed the best provender available. Leguminous hay like that of the cowpea vine, clover or alfalfa is preferable.

HANDY MOVABLE FENCE.

Easily Made and Suitable For Fencing Hogs or Cattle.

Replying to a request for a way to divide a hog pasture without building a permanent fence, G. W. Walker submits this plan in Breeder's Gazette. It may also be used for fencing stock or any similar purpose:

It is made by building panels of fence, taking four common fence boards 6 inches wide and 12 feet long (or 16 if desired) and laying them flat on the floor from four to six inches apart. Then about one foot from each

MOVABLE FENCE.

end nail on cleats of same material with clinch nails and also one such cleat in the middle of the panel. Make as many of these as will reach across the field you wish to divide and distribute them where you want to put them up. Now take similar material and make Fig. A as shown in cut, making notches like 9 and 10 in cut two inches wide and three inches deep in center of crosspieces. Make one more of these than you do of the panels and distribute in the same way.

Now stand Fig. A up and place 1 and 3 of one panel together with 5 and 7 of the next panel in notches 9 and 10 of Fig. A, lapping the panels about one foot, and so on until your fence is erected across your field. If you have larger stock than hogs on each side of the fence, you can prevent them rubbing against the fence by stretching one barb wire on each side and fastening with staples to Fig. A at 11 and 12. This makes a very durable fence, which can be put up quickly or taken down quickly and moved or piled away for future use.

Roof Preservatives.

For tin roofs, gutters, spouts and metal work an oil paint must be used. Plumbago and raw linseed oil, with a tablespoonful of drying japan to every two quarts, make a suitable paint for tin and will last for many years. Dry venetian red, oxide iron paint and Prince's metallic paint, all dry, mixed with oil and a little japan, make good roof paints. Apply roof paint thin, brush it out well and allow no surplus around the edges.

Halesia or Silver Bell Tree.

Halesia tetraptera, popularly known as snowdrop or silver bell tree, so called because of the resemblance of its flowers to the ordinary snowdrop, is one of our prettiest shrubs or low growing trees for large lawns or parks. It is of a low spreading habit, blossoming profusely in April or May.

Its pure white pendent flowers are about five-eighths of an inch in length and hang in clusters on last year's growth. The leaves are about the size of those of the syringa, of a fine healthy color without gloss, says American Agriculturist.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal.

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere.

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] Superior Court, County of Inyo.

J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

MACK & FORBES and W. J. HARRIS, Attorneys for Plaintiff, Independence, Cal.

Notice to Creditors.

ESTATE OF F. D. PRATT, Deceased.

NOTICE is hereby given that the undersigned, MERCIE T. COE, Administratrix of the estate of F. D. Pratt, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them, with the necessary vouchers, within four months after the first publication of this notice, to said Administratrix at the late residence of said F. D. Pratt, deceased, in the Town of Big Pine, County of Inyo, State of California, the same being the place for the transaction of the business of said estate in the county of Inyo, State of California.

Dated April 11th, 1901.

MERCIE T. COE,
Administratrix of the Estate of F. D. Pratt, deceased.

MACK & FORBES, Attorneys for Administratrix.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 27th day of May, 1901, an assessment, No. 34, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the Secretary, at the office of the Company, Room 31, 13th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

OFFICE—Room 31, 13th Floor, Mills Building, San Francisco, Cal.

NOTICE FOR PUBLICATION.

DEPARTMENT OF THE INTERIOR.
LAND OFFICE AT INDEPENDENCE, CAL., July 5, 1901.

NOTICE IS HEREBY GIVEN THAT THE following-named settler has filed notice of his intention to make final proof in support of his claim and that said proof will be made before the Register and Receiver at Independence, Cal., on August 17th, 1901, viz.:

HIRAM C. HAMILTON,

for the SE¼ SW¼ Sec. 29, E½ NW¼, SW¼ NE¼ Sec. 32, Tp. 14 S., R. 36 E., M. D. M.

He names the following witnesses to prove his continuous residence upon and cultivation of said land, viz: Fred B. Stewart of Lone Pine, and Arthur Shepherd, Henry Glade and Albert W. Simonson of Thebe, Cal

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains on Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spen examining the famous Comstock Mines (now being worked to a perpendicular depth of 2,10 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above Round Trip Tickets for sale at Ticket Office Reno. aug-tf

The Change of Life

Is the most important period in a woman's existence. Owing to modern methods of living, not one woman in a thousand approaches this perfectly natural change without experiencing a train of very annoying and sometimes painful symptoms.

Those dreadful hot flashes, sending the blood surging to the heart until it seems ready to burst, and the faint feeling that follows, sometimes with chills, as if the heart were going to stop for good, are symptoms of a dan-

MRS. JENNIE NOBLE.

gerous, nervous trouble. Those hot flashes are just so many calls from nature for help. The nerves are crying out for assistance. The cry should be heeded in time. Lydia E. Pinkham's Vegetable Compound was prepared to meet the needs of woman's system at this trying period of her life.

It builds up the weakened nervous system, and enables a woman to pass that grand change triumphantly.

"I was a very sick woman, caused by Change of Life. I suffered with hot flushes, and fainting spells. I was afraid to go on the street, my head and back troubled me so. I was entirely cured by Lydia E. Pinkham's Vegetable Compound."—MRS. JENNIE NOBLE, 5010 Keyser St., Germantown, Pa.

The Jockey's Bogy.

"The bogy of a jockey's life is 'taking on flesh,'" says Ainslee's. "He dreads this as a beauty dreads to lose her charms, and his whole thought from the age of 16 to 25 is to avoid the catastrophe. This is the pernicious feature of the life and distinguishes it as a healthful sport from boxing or from football, in which the physical being is developed according to the laws of nature and is not outraged or balked. In order to reduce his weight nine pounds Monk Overton once remained in a Turkish bath from 10 p. m. one day until 2 p. m. the next, with no nourishment except a cup of tea and some toast.

"Again, Mike Bergen, mounted on a favorite, rode such a poor race that the stewards came to the paddock to investigate and punish him for fraudulent riding. They forgave the performance, however, when they found him collapsed and unable to speak. Knowing that he had to ride at a certain weight, Bergen had spent 48 hours in a Turkish bath, eating nothing whatever. When he reached the track, he was so weak that a stimulant was necessary. The one drink of whisky he took so demoralized his faculties that he could scarcely keep his seat in the saddle.

"Such a violation of physical development at the age when a boy should be most rapidly maturing makes it difficult for a jockey ever to become robust. Moreover, the mere riding of a race is a terrible drain on the nerve force of a jockey. A boy may lose a pound of weight in a hard race."

Difficult to Treat.

"Well, what is the matter with your husband?" the physician asked as he laid down his repair kit and removed his gloves.

"Imaginary insomnia," replied Mrs. Fosdick.

"Imaginary insomnia?" repeated the physician inquiringly.

"That's what it is. He thinks he doesn't sleep at night, but he gets lots more sleep than I do."—Detroit Free Press.

A Philosopher.

Wife—There's a burglar down cellar, Henry.

Husband—Well, my dear, we ought to be thankful that we are up stairs.

Wife—But he'll come up here.

Husband—Then we'll go down cellar, my dear. Surely a ten room house ought to be big enough to hold three people without crowding

HEAD ACHE

"Both my wife and myself have been using CASCARETS and they are the best medicine we have ever had in the house. Last week my wife was frantic with headache for two days, she tried some of your CASCARETS, and they relieved the pain in her head almost immediately. We both recommend Cascarets."

THE FLEA A PIRATE.

IS FEROCIOUS, BLOODTHIRSTY, AND SAMSONIAN.

His Strength in Proportion to His Size Is Greater than That of Any Other Living Thing—His Pugnacity and His Many Activities.

The flea possesses all the piratical instincts—thirst for blood, rapacity, cruelty. He is, further, as ingenious in devising tortures as he is untiring in the torment of his victims.

The flea is built upon lines that make him forever hungry. But his continuous performance appetite is far from being the oddest thing about him. Proportionately to size, he is the Samson of the universe. If an elephant had the same relative strength he could come near to oversetting a steel-framed skyscraper.

A flea, wingless, with a body out of all proportion to his head, and all over less than the sixteenth of an inch in length, will leap upon a plane surface more than a yard. This, too, when he has been hatched in hair, or straw, or sand, and never known what it was to have a full meal. More marvellous still, he will spring perpendicularly upward from one to two feet. Fancy a man or boy standing flat-footed and all of a sudden leaping over a church spire.

Wonderful things have been done with fleas. They have been put into gold collars and set to drag about lengths of gold chain at least one hundred times their own weight. Further, an ingenious goldsmith back in the leisurely seventeenth century made a coach and four in ivory and gold, with a coachman upon the box, postilion and outriders, yet all so tidy it was dragged by a pair of fleas, working in gold collars. They worked under a bell glass, and were exhibited in London and Paris.

To fight like cats and dogs is the synonym of continuing strife, but even cats and dogs do not fight so bitterly as cat fleas and dog fleas. Oddly enough, the cat fleas are bigger than the dog fleas, so should be always victors. But here as elsewhere condition tells. If the cat fleas are lazy and luxurious—fat they can never grow—the small, lean, keen-beaked dog fleas kill them out.

The combatants stand up to fight quite like a pair of prize-ring ornaments. As they have six legs, they have plenty to stand on and still spare a couple with which to belabor each other. Upon neutral ground, as a floor or walk, the cat and dog fleas keep the peace. But let one invade litter or a coat sacred to the other, and there is straightway a fight to a finish. Something even more curious than this inborn antipathy is that dog fleas will not live upon a cat nor cat fleas upon a dog.

Fleas lay eggs after the insect manner, which hatch out tiny wrigglers very nearly invisible to the naked eye, yet capable of feeding on moisture and microbes—at least one judges that to be the diet, since fleas breed so largely in sand, hair, straw and litter where other food is lacking—and after a while spinning themselves cocoons. The cocoons are no bigger than tiny grains of sand, but under the microscope show as semi-translucent ovals beautifully banded with pink and pearl. They are formed upon top of the matrix, which ever it may be where the sun or the light can strike them fair. Rain just at the hatching time often kills a whole brood of sandfleas.

A flea's beak is sharp and hard, something like a bird's, only more pointed. A fleabite is not poisonous, save and except in rare cases where a flea has previously been biting infected tissue. Certain French scientists have shown that both fleas and bedbugs could thus carry tubercular infection. Further, rats and rat fleas are greatly dreaded as helping to spread the fearful bubonic plague.—New York Sun.

THUMB REVEALS CHARACTER.

Unsuspected Traits Discovered by a Study of This Member.

The thumb confesses the man; no man is clever enough to deceive his thumb. For all time it has been divided into three parts typifying the three qualities that master the world—will, logic and love. The first or nail phalange signifies will; the second, logic; the third, which is the boundary of the Mount of Venus, love. When the thumb is unequally developed, and the first phalange is extremely long, it is neither love nor logic that governs the individual, but merely sheer will. If the middle phalange be much longer than the first, reason predominates, yet the man may not have the power to will himself to do that which his reason dictates. When the third phalange is long and the thumb is short, man is revealed as the slave of the senses, guided neither by will nor reason. If the thumb be supple-jointed the individual is easy-going, spendthrift, careless of time, money, energy, opportunity and all things. If it be firm-jointed he is cautious, watchful, keen, diplomatic, tireless in planning, confident and sure of success, self-poised and self-controlling, says a writer in the Ledger Monthly.

Souvaroff, celebrated for the strength of his will; Danton, that magnanimous soul, who took upon him the disgrace of a crime to save his country; Galileo, Socrates, Newton, Leibnitz, St. Simon, Fourier, Owen—those profound reasoners, those bold innovators—had infallibly very small thumbs. Voltaire, the man of the world, whose heart was subject to his brain, had enormous thumbs.

The intimate psychic connection between the mind and the thumb, revealed by science in a thousand phases, makes it folly to deny that the thumb is the thermometer of character, and the barometer of mental health.

KATE CHASE'S GREAT AMBITION.

She Wished Her Father to Be President and Worked for His Nomination.

The story of "The Dashing Kate Chase and Her Great Ambition," is told by William Perrine in The Ladies' Home Journal. Born in 1840, she early began to exhibit a masterful spirit, to study politics, and to dream of the possibilities in store for her when her father, Salmon P. Chase, was proposed as a candidate for the Presidency in 1856, and again in 1864. When he was called to a Cabinet position he had been married three times, and it was whispered that he was about to make a certain lady his fourth wife. But the resolute Kate had made up her mind that no one should step in between her and her father, and one day when the lady called she was made so keenly to feel that she was an intruder that the budding romance was blighted, and Chase remained a widower.

Even after Kate's brilliant marriage to Senator William Sprague, of Rhode Island, she still cherished the ambition to see her father installed in the White House, and was most gracious to those who were likely to be influential in helping her to advance his interests. When he was appointed Chief Justice she saw in it only a scheme to head off his Presidential aspirations forever, and said, half jocosely, half reproachfully, to Senator Sumner, who had voted for the appointment: "And you, too, Mr. Charles Sumner, in this business of shelving papa! But never mind, I will defeat you all!"

In 1868 she nearly succeeded in getting the Democratic National Convention to carry out her wishes. It was in session in Tammany Hall, New York City, and she kept in communication with it by messengers, waiting anxiously for the moment when it was believed her father would carry all by storm. On the fourth day the moment seemed to have arrived, and her heart leaped with joy. But the expected stampede did not come, and the impatient daughter was almost moved to go herself to Tammany Hall. Indeed, there were afterward some politicians who observed that if she could have gone among the delegates on the floor, she might have been able at the crucial point to have swung the convention to the Chief Justice. Instead, Horatio Seymour was nominated; and Kate Sprague that night was the most unhappy woman in the land.

A FAMOUS BANK.

Old London House Whose Name Figures in Romance and History.

If Londoners have any real sentiment to waste it should rather be directed toward the approaching demolition of the time-honored though frowning and repellent frontage of Coutts' bank. The name of it conjures up the thoughts of heaps of gold second only in size and amplitude to those of the Bank of England. Is not Coutts' the largest private bank in England, and has it not a more extensive connection than any other with the "nobility and landed gentry?" To possess "a snug banking account at Coutts'" has been the stock synonym for riches with all the novelists of the nineteenth century.

"Great George our King" opened an account with the shrewd old Scotchman who not only founded a bank, but founded a family by marrying each of his three daughters to men of title. The Duke of Wellington was another of his most famous clients, and Dr. Johnson and Sir Walter Scott banked their moneys in his keeping. The history of such an institution, could it ever be written, would be far more interesting than any romance.

It is understood that the building will not be wholly destroyed, and the most notable features of the interior will, of course, be preserved. These include costly marble chimney pieces of the florid Cipriani school and a valable collection of portraits of the friends of the founder of the bank, while the dining-room is described as being "hung with Chinese subpects on papers which were sent to Mr. Coutts by Lord Macartney while on his embassy to China in 1792-95."—London Telegraph.

Not a Linguist.

He pulled himself up at the hotel table, tucked his napkin under his chin, picked up the bill of fare, and began to study it intently. Everything was in restaurant French, and he didn't like it.

"Here, waiter," he said, sternly, "there's nothing on this I want."

'Ain't there nothin' you would like for dinner, sir?" inquired the waiter, politely.

"Have you got any sine qua non?"

The waiter gasped.

"No, sir," he replied.

"Got any bona-fide?"

"N-no, sir."

"Got any semper eadem?"

"No, sir, we haven't."

"Got any jeu d'esprits?"

"No, sir, not one."

"Got any tempus fugit?"

"I reckon not, sir."

"Got any soirees dansantes?"

"No, sir."

The waiter was edging off.

"Got any sine die?"

"We ain't, sir."

"Got any pluribus unum?"

The waiter's face showed signs of intelligence.

"Seems to me I heerd of that, sir," and he rushed out to the kitchen, only to return empty-handed.

"Maybe you've got some beef and cabbage and a gooseberry tart?"

"Sure we have, sir," exclaimed the waiter in a tone of the utmost relief, and he fairly flew out to the kitchen.—London Tit-Bits.

A Strange Flower.

One of the strangest botanical curiosities in the world is the "Wonder-Wonder" flower found in the Malay peninsula. It is simply a blossom, without leaves, vine or stem, and grows as a parasite on decayed wood. This extraordinary flower is something like a yard in diameter, and has a globular cup in the middle with a capacity of five or six quarts.

Eve Lived Too Soon.

If Mother Eve had lived in these days she would have captured the serpent, snipped off his fangs with a pair of wire cutters, and be now posing as the "Queen of the Reptilian world" on the midway of the Pan-American exposition.—Baltimore World.

When a politician is weighed in the balance he is usually found wanting—an office with a big salary and little work.

The man whose education is finished helps to swell the undertaker's bank balance.

COULDN'T CALL HIM CRAZY.

Just a Newspaper Headliner Mumbling From Force of Habit.

The young man with the haggard look sat in the rear car of an elevated train, staring and staring at one of the advertisements.

"English beauty shoes," he mumbled to his companion. "That's what he says."

"Yes," said the other, "but that's too short."

"Hm, hm," the haggard man replied. "Beautiful shoes from England"—

"That won't fit. It's long," was the curt reply.

"Well, then, 'Beautiful English shoes'"—

"That's only three words. You've got to have four, you know."

"That's so, that's so. Ah, I have it!" he cried so loud that all the other passengers in the car gave a jump. "'English shoes of beauty,' 23 letters and spaces at last."

A compassionate old man looked up from his newspaper.

"What's the matter with your friend?" he asked. "Is the chap suffering from delirium tremens?"

"Oh, no," the man addressed replied assuringly. "You see, he's just through with his night's work on a morning newspaper. He's a headline writer, you know, and after a fellow has scribbled off headlines of 23 letters and spaces for about eight hours steady he contracts that habit and can't get over it. Every advertisement, every scrap of paper he sees for several hours afterward until his mind gets rested—well, he begins to count the letters and spaces and turn the wording into a headline that will fit. It isn't exactly delirium tremens. It's something worse. The headlines of 23 letters and spaces go wriggling around in that poor overworked brain much worse than snakes."—Chicago Chronicle.

MILTON RELICS AT HARVARD

Signature in an Autograph Album and the Poet's Copy of "Pindar."

The Harvard library numbers among its treasures an autograph of Milton and a copy of "Pindar" annotated in Milton's own handwriting, with marginal notes in Greek and Latin. Both of these rarities were bequeathed to the university by Charles Sumner.

The "Pindar" is dated 1620 and was doubtless used by Milton during his stay at Cambridge university. At the end he has added an alphabetical index in manuscript, occupying two closely written pages of all the authors cited in his notes, with references to the pages in which their names occur.

Milton's autograph is found in the pages of an autograph album or visitors' book kept, according to a custom common in the sixteenth century, by a Neapolitan nobleman, Camillus Cardoyn by name, who resided in Geneva from 1608 to 1640, where Milton, apparently, visited him. Another autograph in this same album among the hundreds which it contains is that of Thomas Wentworth, the unfortunate Earl of Stafford. Milton's signature is dated Jan. 10, 1639, and is appended to a Latin motto—"Travel changes one's sky, but not one's mind," it may be freely rendered and a quotation from his own "Comus:"

"If Vertue feeble were,
Heaven itselfe would stoope to her."

The most notable Milton manuscript known to exist is a little book now owned by Trinity college, Cambridge, England, which contains the poet's copies of his so called minor poems, including "L'Allegro" and "Il Penseroso." In this country, however, it is said that the only original memorials of the great author of "Paradise Lost" are to be found in these two time stained volumes in the possession of the Harvard library.

A Cement Which Resists Acid.

In some branches of industry a cement which is proof against the influence of acids is absolutely essential, and such a substance can be prepared by melting together one part of India rubber with two parts of linseed oil. This should be gradually incorporated with three parts of white bole so as to form a plastic mass. This when heated softens but very little. Though it does not easily dry upon the surface, when once set it is not affected at all by hydrochloric acid and but very little by nitric acid. Its drying and hardening is materially promoted by mixing with one-fifth of its weight of litharge or minium.

Not a Bargain.

"How much will you charge for marrying us, squire?" asked the stalwart bridegroom, painfully conscious of his new suit of ready made clothing.

"I am entitled by law to a fee of $2," replied the justice of the peace.

"Perhaps, Alfred," timidly suggested the blushing bride, "we might get it done somewhere else for $1.98."—Chicago Tribune.

Marveled at It.

"Yes," said Mr. Henry Peck, "I like to go to the circus. One sees so many daring deeds. For instance, did you ever see anything more reckless than the way in which the ringmaster cracks his whip at the ladies who ride the horses?"—Baltimore American.

Athletes are short lived, and giants seldom live out the allotted time of threescore years and ten. They expend too much vitality.

Eczema

How it reddens the skin, itches, oozes, dries and scales!

Some people call it tetter, milk crust or salt rheum.

The suffering from it is sometimes intense; local applications are resorted to—they mitigate, but cannot cure.

It proceeds from humors inherited or acquired and persists until these have been removed.

Hood's Sarsaparilla

positively removes them, has radically and permanently cured the worst cases, and is without an equal for all cutaneous eruptions

HOOD'S PILLS are the best cathartic. Price 25 cents.

NERVES GAVE WAY.

Had Headache, Backache and Serious Indigestion—Pe-ru-na Cured.

Miss A. Brady, Corresponding Secretary Illinois Woman's Alliance, writes from 2725 Indiana avenue, Chicago, Ill.:

Miss A. Brady.

"Last year from continued strain in literary work I became very much exhausted, my nerves seemed to give way, and I had backache, headache and serious indigestion. One of my friends suggested that I try Peruna. It certainly acted like magic on my system.

"Within ten days I felt new life and health given me, and by taking an occasional dose off and on when I feel extra tired, I keep my system in perfect order."—Miss A. Brady.

In view of the great multitude of women suffering from some form of female disease, Dr. Hartman, the renowned specialist on female catarrhal diseases, will direct the treatment of as many cases as make application to him during the summer months without charge. Address Dr. S. B. Hartman, President of The Hartman Sanitarium, Columbus, Ohio.

Don't Believe All You Hear.

A man in a railway carriage was snoring so loudly that his fellow passengers decided to awake him. One particularly sensitive old gentleman shook up the sleeper with a start.

"What's the matter?" he exclaimed.

"Why, your snoring is annoying every one in the carriage," said the old gentleman testily.

"How do you know I'm snoring?"

"Why, we can't help but hear it."

"Well, don't believe all you hear," replied the culprit and went to sleep again.—London Standard.

Took No Chances.

"I'll tell you how it is, parson," said the board of trade clerk. "You've married us, and you'll admit that it is a good deal of a speculation. Now, I'll pay you $2, the regular fee, now and call it square or I'll wait 60 days and pay you what experience teaches me the job is really worth to me, even if it's $100."

The clergyman looked long and earnestly at the energetic, determined young woman and sighed.

"Give me the $2," he said.—Chicago Post.

They Hadn't Made Up.

"Well," said he, anxious to patch up their quarrel of yesterday, "aren't you curious to know what's in the package?"

"Not very," his wife, still unrelenting, replied indifferently.

"It's something for the one I love best in all the world."

"Ah, I suppose it's those suspenders you said you needed."—Philadelphia Press.

A Serious Complaint.

What made you leave your place wif dat gemman?" asked Miss Miami Brown. "Didn't he pay you right?"

"Yes," answered Mr. Erastus Pinkley. "He paid fus' rate, but his clothes was so out of style dat I was almost fohced to keep out of society."—Washington Star.

The fig is the favorite fruit among animals, and horses, cows, hogs, sheep and goats will eat this fruit as readily as man. The elephant considers it a dainty, while all the fowls greedily devour figs.

The average Chinaman doesn't feel that he needs Christianity. He has excellent teachings of his own which he doesn't follow.

Got Grip? Try Fryer's Abietene Cough Balsam

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

Beware of Ointments for Catarrh that Contain Mercury

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is tenfold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists, price 75c. per bottle.
Hall's Family Pills are the best.

For Consumption try Fryer's Abietene Cough Balsam.

CLEANLY WOMAN.

Erroneously Thinks By Scouring Her Scalp That She Cures Dandruff.

Cleanly woman has an erroneous idea that by scouring the scalp, which removes the dandruff scales, she is curing the dandruff. She may wash her scalp every day, and yet have dandruff her life long, accompanied by falling hair, too. The only way in the world to cure dandruff is to kill the dandruff germ, and there is no hair preparation that will do that but Newbro's Herpicide. Herpicide killing the dandruff germ, leaves the hair free to grow as healthy Nature intended. Destroy the cause, you remove the effect. Kill the dandruff germ with Herpicide.

Coated with chocolate, very small and easy to take as sugar, are Adams' Sarsaparilla Pills, for sick headache, constipation, biliousness, dyspepsia, sallow complexion. They purify the blood. 10c, 25c. Druggists

E. W. Grove

This signature is on every box of the genuine **Laxative Bromo-Quinine Tablets** the remedy that cures a cold in one day

Amateurs, develop your own plates at home. K. G. powder developers, six packages 25 cents. For sale by all photo-supply dealers, or Kirk, Geary & Co., 330 Sutter St., San Francisco, Cal.

I am sure Piso's Cure for Consumption saved my life three years ago.—MRS. THOS. ROBBINS, Maple Street, Norwich, N. Y., Feb. 17, 1900.

Did Not Speak With Knowledge.

On a clear and beautiful Sunday morning in a parish not far from Milwaukee a priest was pleased to note the presence at service of an unusually large number of the male members of his congregation, and, since he had been informed of considerable trouble in his flock, he considered it an opportune time to give those present a friendly, yet pointed, sermon on forbearance. He charged the men, particularly the married men, to be ever kind, courteous and considerate to women, to overlook all opportunities for trouble, to be good to them and solicitous of their welfare, and finished with a masterly peroration relating to connubial decency on the part of husbands.

Shortly after he met an old and respected member of the church and said:

"Michael, I was glad to see you at church Sunday. And how did you like the sermon?"

"Well, father," the old man answered, "the language was beautchiful, and the delivery was foine; but, be jabbers, father, if you was only married about three months you'd tell a different story!"—Milwaukee Sentinel.

Resented the Allegation.

Two men zigzagged unsteadily down Long street the other morning shortly after midnight. It was a case of "united we stand, divided we fall." Each of course was trying to steer the other safely home. At length No. 1 came up against a pole and held fast. No. 2 tried in vain to pull him forward. Then No. 1 became impatient at the other's obstinacy and spoke very frankly:

"Shay, you're—hic—you're a shump—thash what you are! I've seen worse men 'n—hic—you in jail!"

This was more than No. 2 could stand. He felt that his honor as a gentleman had been sullied, and, bracing himself stiffly, he replied, with spirit:

"If you shay you've—hic—seen worse men 'n me in jail, why—hic—you're a liar, thash what you are!"—Ohio State Journal.

Misplaced Ability.

The young collegian snapped his watch lid down with a sigh of relief. "Preached 47 minutes," he announced to his neighbor. "We ought to get a man with wind like that on our track team."—Exchange.

Peace in the Philippines.

Peace in the Philippines is bound to prove profitable to all concerned. Warring conditions, whether they be in the Philippines or in the human stomach, are equally disastrous. If your stomach has rebelled, there is one authority that will quickly subdue it. It is Hostetter's Stomach Bitters, and it cures constipation, indigestion, biliousness, nervousness and dyspepsia. See that a private Revenue Stamp covers the neck of the bottle.

The Canadians are to investigate the Chinese. We thought Bret Harte had attended to that little matter long ago.

The Ideal Laxative.

No more ancient pill poisons and black draughts, but up-to-date, scientific, harmless, palatable, potent Cascarets Candy Cathartic. Druggists, 10c, 25c, 50c.

YOU KNOW WHAT YOU ARE TAKING

When you take Grove's Tasteless Chill Tonic because the formula is plainly printed on every bottle showing that it is simply Iron and Quinine in a tasteless form. No Cure, No Pay. 50c.

Hoitt's School,

At Menlo Park, San Mateo County, Cal., with its beautiful surroundings, perfect climate, careful supervision, thorough instruction, complete laboratories and gymnasium, easily maintains its position in the front rank of schools for boys on the Pacific Coast. Ira G. Hoitt, Ph. D., Principal.

Fryer's Abietene Cough Balsam saves Doctor Bills

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

HIGH PRAISE.

Rev. Enoch Hill, of Grand Junction, Iowa, Indorses Dr. Williams' Pink Pills for Pale People.

From the Era Headlight, Grand Junction, Ia.

No higher praise can be offered nor better references given concerning the virtues of Dr. Williams' Pink Pills for Pale People than the many voluntary testimonials from ministers of the gospel which have come from all parts of the country. One of these is from Rev. Enoch Hill, pastor of the M. E. church of Grand Junction, Iowa, who says:

"I am a firm believer in the efficacy of Dr. Williams' Pink Pills for Pale People, the remedy having been used in my family with highly gratifying results. For three or four years I was a sufferer from general debility. I seemed to be lacking in vitality, was tired out most of the time and sleep gave me no rest or refreshment. I was troubled with headache much of the time and my illness incapacitated me for energetic work in my pastorate.

"A sister-in-law living in Nebraska, who had suffered very much and who had used Dr. Williams' Pink Pills with good results, recommended them to me and I decided to try them. I had taken but two or three doses of the pills when I found that they were helping me, and further use of the remedy brought such relief that I am glad to offer this public recommendation of Dr. Williams' Pink Pills for Pale People in the interest of suffering humanity.

"My wife was troubled much as I was and the pills also proved of the greatest benefit in her case.

"I have recommended the pills to many whom I have met in my work and am always pleased to indorse the medicine, the excellence of which has been established within my own observation."

Signed, REV. ENOCH HILL.

Chills and Fever is a bottle of GROVE'S TASTELESS CHILL TONIC. It is simply iron and quinine in a tasteless form. No cure—no pay. Price 50c.

In all cases of physical or mental exhaustion the use of a little Gilt Edge Whiskey will be found invaluable as a stimulant. Wichman, Lutgen & Co., San Francisco, Cal., Sole proprietors for U. S. A.

CANCER SSS

THE ONLY HOPE

The diseases most feared are those which are inherited—handed down from generation to generation, and family to family. By far the most destructive of these is Cancer, which finds the greatest number of its victims among the children and grand-children of those whose blood was tainted with this dreadful malady. You may carry this poison in the blood for years, but as the vital powers begin to wane a slight bruise or cut, wart or mole, sore or pimple may develop into Cancer. From middle life to old age is the time when the slumbering poison is most apt to break out, a sore or ulcer often degenerating into Cancer, and Tumors become more progressive and ulcerate through the skin, the sharp, shooting pains causing the most intense suffering.

The Cancer patient naturally grows despondent as one after another the usual remedies fail, and the sore shows no sign of healing. The impurities that have been accumulating in the system, perhaps for generations, cannot be eliminated nor the poisoned blood made pure by salves, washes and plasters. The proper treatment is to purify and build up the blood, remove the cause, when the sore or ulcer heals.

Mr. J. B. Arnold, of Greenwood, S. C., writes: "A tiny ulcer came, just under the left eye. It began spreading, and grew worse rapidly, destroying the flesh as it went. As Cancer is hereditary in my family I became thoroughly alarmed, consulting the best physicians and taking many blood medicines, none of which did me any good, when one of our leading druggists advised me to try S. S. S., and by the time I had taken the second bottle the Cancer began to show signs of healing, the discharge grew gradually less and finally ceased altogether, the sore dried up and nothing remains but a slight scar. I feel that I owe my life to S. S. S."

S. S. S. goes directly into the blood, destroys the virus, stops the formation of Cancerous cells and cleanses the system of impurities. What we say of S. S. S. as a cure for Cancer is supported by the testimony of those who have tested it and been restored to health.

Begin in time, don't wait until the blood is so polluted and the system so thoroughly saturated with the poison that no medicine, however efficacious, can check the progress of the disease. If there is a taint in your blood get it out at once, don't wait for some external evidence of it, the appearance of a tumor or ulcer. We have prepared a special book on Cancer which we will mail free. Our physicians are ready to help you by their advice and such direction as your case requires. Write us fully and freely—no charge for medical advice. THE SWIFT SPECIFIC CO., ATLANTA, GA.

FARMING NOT SO BAD.

I've bin readin' in the papers
How big fortunes have bin made
By puttin' cash in futures—
It put farmin' in the shade.

It seemed as though 'twas easy
Jes' to pile up heaps o' gold—
Accordin' to the papers
An' the stories that they told.

Some fellers made a million
In the blinkin' of an eye,
An' since money's made so easy,
I made up my min' to try.

I've bin lookin' up the matter,
But no one jes' seems to know
Why the fellers that has futures
Seemed so anxious to let go.

An' when I got mos' ready
Jes' to go into it blind,
The market up an' busted,
An' some folks come out behind.

So I'm goin' to stay at farmin',
Keep a peggin' right away,
An' when the sun is shinin'
You'll still find me makin' hay.

Farm work ain't so awful easy
Er excitin', I'll admit,
But then, you're middlin' certain
To git profits out of it.

MRS. BARRY'S HEARING

"MY!" exclaimed old Mrs. Barry, as with the freedom of one privileged, she walked without knocking into the bright and cozy kitchen of Miss Mora Minturn, "whatever does smell so good? Seems," with another sniff, "as ef it might be chili sauce."

Miss Minturn, in a trim gown of dark-blue print, protected by a great "bib" apron of turkey-red calico, nodded and smiled as she placed a chair for her unceremonious visitor.

As a rule, people in Tattleton were averse to exercising their lungs for the benefit of Mrs. Barry. It was almost impossible to make her hear, and if you succeeded in doing so, you were more liable to be misunderstood.

"Are you goin' to eat all that yourself this winter?" demanded the newcomer with her blinking eyes fixed on the big granite kettle two-thirds filled with the pungent, crimson, appetizing mixture.

Miss Minturn felt that a nod and veracity would now be at variance, so she turned toward her questioner and called out loud and clear:

"No. Most of this is for a person who has such an attack of rheumatism she could not pick up the tomatoes and onions and peppers and put them up herself."

Mrs. Barry continued to look at her blankly and inquiringly. Mora Minturn went up close to her.

"Part of the sauce," she exclaimed, close up to the ear of her guest, "is for Mary Ann Cotter, who lives in the Hollow."

"I should think his help could do that much cookin' for him!" declared the old lady. "He keeps enough of 'em. I allus wondered, More—seein' as how the talk has kinder got around to it—what for was the reason you and Marion Potter, of the Hall, didn't get married years ago, seein' you was sparkin' so long."

Mora smiled as she noticed how the old woman had confounded the two names, which, until this moment, had never struck her as being similar.

"I said Mary Ann Cotter, of the Hollow, Mrs. Barry!" she shouted.

The old woman flung up her hands with a gesture of irritation.

"I'm a little hard o' hearin', I allow, but I ain't so deaf that I ain't heered what you said. Some o' that there good-smellin' chili sauce is for Marion Potter, of the Hall. Now you see."

Miss Minturn smiled as she went back to the stove and fished her net bag of whole spices out of the thick red compound. It was useless to impress the truth on convinced Mrs. Barry. But she made her a cup of tea and brought out some snowy tea cakes for her delectation, and listened patiently and with apparent interest to her babble, until the prosy soul took it into her head to depart and hobbled off down the white, winding road.

A serious look came into Mora Minturn's face as she went on sealing up her chili sauce in the little wide-mouthed jars she had saved for the purpose.

Marion Potter! So people had not forgotten about her engagement to him twelve years ago. What was the foolish trifle about which they had quarreled? And she had sent him back his ring with a few bitter words expressive of her satisfaction at having discovered her mistake in time.

She had been wrong—all wrong. She had other suitors after that, to be sure, but she had found herself comparing them to Marion Potter, invariably to their detriment, and had discouraged all such attentions. And now that her mother was dead, and the boys were gone and married, and she lived alone in the cozy little homestead with only the orphan nephew she was bringing up, she found it lonely at times—very lonely.

Walking across the kitchen, she regarded her reflection in the little walnut-bound mirror that hung near the window. The face that looked back at her was fresh, unwrinkled and pink-cheeked, despite her thirty-six years. Her simple, active, kindly life had kept her youthful in mind and body. But she sighed as she turned away.

At that hour Marion Potter, stalwart, brown-bearded, gallant of bearing, was riding a black horse slowly homeward through the mellow sunset light. Many a maiden had sent him shy glances of admiration—many who would have been honored by his homage since those old days when he was known as the lover of Mora Minturn. But he was not the man to give his heart twice nor to a woman the injustice of offering her mere affection. So, surrounded by his books and dogs, he lived out his own life at his beautiful home on the hill.

"Hello! Look out!" he cried, suddenly reining up. "By George, but I nearly rode over you!"

The old woman coming toward him, who had so unexpectedly darted forward almost under his horse's hoofs, lifted a complaisant countenance, framed in by an antiquated poke bonnet, as she demanded:

"Don't you want to hire my sister Jane's Eliza, Mr. Potter?"

"No!" roared Marion Potter, who was aware that she was a little deafer than the proverbial post. "Why should I? I have three servants now."

Mrs. Barry comprehended, for she went on persistently.

"But Jane's Eliza can cook, Mr. Potter. An' if you take her, you wouldn't have to be havin' your chili sauce made out by Mora Minturn.

Mr. Potter gave a start.

"Eh? Steady, Kate! What are you talking about, Mrs. Barry?"

Mrs. Barry did not hear him. She mumbled on, however, and he listened.

"Says I to her, when I happened in there just now, 'Be you goin' to eat all the chili sauce yourself this winter?' An' she lowed that she was makin' some of it for you. Now, if your help ain't able to do that much without your given' it out, I jist think it 'ud pay you to have Jane's Eliza to do your cookin'."

Mr. Potter nodded leniently. He swerved his horse to one side, smiled back at Mrs. Barry and rode on, Mora Minturn unconsciously filling his thoughts.

Of course there was a mistake somewhere. But chili sauce. He could not remember when he had tasted it. To be sure, his housekeeper was not an adept at preparing table delicacies.

When he turned his horse's head out of the road leading to the hill and rode down that which led to the Minturn homestead he could not have told to save his life. Indeed he was not aware that he had done so till the tempting odor of sliced tomatoes assailed his nostrils, and at the same second he caught sight of Miss Minturn in her garden, snipping away at some belated blossoms of marigold, phlox, honeysuckle and mignonette.

So familiar the scene! So sweet and peaceful the place! So suggestive of home the trim form moving among the withered bushes! Could it be that twelve years have elapsed since he came here to visit his sweetheart? He swung down, secured Kate to the post, and walked up the path.

"Mora!" he said as he neared her.

She straightened up. Her garnered spoils fell from her apron. The pink in her cheeks deepened. She felt distinctly glad that she had put on her new maroon house gown.

"I met old Mrs. Barry a little while ago," he went on hastily. "She said you were putting up some chili sauce for me."

"Oh, did she say that? I could not make her understand that it was for old Mrs. Cotter—Mary Ann Cotter, of the Hollow."

"I say!" called a boyish voice, "that you, Mr. Potter? Never knew you to come up here before. Say, that setter you gave me is a daisy. Are you going to stay to supper? Is he, Aunt Mora?" coaxingly.

"If—he will."

"Of course he will," decided the unconventional nephew of Miss Minturn. "Come and see my safety."

He dragged his captive off in triumph. Such a supper as Mora got up in a short space "might tempt a dying anchorite to eat." The crisp broiled chicken, with the tiny transparent rolls of bacon surrounding it; the brown French potatoes, piping hot; the light, spicy gingerbread, the feathery biscuit, the old-fashioned strawberry preserves, the fresh-brewed fragrant tea.

Dick did most of the talking at supper—there was no doubt of that. But when Mora walked down to the gate with Mr. Potter, about 9 o'clock, he had two jars of the chili sauce, which at supper he had so praised, under his arm.

"Mora," he said, "I've seldom seen you for several years, although we have lived so near together. I am glad of this chance to say how sorry I have often been for my dictatorial tone that time, years ago. I was wholly in the wrong."

"No—I was too self-concentrated. It was I who was in the wrong"

"Mora, is it too late to forgive, forget and amend now?"

She held out her hand to him. He had to put two jars of chili sauce down on the gate post to take them. Kate neighed impatiently. Dick called from the lighted doorway. Around the reunited lovers closed the darkness, sweet with a thousand delicious autumnal scents.

"Guess, Aunt Mora," grunted Dick, disdainfully, next morning, "Mr. Potter didn't care much for your chili sauce, for all he begged for it so much. He went last night and left the jars standing on the gate post."—Vick's Magazine.

Steel of High Quality.

The high quality of Swedish steel was strikingly illustrated at a recent exhibition. A steel ribbon, cold-rolled, was twined like a silken band about one of the pavilions, the length of this monster tape being 2,354 feet, its width 8 inches, and its weight 1,146 pounds.

The repartee you think of when it is everlastingly too late to work off may save you a friend.

AGE OF MECHANISM.

WHAT THE PAST CENTURY HAS DONE FOR MAN'S COMFORT.

A Hundred Years of Invention, Whereby Conditions of Life Have Been Radically Changed—Wonderful Strides Made by Steam and Electricity.

This has been a most materialistic century, an age of mechanism. We have progressed wonderfully in our capacity for luxury, extravagance, comfort. A hundred years ago, our forebears were content to live by hand, as it were; now we live chiefly by complicated machinery. A century of progress has created demands which forced the dormant inventive skill of the world to put forth its best efforts. The world has made more progress in material things in the last hundred years than it did in all the centuries preceding. Civilized man's mode of existence has been totally altered by his inventions.

OLD STYLE OF SPINNING.

The world has gone patent mad. In the United States alone there were 623,535 patents granted in the sixty-two years from 1837 to 1898. During its existence the patent office has received more than $40,000,000 in fees. On carriages and wagons, more than 20,000 patents have been granted; on stoves and furnaces, 18,000; on lamps, gas fittings, harvesters, boots and shoes and receptacles for storing, 10,000 each. The total of patents for the civilized world is easily twice that of the United States. Thanks to these hundreds of thousands of contrivances, what were luxuries to our forebears of 1800 are commonplaces of existence to all classes, rich and poor, in 1900.

Distance Overcome.

With the invention of the steam engine the world shunk at a bound to a twentieth of its former size. Its vast distances ceased to be formidable. Where the lumbering stage coach or the plodding caravan took weeks the flying express covers the distance in a few hours. The trip across this continent used to be a matter of life and death. Now it is a matter of $100, and take your ease as you go. Without the railroad a close-knit nation thousands of miles broad, such as this country, would have been an impossibility. In 1825 the first steam railroad was opened between Stockton and Darlington, England. A year later a similar experiment was tried at Quincy, Mass., where the engine hauled stone for a distance of four miles. The first passenger road in this country was the Baltimore and Ohio, opened in 1830 with a mileage of fourteen miles. Today there are 210,906 miles of railroad in this country; 163,216 in Europe; 26,834 in South America; 31,102 in Asia; 9,978 in Africa, and 14,384 in Australasia.

MODERN SPINNING WHEEL.

Early in the history of railroading twelve miles an hour was considered recklessly fast. In January, 1899, a train on the Burlington route, in a run from Sliding to Arlon, 2.4 miles, did the distance in one minutes and twenty seconds, or at the rate of 108 miles an hour. The Empire State express made a record of 112 miles an hour in May, 1893.

Marine travel did not make so wonderful an advance in speed, through the agency of steam, as did land travel, but the progress in comfort and safety was greater. In 1790 John Fitch constructed a steamboat—and was considered a raving lunatic. This opinion was confirmed when his experiment proved a failure. Seventeen years later, Robert Fulton, another so-called visionary, backed by Joel Barlow and Robert T. Livingston, built the steamboat Clermont. She was soon dubbed "Fulton's Folly," and when she started for Albany on August 11, 1807, all New York was out to witness her failure. She went to Albany in the astonishing time of thirty-two hours, returning in two hours less. Now, when a gigantic ocean lines, with lifeboats as large as the Clermont, crosses the Atlantic in less than six days, we read the news in a bored sort of way, displeased that steamers should be so slow. Fulton's experiment led, years later, to the building of the Savannah, which actually crossed the Atlantic to the great astonishment of the entire world.

Communication between man and man was as expensive as it was slow in the old days. It cost a shilling to get a letter anywhere when the century began, and a shilling in those days represented far more than it now does. Now two cents will carry a letter to the Philippines or around the corner. Then the mail matter handled was too insignificant for statistics; now there are seventy-five thousand post offices in this country, handling postal matter of all kinds, per annum, of 6,576,310,000 pieces.

FIRST FULTON FERRY BOAT.

Rapid Communication.

As for "hurry messages" or "rush" letters, they were unknown. Prior to the experiments of Samuel F. B. Morse, inventor of the telegraph, signaling was done by means of fires on mountain tops, or by waving flags. Morse revolutionized this in 1837 when he announced the success of his experiments. The first telegraph line in this country was opened in 1844. In 1899 there were 904,633 miles of wire in use in this country; 71,393,157 messages were sent that year. Now we are on the threshold of an era when even wires will be no longer necessary and when we will be able to talk or to telegraph to Boston or New Orleans, or perhaps even London without any visible connection between the receiving and sending instruments.

The year 1800 knew no telephone. A hundred years later sees 772,989 miles of telephone wire in use, connected with 465,180 stations and answering 1,231,000,000 calls a year. When the century was new, it took six weeks to get news from Europe. To-day it takes six seconds. To-day there are 170,950 miles of submarine cables—all laid since the first cable, Field's great achievement, was laid in 1857.

Electricity has come to the aid of steam in traffic. Edison must be credited with the construction of the first successful electric road, that which he operated in 1880 at his home at Menlo Park, N. J. Since then electric traction has developed to such an extent that now there are more than 1,000 such street car lines in operation in the United States, with a capitalization of $1,700,000,000. The same electric power, only dimly known before the wonderful century, now lights our cities. In the United States there are half a million arc lights and about 20,000,000 incandescent lights—the latter being equivalent in light-giving capacity to 320,000,000 candle tips such as they used in 1800.

While the railroads have served to diffuse the population from one end of the land to the other, another invention has served to centralize it—the elevator. Because of it the huge sky-scrapers, the immense flat houses and the great factories have been made feasible. Formerly, when Shanks, his mare, was the fashion, people had to climb stairs. This tended to low buildings and the consequent spread of population. The elevator has changed all that. Huge caravansaries teeming with human beings accommodate as many as formerly could be crowded into respectable towns. The elevator makes practicable the centralization of commercial interests which is the basis of our great cities.

The Age of Steel.

The science of applied mechanics has reached a stage where further improvements seem impossible, yet every day new inventions and improvements on old are recorded at the patent office. In other times they built houses of wood and brick; now they construct them of steel and iron, and so carefully are the plans developed that the architect can say how many bolts will be required in the construction of a sky-scraper, how much each beam can support, where each piece of iron belongs. Wooden bridges have been supplanted by huge steel structures. Even stone towers are being abandoned for the lighter steel. The age of steel is here.

Our vast factory systems, employing thousands of workers and furnishing necessaries and luxuries alike at prices that would have made the citizen of 1800 gasp with amazement, have grown out of the substitution of machinery for the hand; the sewing machine, the steam loom, the ring frame and hundreds of other inventions. We do not yet grow crops by machinery, but no sooner has the fruit of the earth reached maturity than it is in the grasp of steel and steam, to be turned to human needs almost without the touch of human hands.

Photography and Printing.

Photography is a product of the last hundred years. To have one's picture "took" in ye olden times required considerable money and more patience, for it took some time to paint the portrait. Daguerre's daguerreotype, the forerunner of the photograph, hewed the way for the developments in this line of the last ten years. Photography and color printing together have been among the mightiest educational influences the world has ever known. Appealing to the brain direct through the eye, they have taught more swiftly and more widely than is possible to any other agency. To science their aid has been inestimable.

No man can judge of the influence of the printing press, which did not reach any considerable development before 1800. In 1800 the principal daily papers were published in Boston and New York City. They were marvels of staid conservatism. They permitted no news younger than a week to creep into their columns. As for the paper on which they were printed, respect for age prevents a description. The type, hand-made and hand-set, leaned either all one way or in any direction most comfortable. It may have been superlative work for those days, but nowadays new type is cast while being set; paper comes in rolls from two to four miles long; presses run off 80,000 complete newspaper an hour. The press, which is the most powerful agent of progress, is in itself typical of the advance of the century.—Washington Star.

Ancient Records.

From Bombay comes the intelligence that records dating back to the first century of the Christian era have been discovered by Dr. Stein in the course of his explorations in Chinese Turkestan. The famous traveler and antiquarian came upon a store of some 300 documents, together with a quantity of clay seals and many inscribed wooden tablets bearing dates A. D. 36 to A. D. 72.

Many a man will row a long way up stream simply for the privilege of floating back.

Children's Corner

A Short Talk to Boys.

If it becomes necessary for you to leave school for a time and go to work, do it gracefully. Work is honorable. Don't be afraid of it. It would be an excellent idea for everybody to learn a trade. The old Jewish law made it obligatory, asserting that if a man neglected to teach his son a trade he did the same as make him a thief. The Emperor of Germany is a bookbinder. The fact that you have a trade need not make you work at it, but with a good trade at his fingers' ends and good health to back it, a man is seldom floored, no matter where he finds himself. If you start to learn a trade, remember that the harder you work, and the more closely you apply yourself, the sooner you will outstrip all your chums and land on the top of the ladder where situations are many and wages are high. Don't be afraid to work. Don't be content with merely putting in the allotted time, but try and find out the best way to accomplish the work you have to do in the neatest and most expeditious manner. You may think that effort of this kind is not appreciated, but it is, and when some fine day there is a chance for promotion, and when you find yourself singled out from half a dozen of your chums, and sent up a step higher, don't attribute it to luck, but to the fact that your employer saw and appreciated the fact that you were careful and painstaking and took this method of rewarding your efforts.

On the other hand, if you go fooling along, doing just as little as you can, and not even that until you are told repeatedly, and then in a slipshod and slovenly manner, don't attribute it to luck when some other fellow is allowed to go several rounds above you on the ladder, at better pay. The employer has seen the difference between your way of doing things and the other boy's, and prefers his to yours, that's all.—The American Boy.

Thirsty Little Travellers.

Two little travelers are Teddy and May.
Long journeys they take in their morning's play,
Exploring the brooks, the garden and lane.
They range through the pasture and fields of grain;
They visit points of the greatest renown
Without so much as a shilling or crown.
Their forests are stretches of waving grass,
Their ocean the meadow, and there, alas!

AT THE OLD PUMP.

They often are shipwrecked among the flowers
And suffer delay for long, sunny hours.
But though to marvelous places they fare,
Their wanderings have but one end, for this pair
Always return with a hop, skip and jump,
To refresh themselves at the dear old pump.
—Youth's Companion.

Egg Inside of a Bottle.

Most young people think it would be impossible to put a hen's egg into a bottle without breaking the shell. It looks harder to explain than the king's question how the apple got into the dumpling, and for this reason the secret of the trick will please young people who love to make their friends wonder. Like many other curious things, it is easy enough when you know how.

This is the way it is done: Soak a fresh egg for several days in strong vinegar. The acid of the vinegar will eat the lime of the shell, so that, while the egg looks the same, it will be soft and capable of compression. Select a bottle with a neck a third smaller than the egg. With a little care you will have no trouble in pressing the latter into the bottle. Fill the bottle half full of lime water and in a few days you will have a hard-shelled egg in a bottle with a neck a third smaller than the egg.

Of course you pour off the lime water as the shell hardens. How the egg got into the bottle will be a conundrum that few can answer.

Tommy Was Tricky.

Tommy, aged 5, had a pony and a dog, and, while he liked them both, he liked the pony best. One day a visitor, to test his generosity, asked him if he would not give him the dog. "No," replied the little fellow, "but I'll give you my pony." This surprised his mother very much and she asked him why he didn't give the dog instead. "Don't say a word, mamma," whispered the little schemer, "when he goes to get the pony I'll sic the dog on him."

A Puzzling Question.

"Mamma," said little Elsie, looking up from her Sunday school book, "there's one thing I can't understand about Adam and Eve." "What is it, dear?" asked her mother. "I know where their meat and vegetables came from," said Elsie, "but where in the world did they buy their groceries?"

Wanted Her Foot Wakened.

Bessie, aged 4, had been sitting in a cramped position for some time playing with her doll. By and by, when she attempted to get up, she dropped back on the floor and exclaimed: "Oh, mamma, my foot's asleep! Won't you ring the breakfast bell, please, and wake it up?"

Grandpa and the Golden Rule.

"Would you like me to give you a quarter, grandpa?" asked 5-year-old Johnny. "Certainly," replied the old gentleman. "Very well," said the little diplomat, "then you should do unto others as you would that others should do unto you."

Not All Kinds.

Big Sister—Oh, I do hope papa will take me to the concert. I'm so fond of music.

Little Brother—Huh! Then why don't you never let me play my drum in the house?

Thought He'd Better Be Mended.

Small Johnny, on being told that he must be broken of a bad habit, said:

"Don't you think I had better be mended?"

NEWSBOYS' TRADING CENTERS.

One of Their Principal "Exchanges" North of Union Square.

There are newsboy centers, as well as news centers, in New York. The north side of Union Square is an important one, and there, at that hour of the afternoon at which the newspapers arrive from down-town, a crowd of small boys, of all the various ages and sizes which come under that classification, gathers daily. The Subway company has built a high wooden fence around its power house there and against this fence are a number of small square shelves, says the New York Evening Post. On these shelves the newspapers are piled as fast as they are thrown out of the delivery wagons and the boys rush around them, each one trying to get his stock of papers first.

The whole scene has the air of a diminutive stock exchange. They may not be picturesque, these small boys, but they are unquestionably alive. As soon as one gets his bunch of papers he tucks it under one arm, like a half-clipped wing, and flies to waylay the crowd of men that pours up from downtown along Broadway and 5th avenue at that time of day. A certain number, though, seem to prefer hanging around Union Square to argue and dispute, in their shrill little voices and to write derisive remarks, referring to each other's past and future, with chalk on the fence.

At the south side of the square, on a pile of dirt and stones, and just beneath the equestrian George Washington's outstretched hand, there is another knot of boys grabbing papers from the delivery wagons of one or two newspapers which only deliver their papers there, and not at the upper end of the square. The boys who have already received their papers scramble up on top of the pile of stones, and, sparrow-like, perch there with their heads on one side, looking down on and jeering at the hustling crowd below.

There are other newsboy centers at 6th avenue and 23d street, and indeed at many other points up town, but none so lively and exciting as the one at Union Square. Quotations of prices may not vary much there, but trade is always lively.

The Suburban State.

New Jersey may be called a suburban State, for its population has been distributed largely under the influence of two great and crowded centers just beyond its limits. Of these New York is much the more important. Nearly half the population of New Jersey resides within eighteen miles of New York, and a large proportion is directly suburban. One hundred thousand more live within twelve miles of Philadelphia. Six of the ten largest cities in the State—Newark, Jersey City, Hoboken, Elizabeth, Bayonne, and Orange—are largely tributary to New York, as Camden is to Philadelphia. In the other three, Paterson is on the finest water power in the State, Trenton is at the head of navigation on the Delaware, and has obtained some water power from the river, and New Brunswick is at the head of navigation on the Raritan, the largest river in the State.—From Economical Studies.

How the Brahmin Cleans His Teeth.

When the Brahmin cleans his teeth he must use a small twig cut from one of a number of certain trees, and before he cuts it he must make his act known to the gods of the woods.

He must not indulge in this cleanly habit every day. He must abstain on the 6th, the 8th, the 9th, the 14th, the 15th, and the last day of the moon, on the days of new and full moon, on the Tuesday in every week, on the day of the constellation under which he was born, on the day of the week and on the day of the month which correspond with those of his birth, at an eclipse, at the conjunction of his birth, at the equinoxes, and other unlucky epochs, and also on the anniversary of the death of his father or mother.

Any one who cleans his teeth with his bit of stick on any of the above-mentioned days will have hell as his portion.—From "Hindoo Manners," the Abbe Dubois.

A Pound of Spiders' Webs.

It has been calculated that if a pound of thread made from spiders' webs were required, it would occupy nearly 28,000 spiders a full year to furnish it.

The author's train of thought is a construction train.

DANGER AHEAD.

The tone of the Eastern press clearly indicates that the price the United States is to pay for the trade of China is the unrestricted immigration of Chinese to this country. As yet the laboring element of the country seems hardly aroused to the danger that threatens, although the California State Federation of Labor has in circulation a petition which reads: "We, the undersigned citizens of the State of California, respectfully urge upon the Congress of the United States that it re-enact at the earliest possible moment the Chinese Exclusion Act, which expires on May 5, 1902, with amendments to embrace all classes of Asiatics, including Japanese, extending its provisions to all territory under the jurisdiction of the United States, and making it perpetual in operation." Copies of this petition have been received by this paper and will be distributed for signatures.

There will be an organized and determined effort to prevent a re-enactment of the Geary Exclusion Act. The commercial interests of the country and the religious bodies are favorable to the immigration of Chinese for reasons that are well known; their influence is powerful and they are actively at work in the East. But we do not believe that there is an influential paper in the Pacific States that will stand by any party that does not favor Chinese exclusion. The Sacramento Record-Union says that American workingmen ought to wake up and meet this assault with a determined and solid front.

The great drouth which has been experienced by the Western States bordering on the arid region, at a cost of millions of dollars, has been the subject of much speculation. It is firmly believed by the people in the drouth-stricken area that were the arid lands themselves fully irrigated the winds which now blow hot from them and scorch and wither the crops of the States to their East would, by coming across green fields and well watered areas, be so modified and moisture-laden as to lessen the danger of such a dry period.

Jack Winters, the Selby underminer of gold, might have gone down to history as a "Napoleon of Finance" if he had possessed the secretive qualities of a smart cracksman. There are some ore shippers around this county who wouldn't die with grief if he had got away with the immense swag instead of landing it in the mud. However, there promises to be the usual hot wrangle over the $25,000 reward, and after a while the courts may hand down a few remarks concerning the compounding of a felony.

Every Indian by this time knows that he has no more right to take whisky from a white man than the white man has to give. Knowing the punishment that he is bringing on the white man's head, he makes himself as great a coward and criminal as the white man, and he should likewise be punished. If every Indian who bought or accepted was given a year in the State's Prison along with his white brother, this business would cease. The Indian is the nigger in the woodpile.—Carson News.

Cuba wants a reduction of our tariff on sugar and tobacco, and is opposed by those interests in this country. The Cuban people then pass some resolutions to the effect that if the sugar and tobacco men of this country do not let this government lower the tariff they will ask for annexation, which they say the American people would grant, and thus entirely ruin those interests in the United States.

The Unions that have the fewest and smallest disagreements with capital are those that preach and practice arbitration. Present times indicate that a new deal is necessary, somehow. For instance, Courts of Arbitration, founded by Federal law broad enough to recognize labor unions as such, would afford peace and justice.

It is pretty evident from a late Government report that the Indians have not all disappeared yet. There are no less than 268,000 of them still left in the United States. Forty-two thousand five hundred of them draw rations from the Government. That is quite a respectable family for Uncle Sam to feed.

Three men quarreled in a Kentucky town the other day and mortally wounded one another. This timely result ought to be considered a distinct victory to the community in which they lived.

Morgan, head of the steel trust, has turned down all offers to compromise with his workmen and the strike will have to proceed until one side or the other is starved or scared out.

A Colorado man has discovered a mine of ivory in the Klondike region, and is kicking because it isn't in the shape of billiard balls, piano keys and chess sets.

Atmospheric sharps say that even at the equator the average temperature of the sea at the depth of a mile is but four degrees above freezing point.

The Selby robber took $280,000 out of a 10-foot tunnel. The wildest visions of Cripple Creek and the bonanza days of '49 never equaled that.

A $300,000,000 coal trust is being incubated. Morgan is sitting on the egg.

The French farmers must be getting somewhat saucy, for we read in a cable dispatch from Lille, France, that a vast congress was being held attended by delegates from all the northern parts of France, to "protest against recent governmental measures threatening the agricultural and manufacturing interests of the north." Six thousand representatives were present to protest against increased tax on alcohol and other threatened governmental proposals. The farmers are probably producers of the raw material from which the alcohol is made. Six thousand delegates are a good many. We do not know how it will strike the government people in France; but if so many American farmers could get together on any proposition, Uncle Samuel would come to the front of the platform and propose three cheers for anything they mentioned. The trouble is always to get them together on any proposition. They have something to learn from France.—Rural Press.

It is understood that Comstock people are interested in the project of erecting a large reduction plant, to include a smelter, on the Carson River. A considerable quantity of Comstock ore now goes to San Francisco for reduction and it is believed that some very low-grade material could now be worked on the river with a proper plant installed. Tonopah is yet to be heard from, officially, but it is safe to say that the miners of that region do not care to ship to San Francisco any longer than necessary, and it is also certain that the conditions at Tonopah will never allow of the building of the right sort of a plant there. Empire is the nearest point where cheap power can be had.—Carson News.

If Schley is convicted of destroying Cerveras' fleet at San Diego it would seem only fair to punish Dewey for a similar offense at Manilla. It is a serious thing to win a naval battle in this country and if a man commits such a crime he must know what to expect. It would seem, however, that the headquarters of the Spanish Inquisition would be the most fitting place for the trial of the cases.—Carson Appeal.

An earthquake wrecked several buildings in the town of Aulton, Mexico, and then passed on to Zopothon, where it sported with the waters of a big lake. At first the waters seemed in a state of great agitation, and then they subsided and gradually disappeared. The earthquake had caused a fissure in the bed of the lake and through this the lake passed out of sight.

The Congress of Nicaragua assembled at Managua on the 2d instant, when President Zelaya read a message advocating the Monroe doctrine, welcoming the assistance of the United States against European colonization in South America and setting forth that Nicaragua is anxious for the construction of the Nicaragua Canal by the United States.

Chandler of New Hampshire is reported to have asserted that he will compel Fighting Bob Evans to retract certain statements made about the way in which Chandler conducted affairs when Secretary of the Navy, and if those two get into a row the Schley-Sampson controversy will seem like a side show.—S. F. Call.

The New York Herald figures that the companies in the United Steel Corporation affected by the steel strike have lost $3,960,000, and the 50,000 strikers $2,700,000 in wages—a total of $6,660,000 since July 1.

The British Parliament has voted $500,000 to Lord Roberts for his services in the South African war. In this country, for smashing the warships of a hostile nation, Admiral Schley gets———.

The Clark interests have won the latest move in the Salt Lake railroad fight. In the meantime both sides are sawing wood and Los Angeles remains in a receptive attitude.—Herald.

The United States Treasury now holds the largest amount of gold now collected in any part of the world. On the 31st ult. the amount was $504,354,297.

The Nevada State Fair will be held at Reno September 16th to 21st, which is the week following the California State Fair at Sacramento.

At the present moment Vice President Rooseveldt is as securely screened from view as any of his predecessors ever were.

Notice to Cattlemen.

"	December 21, 1901

P. H. MACK, W. M.

The Excellent Japanese Cucumber. Second Crop Bush Beans.

Cucumbers.—The Japanese variety will be found excellent for small gardens, as the quality is of the best and little space will be required. They will readily clamber over a slanting trellis or grow nearly upright by occasionally tying the vines to the slats with coarse twine or strips of cloth. A few hills will supply the family needs nearly the entire season through if well watered and care be exercised in avoiding too large a growth of the fruits. By no means allow them to ripen the seeds, as this will soon destroy the vines.

The greater part of the main crop will, according to location, be planted from June 1 to the first week in July. They are best planted in hills five feet apart, or they succeed nicely sown in drills on slightly raised ridges six feet apart. A plentiful supply of well rotted manure should be worked into the hill or drill and shallow but thorough cultivation continued as long as the growth of vines permits.

To prolong the bearing season care must be exercised in picking not to injure the vines, and the fruits should be gathered just as rapidly as the size required for the various grades will admit. The chief insect enemy is the striped beetle, and the best preventives are strong vigorous plants and soil conditions and culture that will promote the most rapid possible growth of the vines. The principal remedies are air slaked lime, sifted coal ashes, land plaster or equal parts wood ashes and road dust freely applied in the morning when the plants are wet with dew.

Tobacco dust is a good fertilizer as well as insecticide and may be used to advantage on all vines except watermelon, to which it is injurious and will destroy the vines if used in large quantities. Spraying with bordeaux mixture is a preventive of disease, and saltpeter and water, an ounce to the gallon, if applied to the hills will be found a wonderful invigorator to the plants.

Bush Beans.—A plentiful supply of the bush beans for family use may be easily grown as second crop without interference to other vegetables. The varieties are numerous and by judicious selections as to time of maturing may be safely planted from May 10 up to within 50 days of frost. Planted as they may be between other crops which are maturing in advance of them, a constant supply of snap and shell beans may be had from July 1 to late fall.

Beets.—The late fall and winter supply, either for home use or market, are best not sown before June 15 or later, as overgrown stock is undesirable for any purpose except breeding. They will continue growth until late fall, and the proper time will be determined by the localities where grown. The best results both as to quality and yield will be obtained by later sowing and depending upon thoroughly enriched soil and intensive culture for crisp quality and desirable size. The foregoing is a Michigan man's advice for everybody's garden, given in Rural New Yorker.

A Convenient Corncrib.

A sketch of a corncrib which is very popular throughout the middle west is presented by The Country Gentleman. It is so constructed that the wagon

A POPULAR CORNCRIB OF THE WEST.

may be drifted between the two parts in which corn is to be stored, and this central part comes handy as a place in which to store small tools or wagons during the winter.

A floor may be laid on a level with the plates, and the attic will provide a large amount of valuable storage room. In boarding up the sides leave a space of about 1½ inches between the boards. This will facilitate the drying of the corn. Frequently more slant is given to the outside walls than is shown in the illustration. This is somewhat a matter of taste. A corncrib built with the dimensions given and 12 feet long will hold about 700 bushels of ears on each side.

$1,000 an Acre From Dandelions.

The dandelion is but little grown in this country as a vegetable other than in some parts of New England. Some of the market gardeners in the vicinity of Boston claim to have taken as much as $1,000 worth from an acre. The variety known as the improved French thick leaved is the best and most generally grown. It is not at all particular as to soil or situation—in fact, it will thrive anywhere—but the larger profits are made in growing it on a heavy loam, with good tilth. The seed should be sown soon after May 1, but good results are obtained when grown as a second crop, the seed being sown as late as Aug. 1.

The soil should be finely prepared, as the seeds are very small, and the young plants because of their dark color are quite inconspicuous. Sow in drills one foot apart and cover thinly. Roll the ground after sowing. In order to see where the rows are a little lettuce seed should be mixed with it, say two ounces to the acre. The lettuce will plainly show the rows.

Cultivate in summer so that weeds will not grow. Upon the approach of cold weather cover with any coarse litter and remove same in early spring. One quarter of a pound of seed is sufficient for an acre, says Rural New Yorker in conclusion to the foregoing.

Notes From Gardening.

The market for American apples is now worldwide.

The carnation Marquis is gaining many friends this season.

There is no abatement in the demand for decorative nursery stock.

The extraordinary demand for geraniums this year runs very largely to semidouble kinds.

J. H. Hale says to plant your peaches on high ground, for it is coolest in summer and warmest in winter.

It is none too early for fruit growers to make up their minds to market in 1901 the highest grade crop on record. Poor fruit is unprofitable at best.

July 1, 1901.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days, and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

SUPERIOR COURT

Hon. Walter A. Lamar, Judge.

Walter M. Willett vs. F. B. Balchet et als.

Cause set for trial Thursday, September 5th, 1901.

Real Estate Transfers.

Recorded since last report:

John L. King to L. G. Stannard—Undivided one-half interest in Bonanza mine, South Park District; consideration, $900.

Sadie C. Mulholland to A. M. Squire—Undivided one-half interest in the March mine, Mazourka Canyon; $100.

Geo. S. Wood has taken himself unto San Francisco for a well-earned vacation.

Big Pine is talking of building a hello line from the town over to Alvord station.

Vernon Smith and family of Big Pine left Independence this morning for Los Angeles.

Dispatch from Sacramento this morning reads: "Attack, heart-failure. All right now. Sadie arrived O. K.—I. H MULHOLLAND."

Monday last Mrs. A. L. Conklin arived from Bakersfield, on a visit to her parents, Mr. and Mrs. John Shepherd, at Georges Creek.

The Lone Pine Band has been engaged for a social dance at Mairs' Hall tomorrow (Saturday) evening. No doubt about having a good time.

Upon a telegraphic call from Justice Woodworth, District Attorney Dehy on Wednesday afternoon left for Bishop to appear for the people in some criminal cases.

Luke Smith has taken his entire teaming outfit from Keeler to Yerington, via the C. & C. Charley Richardson, of Darwin, goes along to try fortune at the new copper camp.

Mrs. I. H. Mulholland was last Monday recalled to Sacramento by a telegram announcing the illness of Mr Mulholland. As we have heard nothing further it is safe to assume that he is not in danger.

A party of Los Angeles men, headed by John Hunt, formerly of the Ballarat region, are now developing several promising claims at Mountain Springs Canyon. That section of the Argus Range has been practically abandoned during the past Summer.

A letter from Mrs. Mary Mulholland, from Los Angeles, brings the welcome report that Mrs. P. H. Mack and her little daughter Stella are convalescing. In that alleged City of Health—the Sanitarium of the South—they were attacked with scarlet fever and had a very serious time of it.

A San Francisco paper proposes to send a messenger around the world in an air ship as soon as the Stanley aerial machine is perfected. The journal referred to is several years late. Ascending from the Panamint mountains, Wm Thomas got his ship up over the air and for twenty-four hours anchored it to the blue ether while the earth turned around under him.

The roads across the Inyos from Big Pine did not escape the recent deluge. Mr. Riddle, of the Deep Spring toll road, stated that while it could be made passable for about $100, it would require an expenditure of $1000 to place it in the same condition as before the storm. The Waucoba road is washed out on both sides of the summit and forces from the Borax Works and the Lead Canyon mines have tackled a large job of repairing.

Information has been received that a lake has been discovered in Northern California the water of which contains ten per cent copper, which can be saved by precipitation. We also desire to state that on the eastern slope of Saline Valley, near the Hot Springs, there has been discovered an underground lake of oyster soup. A local syndicate has been formed to can the product and ship it to Salt Lake and Los Angeles as soon as the Oregon Short Line Railroad is completed.

Miss Etta Naylor, whose management of the Western Union local telegraph office the past three years has made her a favorite with its patrons, leaves this evening for Santa Cruz, Cal., on a three weeks' vacation. Miss Naylor's brother, who is with the U. S. cavalry squadron at Yosemite, will accompany her.—Virginia Chronicle.

More About the Cloudbursts.

The expected news from Southeastern Inyo in regard to the terrific cloudburst effects comes slowly to hand. All of the old town of Panamint except the mill, company store and boarding house were swept down the canyon. Those in the camp at the time were Mrs. Stebbins, her family and brother, J. J. Wall, John Curran and one or two others, all of whom narrowly escaped with their lives. The road up Surprise Canyon was built in 1874 at an enormous expense, mainly to Senator Jones, and has been more or less washed out about every other Summer since then. It looks nearly impossible to put a road anywhere else; certainly none could be graded along the perpendicular walls of the canyon. As will be remembered, all the noted old silver mines lately passed into the hands of a new company, which is thus confronted with a heavy and unexpected expense. It is doubtful if a footman can get up the road now.

Damage to the Cerro Gordo road all occurred below the "yellow grade." T. C. Boland, lessee of the Union mines, has been out for several days looking up the most feasible route for a pack trail, and wondering what has become of the great boulders that used to line the road. An Indian woman who was on the road when the flood came left her horses for higher ground, but the animals have not been located since.

So far as yet ascertained the only victim was Jerry Fitzgerald, a well known old miner of Darwin. His cabin and garden spot was situated in the Darwin Wash, about five miles from the town, in a place where hurried escape would be out of the question. Jas. McDanald and Jean Cathrey were out some three days searching for the missing man, without success up to last accounts. The cabin was filled with debris and the unfortunate old man may never be found.

Mazourka's Find

"Word was received yesterday that a body of gravel carrying considerable gold has been uncovered in the big tunnel of the Mazourka mine, near Independence, Inyo county. The gravel, it is reported, washes seven dollars to the miner's pan, and is improving. This property has been worked with more or less success for the past four years, but the owners are elated over the last find, which is the best yet unearthed. Steps will be taken immediately to develop a better water supply. The present supply is estimated at twenty miner's inches, which is entirely inadequate for sluicing."

So said the Los Angeles Times, July 30, and the item has ever since been tossing round. Even the regular mining papers copied the palpable error. "Seven dollars to the miner's *pan*" is great. Read miner's *car*, which is generally counted as a *ton*, and the gravel is then rich enough to yield dividends.

Inquiries.

We glean the following, among the "inquiries for minerals," from the New York Engineering and Mining Journal:

A New York dealer in minerals asks for deposits of asbestos and talc.

[All the deposits of asbestos so far as yet known or discovered in the White Mountain range contain too high a percentage of lime to leave the product of commercial value.]

An American chemical works asks for molybdenite, pure, or running 50 per cent. ore. This ore is worth $200 per ton to $600 for extra fine grades.

[For purpose of sight identification samples of molybdenite (the ore) and molybdenum (the "clean metal") may be examined at this office. They were found in Deep Spring District and at a place about twelve miles westerly from Big Pine.]

The Mojave Tomahawk, a new and welcome exchange, says:

V. Van Briesen has sold the Mojave Bottling Works to J. H. Underhill.

Van Briesen broke up housekeeping this week and will devote his time and attention to mining.

Dick Williams is back home and is smiling broad and long. He says it's a girl and that mother and babe are both doing fine.

The stage from Keeler that was due here Tuesday night did not arrive, on account of heavy washouts on the north end of the road. Mail matter was carried sixteen miles on horseback and brought in here by Doc Rainey, who went out to meet it.

With electric connections from here through the Cuyama valley to the ocean at Point Sal, and running to the Inyo hills and trout streams in the other direction, Mojave won't be such a bad place to live. And that route is sure to be built.

There could have been seen this week in one of the windows of Messrs. Martin & Carpenter, gold refiners and assayers at 114 North Main street, Los Angeles three small bars of gold, one of which is, in its way, a curiosity. Its peculiar interest lies in the following fact: It weighs twenty ounces and nine pennyweights gold, taken from twenty-three ounces and eleven pennyweights of rock. The ore came from a mine near Lone Pine, Inyo County, Cal., owned by Mr I. H. Conn. The property is traversed by an iron dyke, and from one of the pockets Mr. Conn took out nearly $1000 in gold.—Los Angeles Mining Review.

The property is situated in Beveridge District, about one and a half miles south of the famous Keynot mine. Mr. Conn is now in the East, but intends to return and develop the claim.

Judge Davidson has received private but entirely authentic information to the effect that during the great rush of waters in Surprise Canyon Jim Wall climbed a pine tree 100 feet high.

Prussia has issued an edict against school girls wearing corsets.

The Pan-American exhibit includes a 120-pound potato.

FRUIT AND FLOWERS

STRAWBERRY CULTURE.

The Art and Science of It In Brief. No Plants Lost by This Plan.

Do not plant in a small garden, but some place where you can use plows and team. A few long rows are better than many short ones. Plant on ground free of weed seeds and as early in the spring as the ground is in good working condition. Have the clods well pulverized, then mark off, making furrows three or four inches deep, 40 inches apart. Have your plants ready and set them as soon as the furrow is opened. Take a bunch of plants, dip the roots in water, then lay them quickly on moist soil and sprinkle the soil over the roots until it adheres to every rootlet, then set them quickly before the dirt dries. If this is well done, you will not lose a plant.

Plant 18 inches apart in the row, spreading the roots out well. Plant them on the level; if above it they will dry out and die, and if below it in cultivation the dirt will roll down upon them and cause much needless labor. The same day the plants are set run a cultivator over the ground. Keep the surface loose at all times till frost in the fall. Never plow with large shovels nor throw the dirt up to the plants so as to form a ridge. Plow at all times as close to the plants as possible, dragging the runners with the plow close up in the row, so as to make a matted row. If weeds appear in the rows, pull them out. Thus advises a contributor to American Agriculturist.

Strawberry Root Louse.

Plants may be cleaned from root louse, so Dr. J. B. Smith of New Jersey tells, by either dipping or fumigation. For dipping, kerosene emulsion or tobacco decoction may be used. The kerosene emulsion should be diluted with 12 parts of water. Shake the plants free from dirt and submerge them completely. Keep them covered not more than three minutes and then wash well in fresh water. This should kill all the lice then on the plants if well done. Kerosene emulsion may now be bought ready made or it may be made as follows:

Hard soap, shaved fine, 1 pound, or whale oil soap, 1½ pounds; kerosene (ordinary burning oil), 2 gallons; water, 1 gallon.

Heat the water and dissolve in it the soap until an even boiling hot suds is obtained. Pour this into the kerosene, which should not be very cold, and with a pump churn thoroughly for a few minutes. An ordinary bucket force pump is all that is necessary, the mixture being pumped back into the pail or tub so as to stir it thoroughly. It will turn milky white almost at once and will soon begin to thicken until it is of the consistency of cream and can no longer be forced through the pump. It is then ready to be diluted as much as may be needed. It is better to add water gradually at first to dissolve the emulsion and then fill up to the full amount. For a smaller quantity use the materials in the proportion given.

The Plant Sensation of the Year.

At the recent splendid show of the American Rose society in New York Pandanus sanderii took the prize offered for the best new plant. A cut here reproduced from American Gardening illustrates the form of the plant, which has foliage of golden yellow and green. This plant resembles the old Pandanus veitchii, except that it is golden where

PANDANUS SANDERII.

veitchii is white. It is thought that this will prove a very popular and valuable introduction.

It suckers readily and appears to be easily propagated. The coloring remains good through the older and lower leaves, a most desirable point in this class of plants. It stands about seven feet high and spreads out from six to eight feet.

The New Irish Rose.

Country Gentleman says that the variety which was met with most question marks (mentally) at the American Rose society's show was a new Irish rose named Florence Pemberton. In the minds of some it settled once for all the question whether a rose by any other name would be as taking. Had this bloom been offered as a peony the expressions of delight over it would have been loud and enthusiastic, but as a rose it was an unknown quantity as well as an unknown sort, beautiful certainly, but not with rose beauty. The size is tremendous, just that of the rose peony of our grandmothers, and the style of bloom much the same, though as a peony it would be considered very light and graceful. The color is white, slightly flushed, and the texture apparently tissuelike. Add that all the inner petals are decidedly crimped, and it will be seen that this new sort is certainly a striking thing. Those who have seen it will await its general reception with much interest.

A Bed of Begonias.

The different varieties of begonia vernon make fine ornamental beds, the rich dark shades taken on by the foliage of some sorts forming a fine contrast to the green leaved sorts. The dark leaved sorts are especially fine for bordering beds of any green leaved plants.

Test For Paris Green.

The solubility of paris green in ammonia is a useful test for detecting insoluble adulterants; but, according to Chemist Van Slyke of the Geneva (N. Y.) station, it is not an entirely reliable test for common white arsenic, the most common impurity of paris green.

THE SNOWBALLS.

The Japanese Just What Is Wanted For Memorial Day.

The common snowball of our gardens is a well known bush. Until a few years ago it was "the snowball," as the one of which I write was but little known, says Joseph Meehan in Country Gentleman. Now the latter is the main one met with everywhere, being very much superior to any other known kind and being fairly hardy, as most Japanese shrubs are.

While the old snowball is a straggling grower, never a shapely bush, the

JAPANESE SNOWBALL.

Japanese is as shapely a grower as one would wish to fashion. It is rather a stiff growing shrub, yet not too formal. The flowers are arranged in pairs, one in the axil of every leaf, and when it makes shoots a foot or more in length, as it will do in moderately good ground, there will be this length full of flowers the following year.

The old snowball flowers more than a week earlier than the Japanese. Last year, on Memorial day, May 30, it was out of flower, while the Japanese was just ready. It is high in favor with florists for use on that day, its long branches of flowers being just what they want. There are between 40 and 50 well known species of viburnums besides this (the plicatum) and they belong in nearly equal numbers to our own country and Japan. The well known and handsome flowered sheep berry of our woods and thickets is a viburnum, as well as many other cultivated sorts.

Viburnum plicatum makes an early start to grow in spring; hence should be planted in early fall or very early spring. If planting be deferred till after the buds break in spring, close pruning has to be resorted to.

Valuable Cherries.

The Windsor cherry has been called by good authorities the most valuable sweet cherry ever given to the commercial orchardist. The markets demand a dark colored sweet cherry. It brings a better price and does not decay like a light colored one. The Windsor is large and hard fleshed.

A New York grower says one of the most valuable features of the Windsor is the great vigor of the tree, which is more resistant to disease than any other cherry tree. Black Tartarian, Black Eagle, etc., are hard to raise. The Windsor alone with him remained healthy. The cherry ripens from the 6th to 10th of July along the Hudson.

The Bing is a very large cherry from Oregon, some specimens measuring three inches around. It resembles Windsor.

Montmorency and English Morello are good sour cherries.

Old Melon Seed.

An English gardener tells that having noticed that plants from old seed produced a less succulent growth than did those from young seed for four years he raised his melon plants from old seed, always growing a few plants from new seed. He says: "I then fertilized the female flowers of the older plants with the pollen of the younger, which plants were invariably the more robust. The resulting fruits were more reliable in good quality, and though the female flowers had been small the fruits were large, weighing from three pounds to seven pounds." This experience seems to strengthen the existing idea that old melon seed is more satisfactory than new.

Rose Show Notes.

Queen of Edgely rose, or Pink Beauty, as it is more popularly called, is one of the latest roses to receive high praise.

The new tea rose, Ivory, a white sport from Golden Gate, received the certificate of the American Rose society and won other recognition.

Robert Scott, a rose of the shorter petaled sort and hybrid perpetual, figures among prominent novelties. It is of exquisite pink color and heavy texture.

American Beauty, Liberty, Meteor, Bride and Bridesmaid, Bon Silene, Gontier-Perle, Sunset, Carnot, Beauty, La France, Kaiserin, Crimson Rambler, Golden Gate and Queen of Edgely were among the notable roses of the recent show in New York.

The Italian style of gardening is being more practiced in this country, and one of the most striking features of the New York rose show was the Italian garden, with its white columned "pergola," or old Roman arbor, wreathed with green vines and Crimson Rambler roses.

When Leaves Are Intensely Green.

In general the part of a plant which causes most cases of stock poisoning is the foliage. The period of its maturity is regarded by some of the cultivators of medical plants as being the time at which its chlorophyll content is most highly developed or when the leaves are most intensely green. This is generally soon after the flowering time in the case of herbaceous plants, but with some, such as aconite, purple larkspur, poison camas and many bulbiferous plants closely related to the last, it is earlier, the leaves of some of them having entirely dried up before the plants have flowered. In these cases the leaves would naturally be most active physiologically if eaten before the plants blossomed and might be practically inert at other times. Such seems to be the case with the purple larkspur.

LEGAL.

SHERIFF'S SALE.

BY VIRTUE OF AN EXECUTION, ISSUED out of the Superior Court of the County of Inyo, State of California, and to me directed and delivered, for a judgment rendered and entered in said Court, on the 23d day of May, 1901, in favor of Friederike Rhine and against George Vornberg, I have levied on the following property, to wit:

The "Corona" Mining Claim, situated in Mountain Spring Canyon, about one half mile northwest of Wild Rose Canyon and about one-fourth mile north of the Canyon Wagon Road, in what is sometimes called Argus Mining District, in Inyo County, State of California.

Notice is hereby given that on the THIRTY-FIRST day of AUGUST, 1901, at 10 o'clock a. m. of that day, in front of the Court House, in the County of Inyo, I will sell all the right, title and interest of said George Vornberg in and to the above described property, at public auction, for cash lawful money of the United States in hand, to the highest and best bidder, to satisfy said execution and all costs.

A. M. GIVEN,
Sheriff.

Dated the 6th day of August, 1901.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs. SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal.

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] Superior Court, County of Inyo.

J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

MACK & FORBES and W. J. HARRIS, Attorneys for Plaintiff, Independence, Cal.

Notice to Creditors.

ESTATE OF F. D. PRATT, Deceased.

NOTICE is hereby given that the undersigned, MERCIE T. COE, Administratrix of the estate of F. D. Pratt, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them, with the necessary vouchers, within four months after the first publication of this notice, to said administratrix at the late residence of said F. D. Pratt, deceased, in the Town of Big Pine, County of Inyo, State of California, the same being the place for the transaction of the business of said estate in the county of Inyo, State of California.

Dated April 11th, 1901.

MERCIE T. COE,
Administratrix of the Estate of F. D. Pratt, deceased.

MACK & FORBES, Attorneys for Administratrix.

NOTICE OF ASSESSMENT.

INYO MARBLE CO., OF CALIFORNIA.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, California.

NOTICE IS HEREBY GIVEN, that at a meeting of the Board of Directors, held on the 7th day of May, 1901, an assessment, No. 54, of five (5) cents per share was levied upon the Capital Stock of the Corporation, payable immediately in United States Gold Coin, to the secretary, at the office of the Company, Room 1, 14th Floor, Mills Building, San Francisco, California.

Any stock on which this assessment shall remain unpaid on the 8th day of July, 1901, will be delinquent, and advertised for sale at public auction; and unless payment is made before, will be sold on Tuesday, the 6th day of August, 1901, to pay the delinquent assessment, together with the costs of advertising and expenses of sale.

CHARLES E. ANDERSON,
Secretary.

OFFICE—Room 21, 10th Floor, Mills Building, San Francisco, Cal.

NOTICE FOR PUBLICATION.

DEPATMENT OF THE INTERIOR.
LAND OFFICE AT INDEPENDENCE, CAL., July 5, 1901.

NOTICE IS HEREBY GIVEN THAT THE following named settler has filed notice of his intention to make final proof in support of his claim and that said proof will be made before the Register and Receiver at Independence, Cal., on August 17th, 1901, viz.:

HIRAM C. HAMILTON,

for the SE¼ SW¼ Sec. 29, E½ NW¼, SW¼ NE¼ Sec. 32, Tp. 14 S., R. 36 E., M. D. M.

He names the following witnesses to prove his continuous residence upon and cultivation of said land, viz: Fred B. Stewart of Lone Pine, and Arthur Shepherd, Henry Glade and Albert W. Simonson of Thebe, Cal

TO LAKE TAHOE

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK

Passengers may also take train mentioned at Reno for Virginia City, 52 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Office, Reno. aug3-tf

Our Working Girls.

Life to the most favored is not always full of sunshine, but to the average American girl or woman who is obliged to work for her living, and, perhaps to help others at home, life is often a heavy drag in consequence of illness.

Women who work, especially those who are constantly on their feet, are peculiarly liable to the development of organic troubles, and should particularly heed the first manifestations, such as backache, pains in the lower limbs and lower part of the stomach, irregular and painful monthly periods,

MISS ELLA BRENNER, E. ROCHESTER, OHIO.

faintness, weakness, loss of appetite and sleep.

The young lady whose portrait we publish herewith had all these symptoms, and in addition leucorrhoea, and was cured by Lydia E. Pinkham's Vegetable Compound. First, she wrote a letter to Mrs. Pinkham's laboratory at Lynn, Mass., describing her trouble, received in reply accurate instructions what to do to get well, and now wishes her name used to convince others that they may be cured as she was.

The same helping hand, free of charge or obligation, is extended, to every ailing woman in America. If you are sick you are foolish not to get this valuable advice, it costs you nothing, and she is sure to help you. Don't wait until it is too late—write to-day.

Novel Uses For Peat Wood.

Peat wood is adapted perfectly as a material for street paving, being absolutely free from dust, noiseless and exceedingly durable. Natural wood blocks, on the other hand, do not resist atmospheric influences sufficiently and soon warp. Peat wood is suited also excellently for railroad sleepers. Screws, rivets and nails become fastened therein as firmly as in the best of oak.

Multiplied.

Tess—Mrs. Fadd's collection of bric-a-brac is wonderful. I saw it yesterday. She's got a number of fine old pieces.

Jess—Yes, and she's got at least twice as many more today.

Tess—You don't say?

Jess—Yes. Clumsy servant girl!—Philadelphia Press.

CURE SICK HEADACHE.

WORKERS IN WINE VAULTS.

They Drink Large Quantities of Wine, but Are a Gloomy Lot.

Even to the nonbibulous there is something novel and impressive in the spectacle of a vast underground world "peopled" with millions of bottles of champagne, on the contents of which a fleet might float, and where thousands of pounds' worth of wine run in the gutters as little regarded as so much water.

These underground "temples of Bacchus" are seen at their best under the old world town of Epernay or the Roman architecture of Rheims, where the corridors, hewn out of the solid rock, stretch in all directions for miles and where the floors descend one below another, like the different levels of a mine, to a depth of 140 feet.

Along these miles of corridors are stacked hundreds of thousands of bottles of wine undergoing the processes of refining and maturing, and a walk along them may be as fraught with danger as to cross the line of fire in a battle, for at any moment a bottle may burst and hurl its fragments at you with something of the force of shrapnel.

Into these vaults hundreds of workmen disappear at 6 o'clock every morning, only to emerge into the upper air 12 hours later. Unfortunately, the conditions that are best for the wine are almost as uncomfortable as one could conceive for the human population of the vaults. All the year round, whether in the height of summer or the depth of winter, a uniform temperature of 45 degrees must be maintained, and the air is so saturated with moisture that it runs in rivulets down the walls, and the screens which separate the cellars are heavy with it.

In the damp, dark corridors behind these screens are men whose sole duty it is to turn the thousands of bottles, one by one, and give them a slight shake, so as to dislodge any sediment that has formed, and this process, probably the most monotonous and under the conditions of cold, moisture and darkness the most dreary that falls to the lot of workingman, is repeated hour after hour and day after day for a whole lifetime.

An expert worker will turn as many as 60 bottles a minute and maintain this rate for ten hours a day, handling 36,000 bottles in a day's work. Is it any wonder that after years of this monotonous drudgery these men develop all kinds of strange moods and fancies? They become gloomy and taciturn and get the strangest ideas into their heads. Some of them persist that the vaults are haunted and profess to see eyes glaring at them from obscure corners and figures flitting past them, possibly the eyes of men who have turned bottles before them and cannot refrain from revisiting the haunts of their earthly days.

But naturally all the work in these underground worlds of Bacchus is not of this lugubrious description, for here a small army of men and girls are engaged in corking, putting on the tin foil which makes the bottles so pleasing to the eye and labeling.

The corking is done at the almost incredible rate of 100 bottles an hour. The bottles are handed in rapid succession by a boy to the "disgorger," who with marvelous dexterity whisks out the corks, discharging any sediment that may have collected, fills them up with champagne and passes them on to the corker. The corking has for many years been done by machinery, the machine seizing the cork, compressing it to the proper size and pushing it into the neck of the bottle. The bottles are then ready for the girls, who put on the finishing touches with tin foil and labels.

As may be expected, these processes, especially that of disgorging, are not free from danger, for at this stage a bottle of champagne may be as risky a thing to handle as a live bomb, and accidents more or less severe are fairly common. It is estimated that at Rheims alone £10,000 worth of champagne is wasted every year through the bursting of bottles.

Although these hundreds and thousands of workmen are allowed a practically unlimited supply of ordinary wine, some of them drinking as many as three bottles a day, it is remarkable that drunkenness is almost unknown among them.—London Tit-Bits.

When a busy man has time to think about it, he wonders how the idle people with no means of support manage to dress so well.—Atchison Globe.

CASTORIA

THE CENTAUR COMPANY, NEW YORK CITY.

ENGINEERING

Louis Kessler of Des Moines, Ia., has constructed a steam engine which he believes will work a revolution in the transmission of motive power.

The central idea of the Kessler invention is the recondensation of the steam automatically, so that the water in the boiler may be used over and over again.

Operating in this boiler is a long hollow piston, lacking about a thirty-second of an inch of fitting to the sides of the boiler, thus leaving room for a steam cushion all the way around it and also making it possible for the condensed steam to run down the sides. A rod connected with this piston passes up through the center of another pis-

THE KESSLER ENGINE.

ton which operates in a vacuum cylinder above the boiler and is geared direct to the flywheels.

The upper piston fits absolutely airtight in the vacuum cylinder and is geared to the shaft in the usual crank manner. As the steam piston is forced upward it pushes the upper piston up, leaving a vacuum, which draws it back again, thus giving, in addition to the steam power of from 45 to 60 pounds pressure, the additional 15 pounds pressure of the atmosphere.

One of the great advantages claimed for the invention is that, in view of the fact that these two pistons are connected direct to the machinery and there being a great difference in the length of their stroke, the new engine dispenses entirely with the "dead center" principle of all other engines, as one of the pistons begins work before the other ceases.

Railway to the Pole.

Among the startling engineering suggestions of the day is that of a tube railway to the north pole, not as a commercial venture, but as a scientific solution of a difficult problem regardless of cost. Starting from some point in Greenland, the tunnel would run in a direct line just beneath the surface of the ground and would have stations at certain intervals, with larger ones on the banks of channels or straits, where it would be necessary to build ferryboats and provide for their housing in winter. With the completed line the summer explorer should be able to reach the pole and return in a week.

New Use For Liquid Air.

A remarkable use of liquid air has come about through Herr Hempel, a German engineer. As is well known, if liquid air is left to evaporate, the incombustible nitrogen evaporates first, leaving behind almost pure oxygen. This liquid oxygen is employed by Herr Hempel to fire low grade fuel, and for this purpose he has constructed a peculiar furnace, under the grates of which the oxygen is led.

Leather Railroad Ties.

A patent has recently been granted for a novel railroad tie. This is composed entirely of leather ground into pulp and treated by a process similar to that with which pulp is treated to make it into paper and cardboard. After undergoing this process the leather is treated chemically to make it impenetrable by water. It is then cut into strips the width and thickness of the tie, and many of these parts are put together to make the length of the tie. These parts are pressed together under an immense pressure, which makes the tie a perfectly solid mass of leather.

New Diamond Cutting Method.

An expert gem cutter recently discovered and patented a method of cutting diamonds by which, it is said, their brilliancy and apparent size are increased 25 to 30 per cent. This remarkable effect is brought about by following the natural lines of crystallization of the uncut gem. A brilliant may thus be cut with as many as 80 facets, while the number under the old method never exceeds 64.

To Utilize Peat Bogs.

J. J. Wheat of Chicago has invented an apparatus to make possible the utilization of the immense bogs near Chicago, where peat is to be found in sufficient quantities to supply all needs for 100 years.

To Coal Vessels at Sea.

An English naval architect has invented a method of coaling vessels at sea by which it is possible to deliver from 50 to 100 tons an hour, compared with 20 tons by the method invented by Miller. The British admiralty is considering the advisability of adopting the method.

Counterfeit Bills.

The average counterfeit bill shows better work on the right hand side than on the left. More care is taken to make the work accurate, because unless a man is left handed it is customary in counting a pile of bills to hold the left ends down and turn up only the right ends.

A LETTER FROM JEFFERSON

It Shows That He Was a Good Provider For His Household.

Mrs. Sara T. Kinney has in her collection of treasures an autograph letter of Thomas Jefferson. The date is blurred, and the address is mutilated past recovery. Here is the letter:

MONTICELLO, Oct. 9, 1794. (?)

Dear Sir—In a letter of the 17th ult. I acknowledged the receipt of your favors of the 16th and 27th of August, and within a few days at most the several articles you had been so kind as to forward to me came to hand safely in good condition and to my perfect satisfaction. As the freezing of the Delaware might prevent my getting my supplies of groceries for the first quarter of the ensuing year were I to delay sending for them, I intimated in my last letter that I might probably trouble you with a new application very shortly. This I take the liberty of now doing, having noted on the back hereof the list of articles desired. When I wrote you before, I did not suspect my stock of oil to be so low. It is now entirely out, and therefore I am obliged to ask an immediate supply of three gallons till yours shall arrive. I have written to an old acquaintance, Mr. Barnes, in 3d street, from whom I used to take teas in Philadelphia, to ask the favor of you to receive some which I have desired of him and to pack them up with the other things and have ventured to say to him that you would be so good as to pay his bill, which may be between 6 and 10 or 12 dollars. I will pray you to have everything very securely packed, as without this they are sure to be pilfered by the sailors and wagoners. As soon as you can send me a note of the amount by post. I will by the return of the post inclose you a draught for it. Your kindness not only encourages me in giving you this trouble, but has forbidden me to apologize for it. I am still confined with my rheumatism, tho' much mended. I am divided between two enterprizes for the next year, the going on with my house or rebuilding my mill, but whichever I undertake should you receive from Italy a workman who understands the laying and cutting of stone I would be glad of him on reasonable wages—that is to say, on wages reasonably better than those of Italy, but not such as are given in Philadelphia. Our languid circulation of money in this country would not permit that, and, furnishing him the subsistence, he would not need it. I am, with great esteem, dear sir, your friend and servant, THOS. JEFFERSON.

Sixty pounds single refined sugar.
One hundred pounds best brown sugar.
Eighty pounds best Indian coffee (not the green).
Twenty pounds chocolate.
One hundred pounds rice.
Fifty pounds of biscuit (of the kind called crackers).
Twenty pounds raisins.
Ten pounds bitter almonds.
Three gallons olive oil.
Six bottles of mustard (they are generally small).
Three pounds black pepper.
One pound allspice.
One-quarter pound nutmegs.
One-quarter pound cloves.
One-quarter pound cinnamon.
One-quarter pound ginger.
Thirty gallons of treacle (observe that this is different from molasses and superior).
Twenty-five pounds of the tongues and sounds of the codfish pickled. This article is to be had usually at only one place in Philadelphia, I believe. Mr. Petit, my ancient maitre d'hotel, can point it out. He lives with Mr. Cassions.
Three pounds of hair powder and two or three rolls of good hard pomatum.

P. S.—The want of the article of oil renders me anxious to receive this invoice as soon as you can find a vessel coming to Richmond. Be pleased to address them as usual to Colonel Gamble.—Hartford Courant.

Colds and Insurance.

A leading insurance journal says somewhat pathetically that colds cost life insurance companies $1,000,000 a month. What they cost those who catch the colds is of course quite beyond cavil or reclaim, but the paper goes on to warn the careless who happen to own policies how to be able to keep on paying premiums a while longer. The gist of the advice is to avoid exposure, keep out of drafts and fight a cold from start to finish. "The grave is still very hungry," it adds. "Besides, the life insurance companies would like to save a million a month." The highest medical authority in journalism gives the following: "The philosophy of prevention is to preserve the natural and healthy action of the organism as a whole and of the surface in particular, while habituating the skin to bear severe alterations of temperature by judicious exposure and natural stimulation by pure air and clean water and orderly habits of hygiene and health."—Saturday Evening Post.

As Bright as He Was Bad.

He was a charming little fellow of 4, pretty in his ways, good to look at, but as naughty as could be. He sat on the bottom step kicking his fat little legs and refusing utterly to obey his father, who had told him to go up stairs several times in increasing degrees of severity. After a few minutes of this clashing of wills his exasperated parent picked him up somewhat suddenly, carried him and sat him down very firmly on a chair in his room and then went out and shut the door. Silence reigned; not a sound from him for at least half an hour. Then the door opened, and a sweet little voice called out, "Father, have you got over your tantrum yet, for I should like to come down?"—London Tit-Bits.

The Capitol Rotunda.

The rotunda of the capitol at Washington is 96 feet in diameter and 180 feet high. It is a circular hall in the center of the building and contains eight large historical paintings. The great dome overarches it.

The Turnip.

Turnips come from India. The name is from "turn" and "nep," words of ancient origin meaning something round.

Ready to Tackle Anything.

Merchant—Do you speak German?

Needy Applicant—I never have, but, gracious, I'll tackle it if you give me a job.—Indianapolis Journal.

Rheumatism

What is the use of telling the rheumatic that he feels as if his joints were being dislocated?

He knows that his sufferings are very much like the tortures of the rack.

What he wants to know is what will permanently cure his disease.

That, according to thousands of grateful testimonials, is

Hood's Sarsaparilla

It promptly neutralizes the acid in the blood on which the disease depends, completely eliminates it, and strengthens the system against its return. Try Hood's.

Beware of Ointments for Catarrh that Contain Mercury

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is tenfold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists, price 75c. per bottle.
Hall's Family Pills are the best.

Stops the Cough and Works Off the Cold.

KEEP YOUR BLOOD CLEAN

THE SMELL OF THE ONION.

Due to the Presence of Sulphur In the Vegetable.

It is interesting to make inquiry into the cause of this unfortunate quality of the onion. It is simply due to the presence in some quantity of another mineral matter in the bulb—sulphur. It is this sulphur that gives the onion its germ killing property and makes the bulb so very useful a medicinal agent at all times, but especially in the spring, which used to be—and still is in many places—the season for taking brimstone and treacle in old fashioned houses before sulphur tablets came into vogue.

Now, sulphur, when united to hydrogen, one of the gases of water, forms sulphureted hydrogen and then becomes a foul smelling, well nigh a fetid, compound. The onion, being so juicy, has a very large percentage of water in its tissues, and this, combining with the sulphur, forms the strongly scented and offensive substance called sulphuret of allyle, which is found in all the alliums. This sulphuret of allyle mingles more especially with the volatile or aromatic oil of the onion. It is identical with the malodorant principle found in asafetida, which is almost the symbol of all smells that are nasty.

The horse radish, so much liked with roast beef for its keen and biting property, and the ordinary mustard of our tables both owe their strongly stimulative properties to this same sulphuret of allyle, which gives them heat and acridity, but not an offensive smell, owing to the different arrangement of the atoms in their volatile oils.

This brings us to a most curious fact in nature, that most strangely, yet most certainly, constructs all vegetable volatile oils in exactly the same way—composes them all, whether they are the aromatic essences of cloves, oranges, lemons, cinnamon, thyme, rose, verbena, turpentine or onion, of exactly the same proportions, which are 88¼ of carbon to 11¾ of hydrogen, and obtains all the vast seeming diversities that our nostrils detect in their scent simply by a different arrangement of the atoms in each vegetable oil. Oxygen alters some of these hydrocarbons, sulphur others.—Chambers' Journal.

Mice and Matches.

An investigation extending over a period of nearly three months was made by the inspection department of a Boston fire insurance company in order to determine whether fire can be caused by rats or mice and matches. The tests were carried on in a cage made of iron pipe, covered with galvanized iron netting, in which a tin box partly filled with cotton waste was placed for a nest. Rats and mice, singly or several at a time, were confined, for longer or shorter periods, within this cage, in which sulphur matches, parlor matches and safety matches were also placed. The creatures were alternately fed and allowed to go hungry. During the experiments with the mice apparently none of the matches were gnawed, but two of the safety matches were carried by them into their nest. On the other hand, the rats ignited the sulphur matches by gnawing them, which is indisputable evidence that common sulphur matches can be ignited by rats.

Southern Moonshiners.

The great majority of moonshiners are to be found in the mountain fastnesses of Georgia, Alabama and Tennessee, and here they live in conditions of civilization as crude as their ancestors, most of whom were English fugitives from justice who reached this country more than a century ago. Indeed, in many respects these descendants have retrograded rather than advanced. Had they been surrounded for a century by a Chinese wall they could not have been more destitute or ignorant of the modern conveniences.—International Magazine.

The Best of Neighbors.

"You say they are excellent neighbors?"

"Yes."

"Well, that's somewhat indefinite. Do you mean that they never borrow or that they are willing to lend?"—Chicago Post.

Adams' Sarsaparilla Pills

act gently and promptly on the liver, kidneys, stomach and bowels. They cure sick headaches, constipation, biliousness, stomach disorders, sallow complexion and are the only pills that will also purify and enrich the blood. Sold in 10ct. and 25ct. boxes by all druggists. Every box guaranteed.

AN EFFECTIVE REBUKE.

How General Lee Got an Exposed Point Properly Fortified.

The late Major General Harry Heth was the only man in the Confederate army whom General Lee called by his first name. Lee addressed even his two sons as "General." Heth had been the friend of his youth, and Lee loved and trusted him profoundly. Yet his love did not cause the commander in chief of the Confederate army for a moment to forget his duty, as is shown by an incident described in The Century.

One day before Petersburg Lee rode up to Heth's tent and said, "Harry, I should like to ride down your line."

Heth was much flattered at the proposal, and as they rode side by side he pointed out positions of danger and vantage. Suddenly they came upon a place of much importance where for several hundred yards there were no fortifications. Surprised, Lee turned to his friend for an explanation. Heth said that he had ordered defenses for this spot and had supposed them finished.

"See that they are completed at once, Harry," said Lee, and, turning his horse, he rode back to headquarters.

After a few days the general again appeared at Heth's tent with the same proposal, and the delighted officer sprang to his horse. Arrived at the ill fated spot, to Heth's dismay, it was found still open. Without a word Lee turned toward his tent, motioning Heth to follow. Dismounting, the commander in chief seated himself, and the subordinate stood, wondering what his punishment would be. Lee spoke in his kindest tones.

"Harry," he said, "that horse your wife rides worries me more than I can tell. He kicks and fights the bit till I fear he will either break her delicate wrists or pull her arms out of their sockets. Now the best way to take the edge off a nervous horse is to give him plenty of exercise—regular exercise—morning and night, until he quiets down. For the sake of your wife as well as yourself, I beg you to make the experiment, and I know of no better place for you to ride the horse while taming him than just up and down in front of that gap I ordered you to have closed until a good breastwork has been completed. Good evening, sir."

The rebuke was given kindly, even affectionately; yet the recipient declared that he never slept a wink that night, and for days afterward felt as if he had been beaten with a club.

A Mystery Solved.

An old sea captain who had navigated his ship many times round the world persisted in maintaining that our globe is not a globe at all, but a flat surface. No arguments, derisive or painstakingly educational, could alter his opinion one jot. Some one said to him once:

"But if the earth is as you say, captain, there must be an edge to it. How is it that no one has ever tumbled over the edge?"

"Why, of course they have," he answered triumphantly. "That's where the ships go that are reported 'missing.'"

The Pan-American Exposition

Will be the greatest this country has ever seen. The entire machinery will be run by power furnished from Niagara Falls. Although the power required is enormous we believe this cataract is equal to the task, the same as Hostetter's Stomach Bitters is equal to the task of supplying the body with motive power when it is run down. There is no medicine in the world so good for dyspepsia, indigestion, constipation, flatulency and nervousness. Try it.

Cheaper.—Nodd—Are you renting a cottage at the seashore this summer? Todd—No, I couldn't afford it. I'm buyi g one.

AWFUL AGONY

The Story of a Stricken Woman Whom Doctors Were Not Able to Help.

From the News, Connersville, Ind.

The story of Mrs. Nellie M. Hedden, of No. 621 Summit avenue, Connersville, Ind., contains an important lesson for many American women who suffer in silence rather than face the ordeal that the usual treatment of their troubles entail. It is a story that rings with honest gratitude and does not tell half the misery that the narrator endured. Other women who are suffering as Mrs. Hedden did will know how to understand and appreciate much that cannot be told in a newspaper article. Mrs. Hedden's experience is best given in her own words. She says:

"For nearly a year I endured terrible agony caused by a general breaking down of the nervous system, female weakness and suppression of the periods. I suffered greatly with bearing down pains and was very weak and short of breath. My circulation was very bad causing numbness of limbs, dizziness and headache all the time. My heart would sometimes feel as if there was a heavy weight on it. I had never been healthy and strong, so you can readily see that I was in no condition to withstand such a combination of ailments.

"I grew worse very rapidly and all the doctors I tried failed to check my decline. A friend of my husband told him how much good Dr. Williams' Pink Pills had done his wife, so I commenced taking them and can now state that they are the only relief I ever had. The first box helped me so much that I was thoroughly convinced of the efficacy of the remedy. I continued the treatment for several weeks, using six boxes in all.

"In conclusion, I will say that if any one who is suffering the same as I was, will take Dr. Williams' Pink Pills as directed they will be rewarded."

Signed, NELLIE M. HEDDEN.

Subscribed and sworn to before me this 14th day of November, 1900.

A BALD NEWSPAPER MAN.

Getting a New Crop of Hair and Has No More Dandruff.

Everybody in the Northwest knows Col. Daniel Searles, the veteran journalist and publicist of Butte. Jan. 10, 1900, the Colonel writes: "I used a couple of bottles of Newbro's Herpicide with marvelous results. The dandruff disappeared, a new crop of hair has taken root, and the bald spot is rapidly being covered." Herpicide is the only hair preparation that kills the dandruff germ that digs up the scalp in scales as it burrows its way to the root of the hair, where it destroys the vitality of the hair, causing the hair to fall out. Kill the dandruff germ with Herpicide.

Scrofula

Scrofula is an unwelcome legacy, but one which the children of blood poisoned parentage must accept, with all its humiliating consequences. It is an inheritance that makes one poorer; that brings wretchedness and disease instead of health and riches, for the child whose ancestral blood is tainted with Scrofula or the loathsome virus of Contagious Blood Poison is unfitted for the arduous duties of life so long as any of the transmitted poison remains in its veins. Scrofula manifests itself in various forms; swollen glands about the neck and throat, catarrh of the head, weak eyes, hip bone disease, white swelling and offensive sores and abscesses are familiar symptoms, attended usually with loss of strength, poor digestion and pale or bloodless complexion. The skin is sometimes most dreadfully affected, eruptions breaking out on all parts of the body. Scrofula destroys bone, tissue and flesh; no part of the human system escapes its withering, benumbing touch. Parents whose blood is poisoned by their own misdeeds, or who themselves may be suffering for the sins of some remote ancestor, must restore their own blood to its normal purity and strength, or they cannot expect healthy, robust children. S. S. S. cures Scrofula, like other diseases of a deep-seated, constitutional character, by restoring life and purity to the profoundly poisoned blood, and the rich, strong blood that is carried to the swollen and diseased glands absorbs and destroys the tuberculous deposits, and the painful, disfiguring sores and other evidences of Scrofula disappear.

When nineteen years old, and about one year after the birth of my first child, the glands on the left side of my neck began to swell. Four of the places were lanced and became open running sores; risings came under my left arm, and the discharge was simply awful. The doctors said I had the worst case of Scrofula they had ever seen. I took iodide of potassium, but this nor the other drugs given for this disease brought relief. When the physicians advised me to have the glands removed, I decided to try S. S. S. A few bottles cured me completely; no signs of the terrible disease are left.

MRS. RICHARD WASSON,
Golden Corners, Ohio.

S. S. S. should be begun immediately upon the appearance of the first symptoms, or where there is a known predisposition to Scrofula. Our medical department will be found of great help to those who are struggling with this wasting disease of heredity or any other blood trouble, and we invite you to write us. Should you or any member of your family need advice, our physicians will cheerfully give the information you desire, for which we make no charge. Book on Blood and Skin Diseases free.

THE SWIFT SPECIFIC COMPANY, ATLANTA, GA.

What a Sigh Means.

Sighing is but another name for oxygen starvation. The cause of sighing is most frequently worry. An interval of several seconds often follows moments of mental disquietude, during which time the chest walls remain rigid until the imperious demand is made for oxygen, thus causing the deep inhalation. It is the expiration following the inspiration that is properly termed the sigh, and this sigh is simply an effort of the organism to obtain the necessary supply of oxygen. The remedy is to cease worrying. One may be anxious, but there is no rational reason for worrying. A little philosophy will banish worry at once. Worry will do no good. It will rob one of pleasures when blessings do come, as one will not be in a condition to enjoy them.

ROOT OF OUR TREE OF COMMERCE.

How the Nicaragua Canal Would Nourish the Mississippi and Its Branches—Our Great System of Inland Waterways.

So much has been said and written of the advantage of the Nicaragua Canal to the country in general that its direct value to certain portions of the United States has not perhaps been fully appreciated. A section of the country which might be said to be vitally interested in this undertaking is that adjacent to the Mississippi River and its tributaries. One of the strongest arguments which proves this assertion is the map. A child could detect the important relation which the artificial waterway bears to this great natural thoroughfare.

An examination of the map shows the remarkable likeness of the Mississippi, the Missouri, the Ohio and their branches to a tree, the main river forming the trunk and the others ramifying to the right and left, the larger branches in turn sending out shoots. On the face of the map this system of water ways stands out like a great oak, placed by nature to foster the commerce of a territory populated by millions of people and the site of thousands of industries. Some of the greatest cities in the country owe much of their progress and prosperity to their location on the banks of the Mississippi and its branches. The natural resources of the States traversed by these waterways have been largely developed by the facilities afforded to connect them with the centers of consumption. The settlement of what we now call the Middle West, but which is in reality the heart of the United States, has been in a great measure due to the same system. The pioneers of Indiana, Illinois, Kentucky and Ohio, as well as the States west of the Mississippi, and even part of the Gulf group, came to this region in boats at a time when the railroad and the locomotive were curiosities.

A few months ago a United States gunboat explored the upper Amazon and reports were made by the officers of the thousands of miles of navigation which this river afforded. Yet the Amazon, the Ganges and the Nile combined do not equal the Mississippi and its tributaries in the mileage of navigable water. Towns and cities in no less than twenty-eight States of the Union can be reached by steamboats from New Orleans. Fully one-third of the population of the United States to-day reside in the country adjacent to the Mississippi and its tributaries—fully 25,000,000 persons. A boat drawing five feet of water and starting from New Orleans can reach 1,000 communities varying in population from 700,000 to 500. Among the great cities which enjoy the advantages of water transportation by this system, and which the canal would connect by water with the Pacific are St. Louis, with its 700,000 population; New Orleans, with its 300,000; Pittsburg, with its 250,000; Louisville, with its 225,000; and Wheeling, with its 50,000. On the trunk of the tree are Memphis, Vicksburg, Baton Rouge, Quincy, Burlington, Davenport, Dubuque and La Crosse, a chain of communities extending from the cotton and sugar plantations of the South to the timber lands of the far North.

In a study of this portion of the United States a surprising feature is the large number of streams which are navigable. It is doubtful if the Mississippi has a branch of fifty miles in length which is not deep enough for steamer traffic over at least a portion of its length. The same is true of the principal branches, with the exception of some of the tributaries of the upper Missouri in Dakota and Nebraska. The shoals formed by rock ledges are but few in number. This is owing to the fact that the majority of the streams flow through a region which offers few barriers to the natural deepening of the channel. Along the lower Mississippi in the vicinity of New Orleans a network of bayous and other waterways forms a series of channels which extend far into both Louisiana and Mississippi. They reach the famous Yazoo Valley in the latter State, traverse the coast country and give most of the important towns in both States water communication with New Orleans. The same condition exists along the Red River, which is one of the most valuable branches of this trunk. Other streams connecting with the lower Mississippi and of great value to navigation are the Arkansas, the St. Francis, the White, the Yazoo, the Tallahatchee and the Ouachita. Steamers can ply on several of these streams a distance of over 200 miles from their mouths, yet all are located below the junction of the Ohio and the main river. The Ohio Valley is traversed also by a network of water courses, the largest of which is the Tennessee River, reaching portions of Kentucky, Tennessee and Alabama, and of a depth to allow steamers to go as far as the city of Knoxville. In Kentucky, the Green, Kentucky and Big Sandy Rivers are all available feeders of the Ohio, while penetrating the coal and timber lands of West Virginia are the Kanawha and several smaller tributaries. Joining the east side of the trunk are a number of branches extending as far north as the State of Wisconsin. The most important is, perhaps, the Illinois River, which, with the connection with the Chicago Drainage Canal, may form a ship channel between the great lakes and the Mississippi.

The variety of traffic, both foreign and domestic, which originates in this great territory represents nearly every kind of manufactured and raw material which the United States produces. The agricultural staples of the South, such as cotton, tobacco, sugar cane and rice, are noted for their quality and quantity in the section reached by the Mississippi and its tributaries, while its water courses also penetrate the extensive pineries of northwest Louisiana. Much of the mineral wealth of Arkansas in marble, zinc and other resources lies along the navigable streams in this State. It is hardly necessary to refer to the products of Tennessee and Kentucky, which are shipped by water to St. Louis and other markets by way of the Tennessee, the Cumberland and other streams. The shipments of coal from western Pennsylvania and West Virginia by way of the Ohio River to the lower Mississippi have reached as high as a million tons in a year, large fleets of steamers and barges being employed exclusively in this business. A large proportion of the cotton business of New Orelans is furnished by the water communication which this city enjoys with the Southwest. The industries in the group of cities along the Ohio River in Indiana, Illinois and Kentucky, as well as in Chattanooga, Nashville and Memphis, have been fostered to a considerable extent by the location of their sites on navigable water, giving the manufacturers the benefit of rail and water facilities.

The effect of the construction of the Nicaragua Canal upon the cities and towns in this part of the country, even with the present area of river navigation, will be to increase their importance. It brings the Mississippi, the Ohio and the Missouri valleys from 6,000 to 10,000 miles nearer the great market which will be opened to us in South America, as well as the northern Pacific coast. A vessel going from New Orleans to San Francisco, for example, must round Cape Horn and traverse over 13,000 miles of ocean. By the canal route the distance is but 4,150 miles, or less than one-third of the present length. A vessel taking a cargo from St. Louis to San Francisco by way of Cape Horn would travel a distance of 14,000 miles, while by the canal route it would be reduced to less than 5,000. The city of Louisville would be 5,532 miles from San Francisco, while at present it is 11,882 by the water route. The manufacturers of Alabama could ship their products to a Gulf or a Mississippi River port and have them delivered at their destination in less than half the time now required. The effect which the canal would have in the expanding commerce of this part of the South is incalculable. No nation on the globe enjoys such a system of inland water communication as the American people possess in the Mississippi and its tributaries.—D. Allen Willey, in Chicago Record-Herald.

A Gentleman.

She was never at a loss in the interests of the family for whom she had toiled in innumerable capacities for years. Over the soapsuds of a Monday morning, in the back kitchen, she heard and retailed the news. Hers was generally of funerals and weddings; theirs of the minor and major movements of home sisters, and brothers gone abroad. One of these last was expected back from the East after an absence of four years. Elbow deep in froth, she contrasted his qualities with those of his elder brother in Africa, whom she (secretly) regarded more. "Yes, now," she said, referring to her unacknowledged favorite, "'e was a gentleman, Mister John was. When 'e wanted 'e boots cleaned 'e'd come to the top of the stairs and call down, soft-like: 'Mrs. L., will you be so kind as to clean my boots?' Not but what Mr. 'Arry's a gentleman, too, but in a different style. When Mister 'Arry wanted 'is boots done, 'e'd drop 'em over the banisters and holler: 'Eads, I want my boots cleaned!'"—London Academy.

New Mouse in Dublin Bay.

On a sand island in Dublin bay a new kind of mouse has been found. It resembles the ordinary mouse in all except its color, which is that of the sand, and the naturalists attribute that to an interposition of nature for its protection from the owls and hawks on the island. It is supposed that they are the descendants of castaway mice and that the protective coloration is a gradually acquired result of their surroundings.

A Systematic Woman.

There is a woman in Kansas, 90 years of age, who spent exactly thirty years each as maid, wife, and widow.—Kansas City Journal.

A widow usually retains her husband's initials until a new city directory is issued, when she appears with her own.

It is one of the unsolved mysteries how two men can exchange umbrellas and each invariably get the worst of it.

THE NEW BATTLESHIP MAINE.

THE NEW MAINE, NOW IN COURSE OF CONSTRUCTION.

The principal dimensions of the new battleship are: Length between perpendiculars, 388 feet; length over all, 393 feet 10½ inches; extreme breadth, 72 feet; mean draught, 23 feet 6 inches; displacement at normal draught, 12,300 tons; estimated displacement at full load draught, 13,500 tons. As to type, the new vessel is to be an improved Alabama, two knots faster than that fine battleship, equipped with a more powerful armament and hedged about with a greater area of armor protection.

In the contract it is stipulated that she must on her official trial maintain a speed of 18 knots for four consecutive hours.

The armament designed for the vessel is a very powerful one. It will consist of four 12-inch breech loading rifles mounted in pairs in two elliptical balanced turrets, one forward and one aft. In addition there will be sixteen 6-inch rapid-fire guns mounted in broadside, six 14-pounders, eight 3-pounders, six 1-pounders, two Colt automatic and two 3-inch rapid-fire field guns. In the Maine the 14-pounder type of rapid-fire gun will be installed for the first time on an American battleship. There are two submerged torpedo tubes on the ship, the Maine class being also the first in which these tubes have been placed below the water line.

Topics of the Times

The United States leads all other nations in the matter of fruit growing. Strawberries were valued at $80,000,000 last year and grapes at $100,000,000.

While tests of a new electric train were being made on the elevated road in New York City the insulation became defective and the steel rails were dissolved as though made of tissue paper.

A telegram of twelve words is sent to any part of New Zealand by simply affixing to it a 6d stamp—12 cents.

The Newfoundland seal fishery this year will be one of the most successful in years.

The Charity Organization Society of New York has instituted a college of tubs, wherein washerwomen are not only to be taught their trade, but also how to return intact the various articles on their lists to the original owners.

At a recent meeting of the Central Pennsylvania Conference of the Methodist Church a by-law was passed making it obligatory on candidates for pastorates to pass a physical examination and thus demonstrate that they are as sound in body as in soul.

St. Paul and Minneapolis, it is said, have the lowest death rates of any cities in the United States. St. Paul, with a population of 163,632, has a death rate of 10.79, while Minneapolis, with a population of 202,718, has a death rate of 11.08 per thousand inhabitants.

The magnitude of the operations carried on incidentally by David Rankin, the Missouri cattle king, may be imagined when it is remembered that at his ranch in Atchison County this year he plants 10,000 acres of corn alone, employing about 250 men and utilizing 600 horses.

The chafing dish is among the most ancient adjuncts to the culinary department of all nations. It was in great demand at the grand feasts given by the wealthy citizens in ancient Rome. Some of these dishes have recently been found among the ruins of Pompeii. They are of exquisite workmanship.

Most of Morocco is "more oriental than the Orient itself," but Tangier has become modernized so much and so many Christians live there that it is already regarded as "unclean" by the Moors. It has telephones and electric lights and most of the trade of the sultanate with the outside world is done through the port.

The name of the postoffice Half Rock, in Missouri, is not to be accounted for by any peculiarity of the physical features of the place, as might be supposed. It seems that one of the first buildings erected there was a general store, the proprietor of which sold such bad sugar that his customers declared it to be "half rock."

Postal authorities in Washington are worrying over the case of a man who advertises to cure deafness without fail for a certain sum. To those who send the required amount the advertiser sends 2,000 pills, with directions to take not more than one a day, guaranteeing a cure when all the pills have been used. As the truth or otherwise of this claim cannot be determined for about five years and a half, the authorities do not know what course to take.

A magnificent oak tree at Athens, Ga., not only owns itself, but possesses other property. It was owned many years ago by Colonel W. H. Jackson, who, in his childhood, played around is a massive trunk and in later years grew to love it almost as he would his own child. Fearing that after his death the old oak would fall into the hands of persons who would destroy it, he recorded a deed conveying to the tree "entire possession of itself and of all land within eight feet of it on all sides."

In Sweden the State owns and cares for over 18,000,000 acres of forest lands. Schools of forestry are maintained and the timber lands are efficiently cared for by graduates of the schools, who understand how to farm the lands by preventing waste and profitably manufacturing the product of the forests, carefully replanting where trees are cut down. As a result of forestry so managed all the cost of schools and caretakers is defrayed out of the product sold by the State and the net profits are four times greater than the expenditure.

WORDS AND THEIR HISTORY.

How Some Words Now in Everyday Use Had Their Origin.

To one who is inclined there can be no more interesting study than that of words. To take some word in everyday use, trace it to its origin, become familiar with its romance, note its various changes and meanings as it has come down, perhaps, through the centuries, is a source of delight as well as profit to one who would get at the beginning of things. And for such a recent number of St. Nicholas offers a pleasant repast in an article on "Words and Their History," by R. W. McAlpine.

In the lives of words, as in the lives of men, time brings about many changes. Words change in form, in stature and in color; they lose the traits of their ancestors; and yet, sometimes and somehow, they retain just enough of the original to hint at their beginning and to suggest to the curious gleaner in the field of thought that, though there may be a wide gap between the past and the present of a word, the gap may by patient effort be so narrowed as to be bridged over, and the difference between the word that is and the word that was be fully accounted for.

To illustrate this Mr. McAlpine takes as an example the word "peculiar," and his manner of handling this will give a good idea of how entertainingly the entire article is presented. What connection is there, he asks, between this word and a flock of sheep or herd of cattle? Pecus is the Latin for herd or flock. Peculium meant the property owned by a son or slave with the consent of the father or master. It was also the name given to the property held by the wife as her own. The bulk of this property was herds of cattle. In time the word was applied to any property belonging especially to one person. It was peculiar to himself and to deprive him dishonestly of this peculiar property or any part of it to-day is to peculate.

From pecus also comes the word pecuniary, which has an interesting bit of history. Pecunia was in primitive times the wealth of a man in cattle. As civilization advanced men required other things to render life worth the living, and pecunia became the word for all kinds of property. When money became the medium of exchange pecuniary came to have reference to money and money value only.

As peculate and pecuniary are from the Latin pecus, a herd of tame animals, so spoil, which we sometimes call plunder or booty, is from spolium, the skin stripped from the back of a wild animal. It used to refer only to the trophies of the chase; now anything taken from an enemy by force is called spoils. Other words in common use in English to-day that have an animal origin are: Chivalry, from the French cheval, horse; equestrian, from the Latin equus, horse; cynic, cynosure, from the Greek kuon, dog; fiddle, from the Latin vitulus, calf; capricornus, capricorn, caper, from the Latin caper, goat; dandelion, jackanapes, shepherd, coxcomb, harelip, cowlick, sheepish, aquiline, etc.

At first glance it may be difficult to see any connection between veal and fiddle, but vitulus is Latin for veal, and the middle Latin vitula is the word that gave the Italians viola or violin, and to us both violin and fiddle. The word bunting is from "to bunt," meaning in parts of England to sift, bunting being the coarse bolting-cloth used in the process of sifting flour in the mill. Here we use bunting as a name for the material out of which flags are made, and in some cases for the flags themselves.

Tram, as applied to certain kinds of roads, comes from the name of its inventor, Outram, monkey wrench from Charles Moncky, who invented it; boycott from Captain Boycott, and macadamized from John Loudon Macadam, the originator of this system of road-making.

Then we have pantaloons, from St. Pantaleone, fiacre from the Scottish Saint Fiacre, in front of whose image in Paris this common hackney coach used to wait for fares; and hansom from the name of its inventor. Tawdry is but a rough form of St. Audrey, whose name was given to an English fair whose cheap laces, jewelry and other tinsel splendors were peddled out to boorish buyers. Dunce owes its being to the learned Duns Scotus, and atlas to the demigod who was supposed by the ancients to bear the world on his shoulders.

Bureau has an interesting evolution. It is from the Latin burrus, a coarse cloth of a bright red color, or from the French buire, brown, the color of a cloth called by the French bureau. This cloth, a sort of drugget, was used to cover a table or desk, and in course of time the table or desk itself was called bureau. Then the word was applied to the place where the table or desk was used, then to a department of public business requiring a number of clerks who used tables or desks at their work. Latterly it came to mean a body of officials under a chief, following the use of board, which was first a plank, then a table made of planks, and then a body of officials who sat at that board to transact business.

Tumbler, applied to a drinking glass, had its origin in a day when such vessels would not stand alone, when they tumbled; tumbar means to romp and play, in Anglo-Saxon, and from this we have our word tomboy. Dude seems to have been derived from the Scottish word duddies, clothes, which crossed into England, to become duds or dudes, and into America to designate something in the guise of a man, but dressed as a fop, or beau, what Shakespeare calls a "clothes-wearing man" and Addison a "circumforaneous wit."

Sigsbee's Valley.

The deepest valley in the Gulf of Mexico is named "Sigbee's Deep," after its discoverer, and the scientific name of Sigsbeia murrhina is given to one of the rarest species of deep-sea fauna. It was Sigsbee, too, who discovered near the Morro light, not far from the spot where the Maine now lies, many beautiful specimens of the pentacrini, or sea lilies, and who, while in command of the Blake, placed at the disposal of scientific investigators the first extensive collection of this ancient genus. Thus has Captain Sigsbee associated his name with the harbor of Havana both by scientific investigations and by exhibition of the highest qualities of command. We have the authority of Professor Alexander Agassiz for saying that the success of the scientific party in the Blake was largely due not only to Captain Sigsbee's capacity as a commander and to his active interest in scientific investigation, but to the numerous improvements in the apparatus for deep-sea dredging and sounding originating with him.—New York Independent.

So many troubles are not imaginary.

ROUEN'S AIR FERRY ODDEST OF BRIDGES.

The "Pont Transbordeur," or overhead ferry, which has been built and is now in successful operation, over the River Seine, at Rouen, France, represents the solution in a novel way of one of the most interesting problems in engineering. There is nothing like this overhead ferry in any other country in the world.

Among the means which the engineer has hitherto employed to cross rivers and channels are boats or ordinary ferries, swing, draw, bascule and ordinary bridges, tunnels under the beds of channels and traveling carriers.

The swing, draw and bascule bridges can only be safely used over locks, inland canals or rivers, where a vessel

ROUEN'S AIR FERRY.

can be under perfect control in all kinds of weather. Ordinary bridges are more satisfactory than the others, but if they are to cross a river leading to an important harbor they should be of a height to permit a ship with the tallest mast to pass under. Some masts are 200 feet above the water. Inclines or elevators must be used to reach the bridge level, and the reason that there are so few bridges like the Forth Bridge in Scotland and the Brooklyn Bridge is their great cost. The objection to tunnels is the great cost and risk in building. Many large tunnels under water have been abandoned, and even when built are not greatly appreciated by the general public.

The overhead ferry system remedies all these drawbacks. The advantages of the system are:

The channel to be crossed is left entirely clear at all hours, without requiring vessels to make any special signals or modify their rate of speed any more than they would in the case of a cross-channel ferry.

No increase of distance or ascent or descent is forced on the traffic in order to cross from one shore to the other.

The essential part of the system may be described as a horizontal railway supported by a bridge spanning the channel and built up at such a height as will allow the tallest masted vessels frequenting the channel to pass beneath.

The platform of the bridge carries two lines of rails, over which a carriage on small wheels rolls, the number of wheels varying with the weight to be carried.

The rollers are connected with a movable frame under the line of rails, which may freely move in a longitudinal direction quite close to the platform and from one end to the other of same. Thus is provided a rudimentary vehicle which can cross the channel without interfering in any way with the opening, which is to remain clear.

In order to obviate any swinging motion which might result from the pressure of the wind or the forward motion of the carrier itself, the rods by which the latter is suspended are arranged in triangles, both in the longitudinal and transversal directions. There is thus a little railway for crossing the river, with this difference, that the body of the vehicle, instead of being above the rails and wheels as usual, is some 140 or 160 feet below these.

SOCIETY'S FAIR GAMBLERS PLAY BRIDGE WHIST.

Society in New York has been indicted by Dame Rumor for gambling. Bridge whist is the game of chance now most popular with the fashionables, and it is claimed that in the course of an evening of bridge sometimes as much as $20,000 changes

MRS. RICHARD IRVIN.

hands, and such small sums as $500 frequently. Mrs. Richard Irvin has denied the story that she will lead a crusade against the game, and says that, while she does not play bridge herself, she is not opposed to the game. At a recent whist party in New York one man, a guest, lost something like $400. When the game was over he bade his hostess good-night and told her he would send his check for the amount the following morning. "It is our custom," she informed him, "to settle up everything at once. "Can you not pay it now?" He hadn't the money with him nor a check, but, as his hostess persisted, he managed to borrow the amount from his friends!

COULD NOT ESCAPE BLAME.

Slanderer Did Not Shift Responsibility on the Phonograph.

A sewing machine agent in Germany wanted to slander an employe whom he had quarreled with and discharged. He did not call it slander, but he knew that his enemy would, and possibly the courts also, and as the penalties for that offense are likely to be heavy in the kaiser's realm he sought out a way in which he could gain the desired end without endangering his own safety. An inspiration came to him and purchasing a phonograph roll he went to the village inn, placed it into the instrument which was in the taproom and talked it full of things about his sometime friend.

Later in the day the patrons of the inn came in to have their beer, and, as was their custom, some of them dropped coins into the phonograph and set it a-talking. The result was appalling to them. The phonograph told the most shocking tales about one whom they considered a hitherto much respected and altogether to be praised if not admired fellow citizen, tales they knew not to be true. They hurried to the slandered man, and in the course of time he brought an action against his former employer. The latter pleaded that he had not insulted the plaintiff, but that the phonograph was the guilty one. The phonograph was brought into court and turned on to give its testimony, but it refused to work. However, the judge decided that the defendant was at least an active accomplice in the slanders and fined him 50 marks.—New York Commercial Advertiser.

LIFE SENTENCE FOR A FEUDIST.

John Shotwell is a famous Kentucky feudist, and was recently convicted at Williamsburg of participation in the Corbin riots, during which the restaurant belonging to the Whites, the opposing faction, was blown up with dynamite, and two persons were killed.

JOHN SHOTWELL.

Shotwell was sentenced to the penitentiary for life, but a motion for a new trial will be made.

Sky Mountains.

The highest of all the clouds are those delicate, white, fibrous, detached masses of frozen vapor always seem high against the blue sky. The topmost point of the highest of these may be ten miles above the earth. They are called cirrhus clouds. Altogether there are ten principal types of clouds. The lowest, known as the stratus, are really horizontal sheets of lifted fog, seen on damp days or in very damp localities. These clouds are only a few hundred feet above the earth.

Some of the vast bodies of vapor are higher than the tallest of the Alps. They are undoubtedly snow-capped—veritable mountains of ice and snow. It has been discovered that the temperature on one such summit was 75 degrees below zero.

Were it possible for us to ascend in a balloon and penetrate one of these snow-capped peaks from base to summit, we should travel first through a layer of dry air and vapor, then through another of dry air, vapor and water, a third of freezing vapor, water and ice; and, finally, through the summit, composed of dry air, vapor and ice, but no water.

My Cat and I.

He has cheeks round as apples. Mine are hollow.

He is portly, even haughty. I am not.

He has big, sleepy eyes. Mine are dim.

He has paws soft as velvet. Thin and trembling mine.

He stands ready for a frolic. I've not time.

He has repose. Worried am I.

He is, in short, big and beautiful, sleek and silky, fat and fine—which I'm not and never can be.

Yet we live the same.

He has no advantage.

The same house shelters us. We breathe the same air. We eat the same food, he lingering fondly over all save fruit courses, being especially devoted to rice, milk, soup, meat, oil and vegetables. We even sit upon the same chairs.

So why this awful difference?

But hold! Though neither has the advantage in the matter of board and keep, there is one great, big difference! He does not work between meals.

A Fisherman's Luck.

The prize of $20,000 in a French lottery has been won by an old fisherman, who is over 60 years of age, and has not missed a day from fishing for over fifty years. He can neither read nor write, and allowed his little niece to choose the number of the ticket for him.

INDEPENDENCE, CAL.,

FRIDAY, AUGUST 23 1901

BANISH THE MUSKETOS.

Editor Green of the Colusa Sun supplies to his readers more genuinely original editorial matter than any other of our State or rather country exchanges. Following, upon a minor subject, is a sample:

Right a top of the discovery that mosquitoes convey malaria, yellow fever, etc., comes another important discovery and that is that the castor bean will banish mosquitoes! So all we have to do to keep away both insects and disease is to grow castor beans. Planting the castor bean to keep moles and gophers out of the garden is an expedient in vogue when we were born, and it has not failed. Now, as the bean is a valuable product, why not grow it for commerce all over the districts in which the diseases are epidemic?

It is Prof. Starr of the University of Chicago who made the discovery. We hope it is true, but some scientific people told us that the Australian gum was a specific, but that was a fake as a remedy. A Chicago dispatch, telling about the intention of park authorities to try planting the castor bean, says:

"This discovery was made by Prof. Starr while he was traveling in tropical countries. He was supposed to be studying anthropology during these trials, but the exigencies of the situation forced him, for a time, to study the best methods of driving off the clouds of mosquitoes which made life a burden.

"'One night,' says the Professor, 'I was annoyed more than usual. Thousands of the little insects hummed and buzzed about me. Finally, in desperation, I tore some branches from a plant, with which to brush them away. I soon found that I did not have to brush. The mosquitoes had disappeared and did not come back that night. The plant from which I had torn the branches was that of the castor bean. The next evening I again tried it with the same success.'

"Prof. C. M. Child of the department of entomology of the University of Chicago confirms the statement of Prof. Starr. He thinks that there is something in the castor bean plant which proves antipathetic to the mosquito."

The biggest project in view is the tunneling of the mountains and cutting out of the snow-sheds. The proposition has been talked of before but this time they already have the supplies on hand for the surveyors' camp and the survey will be commenced as soon as Locating Engineer W. C. Eades arrives, which will be about the middle of the month. He is under W. H. Hood, the Chief Engineer of the company. It will take several months for him to complete the survey and when he gets through and reports it will be definitely known whether or not the tunnel will be constructed. The plan is to start from Cold Stream and come out at Soda Springs. The distance would be about five miles. Such a tunnel would shorten the road, do away with snow sheds and lessen the grade, but on the other hand it would cost about $5,000,000 besides disadvantages on account of pure air in running through such long tunnels.

Foregoing is from the Truckee Republican. It means, of course, that impure air would probably be the trouble. In the great Alpine tunnels that problem has been met with by electric motors.

August 20 1851, fifty years ago, the America's cup was won. For fifty years it has been kept here by the superior qualities of American boats and American sailors. Ten different times our British cousins, the givers of the cup, have tried to "lift" the bauble without success. The trinket is worth perhaps $500; but millions have been spent in the effort to get it back, and as much more in its defense. It is estimated that the defense of the cup against Shamrock II will cost about $350,000, and Sir Thomas Lipton's expense bill this year will aggregate an even larger sum. As against his latest boat the Americans seem to be weakening and undecided as to which new craft shall be sailed as a defender, but all hands agree that if defeat comes it will be at the hands of a brave knight.

While all the great nations of the world are acting like greedy children that blindly grab because they see other children grabbing, Holland is perfecting a plan for expending $33,000,000 in creating a province. The new province now lies at the bottom of the stormy, dangerous, useless Zuyder Zee. A dyke is to be built, the great salt water lake is to be pumped dry and 500,000 acres of fertile land will be annexed to Holland.

The people of Columbia and Venezuela have gotten madly at the terrible work of killing each other, under guise of war. Any pretext of European intervention is forestalled by the Monroe doctrine and a sprinkling of Uncle Sam's navy. "Let us have peace," but we don't want a piece more of Central or South America.

It is hoped to secure enough names to the anti-Chinese petitions to represent the full voting strength of the State, and this ought to be accomplished without difficulty if the people can be aroused to a realizing sense of their duty to themselves.

Down in Denison, Texas, during the late drouth, the people prayed for rain one Sunday and before the day was over a rainstorm came that incidentally destroyed a new $150,000 church. Who says that there is no efficacy in prayer?

FRUIT AND FLOWERS

FRUIT SETTING.

The Effect of Spraying Blossoms With Bordeaux Mixture.

In chemical experiments reported by the Geneva (N. Y.) station it has been found that bordeaux mixture prevents the sprouting of pollen immersed in it, whether that of the apple or some other plant. Facts indicate that this fungicide has a preventive action upon the germination of pollen exposed to its influence, and they lead to the conclu-

FLOWER CLUSTERS FROM APPLE TREE.

Variety—Baldwin. 1. Sprayed once in bloom; all blossoms dead, with possibly one exception. 2. Sprayed in bloom; at least two vigorous fruits set.

sion that if the stigmas of an apple blossom before fertilization should be subjected to the action of some fungicide or insecticide, even though the amount in contact with the sensitive surface be slight, the chances would be decidedly against the growth of the little fertilizing bodies which fall upon it. In that case the blossoms could not set fruit. Study in the orchards at Geneva confirms this conclusion, but shows also that the blossoms in many cases become fertilized very soon after they open and thus escape the destructive effect of the bordeaux, except when it kills the tissues of the tender parts of the flower.

Several sprayings have cut off crops, and a single spraying has killed some blossoms.

It seems certain that spraying in bloom destroys some of the blossoms and might in some seasons seriously lessen the crop. In other years, though, when blossoms are very plentiful, the thinning of the fruit by death of the flowers from the bordeaux mixture may be of advantage, especially if the spray be applied at such a time that the strong center blossoms have passed the danger point and the later side blossoms of the clusters only perish.

No evidence has been found to support the view of some growers that the spraying actually helps the flowers to set fruit, but it all points to the contrary belief.

About Dahlias.

Many cultivators are much worried that their dahlias are not planted. Others are turning away, thinking that it is too late for this season. As far as my experience goes this is all folly. There have been more dahlias wasted in recent years by early planting than from any other cause. Last season my best results were from tubers which were practically dormant and planted at intervals from June 17 to July 4. The very best results of all came from plantings made on June 27. After making a careful investigation along these lines and asking for results from successful growers within a radius of 400 miles of New York city I find that the majority have not planted earlier than June 15 to get their exhibition blooms. Their results are beyond question.

The advantages of late planting are logical. It is the experience of every one and more especially of those who are complaining of lack of success in flowering that a remarkable growth takes place in May and early June, when the tubers are first put out; that the plants grow and flourish for awhile and then stop, and the foliage grows smaller instead of bigger and dries up, and whatever flower buds may be formed go practically the same way. The plants never revive until fall and in many instances not even then.

Late planting prevents all this, inasmuch as the first severe hot spell or drought is passed before the plants attain any size. In fact, they never stop growing. Another great advantage is that treated in this way no stakes are required. Roots can be planted close together in the row, and they will resist wind and any ordinary gale without the assistance of a stake. They begin blooming in August and are practically never out of bloom until frost cuts them down.

It is my confident belief that if the practice of late and deep planting were generally adopted there would be less inquiry next fall, "Why do my dahlias not flower?" So writes J. W. Withers in American Gardening.

SHORTHORN CATTLE.

Beginning and Progress of the Breed In This Country.

At the beginning of the past century there had been a number of small importations of Shorthorn cattle made to this country, more especially into several eastern states, and in 1817 shipments were made into Kentucky, from a part of which are descended the cattle known to American breeders as the unfashionable "Seventeens," says Secretary Coburn in his March report. It is scarcely possible to conjecture the number of Shorthorns that have been imported to and bred in the United States, as previous to 1845 no American herdbook was kept. Entries have been closed for volume 48 of the American Shorthorn herdbook, and that, with its predecessors, will contain pedigrees of 162,000 bulls and 279,000 cows, or a total of 441,000 pure bred Shorthorns with lineage recorded in the United States alone to date, besides which pedigrees of 4,600 bulls and 8,000 cows have already been filed with the editor for publication in volume 49.

In color Shorthorns may be either red or white or any combination of these. The red may vary in shade from a light or yellow to a very dark or mahogany, the latter at present being the favorite with many breeders in this country, while the white is least popular or, in fact, scarcely acceptable at all. In England the roan color is valued most highly, and in America it is an especial favorite in the feed lots, although breeders of thoroughbreds are partial to red, because they claim that animals of that color, unaccountable as it may seem, in consideration of their conceded superior quality, are more readily and profitably sold for breeding purposes.

The cows vary greatly in the milking quality at present, but early in their hostory were valued highly for the dairy. In later years a majority of breeders have unfortunately been so absorbed in the development of the beef making qualities of their stock as to greatly neglect the equally important matter of development in milk and butter production, a condition which true friends of the breed will hope to see modified for the better from year to year in the future.

FODDER CROPS

It is a question whether we in this community (Indiana) should plant corn at all for the roughness alone, says a writer in Prairie Farmer. We have tried the Kaffir corn, but it is not very well liked here. The common eight rowed sweet corn is grown here, for the purpose of feeding in late summer and early winter, more than any other variety. We commence planting as soon as the ground is warm and plant some about every three weeks until July 4. We go through it and pull the finest ears for family use or for the market and feed the rest, corn and all.

For the ordinary farmer I think some variety of white corn, such as Duncan's White Prolific or some other large stalked and long, broad bladed variety, is desirable, as this makes the best fodder when shredded on our machines, and the stock get a great deal of the stalks, which some value as feed. I like this large corn also because it stands up better and has therefore less sand and dirt on the stalk and blade. Right here is one great point in favor of the shredder, as it knocks off the dirt, and the stock don't have to eat the dirt to get the fodder.

Green Food For Hogs.

There is nothing cheaper and nothing better than plenty of green food of some kind for hogs, says a Kansas grower in Prairie Farmer. It is good for their health and to make growth and is also good for the growth of the pocketbook. Ten bushels of corn with all the good alfalfa or other grass they can eat, or even good hogweeds, will make as much growth on pigs as 20 bushels fed to them in a dry lot. Those not having alfalfa or clover can grow rye, which also is a good green food. In the fall of 1899 I sowed a field to rye for the hogs. As soon as it was high enough for them to get a bite they were let into the field. They had the run of it till near harvest time, when they were shut out just soon enough to allow what they had not destroyed to ripen. After ripening it was harvested, then thrashed from the shock. The yield was 25 bushels of grain to the acre of a splendid sample. Not bad, was it? Two crops in one—a crop of pork and a crop of grain.

Another field had been prepared for the pigs to go as soon as they were shut out of the rye. One-half of this field was sown to Kaffir corn, the other half to rape in the spring of 1900. The Kaffir corn seemed to please them best for some time. They feasted on it until near fall, and then they commenced on the rape, which furnished lots of feed for them until winter. By that time another field of rye was ready for them. Rape is a splendid food for hogs. They eat it and grow, for they like it. It will still grow after being eaten off and will furnish more green stuff until winter, as it takes a hard frost to kill it.

A Good Paint.

This paint has been highly recommended: Add one pound concentrated lye to one gallon rainwater; slack two pounds stone lime in four gallons water; dissolve one pound glue in one gallon water; put two pounds sulphate of zinc in three gallons water. Mix each of these in separate vessels, add the lye to the limewater, pour in the glue water and add the zinc solution; dilute to 20 gallons and stir in 100 pounds whiting. Add any coloring pigment except blue, which the lime and alkali would alter.

HESSIAN FLY.

No Damage Where a Medium Grade Fertilizer Was Applied.

It appears from the letter of a wheat grower to The Ohio Farmer that many farmers of that state, expecting the fly last fall, deferred seeding until late, but the fly anticipated the wheat grower also, for it did thorough work on all wheat sown in this farmer's section up to Sept. 24, but after the 28th none of its work can be found. These dates have reference to the time of sowing and not when eggs were laid.

Where a medium grade of prepared fertilizer was applied (200 pounds per acre) no appreciable damage was suffered by the wheat plant last fall. Its effect was to stimulate the shooting of a new plant from the root below the larvæ, which were generally several in number, and a spring examination of the complete stool showed the insects in a small, dead branch which was really the main plant at the beginning.

On some drill widths where no fertilizer was applied the wheat died entirely. It lived long enough, however, to nurture the larvæ it contained to maturity. These, in many places where the dead plant heaved out and become disintegrated by decay, lay about upon the surface of the ground, every one a thing of life. The first, adults, according to this man's observation, issued forth May 4 to soon go to work depositing eggs upon the leaves of the wheat to supply larvæ for each joint above ground, which sap the life of the plant and cause crinkled straws and empty chaff next harvest time, unless Professor Webster's parasite comes to the rescue.

Professor Webster's parasite is a fungous or parasitic infection similar to that which is destructive to chinch bugs.

July 1, 1901.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days, and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

INYO MERCANTILE CO.

NEW ADVERTISEMENTS.

"The LAND OF THE BOER AND THE BOER-ENGLISH WAR"

An interesting lecture on South Africa and the present war, illustrated by superb stereopticon views. Presented by

Rev. Geo. C. King.

Songs Illustrated by the Stereopticon.

Canvas covers 225 square feet. Illumination, 800 candle power.

WILL BE AT

SUPERIOR COURT

Hon Walter A Lamar, Judge.

AUGUST 19 1901.

In the matter of the Estate of Eleanor Spencer, deceased.

Petition for confirmation of sale of personal property granted.

Estate of Thos. E. Leece.—Petition for confirmation of sale of personal property granted.

AUGUST 20, 1901.

Estate of J. G. W. Birchim, deceased. The petition for confirmation of sale of real estate coming on at this time to be heard, and a higher bid that the one petitioned to be confirmed being presented and filed in open Court by Edward B. Smith,

It was ordered, that said sale be confirmed to him upon his filing a bond in the sum of $280.

Real Estate Transfers.

Recorded since last report:

Geo W. Carey to Lucia F. Cary—20 acres oil land near Olancha.

Don't forget the lecture.

Merchants are receiving lots of new goods.

On account of rain Randsburg chickens are developing web feet.

J. C. Crocker was down from Big Pine last Wednesday.

Stated meeting of Masonic Lodge at the hall to morrow evening.

BARGAIN SALE at Eibeshutz' Store on Saturday. No trouble to show goods.

A base ball tournament, $50 premium, has been provided for at the District Fair at Bishop.

Forest Supervisor Price has returned from a lengthy trip through the Tehachipa country.

H. C. Hamilton was in town Saturday last, making final proof on his land at Georges Creek.

Ambrose Smith, the Tinnemaha rancher, paid Independence a visit day before yesterday.

A new line of FALL GOODS just arrived at Eibeshutz' Store. Don't fail to see them.

C. L. Meyers of Big Pine, accompanied by his daughter Clara, spent several days in Independence during the past week.

The Irwin Cartier party and Max Fausel and wife are home again from foreign shores—of Sierra trout streams.

Since most of the outers have returned from the mountains steady, warm weather appears to have set in for good.

An immense supply of cordwood at Nathan Rhine's indicates that there will be no freeze-to-death famine again next Winter.

Ladies can find goods at PRICES to SUIT them by calling at Eibeshutz' Store.

Among the "returners" yesterday were Ben. H. Yandell and A. S. Nuecker, accompanied by Dr. C. E. Turner of Vallejo.

A patent has been granted by the department to W. N. Inman of Randsburg and C. C. Inman, of Bishop, for a sack holder.

Pete Copeland, at Tonopah on Saturday, sat upon a 25 lb box of giant and fired it. There were no remains to speak of, but his manner of exit was effective.

Owing to reports that the Coso Hot Springs have dried up, very few people have visited them. The late storms have increased the flow of water and the springs are now doing full time.—Randsburg Miner.

For a fine fitting SHOE call on Eibeshutz.

Note the announcement of lectures at Keeler, Lone Pine and Independence next week. Rev. King was formerly in the pulpits of the churches of Mono. Nevada papers speak in very complimentary terms of his lectures.

According to all accounts the late heavy rains caused widespread damage to all the grain fields lying north of Fish Springs and up to Round Valley. The phenomenally wet season has proved a very bad one for the farmers.

In the U. S. Land Office, last Saturday, the matter of final proof on land filing by P. J. Shaw was continued until September 2d, on account of protest entered by E. B. Smith and from the further fact that Shaw's attorney had not returned.

For the General Safety.

The citizens of Bishop have organized a committee to combat and if possible suppress the Indian liquor traffic, taking means of dealing with certain individuals whom, it is believed, have been devoting their time exclusively to the business.

Last week Messrs. J. L. Bourland and J. H. Shannon were brought before Justice of the Peace Woodworth on complaint of Jesus Coronado, complaining that they had delivered to him a written notice to leave the the town of Bishop within a certain time or suffer the consequence. In the pursuance of that notification he feared that they would do him bodily injury, and asked that they be put under bonds to keep the peace.

But by the time the case was called for examination he had evidently taken a different view, as he then stated that he did not wish to carry the matter any farther and that he wished to withdraw his complaint. This he was permitted to do and the defendants were accordingly discharged.

So far, so good. There is need of like citizens' committees at Big Pine, Independence and Lone Pine, with intermediate auxillaries. As in the cases of Shannon and Bourland, it is not supposable that such committees will act otherwise than within lines of general and direct support of the law—the courts and officers. General co-operation may effect reforms while punishing none but the guilty.

The Mountains Across

Forest Ranger Naylor and Under Sheriff Willis returned last Tuesday from a trip across the Sierras to San Francisco. They followed a different route from that usually traveled, going by way of Ellis, Camp Badger and Auckland to the Santa Fe road at Orosi, and believe that a material saving in time and distance can be made over the usual route via Millwood and Sanger.

The report the trails in fair condition, aside from some slight damage occasioned by the recent heavy rains; also, that considerable work is now being done toward their further improvement. With the exception of Bubbs Creek all the streams have good, substantial bridges.

The Lecture.

The illustrated lecture given by Rev. King at the Methodist Church Saturday evening proved to be one of the best entertainments presented in this city in some time. His subject, "Ben Hur," was well handled and thoroughly understood and appreciated by the audience.

The lecture of last evening proved just as interesting and was thoroughly enjoyed by the audience. Both lectures were illustrated by stereopticon views which made the entertainment doubly fascinating.—Carson Appeal.

A party consisting of Pat. Clinton, Henry Levy, J. D. Lewis, Eddy Eibeshutz and others left yesterday for Onion Valley, expecting to make a rapid transit to that resort. Their first camp will be made near head of the water works and on succeeding nights at Cottonwood, Gray's, Rex Montis and at the Kearsarge mill, so that the entire fifteen miles may be covered in a week or so. Wells Barnes has sent out necessary supplies for the different stations.

Mr. D. P. Hargis of Johannesburg has returned for brief stay in his old stamping ground. He reports that matters are lively in Randsburg oil circles. The company which is represented by Mr. Hargis and Mr. G. D. Calvert has some 4000 acres of oil lands in Township 28 S., Range 41 E., and in 29 S. and 42 E. They are going to have a well put down and the drill is to drop by the 15th of October.

Arthur Mairs arrived from Los Angeles last Wednesday. His diploma of graduation from the Woodbury Business College is a document that any young man should be proud of, because it requires a combination of bright intelligence and hard work to get one. We predict a successful career for "Pete," as he is generally called by homefolk.

To our disappointment, there is yet no further news from Darwin in regard to the fate of Jerry Fitzgerald in the Darwin Wash flood. There may never be anything more known about it, as investigation and search did not occur until eight days afterward, when the appearance in the town of Jerry's animal aroused inquiry.

According to the Register, the Fourteenth Annual Fair of Agricultural District No. 18 will be held at Bishop September 24th to 27th. Doubtless all announcements will follow in due time.

Southern Pacific passenger No. 9 rolled in on time Friday afternoon, but she quit rolling here and from present indications she may stay with us a week. The heavy rains loosened the mountain side near Cameron and the cloudburst of Friday afternoon carried down a side covering 1200 feet of track to a depth of 10 to 20 feet. Small washes about three miles east tied up trains on that side, but they succeeded in repairing and passing this far at 9 o'clock Saturday morning. A bad break is reported on the Caliente side of the Tehachapi grade, but just how bad or where we have been unable to learn. The Cameron slide will be a slow job, for it can only be handled by a limited number of men. The Santa Fe overland is also tied up here.—Mojave Tomahawk.

People, who don't know, seem to doubt the announcement that a railroad will be built to this camp, a branch of the C. & C. R. R. The proposition is now under advisement by the Southern Pacific management and as they have $15,000,000 surplus and are looking for new paying territory there is no doubt but what the company will build a road to Tonopah at an early date.—Bonanza.

APPLE CANKER.

What the Practical Men and the Scientists Say About It.

The orchard disease caused by the fungus Sphæropsis malorum is very common in the state of New York. It has been known to scientific investigators for only a few years, and though noticeable in many orchards its effects have been ascribed by practical men to sun scald, frost injuries or varietal weakness rather than to a specific disease. The Geneva (N. Y.) station says, however, that the blackened, enlarged

APPLE CANKER.

[1, branch girdled at a and injured at b by cankers; 2, same with dead bark removed; 3, typical canker.]

limbs with the bark marked by pits and scars bordered by concentric lines and cracks—the cankers—and the long sections of bare wood where the bark has been destroyed are found in many localities and on many varieties. The same germ causes a twig blight often found in orchards showing little or no sign of the canker form and also produces black rot of the fruit.

It has been known that fungi very similar to this one work on other trees and shrubs. Tests made in 1900 prove that this same species of fungus occurs on apple trees, pear trees and hawthorn trees and on apple, pear and quince fruits.

To cause the destructive cankers which girdle the limbs the germs of the disease must get through the tough outer layer of the bark into the growing layer beneath, the cambium. An injury to the bark of some sort is necessary to this entrance, for the fungous threads cannot penetrate the unbroken bark. Sun scald as well as mechanical abrasions may cause such injuries. The bark is killed by the sun and frost and cracks or peels, when the germ finds ready entrance and rapidly extends the injured area in canker form.

Sun scald or sunburn is a common trouble in this state, probably more common than generally supposed, especially on tender varieties. The long areas of reddish bark on the south and southwest sides of limbs and young trunks are inconspicuous when they first are scalded and so escape notice, but they are all too common and may become the seat of serious harm to the trees.

Trees of tender varieties should be protected from the direct rays of the sun by training them to low, thick heads which shade both trunks and branches. Additional protection may be given by a coat of whitewash upon the trunks, which helps to prevent absorption of the sun's rays and also exerts a favorable influence upon the bark itself. A good mixture is:

	Pounds.
Lime (unslaked)	20
Tallow	4
Salt	5

Dilute with water enough to make it spray easily.

In addition to the protection from sun scald thorough spraying with bordeaux mixture and care to prevent accidental injuries make up the preventive treatment. The larger diseased limbs may be saved from complete loss by cutting them off back of the cankered area and inserting clons of the same variety.

Only a few specimens showing effects of this trouble have been found in America, some coming from Nova Scotia and a few from Cortland county in this state. The cankers are unlike those of the sphæropsis and are caused by a different fungus, Nectria ditissima. They are well represented by the

EUROPEAN CANKER.

figures of the second cut, the lower showing a recent infection and the upper an old canker.

Though rare in America, the trouble should be watched for by apple growers, as it is a serious pest in English orchards.

FRUIT GROWERS' TALK.

Thin the Fruit on the Trees and Everlastingly Do It Too.

"The past season has demonstrated more fully than ever to the progressive fruit grower the fact that he must ever be on the guard to fight insect and fungus enemies and make up his mind to grow first class fruit or be content with no profit from his work. After he has overcome insect and disease and has fine, healthy orchards then he must prune his trees and thin the fruit judiciously or the results will be unsatisfactory. Fruit thinning is of great importance, and without it is impossible to have first class fruit, no matter what the conditions are. When fruit sets as full as peaches and Keiffer pears did the past season, it is impossible for the fruit to be first class.

"There was a general complaint of the rusting or clouding of the Keiffer pear the past season, and this greatly injured its sale. This was especially bad on full bearing trees or where they were crowded with branches and foliage. Fruit on the outside and the top branches was not nearly as much affected as on the inside. This shows the necessity of pruning to make the center of the trees open to let in air and sunshine," says Charles Black of New Jersey.

"We are growing better fruit all the time. We have got to thin the fruit on our trees, and everlastingly do it too. We must thin our apples and peaches and every one of our fruit trees. I think the time is coming when we will also have to trim our smaller fruits," says J. H. Hale of Connecticut.

Geranium Again Very Popular.

The good old household plant, the geranium, has jumped into a fresh period of popularity, the semidouble sorts taking the lead. Many new geraniums (more correctly Zonal pelargoniums) are introduced every year, but make little progress in cultivation, as they are not able to endure our severe climate when treated as bedding plants.

In other words, as told by The Rural New Yorker, they are not "sunproof," and in consequence are quickly dis-

GERANIUM HALL CAINE.

carded, but this is too great a loss, as they can usually be grown to great perfection in the conservatory or window garden.

The sketch shows a type of bloom of this large flowering, decorative class. The variety is Hall Caine, cherry red in color, with florets 2½ inches across.

The coloring of some of the new kinds is wonderfully delicate in the light shades and vivid in the darker tints, while the habit of plant and form of truss leave little to be desired.

A Chance For the Wide Awake.

Orris root, the rhizomes of Iris florentina, has been singularly overlooked by wide awake Americans who are ever on the lookout for something on which "a good snap" might be made, says Meehan's. As it has long been grown as an ornamental garden plant there is no question about its successful adaptation to culture here. It is one of the staple bases on which many popular perfumes are constructed and would always find a ready market. European papers tell us that the demand there for it is so lively that prices have risen considerably, and indeed it is believed that the stock in hand is behind the probable demand.

FRUIT AND FLOWERS

A TAKING NOVELTY.

Another of Japan's Many Quaint and Charming Fancies.

One of the fads of the floral world this season is the Japanese fern ball. Japan supplies us with many beautiful ferns, and the quaint shapes into which they twist the creeping rhizomes of Davallia bullata are characteristic of the unique productions of the country. The hanging ball here represented is one of these singular affairs, but there are others in the shape of triangles, circles, etc., arranged in the same way—i. e., by binding these rhizomes with wire over a center of sphagnum moss, which must always be kept damp. All these Japanese devices can be grown in a room if they are thoroughly soaked in tepid water daily, after which they should be hung up to drain over

THE HANGING FERN BALL.

a tray before placing them in position. The davallia (hare's foot fern), which is used, is fairly hardy, and it is easier to keep in good condition at a distance from the fire than too near it. In fact, it should be a rule in choosing a position for our room ferns not to expose them to more dry heat than we can avoid or to direct sunlight.

To buy one of the undeveloped fern balls, a brown, dead looking sphere, and watch the peeping forth and gradual growth of the fronds until the whole is changed into a graceful feathery mass of living green is a pleasure only appreciated through experience.

They Like Fat Girls In Tunis.

A Tunisian girl has no chance of marriage unless she tips the scale at 200 pounds, and to that end she commences to fatten when she is 15 years old. She takes aperients and eats a great deal of sweet stuff and leads a sedentary life to hasten the process. Up to 15 she is very handsome, but at 20 what an immense, unwieldy mass of fat she becomes! She waddles, or, rather, undulates, along the street. Her costume is very picturesque, especially if she be of the richer class. They are clothed in fine silks of resplendent hues of a bright red, yellow or green and wear a sort of conical shaped headdress, from which depends a loose white drapery. Turkish trousers and dainty slippers, the heel of which barely reaches the middle of the foot, complete the costume.

Quite Willing to Migrate.

A traveler passing through a fever infected locality said to an Irish resident:

"Pat, I'm surprised that you stay in a place where people die so thick and fast."

"Faith," rejoined Pat, "if you'll be arther tellin me av a place where payple niver die Oi'll move there tomorry an end me days."—Chicago News.

By excessive applications of water alkali may be brought to the surface and ruin land for crop growth, but by sub draining land to keep down the water table, and by surface irrigation to wash down the alkali in the top soil, any land can be preserved and almost any land can be reclaimed from alkali destruction. This fact has been thoroughly demonstrated.

As a result of the rivalry between the Gould railroads and the Pennsylvania lines backed by the Morgan syndicate, the Gould and Harriman syndicate is now planning a great transcontinental line to be known as the Atlantic and Pacific Air line. The Central and Union Pacific will be a part of this system.

Notice to Cattlemen.

All cattlemen wishing permits to graze their cattle in the Forest Reserve, or foothills of the Reserve, for Spring and Summer of 1902 should make application at once, to

ANDREW PRICE,
Supervisor Forest Reserve.

Eastern Division Forest Reserve,
Independence, Cal., Aug. 1, 1901.

LEGAL.

SHERIFF'S SALE.

BY VIRTUE OF AN EXECUTION, ISSUED out of the Superior Court of the County of Inyo, State of California, and to me directed and delivered, for a judgment rendered and entered in said Court, on the 23d day of May, 1901, in favor of Friederike Rhine and against George Vornberg, I have levied on the following property, to wit:

The "Corona" Mining Claim, situated in Mountain Spring Canyon, about one half mile northwest of Wild Rose Canyon and about one-fourth mile north of the Canyon Wagon Road, in what is sometimes called Argus Mining District, in Inyo County, State of California.

Notice is hereby given that on the THIRTY-FIRST day of AUGUST, 1901, at 10 o'clock a. m. of that day, in front of the Court House, in the County of Inyo, I will sell all the right, title and interest of said George Vornberg in and to the above described property, at public auction, for cash in gold money of the United States in hand, to the highest and best bidder, to satisfy said execution and all costs.

A. M GIVEN,
Sheriff.

Dated the 6th day of August, 1901.

SUMMONS.

In the Superior Court of the County of Inyo, State of California

J. J. WALL, Plaintiff vs SURPRISE MINING AND MILLING COMPANY, a Corporation, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in the office of the Clerk of said County of Inyo.

MACK & FORBES and W. A. HARRIS Attorneys for Plaintiff, Independence, Cal,

The People of the State of California send Greeting to Surprise Mining and Milling Company, a Corporation, Defendant.

You are hereby directed to appear, and answer the Complaint in an action entitled as above, brought against you in the Superior Court of the County of Inyo, State of California, within ten days after the service on you of this Summons—if served within this County; or within thirty days if served elsewhere

And you are hereby notified that unless you appear and answer as above required, the said Plaintiff will take Judgment for any money or damages demanded in the Complaint, as arising upon contract, or he will apply to the Court for any other relief demanded in the Complaint.

Given under my hand and the seal of the Superior Court of the County of Inyo, State of California, this 25th day of April, 1901.

[SEAL.] J. E. MERONEY, Clerk.

[Endorsed:] Superior Court, County of Inyo. J. J. Wall, Plaintiff vs. Surprise Mining and Milling Company, a Corporation, Defendant.

MACK & FORBES and W. J. HARRIS, Attorneys for Plaintiff, Independence, Cal.

TO LAKE TAHOE.

A TRIP OF RARE INTEREST.

Passengers on west-bound overland trains of Central Pacific Railroad are respectfully notified that during the excursion season, commencing May 1st and closing October 1st, a delightful trip to LAKE TAHOE can be enjoyed (losing but one day in their journey) by taking the Express train of the Virginia & Truckee Railroad, leaving Reno at 7:10 a m, arriving at Carson City at 8:25 a m, where well-equipped stages leave promptly for Glenbrook, Lake Tahoe, connecting with Lake Tahoe steamer for Tahoe City, there connecting with Moody & Co.'s stages for Truckee, arriving same evening where connection is made with west-bound passenger train of Central Pacific Railroad. Through tickets, Reno to Truckee, by above route, for sale at Ticket Office, Reno, $6 00. East-bound passengers can leave Truckee early in the morning (Through Tickets for sale at Stage Office in Truckee) make the trip over the above described route, arriving at Reno same evening.

VIRGINIA CITY & THE COMSTOCK.

Passengers may also take train mentioned at Reno for Virginia City, 32 miles, where an entire day may be pleasantly and profitably spent examining the famous Comstock Mines (now being worked to a perpendicular depth of 3,100 feet) with their massive hoisting and pumping machinery. Returning, see Time-Table above. Round Trip Tickets for sale at Ticket Offices Reno. aug-tf

LEARNING A TRADE.

The Danger of Making a Specialist of a Beginner.

It is generally to the interest of an employer that an apprentice should not learn his trade as a whole, but only a little section of it, says Joseph Horner in Cassier's Magazine. It pays better to keep a lad repeating the performance of one section of his craft than to teach him all. More money is made. But the apprentice becomes a young specialist, a prig in his teens, cocksure over some little piece of handicraft at which he may earn something over his normal wages, and many a lad does not become disillusioned until he has to face the world and try his luck in other shops.

And therefore the best shops in which to place a lad are not the big establishments, but the small ones, where every class of work is done and where tools and appliances are often scant. A lad will learn more in these than in those replete with every appliance and minutely subdivided into sections and groups.

The best training for a lad today is that which he can evolve for himself. The greatest evil that can befall him is to become a specialist and nothing more while in his teens. Yet that is what must happen if he spends several years tending machines or doing repetitive, unvarying tasks in one big establishment.

The best training, therefore, today is that gathered by the peripatetic youth. If a lad cannot gain experience in one place, he should move about, gathering as much as he can accumulate with one firm, then on to another, and attending training schools as opportunity offers. His views become broadened, he becomes self reliant, and in time, having found his true work, he may settle down as a specialist.

DRESS UP FOR SUICIDE.

Said to Be an Invariable Rule With Women Seeking Death.

"If I should ever be called upon to furnish indisputable proof of the inherent pride of woman," said a police sergeant, "I would point at once to her invariable rule of dressing up in her best clothes when she goes out to commit suicide. In my experience on the force I have had occasion to handle a good many suicides and afterward investigate their personal affairs, and in every instance I have found that the poor unfortunates prepared themselves for death by donning their best bib and tucker.

"The majority of the printed reports of suicides say that the clothes of the dead woman were 'good' or 'well made' or 'elegant.' If the woman contemplating suicide owns a silk waist, she wears it. Her broadcloth skirt and silk petticoat naturally go with this garment, and she selects her best shoes.

"I have looked up the history of many of these respectably clad suicides and have found that they owned but one gown with which they could make a decent appearance on the street and that that one good dress was chosen without exception as the appropriate garb in which to make the exit from this world's stage. It makes no difference what manner of death is chosen, the costume is carefully selected.

"Let a woman sleep her life away under the influence of drugs or burn her soul out with acids or sink into the slime of the river, she clothes herself in her most becoming garments and seeks the end with apparent tranquillity. Her instinct of gentility and elegance in clothes is with her to the last, and even in the face of death she shrinks from a public appearance in unbecoming raiment."—New York Sun.

High Mountains of the Moon.

The Leibnitz range attains enormous altitudes above the average level of the moon's surface and is sometimes seen projected far beyond the regular curvature of disk, thus destroying the circular contour and giving it a notched or serrated aspect. Several of the peaks of these southern mountains measure 30,000 feet in altitude, while one has been estimated to attain the great height of 30,000 feet. All the chief mountains of the moon which can be seen from the earth with a telescope have had their heights ascertained. The German observers, Beer and Maedler, have calculated the height of no fewer than 1,095 lunar mountains. The Doriel mountains supply an instance of great elevation, the peaks of the three leading ones being between 25,000 and 26,000 feet high. Among other lunar peaks may be mentioned Huyghens, 21,000 feet; Hadley, 15,000 feet; Bradley, 13,000 feet, and Wolf, 11,000 feet.

The Same Old Cry.

"I wonder what Eve said when she found she had to leave the garden of Eden," said Mr. Grumpin's wife.

"It was just about what all women say when they are starting on a journey. She complained that she didn't have a thing to wear."—Washington Star.

Wanted Her to Have the Best.

Nell—Rather conceited, isn't he?

Belle—I should say. He said the best was none too good for me, and then he proposed.—Philadelphia Record.

Adams' Sarsaparilla Pills

act gently and promptly on the liver, kidneys, stomach and bowels. They cure sick headaches, constipation, biliousness, stomach disorders, sallow complexion and are the only pills that will also purify and enrich the blood. Sold in 10ct. and 25ct. boxes by all druggists. Every box guaranteed.

Gold coin loses 1 per cent of its weight in 50 years, silver the same amount in 10 years.

Humors

They take possession of the body, and are Lords of Misrule.

They are attended by pimples, boils, the itching tetter, salt rheum, and other cutaneous eruptions; by feelings of weakness, languor, general debility and what not.

They cause more suffering than anything else.

Health, Strength, Peace and Pleasure require their expulsion, and this is positively effected, according to thousands of grateful testimonials, by

Hood's Sarsaparilla

Which radically and permanently drives them out and builds up the whole system.

25 CTS. PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION 25 CTS.

A PRIZE WINNER

THE entries for the dog show were about complete. The proud owners of the high-bred canines to be exhibited were rushing about the large hall, all objecting more or less to the places assigned their various pets. Some of the more enthusiastic ladies were decorating the places where their pets were to display their charms with gay bunting and bright ribbons.

A tall, fair girl was tacking up a strip of wide ribbon bearing the name "Tyke" in gold letters. She had adjusted it almost to her satisfaction, when an unusual sound made her stop her hammering to listen. A child's voice rose shrill above the din of the hall and a man's harsh tones brought Marion Deniston into the aisle to see what was the trouble. There she saw a golden-haired boy, his blue eyes filled with tears, hugging to his breast a ridiculous stuffed dog. It had four legs, "one at each corner," but there the resemblance to a real live dog ceased.

The man, half amused and half angry, was about to take hold of the child half roughly, when Marion laid a restraining hand on his arm.

"What is the matter?" she asked, quietly.

"Oh, this youngster's a nuisance," the man answered, impatiently. "I'm worried to death trying to get things into shape here, and just look at the thing he wants to enter in the show," and he pointed to the comical little animal with a laugh that made the little fellow's lip quiver as he hugged the toy tighter. Inspired by the friendliness in Marion's face, he held his treasure up for her inspection.

"Isn't he a fine dog?" he asked.

"He certainly is," Marion said. "I am sure I never saw such a remarkable dog before. What is his name?"

"Dewey," answered the child, proudly.

Marion carefully concealed a smile, and the little fellow went on, "I named him that 'cause my papa bought him for me for bein' brave and not cryin' when he went off to the Philippines. I

"DID HE GET A PRIZE?" ASKED ROBIN.

didn't cry, but I didn't want my papa to go," and the tears that were not shed when "papa" marched away were very near the surface now as the little golden head drooped pitifully.

Marion, bending hastily, put her arms about the child and said, tenderly, "I am sure papa was proud of his brave boy, for most little boys would have cried."

"Well, I didn't," the little fellow said, brightening up. "But mamma did. She's cried nearly all the time—'specially since a boy brought her a yellow letter."

Marion drew the child closer to her as she realized what the "yellow letter" meant.

"What is your name, little one?" she asked, gently.

"Robert Elliot Dowling, but every one calls me Robin. But, where's 'Dewey'?"

Marion's eyes were dim and she picked up the queer shaped canine and handed it to Robin.

"Can't I leave him here?" he asked, wistfully.

Marion looked puzzled. "Leave him here?" she queried. "What for, dear?"

Robin seemed surprised. "Why, for a prize," he exclaimed. "You see," he added, confidentially, "I think maybe mamma'd feel better and not cry so much if Dewey'd get a prize; and then, we don't have very much money any more, and mamma says she guesses she'll have to go to work. I thought maybe people'd pay to see Dewey. My papa said he was a—he was—a—a—oh, yes! I know now—a very un—u—s—u—al kind of a dog, and my papa knew lots about dogs and everything, he did," and the little fellow paused for want of breath.

Marion, really distressed, started to say something about "live dogs," when the man who had called Robin a nuisance stepped forward. "Young man," he said, "it would be an honor to have 'Dewey' in this dog show, and we'll be glad to have you leave him here. You see," he added to Marion in an undertone, "I saw the little chap's father's name in the paper just the other day. He was in almost the first engagement over in the Philippines—and, you know what I mean."

Marion nodded sadly, but she smiled as she took Robin's hand. "We'll enter Dewey," she said, gayly, "but first you must take me to your mamma," and she went with the child to the humble home a few blocks away, where from the heart-broken soldier's widow she heard again the story of the departure for the Philippines and the tragedy of the "yellow letter."

The annual dog show of this Western city was quite a social event, and the opening day found the canines surrounded by hosts of admiring friends, but the largest crowd was gathered about the space where Marion Deniston's beautiful cocker spaniel, Tyke, was on exhibition. Poor Tyke's vanity would have been sadly wounded had he realized that not he, but the ungainly stuffed creature standing impudently on a small table, was the center of attraction. All day Marion sat by this table telling to friends and strangers alike the story of "Dewey," always ending with, "Perhaps you will be willing to pay something for seeing 'Dewey.' He's a very unusual dog."

"Poor little chap," her hearers would say, and the quarters and half dollars jingled merrily into the little fancy basket at "Dewey's" side as the pathetic story freely opened purses and pockets. Marion forgot to notice that most of the visitors passed Tyke, the pride of her heart, by unheeded. Absorbed as she was in the wonderful "Dewey," she herself was near forgetting her pet's existence.

Toward evening a little figure flitted in through the door and up to Marion's side.

"Did he get a prize?" Robin whispered, anxiously.

"No, dear, the prizes won't be awarded for two days yet, but every one thinks he is lovely," Marion whispered, enthusiastically.

"Must he stay here all night?" Robin asked, wistfully.

"Why, you'll want him here this evening for people to see, won't you?"

"Well," Robin said, hesitatingly, "you see 'Dewey' sleeps with me, and I'm 'fraid he won't sleep well here."

"See here, Robin," Marion said, cheerily, "you go to bed without 'Dewey' tonight, and I'll leave him at your house on my way home. Then you bring him back here in the morning." Marion did not add that she needed the funny little dog to wheedle dollars out of masculine pockets that she knew would be present in the evening, but said, coaxingly, "I know lots of people would be disappointed to-night if they missed seeing 'Dewey.'"

Robin patted his treasure affectionately, then said, "It would be too bad for them not to see him, 'cause there's not another dog like him here," and, feeling like a great public benefactor, he left "Dewey" perched on his flag-draped table and trotted home.

All that evening and the following days of the dog show Marion stood faithfully at her post, relieved occasionally by her sister Agnes. Agnes' contempt for the dog show itself was unbounded, but after hearing about "Dewey" she forgot that she "wouldn't go near the horrid, yelping things," and became almost as constant an attendant of the despised exhibition as Marion.

The third evening was the time of great excitement. For the first time Marion's allegiance to "Dewey" wavered. Her little sawdust-stuffed protege was quite forgotten when the judges awarded Tyke the coveted blue ribbon and a prize of $25. But at an announcement made from the center of the hall she grabbed "Dewey" in remorse. One of the judges was saying that, owing to the extraordinary good behavior of one of the dogs, a special prize would be awarded to the very remarkable dog "Dewey" for being the best behaved dog in the show, and amid the cheers of the crowd Marion held "Dewey" up while some one tied about his shapeless neck an enormous red, white and blue bow that almost hid the little dog from view. But still louder cheers rang out when it was announced that the special prize was $50 in gold.

Then before Marion's mind came the picture of the desolate home, the sorrowing wife and brave little child, and, laying her $25 beside the $50, she said, "It is glory enough for me to know that Tyke is the finest cocker spaniel in town. He keeps the ribbon and 'Dewey' shall have the money." Her example was followed by others, until the silver pieces in the little basket were covered with gleaming gold.

When Marion carried the hero of the dog show back to its owner that night, she pressed into the hands of the soldier's widow a bag containing nearly $300, the first ray of light to penetrate the dark cloud that settled over the little home with the coming of the "yellow letter."—Chicago Record.

He Believed He'd Remain.

An absent-minded farmer had an unfortunate experience at a Memphis hotel, which has induced him to jot down a few important words for use the next time he goes to the city.

He registered at the desk shortly after supper, and hung about the office until 9 o'clock, when he remarked to the clerk that he believed he would "remain."

"Very well," said the affable clerk.

Another hour went by, and the old farmer came again to the desk, and observed with decision:

"I say, I believe I'll remain."

"Of course, by all means, if you wish," again replied the clerk.

As the clock struck eleven the old man, now so sleepy that he could barely keep his eyes open, angrily called out:

"By gum, I say I believe I'll remain."

"Certainly, so you've said," answered the clerk, "and when you're ready to retire you can find your key at the desk."

"Retire!" yelled the farmer, jumping to his feet. "That's the word I've been trying to think of for two hours. Gi' me that key. I'll sleep till 10 o'clock to-morrow to make up for lost time!"

A Holiday that Will Last a Week.

There is a movement afoot in New England to establish a new holiday—"Old Home Week." Our great country has grown wondrously since the Civil War, and in the rush to people the wilderness families have been broken up and scattered. Sons, daughters, sisters and brothers have left their native towns and gone thousands of miles away to begin life for themselves. Hardly a family in the older States but has given loved ones to the ravenous West, and New England has given more than all. So now it is thought that one week in each year should be set apart for family reunions—a week in autumn, perhaps—when harvest is done and the children of New England can come together under the old roofs, meet their old playmates and live their old lives. All through the Western States people are becoming interested in the new holiday, and last year one of the New England governors issued a proclamation setting aside an "Old Home Week." The home-coming was general enough to warrant the belief that the holiday can be made a permanent one.

Three uncomforts of a man's home: A smoky chimney, a leaky roof and a scolding wife.

What Douglas Gave Fremont.

In the presidential campaign of 1856 the Democrats in the west made an effective point by contrasting Mr. Buchanan's long public career as a senator, secretary of state and minister to England with General Fremont's limited experience, consisting of a service of 21 days in the United States senate.

In the great campaign of 1860 they tried the same tactics, which had proved so successful, to disparage Mr. Lincoln. He had served but a single term in congress, while Senator Douglas had for many years enjoyed a national reputation.

This point was urged in a heated discussion overheard between an ardent supporter of Senator Douglas and a German voter who favored Mr. Lincoln. The former finally thought to overwhelm his opponent by saying:

"Who is this Lincoln, anyhow? Nobody ever heard of him until Senator Douglas brought him into notice by holding joint debates with him. Senator Douglas, on the other hand, is a great statesman. Why, he has had his eye on the presidential chair for the last ten years."

"Vot is dot you say?" was the reply. "You say Meester Dooglas have had his eye on the president chair for the last ten years?"

"Yes; that is just what I said."

"Vell, you shoost tell Meester Dooglas cef he keep hees eye on dot chair shoost a leedle vile longer he vill see old Abe Lincoln sitting down in it."

That closed the debate amid a roar of laughter from the bystanders.—Lippincott's Magazine.

Curious Vienna Law.

They have curious laws in Vienna and enforce them too. Recently Marie Friedl and Felix Kopstein, aged 15 and 13 years respectively, were walking along a street in the Austrian capital when they came across an old woman staggering along under the weight of a heavy package. Moved by pity, they offered to carry it for the old woman, a proposition to which she readily acceded. The kind hearted children had not gone far before they were arrested by a policeman for carrying parcels without a license. The children were taken to a police station, where the officer in charge lectured them upon the enormity of their offense. They were kept under arrest for six hours and then released with a warning.

It seems that there is a corps of "messengers" in Vienna to which a municipal statute grants the exclusive right of "carrying" inside the city. The bay and girl had violated the law by carrying the old woman's burden, and under such an interpretation of the statute a man who carries a package for a woman with whom he is walking may be "run in" by the first policeman who sees him.

The Trust Problem.

To a thoughtful mind, the trust problem is one of serious import. It must be firmly grappled with, for it creeps upon society before you are aware of its existence, in this respect much resembling the various disorders which attack the stomach, such as constipation, indigestion, dyspepsia, biliousness, liver and kidney troubles. Hostetter's Stomach Bitters is the one reliable remedy for all such ailments. Be sure to give it a trial.

Extraordinary Devotion.—"Why do you think she is so desperately in love with him?" "She wears a color that isn't becoming to her, because he likes it."

FAKE HAIR PREPARATIONS

Do Hair No Good, But Often Cause It to Fall Out.

Many hair preparations are "fake" because they are merely scalp irritants. They often cause a dryness, making the hair brittle, and, finally, lifeless. Dandruff is the cause of all trouble with hair. It is a germ disease. The germ makes cuticle scales as it digs to the root of the hair, where it destroys the hair's vitality, causing the hair to fall out. To cure Dandruff, the germ must be killed. "Destroy the cause, you remove the effect." Newbro's Herpicide is the only preparation that kills the dandruff germ, thereby leaving the hair to grow luxuriantly.

A Guaranteed Cure.

Most difficult to cure—Chronic Constipation. Yet Cascarets Candy Cathartic are guaranteed to cure any case or money refunded. Druggists, 10c, 25c, 50c.

FORTUNE'S PHASES.

THE UPS AND DOWNS IN THE LIFE OF A CLERK.

A Tale of Misfortune and Misery With a Happy Ending—The World Seemed All Very Dark for a While.

A clerk's life, ordinarily, is a very humdrum one with but little variety to the daily routine. But Mr. Fred R. Morton, of No. 80 Vesper street, Portland, Me. had an experience recently which has made his life now a very happy one. In telling a reporter of what he went through, he said:

"I had been suffering with stomach trouble for about two years. Every day about ten o'clock in the morning and three o'clock in the afternoon I became faint and felt so bad that if I did not sit down I would fall. That sensation usually lasted for about an hour, and when noon came I had no appetite for lunch.

"I saw Dr. Williams' Pink Pills for Pale People advertised in the daily papers about a year ago and decided to try them. I felt relief from the first box and after I had taken six boxes my disease was cured. I do not take them now but always keep them in the house. I have told my friends what these pills have done for me and should I know of any one's being sick as I was I should surely recommend Dr. Williams' Pink Pills for Pale People."

Mr. Morton's satement was published in the Portland Express, after he had sworn to it before Marshall H. Purrington, a notary public.

The most effective remedy in the world in cases of this kind is Dr. Williams' Pink Pills for Pale People. They act directly on the blood and nerves. This makes them invaluable not only for stomach trouble but also for such diseases as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, rheumatism, nervous headache, the after effects of the grip, palpitation of the heart, pale and sallow complexions and all forms of weakness either in male or female. Dr. Williams' Pink Pills for Pale People are sold by all dealers, or will be sent postpaid on receipt of price, fifty cents a box, or six boxes for two dollars and fifty cents (they are never sold in bulk or by the hundred) by addressing Dr. Williams Medicine Co., Schenectady, N. Y.

Beware of Ointments for Catarrh that Contain Mercury

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is tenfold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists, price 75c. per bottle.

Mothers will find Mrs. Winslow's Soothing Syrup the best remedy to use for their children during the teething period.

Size of Propellers.

"The small size of the screw," says a boiler maker, "is not due to the perception of any inventor of its greater effect as compared with a larger one, but purely to accident. When I first engaged in the machinery business, screws for steamers were made as large as possible, it being the theory that the greater the diameter the higher the speed. A vessel was placed on Lake Erie with a screw so large that it was deemed best to cast each blade in two parts and then weld them together. During a storm all these blades of the propeller broke at the welding, reducing the diameter by more than two-thirds.

"To the surprise of the captain the vessel shot forward at a speed such as had never been attained before. Engineers then experimented with smaller propellers and discovered that they were much more effective than large ones. Had it not been for that accident we might have gone on using large blade screws to the present day."

Jupiter and Ten.

A very ignorant and wealthy woman who was fond of talking about her "art gallery" one day met at the house of an acquaintance a lady who had not called on her, although they lived in the same town.

"Come and see me, do," said Mrs. B., the patron of art, as the other lady was taking her leave.

"Thank you very much," was the noncommittal reply.

"We've got a new picture too. That ought to tempt you to come, if I can't."

"I should be very glad indeed to see it."

"Such a lovely picture! Sometimes it seems to me I could look at it all day long."

"What is the subject of your picture, Mrs. B.?" inquired the hostess.

"Jupiter and Ten," was the reply.

It was "Jupiter and Io."

The Reading Cure.

Reading aloud is recommended by physicians as a benefit to persons affected with any chest complaint. The recommendation is made because in all cases of lung trouble it is important for the sufferer to indulge in exercise by which the chest is in part filled by and emptied of air, for the exercise is strengthening to the throat, lungs and muscles of the chest.

Reading aloud can be practiced by all and besides being a curative act can be a pleasure and profit to both reader and hearers. In this treatment it is recommended that an overdose of medicine be avoided, that the reading be deliberate, without being allowed to drag, that the enunciation be clear, the body be held in an easy, unstrained upright position, so that the chest will have free play, and that the breathing be natural and as deep as possible without undue effort.

Throwing Rice.

How many people know that the custom of throwing rice at a wedding symbolizes not the expression of good luck, but it is a metaphorical flight of arrows shot at the bridegroom. In uncivilized ages most nations were accustomed to the forcible capture of a bride by her lover, and the attempts on the part of her male relatives to prevent her husband from carrying her away is typified by a volley of rice instead of more fatal missiles.

The Interval of Effort.

"My man, you are a professional beggar, aren't you?"

"No, sir. I'm a professional loafer. When I gits hungry, then I gits up and begs."—Chicago Herald.

The Way the Boy Put It.

Different sermons may be preached from the same text, and there may be more or less of truth in each of them.

"Here is an account," said Mr. Morse, pointing to a paragraph in the evening paper, "of the way in which a boy was saved from drowning by a mastiff which belonged to his cousin. The boy ventured too near the edge of a treacherous bank, lost his footing and fell into the lake. The dog dashed in after him and succeeded in pulling him out."

"There," said Mrs. Morse, turning an accusing glance upon her 10-year-old son, "that shows how dangerous it is for a boy to go too near the water!"

"Why, mother," said the boy in sorrowful astonishment, "I thought father read it because it showed how perfectly safe I'd be wherever I went if you'd only let him buy me a big dog!"

Mr. Morse coughed and became discreetly absorbed in the quotations of mining stocks.

Too Much.

"You say you think your boy has too great an appetite?" said the physician to an anxious mother. "Do you realize how much a growing boy can eat?"

"I should think I ought to if anybody does," returned the boy's parent. "I'll just put the case to you, doctor.

"Where we were, up in the mountains, the waitress would come in and say to my boy, 'We have fried fish, steak, liver and bacon, baked and fried potatoes, rye biscuit, muffins and dry toast.'

"And that boy Ned would say, 'I'll take it all, please—and some eggs.'"—Exchange.

The Skin AN INDEX TO THE BLOOD

Millions of little glands or tubes connect the blood with the skin, and through these small drain pipes perspiration passes out, carrying with it the impurities that are thrown off by the blood. Should the pores of the skin be entirely closed for even a brief space of time, and the poisonous matter forced back into the circulation, instant death would result. In addition to the sweat glands, the skin is provided with certain others which pour out upon it an oily substance, keeping the skin pliable and soft and protecting it from heat and cold. The blood and skin are so closely related that whatever affects one seriously interferes with the functions of the other. Not only health, but life itself, depends upon perfect harmony between the blood and skin. When, therefore, the blood becomes poisoned from any cause, it quickly manifests itself upon the skin in the form of sores and ulcers, pimples and various eruptive diseases. By the character of the sore we are enabled to determine the nature of the poison or humor in the blood, as every disease originating in the blood has its own peculiar sore or pimple. The skin is not only affected by the poisons generated in the system, but poisons from without enter through the open glands or pores and quickly infect the blood. Mercury rubbed upon the skin will produce Rheumatism, and Poison Oak and Ivy and other wild plants gain easy access to the blood through the skin. As so-called skin diseases originate in the blood, the application of powders, soaps and washes can do no permanent good, but often do immense damage by closing up the outlet to these little tubes and interfering with the natural action of the skin. The treatment must begin with the blood, and the acid or other poisons antidoted or neutralized. S. S. S. does this and purifies the circulation, builds up the blood and flushes the little glands or pores with pure, new blood, and restores healthy action to the skin. The use of cosmetics never yet brought health and beauty to a rough, red, pimply skin or sallow complexion. What is needed is rich, pure blood, such as S. S. S. makes. It not only relieves you of all disfiguring blackheads, blotches and irritating, itching eruptions, but improves your general health. S. S. S. contains no mercury, potash, arsenic or other mineral, but is a purely vegetable remedy and the safest and best in all blood and skin troubles. Write our physicians for advice or information; they have made a study of blood and skin diseases, and you can have the best medical advice without cost. Book on Blood and Skin Diseases free. A JAPANESE LULLABY.

The Slumber Lady, so pale and sweet,
Comes over the waters with dancing feet;
The Slumber Lady is young and fair,
And has white lilies twined in her pretty black hair;
This Slumber Lady so frail and fleet,
Has sun-gold shoes on her little feet.

The Slumber Lady with dreamy eyes,
Floats up from the Sunset House in the skies,
And throws little diamonds, so sharp and so bright,
Into little tired eyes, to shut them up tight;
Then away to her home in the white moon she flies,
This Slumber Lady with dreamy eyes.

The Slumber Lady comes soft and low,
A lullaby where the green waters flow,
She teases the birdlings, then sings them to sleep
In their cozy grass nests where the rushes weep,
This Slumber Lady with voice so low,
That laughs with the waters as they flow.

The Slumber Lady is pale and sad,
For her heart grieves much for her little lad;
The little lad, with the wondering eyes,
Who sleeps so still 'neath the mourning skies.
The Slumber lady is white and sad,
For never will come back her little lad.
—Philadelphia Bulletin.

At the Cannon's Mouth.

MAJ. ARTHUR FITZGERALD Lacelles sat near to a corner of the dungeon and watched the tarantulas. Close by the Major, with his chin resting on drawn-up knees, sat Color Sergt. John Halliwell.

The dungeon was subterraneous to the extent of ten feet. The massive walls were mucid with damp and unwholesome air. At intervals the moisture swelled into huge drops and splashed upon the green floor. Sometimes a drop fell upon a spider and

"MAJOR, I HAVE SOMETHING TO TELL YOU."

made him shiver; but the tarantulas never moved, only just waited, waited.

Half an hour in this dungeon would have cowed a savage dog. Yet into it man had thrown his brother man. To whom did it belong? To the rajah of Bihtoor, better known as Nana Sahib of execrable memory.

Color Sergt. John Halliwell, like most of his kind, loved his life. He knew he was about to lose it; that made him grave. He also loved a woman. The loss of the one implied the loss of the other; this made him sad.

Presently he looked toward his companion, and seemed about to speak. Then, thinking better of it, became once more lost in meditation. Why, he asked himself, should he make the confession? Probably he would be harshly rebuked for his temerity. But then, at such an hour a man yearns to open his heart to a fellow.

"Major," he began—peril has bred intimacy between the superior and his subordinate—"Major, I have something to tell you."

The Major's knitted brows relaxed.

"If I did not believe, sir, that I have fought my last battle, my secret should have remained unrevealed. It is just possible that one of us may see the light again. If that one should be yourself, sir, will you deliver a message from me?"

"Why, certainly, Halliwell. What is it?"

"A message, sir, to your daughter, Constance, whom heaven preserve from this land gone mad! I love her! You look angry. I cannot help it. She is the angel of my life."

"Confound it, sir! But I am angry, and very angry, too! The devil! You look high, my friend!"

"Let it not disturb you, sir. Life might have given her to me—I believe it would have done so, for, had I not been so miserably caught, I would have won promotion at this time, when honor and glory lie within the grasp of every brave man. And, speaking with all respect, my lineage will bear comparison with yours.

"But now—well, Dundoo Pant's word is sterner than yours, Major. Only I would ask it, sir, should you elude the clutches of this infamous villain, this Nana Sahib, to tell Constance that one man met his end unflinchingly, thinking of her bonny eyes and heaven reflected therein."

Maj. Lacelles grew sullen and irritable, though he confrolled his feelings. The color sergeant continued to sit motionless. Thus for an hour both maintained an almost intolerable silence until a key grated harshly, and the door of the dungeon was flung open. Half a dozen sepoys entered, and the two Englishmen were led forth.

Hundreds of tiny eyes followed their egress. The tarantulas, it seemed, were doomed to disappointment.

Down a flight of stone steps, through a subterranean passage reeking with damp, up again into a dryer atmosphere, through more corridors tortuous and innumerable, all forming part of the great palace of the rajah of Bihtoor, were the prisoners led by their dusky guard.

All this abruptly terminated. Darkness gave place to light, squalor to splendor, misery to magnificence. They were confronted by the rajah himself in one of his state apartments.

The rajah's eyes filled with an evil fire as he glared upon the men who had once esteemed themselves his friends, for they, in company with others, had not infrequently shared his hospitality.

His prisoners regarded him with proud indifference. He smiled, and pointed a bejeweled finger through a window. The men's eyes followed the direction of the gesture.

Cawnpore lay stretched out before—hundreds of bamboo and mud huts interspersed indiscriminately with public buildings of a more substantial structure. The broad river appeared as a streak of silver; the minarets flashed in the golden sunlight.

"Down—look down." It was the rajah who spoke.

They obeyed, and this is what they saw:

A long court of extreme narrowness, bounded on either side by edifices apparently consisting of the quarters allotted to the prince's retainers. At the rear of this court, and almost against the palace wall, a square, thick iron shield had been erected. At the opposite end, some fifty or seventy-five yards distant, a cannon stood mounted upon a stone carriage.

Maj. Lacelles shrugged his shoulders. "Of course, you see the devil's game, Halliwell," he whispered. "It seems we shall have to run a race."

Softly though the words were uttered, the rajah's attentive ear did not miss them.

"A race—that is it," he said, his voice trembling with half-suppressed excitement. "A race for life. See, I am merciful. If you leap the gun before the fuse burns to the touchhole you shall dine with me to-night and go where you will in the sunshine. You first; the other remains—to observe."

At a glance from the rajah's eyes Maj. Lacelles was seized, but the officer, by a powerful effort, wrenched himself free and faced upon his captors with a look rendered more terrible by its anger. While they hesitated, the Major turned to his companion with extended hand.

"Halliwell, you have my word. If I escape I will deliver your message. God bless my darling girl!"

"Thank you, Major. Heaven help you. Good-by. And run hard—hard! One never knows, you know."

The next instant the Major had gone. In a few minutes he appeared in the court and took his station in front of the iron shield, facing the gun. Two sepoys held him by the arms, awaiting the signal.

"He will never do it," groaned the color sergeant, inwardly. "He's too fat. O, devils—incarnate devils!"

Suddenly the man at the gun raised his hand and touched off the fuse. At the same instant the Major was pushed forward. He bounded with great swiftness down the passage, so narrow that he had scarcely room to swing his arms. In a trice he had covered a quarter of the ground—a half—three-quarters. Then Halliwell cried, "Good God!" for a jet of red flame burst from the cannon's mouth.

A man's body cannot check a charge of grape shot. The watchers at the window heard the patter of a ghastly rain upon the stones.

Halliwell turned his face to the prince to show him that a soldier can look

HE CLEARED THE GUN WITH ONE SUPERB BOUND

upon a soldier's death and not flinch. The Nana's dusky skin had paled a little. He took some grapes from a dish and ate them slowly. Then he turned to one of his retinue.

"This one is thin. Think you he will run faster?"

"Your highness will have the better sport."

Halliwell was led from the apartment. A face swam before his eyes, the face of a woman, into whose heart a great sorrow would shortly come, a woman left fatherless. The vision lent him strength, gave him courage to his sinking heart and vigor to his limbs, which privation and imprisonment had weakened.

Then he realized that he was facing the grim muzzle of the cannon. Never runner toed the mark in so dreadful a race. He saw the gunner attending to his piece, watched him brush away the priming and carefully reload.

Suddenly he received a violent push and knew that the fearful sprint had commenced.

Have you ever, in the grip of nightmare, run from one who follows fast? You strive to fly, but your feet cling to the ground, and you only crawl.

So it was with John Halliwell. The stone flags seemed glued to his limbs; in reality he scarcely touched them at all. Every nerve and muscle of the man were engaged in the frightful struggle.

The gunner, who stood by his piece, recoiled with amazement from the face of the Englishman, who, rushing down upon him, cleared the gun with one superb bound, even as the leaden death roared out.

The color sergeant waited not to test the verity of the rajah's word, and the invitation to dinner failed to tempt him just then. He continued his rapid course through the maze of mud huts and cocoa palms, over the baked plains, and finally plunged into the river, which bore him, half swimming, half floating, upon its deep and even current.

Two years afterward Lieut. John Halliwell won a prize even more dear to him.—Utica Globe.

LUCK'S PART IN A REUNION.

Separated by Failure to Find Gold—United by Success in Finding It.

After a parting of forty-five years, a father and son were united in Sausalito, Cal., recently, under peculiar circumstances.

In 1856, J. S. Bellrude, a local justice of the peace, left his home in the State of Wisconsin to visit California in a search of gold. Behind him he left a young wife and an infant child, and he worked his way in the California wilderness with the thought ever before him of making a rich strike and returning to his little family with the wealth that would forever make them comfortable. But luck conspired against him, and while success after success crowned the efforts of the men delving in the hills about him, his own little claim produced a heritage of debts. Ten years passed, and Bellrude learned that his wife was dead. The son was living in comfort with his mother's people, and the discouraged man, feeling that all was well with the boy, allowed him to drop from sight, and his very existence became uncertain with the father. Thirty years ago the father mailed his picture to the son, and since that time the latter has always tried to keep trace of the former's whereabouts.

A year ago the son, who had become 46 years years of age, left his home, and, emulating his father's example of years before, struck out into the frozen regions of Nome to search for gold. Luck, which had never come to the father, showered its favors on the son, and the latter located a number of good claims, which, he says, will make him a wealthy man. A short time ago he returned to Seattle, from which place he located his aged father in Sausalito. He at once went back to that town, and almost the first man he met was Bellrude, Sr. The latter was sitting on the front seat of the hack which he drives when the calls of justice are not pressing, and he was at once accosted by the son. The latter held the picture sent him by his father thirty years ago in his hand, and carefully sized up the old man.

"Are you J. S. Bellrude?" the young man asked.

"Yep," answered the justice.

"Well, do you know me?" asked the stranger.

"No. I don't know you, young man, and you can't tell me anything, either," responded the Judge, who has not spent ten years on the Sasualito water-front for nothing.

"Well, my name is C. M. Bellrude, and I guess you are my father," said the stranger. "Here is the picture you sent me thirty years ago in Wyoming."

The father recognized the likeness and then recognized his son. The pair walked home arm in arm, and the fatted calf was eaten in the Judge's furnished rooms that night. The son intends to put his father on an independent footing.

Alabama's Four-Legged Baby.

Physicians in Alabama are taking much interest in the case of the four-legged child to whom Mary Maddox, a negress, gave birth at Opelika. The baby is a well-developed male child.

One pair of legs are in the ordinary position, and, like the arms, are well formed. The extra pair of legs are near the arms, and while quite well formed, are small. The feet on the extra legs are regularly formed, with toes and toenails, but have the appearance of belonging to a sickly child. The child is robust and healthy, with all the faculties of an ordinary child.

The child has been examined by leading physicians of the State and pronounced healthy in everything except the extra pair of limbs. He has good use of his regular limbs, but seems unable to control the others. The physicians, after a careful examination, said that if the child lives, which seems altogether probable at this time, he will eventually get control of them, as there are about the same muscles and ligaments in them that are found in a cub bear of the same age.

Dr. Williamson, a strong believer in the Darwinian theory, declares that the case is simply a retrogression of mankind—a step backward—and that the child demonstrates that the human race came from the monkey family.

Trying to Get It All.

"Russell Sage says it is better to start in life with 10 cents and Providence than with $1,000,000."

"Well, we will have to give Uncle Russ credit for one thing."

"What?"

"He is trying to make it necessary for everybody else to begin life in the way that he considers best."

The early cucumber joke may be laughable, but when it comes to doubling a man up it isn't in it with the real thing.

Too many people in this miserable world are never happy unless they are bubbling over with unhappiness.

Even sickness is well when it ends well.

FINEST COUNTRY HOUSE IN AMERICA.

Mr. and Mrs. Clarence H. Mackay are building the most beautiful country home in America. Nearly 1,000 artisans are at work upon the place amid the sunny slopes of the headwaters of Hempstead Bay, near Roslyn, L. I. The country home of the Mackays will resemble in its general lines the renowned Chateau Lafitte. Its walls will be pearl gray stone, on one side of which will be a distant view of the ocean and on the other a view of the sound. Not far away are the Wheatley Hills, in which nestle the mansions of a score of well-known American millionaires. The cost of this superb palace will be about $5,000,000. The structure will be of granite, 238 feet long from east to west, and 100 feet wide from north to south. The main entrance consists of three large doorways and three smaller ones. The house will be furnished very richly, especially in the apartments which will be occupied by Mrs. Mackay, and the third story will be fitted gorgeously for the exclusive lodging of visitors. The grounds will be in keeping with the dignity of the house itself. An army of servants will be hired to maintain it.

HOW THEY RAISED MONEY FOR THE CHURCH.

Young women members of the Epworth League of the First Methodist Church of Matteawan, N. Y., pledged themselves to earn $1 each and contribute the money toward the liquidation of the church debt. At a sociable the other night they told how they had earned the money. One said she earned 50 cents by washing her father's pet pig, and more by selling kisses at 5 cents each. Two young women had made the rounds of the town with a hand organ. Some sold flowers. One said she stole vegetables from her grandfather's garden. She justified the theft on the ground that the money was for the church.

Back to Cannibal Islands.

Just forty-two years ago the Rev. John C. Paton, who is now visiting his brother in Glasgow, Scotland, first set foot on the New Hebrides Islands. At that time all the inhabitants of the islands were cannibals. They had no written language and lived in great degradation. Every widow was burned on the grave of her husband and cannibalistic feasts were frequent. There were twenty-two islands, inhabited by as many different tribes, and each tribe had its own language. For the last forty-two years Dr. Paton and his colleagues have been permanent residents on the islands. They have made more than 18,000 converts, have reduced to writing all the twenty-two languages, and have taught the natives the ways of civilization. Dr. Paton had his satchel stolen while in London, and declares he is anxious to get back to his islands, where his life and property will be safer than they are in the English metropolis. During his stay in the New Hebrides and before the natives were brought under the influence of Christianity Dr. Paton was placed in peril of his life more times than he can remember. At least fifty times his life hung in the balance, but each time he came out without serious injury of any kind. He loves the islands and the people and will start soon to return to them after bidding a last farewell to his native land and his kinsmen.

DR. PATON.

Paid for Babies to Baptize.

The Rev. Dr. Richard Harcourt, pastor of the People's Church at Reading, Pa., announced that on a recent Sunday he would present to each child brought to him on that day for baptism a gold dollar to be placed in a savings bank to the child's credit, where it is to remain until he reaches his twenty-first birthday. On the appointed day fifteen children were presented for baptism. After the ceremony was over Dr. Harcourt placed in the hand of each babe a gold dollar, saying as he did so: "I present you with an offering of gold. God bless you." Dr. Harcourt explains that he is simply following the example of the wise men of the East, who brought gold, frankincense, and myrrh to the cradle of the Christ child at Bethlehem. He believes it would promote thrift among the people if the same custom should be generally adopted. The deposit of $1 at 3 per cent compound interest would amount in twenty years to a snug sum, and it is believed that at the same time young people would be encouraged to save their money and add to this nest egg.

REV. DR. HARCOURT

American Soldier's Generosity.

A writer in Ainslee's Magazine tells this story: "Our Government allowed several transports with returning volunteers to stop at Yokohama, and so hundreds of American soldiers visited that city and Tokio. One of them hired a bicycle, and was taking a ride about the streets of Yokohama when he ran down an elderly Japanese man. The soldier rang his bell several times, but the Japanese apparently paid no attention to it, and the American found himself promptly arrested and taken to court, where he was fined 10 yen ($5) He protested that he had done everything possible to avert the accident, and asked why the man made no attempt to get out of the way. The policeman then told him that the man was blind. The soldier looked dazed for a minute, then felt in his pocket and brought out a $10 bill. 'Here,' he said, 'it's the last I've got, but he can have it,' and he turned it over to the blind man. The Japanese were deeply touched, and that same day a delegation of policemen hunted up the soldier and gave him back his fine."

TOMB OF GEN. GREENE

Has Been Recently Discovered at Savannah, Ga.

After many years of speculation as to the burial place of Gen. Nathaniel Greene, the illustrious soldier of the revolution, the searchers have been rewarded by finding his bones in an old vault in Colonial cemetery, Savannah, Ga. Gen. Greene was buried in 1786, and until the discovery made by the searching party recently his burial place has been a mystery. Col. Asa Bird Gardiner went to Savannah from New York, representing the Rhode Island Society of the Cincinnati, and engaged the services of a local committee to assist in the search for the body. Ineffectual efforts had been made in years gone by to find the body, but Col. Gardiner was sure that the General had been buried in a tomb known as the Jones vault. He was rewarded in his search by finding a coffin plate upon which he could trace the word "Greene," and some continental buttons. Gen. Greene's skull was of unusual size, and this was well preserved. His hands were encased in silk gloves that were still intact when found. The bones of his son, who was drowned in the Savannah River, were found by his side. The few remaining bones have been placed in separate boxes and deposited in a safety deposit vault for such disposition as may be arranged later. They will probably be buried under the Nathaniel Greene monument in Savannah.

TOMB OF GEN. GREENE.

New Zealand Landscapes.

Almost every New Zealander lives within sight of the mountains or the ocean, or both. Its landscapes show long ranges and solitary giants tipped with Alpine glow; there are waterfalls everywhere, some of them among the finest in the world; luxuriant countryside, golden farms, lakes, geysers, volcanoes, forests with miles of pink, white and red-flowering trees in spring, and there are fiords of the sea threading their way around the feet of mountains crowned with glaciers and perpetual snow. The scenery is a synopsis of the best in Norway, Switzerland, Italy and England.

Automatic Postal Weighing Machines

To overcome the difficulty caused by the loss of time and the reluctance of postoffice clerks to weigh letters, the French authorities are installing small automatic weighing machines in postoffices. You place your letter on that part of the balance which corresponds with your idea of the weight of your letter, and if it is too heavy a label containing that information comes into view.

Couldn't Spare It.

Easterner—Why don't you build your courthouse over there?

Westerner—Why, if we did we'd have to cut that tree down.

"Well, what of it?"

"What of it? Man alive, that's the only tree in this neighborhood fit to lynch a man on!"—Philadelphia Record.

CHICAGO'S FORTUNE-TELLERS.

They Are Said to Gather in Half a Million Dollars Per Year.

At low estimate Chicago spends nearly half a million dollars every year upon clairvoyants, fortune tellers, palmists, "voodoo doctors," and a long procession of fakers and confidence folk who prey upon the gullibility of the general public. This, simply for fees. To add to this the long train of additional expense to which the victims are put, such as traveling expenses, paraphernalia, investments that fail to pay, and kindred ventures, probably $2,500,000 would not cover the community cost.

According to the city directory, there are nearly 100 professional clairvoyants in Chicago. At least fifty more than are listed as such practice the "art." There are 100 fortune-tellers, perhaps seventy-five palmists, and an unknown number of kindred folk who live by their wits on these general lines.

A popular and successful clairvoyant, who can locate gold mines for his followers, has a gold mine of his own. He may take in $250 to $300 a week. Others much less fortunate may be reasonably content to make both ends meet. In general, figuring fifty-two weeks to the year, Chicago's tribute to these seers may be figured out about as follows:

150 clairvoyants at $20 a week	$156,000
100 fortune tellers at $10 a week	52,000
90 palmists at $15 a week	75,000
Miscellaneous fakirs	150,000
Total	$433,000

This is almost as much as the general public gives to charity, and is only a fraction of the money that in other ways is wasted upon these people who affect to be able to read the future. That they do not and cannot read the future may be proved by the caller over the threshold before he has stepped inside.

When the reporter rang the bell of a West Side house behind whose door—according to an advertisement—was a clairvoyant "ordained to do what she does and whose marvelous achievements are demonstrated in your presence while you look, listen, and wonder," the door opened about four inches, and the face of a stout, commonplace-looking woman peered out as if she was suspicious of a collector or constable, or perhaps somebody who wanted to kill cockroaches.

"Good-morning," said the caller. "I didn't know if you were ready, but I've come over to ask you about it."

"About what?" and the door closed another inch.

"You know," insisted the caller, "about clairvoyancy, trances, and that sort of thing."

"I don't know anything about it," said the voice; "who are you, anyhow?"

"What! You don't even know who I am? I thought you were a clairvoyant——"

But the door had closed with a sudden jar and the caller was outside of it, staring at the porcelain name-plate on the door.

Yet, according to this woman's advertisement, "the greatest mysteries of life will be revealed," business troubles will be unraveled, love affairs will be straightened out and made smooth, your enemies will be named and placated, and life generally will be made merry as a marriage bell. Incidentally, too, she "locates lost and stolen articles, mines," etc.—whatever "etc." may mean in the context. At the same time, by actual proof, she does not know a book agent from a customer until the caller has explained; and then the book agent might lie to her successfully.

A VOODOO WOMAN.

Legend of a Spring.

Swimming about in a large marble-lined tank in a small church just outside Constantinople are to be seen a number of fishes, brown on one side and white on the other. These, it is said, are the descendants of the ones that gave the name "Balukli" (place of fishes) to the church. The legend is as follows: At the time of the invasion of Constantinople by the Turks, a monk was cooking fish near a spring of water, where the little church now stands, when a messenger rode up in haste, announcing "The city is taken!" Discrediting the story, the monk declared that he would sooner believe that the half-cooked fish before him would jump back into the water. As he spoke, the fish, so the story goes, did actually leap from the pan into the spring. Ever since that time the waters have been regarded as curative, and once every year pilgrimages are made to it by sufferers from various ailments.

YANKEE LAD IS A FIGHTER.

Boots, a Waif from America, in the Field with the Boers.

Thomas F. Millard, the war correspondent, tells the New York Sun the following story of Boots, a 12-year-old Yankee, whom he met fighting with the Boers, and who may be still dodging bullets and lyddite shells. Said Mr. Millard:

"His real name is William Young, but in the laagers he is known by the sobriquet of Boots. I think he came by his title honestly enough, for he drags about a huge pair of legging boots many sizes too large, and ornamented with enormous brass spurs.

"Boots is a midget of 12—or at least he gives that as his age, though he doesn't look it by three years.

"Boots was born in the United States. When very young he remembers being taken to England, whence he came to South Africa. His parents are long since dead, and since their death William, having no other relations that he knew of, has rustled for himself.

"When this war began William espoused the cause of the Boers and joined the Irish brigade under Colonel Blake. The men who formed this adventurous corps took a fancy to the waif and made him one of them. So it was that Boots saw all the bloody battles of the Natal campaign—Dundee, Newcastle, Nicholson's Nek, the Platrand, and the many fights along the Tugela. Armed with two water bottles, the midget would enter a fight, and more than once has a wounded brigadier, on finding a cooling drink placed to his parched lips, looked up to discover Boots. If the fire were too hot to permit his wounded comrades being removed to a place of safety the boy would remain to attend them until the battle was over or night fell.

"When Captain Hassell organized the American scouts as a separate company Boots decided to join his countrymen. Boots has a horse to ride, but his ambition is to possess a pony of his own, and a Mauser carbine, so he can fight like the other scouts. For the purchase of a pony he has saved up £2 and 5 shillings, which will buy no horse in South Africa in war time. So Boots has to go without a pony until better times. But he has hopes of capturing one from the British.

"Meanwhile, since he cannot fight like a full-grown man, he makes himself useful around the laager. As to the future, Boots scorns to contemplate it.

"'What'll I do when the war is over?' he said. 'I dunno. I'll do whatever I can. Maybe, if the Boers lose, I'll go to America.'"

Most men devote a large part of their earnings to their wives and children, and work patiently from youth until old age. How much there is to admire in the average man! Yet how the men are abused! Any woman is free to shoot a man.

Do people avoid you because you are disagreeable? And did you ever try to overcome the habit?

INDEPENDENCE, CAL.,

FRIDAY, AUGUST 30.....1901

NOW FOR NITRATE.

An expert will soon go to Death Valley for the State Mining Bureau to examine the deposit of nitrates there. If there is as much of the essential element of blasting powders in that section as has been reported by prospectors, and it can be transported and refined cheaply enough, California may be able to afford serious competition to Chili not only in the markets of this State but also in the world at large. Now the Chilean markets have the whole world for their market. Great fortunes have been made by the lucky holders of stock in companies that have exploited the Chilean nitrate beds. San Francisco has been a large importer from Chile, there being some of the largest manufacturers of blasting powders about the bay, not far from this city. State Mineralogist Aubury believes that the investigations in Death Valley may lead to important commercial results. Professor Bayley will start for the valley next month for the Mining Bureau, equipped fully for the work in hand.—S. F. Call.

Professor Bayley named in the foregoing was the agent and promoter of the property belonging to A. W. Unthank and associates—who located beds of nitrate in 1892—and is the gentleman who spent all of last May and June in making practical and scientific investigations of the proposition. The fields are on that part of the Amargoza channel lying east of the Funeral range, and on the line between San Bernardino and Inyo. Seventeen 160-acre claims lie in this county; how much more there is in San Bernardino we do not know. At all events the entire property has recently been sold for the sum of $100,000.

It appears that the efforts of the State Mining Bureau and Prof. Bayley simply extends examination of the Amargoza river bed northward to its final sink in Death Valley, where there are oceans of rock salt if not saltpetre.

Wm. T. Coleman expended millions in attempting to market the absolutely inexhaustible borate resources of that region. Now we are in hopes to see what another generation can do with the nitrates.

Speaking of the passing of the Belgian hare craze, the Los Angeles Times says that community is threatened with another outbreak in the line of Belgian froggeries to raise frogs for the market. These frogs attain the weight of four or five pounds each, and the hind legs resemble spring lamb, one of them being ample for a meal. A peculiarity of these creatures is said to be the fact that the hind legs can be removed every three or four months, when they grow rapidly out again, thus yielding a profitable crop of the finest kind of food. As they consume nothing but flies and air, they are quite inexpensive to raise. It is also reported that one of the local breweries is thinking of breeding these animals for their hops. The chief drawback would probably be their singing in chorus in the small hours of the night. This might easily be obviated by having the frogs muzzled during the concert hours.

The Agricultural Department is investigating the way alfalfa will send its roots down in search of moisture and Chas. W. Irish, Chief of the "Irrigation Enquiry" of the U. S. Department of Agriculture, cites a case where a mining tunnel was run under a bluff where there was an alfalfa field. In the tunnel the workmen encountered alfalfa roots at a depth of 129 feet below the surface. An alfalfa root will penetrate the soil at the rate of a little over a foot per month.

Like wine, the Los Angeles Herald Magazine is improving with age. It seems almost incredible that so much excellent reading matter could be gotten together each week, lavishly illustrated, and given free with a Sunday paper. There ars very few papers in the whole country that attempt to give anything like it, and the wonder is that the Herald can make it profitable. It is one of the best supplements to a Sunday newspaper that we have ever seen.

It is said that J. Pierpont Morgan will spent from fifty to a hundred thousand dollars fitting up the Crocker house in San Francisco for occupancy by him while he is there as a delegate attending the triennial council of the Protestant Episcopal church, for the purpose of extending the influence of the church founded by Him who had not where to lay His head.—San Jose Mercury.

A company in Texas owning a million acres of forest land prohibits the felling of any trees on its domain of less than one foot in diameter, and all the smaller trees are carefully protected. If some such policy had been adopted in this State in the earlier stages of lumbering, our forest lands would not be as extensively denuded as they are at present.

The first prize winner in the Oklahoma land lottery at Lawton, held under the auspices of the United States Land Department, is said to have half a dozen contest lawsuits on hand and about 200 squatters to fight off the section allotted to him before his title is quieted. It looks as if he might have been better off had he not drawn a prize.

The Selby Company has recovered all the gold bullion "swiped" and thrown away by Winters. The burglar was awarded fifteen years board and lodging at Folsom—the full amount. Some seem to think that he will some day be pardoned or paroled out and paid for his "time," but corporations are forgetful.

EDISON ELECTRIC POWER COMPANY

According to the Bakersfield Californian, F. C. Finkle, chief civil and hydraulic engineer of the Edison Electric company and the companies combined with it, has proceeded to the scene of operations.

Already fifty men are at work building trails and wagon roads along the mountain side where the plant is to be installed, and fifty additional men will be added to the present working force. It is now estimated that within six months' time fully five hundred men will find employment on the stupendous project now under way. Power drills and air compressors for driving the tunnels have been ordered and as soon as the wagon road is in condition the work of drilling will begin. To carry the water, a line eight miles in length will be constructed, and in its course there will be twenty tunnels and many viaducts. The intake will be located at Democrat Springs, three miles above Lucas Creek, and the outlet will be just above the intake of the Power Development company's flume. By carrying the water the distance of eight miles a fall of 840 feet will be secured and it is conservatively estimated that this will develop 15,000 horsepower at the lowest flow of the river, last year being reckoned as the lowest point the river has reached in its history.

To give an idea as to the magnitude of the proposed plant, it may be stated that when completed it will be the largest by far in this State, the next in size being the Bay City, on the Yuba river, whose capacity is but 8,000 horse-power. The plant installed at Niagara furnishes 30,000 H.-P., but that in contemplation in the Kern canyon will be more picturesque than any in the United States owing to the difficult engineering problem to be overcome and the immense fall secured. It will certainly be a point of interest on this coast and will be no small advertisement for Bakersfield, from which point tourists must start who wish to visit the plant.

It is estimated that it will take fully three years to complete the work now begun and that the cost will be more than $2,000,000. As Bakersfield will be the base of supplies for the undertaking, it will be seen that the work means not a little to the business interests of this city.

The exact consolidation that has been effected between the different power companies of the south has not yet been accurately made public.

The statement that the Power-Development company is a party to the consolidation is erroneous. That company will continue to operate under its same name and management and will care for the local power market for all points in Kern county. The Edison Electric company of Los Angeles has absorbed the Redlands Electric Light and Power company, the Southern California Power company in Santa canyon and the California Power company of Kern river. All these companies have received stock in the Edison company and they will now simply act as agents for the powerful central concern. The consolidated companies will supply power to Los Angeles, Pasadena, Redlands, Riverside, Santa Ana, Pomona, Colton, Highlands, Orange, Fullerton and Puenta, and with the completion of the Kern river plant and the installation of a new plant in Mill creek, which will be effected next year, at a cost of $250,000, the Edison company expects to reach out into every locality in Southern California where there is a business sufficient to justify the extension of the lines. The power from Kern river will be utilized as far south as San Bernardino, it being the intention of the promoters to supply the proposed Electric Valley Tranfer company at the latter place with power.

The consolidated companies have the backing of some of the heaviest capitalists in the southern part of the State. John B. Miller is President and the big stockholders are W. S. Tevis, C. N. Beal, John B. Miller, Henry Fisher, H. H. Sinclair, Geo. B. Ellis, John H. Cravens, W. R. Staats, F. H. Barber, Dr. Addison and F. H. Rindge.

The case of the Ratcliff mines in the Panamint range is another instance of how a good mining property can be wrecked through incompetent management. Judge Wellborn, of the United States Circuit Court, Los Angelos, rendered a decree last week ordering the sale of the property under foreclosure proceedings, the notice of which will appear in the next issue of the INDEPENDENT. In reference to the matter the Los Angeles Mining Review says: "The sale will probably result in the mines being worked with a good force in the very near future. The vein is quite large, ore is of good grade and the mine equipped with a tramway, mill and assay office; in fact everything is ready to commence operations at once, and it is believed that economical management will place the property on a paying basis."

The molybdenite mine, recently discovered by Robert A. Cameron, is the genuine article. It is in Mono county, and located on the easterly tributary of the Walker river near the summit, and he and Frank Saxton of Carson and late assayer at the Dunderburg mine, have made two locations, and the extensions have also been located by others. They are working the mine and intend putting up a plant to reduce the ore.—Bridgeport Chronicle-Union.

Jim Yerington, our faithful Commissioner representing Nevada at the Pan-American Exhibition at Buffalo, is doing yoeman service in advancing the interests of this State. He has done his great work by giving honest statements to capitalists looking for solid investments. The people of this section are proud of Commissioner Yerington; this is the one time that the right man is in the right place.—Tonopah Bonanza.

California's assessment roll, exclusive of railroads, is $1,195,962,494.

Our Sun a Small One.

The sun is about 92,000,000 miles off. The only way of measuring the distance of a fixed star is by parallax, and scarcely more than half a dozen can be estimated that way. Suppose the sun is here, in space, on Jan. 1. On July 1 he will be 184,000,000 miles over there. This is the base of measurement. The observer who wants to estimate the distance of, say, the star A Centauri notes its position with regard to the next star. In six months he notes again, and if they are separated by a different distance a so called parallax is established, and some calculation can be made of the distance of the nearest one. In the most favorable cases this parallax is extremely slight.

What is the sun made of? The lines of the spectrum give an idea of his chemical properties, but beyond that all is hypothesis. His substance, as a whole, is of much lighter material than the earth, but yet there may be a hard and heavy fiery pudding inside, for there is a light and thick outer coating, named the photosphere. Outside this, refining away to an unknown distance, is the chromosphere, of hot air, so to speak. The spots are rifts through the photosphere, coming and going, and some are so large that our whole earth could be shot right through, with a thousand miles to spare all around.

When a total eclipse covers the sun, flames to the height of thousands of miles are seen out of the photosphere. The sun is a hundred times larger than the earth, an easy thing to say, and yet our sun is believed to be a rather small one. For instance, Sirius is at least nine times as big.—Imperial.

Ball's Campaign Story.

It is not probable that a better story teller than ex-Lieutenant Governor David A. Ball of Missouri ever stood before an American audience. In 1896 he was trying to persuade the gold Democrats that, notwithstanding the fact that they differed from the regulars on the financial issue, they agreed with them on so many points that they ought to vote for Bryan anyway. He wound up that part of his speech as follows:

"How would a Mossback Missouri Democrat look voting with the Republicans? I will tell you. Up in Pike county an old chap undertook to commit suicide by hanging himself with a blind bridle. Just as he was about dead his son cut him down. The old man rubbed his eyes and said, 'John, if you had let me alone a minute longer I would have been in heaven.' 'Yes,' replied the boy; 'you would have cut a deuce of a figure in heaven looking through a blind bridle, wouldn't you?' And that," concluded Mr. Ball, "is the way a Missouri Democrat would look voting for a Republican under any circumstances whatsoever!"—Champ Clark in Saturday Evening Post.

Is a Good Breakfast Necessary? Yes.

A good breakfast is the physical basis of a day's work. The American breakfast, regarded with so much horror on the European continent, has contributed largely to make the nation what it is today. It enabled our forefathers to do an amount of work which it appals foreigners to contemplate.

As a rule there is something wrong with the man or with his habits if he cannot eat a good breakfast. A man who works at high tension all through the morning hours without this substantial foundation is working entirely upon his nerves. That means disordered nutrition and sooner or later bankruptcy and collapse.

If a man gets up in the morning with a bad taste and no inclination for food, it is because his system is full of waste and his circulation of obstructions. Let him make a radical change in his habits and train his digestive organs to accommodate a nourishing morning meal.—Medical Brief.

A Curious Error.

The Rev. Dr. Edward Everett Hale told how a curious error crept into the translation of the Lord's Prayer into the Delaware Indian tongue. The English translator had as an assistant an Indian who knew English. "What is 'hallow' in Delaware?" asked the translator. The Indian thought he said "halloo" and gave him the equivalent. Therefore the Delaware version of the Lord's Prayer reads to this day, "Our Father, who art in heaven, hallooed be thy name."

A Cruel Blunder.

Two brothers had the habit of calling on the same South Side girl. One of the brothers, George, was to take part in some private theatricals, and the girl had promised to fix up a shirt and a pair of shoes for his costume. The articles were to be delivered to her on a certain evening.

Frank, the second brother, took it into his head to call on the girl that same evening. Frank knew nothing of the arrangements George had made with her to help him with his costume. He rang the bell, asked the maid to tell the girl that Mr. Allen had called and sat down in the parlor.

The maid went up stairs and presently returned, trying hard not to smile.

"Miss Jones says she is busy just now and that you are to send up your shirt and shoes," was the message she handed Frank.

"What?" he yelled.

"I'm to take up your shirt and shoes."

"Thanks, but I may need them myself to go home with. I hope Miss Jones will be better in the morning. Never mind; I will close the door myself."—Chicago Chronicle.

Where He Failed.

The young man drew himself up to his full height.

"I have," he cried, "an unsullied character, an ardent heart, a versatile mind and strenuous biceps."

The young girl yawned and seemed interested.

He was quick to push his advantage.

"I am the possessor of a town and country house, a yacht, a stable of thoroughbreds and a box at the opera."

She hesitated, and a slight flush betrayed that she was listening.

"I have got," he continued, with a certain fierceness, "30 servants, 40 pairs of trousers, 50 ancestors, three automobiles, six prize bull pups and an army commission."

Ah, she had found her tongue at last!

"And how many golf medals?" she lisped.

The young man shuddered.

He felt that he had lost. He had played nervily and high, but she was above his limit.—Judge.

OFFICE OF INYO MERCANTILE CO.,
INDEPENDENCE, CAL.,
July 1, 1901.

To Our Friends and Patrons:

Owing to the fact that our capital is limited we are not in a position to extend to our friends the accommodations they may require and at the same time properly protect our cash trade with prices; we are compelled to do only a strictly cash business.

On and after this date all accounts will be closed, and in future we will insist on all bills being settled every thirty days, and under no circumstances shall we deviate from this rule.

We take this opportunity to thank our friends for the patronage accorded us, and to assure them that our aim will be at all times to give them good goods at the lowest prices.

Persons knowing themselves indebted to us will please call and settle.

Respectfully,

INYO MERCANTILE CO.

NEW ADVERTISEMENTS.

DESERT-LAND, FINAL PROOF.

UNITED STATES LAND OFFICE,
INDEPENDENCE, CAL., Aug. 29, 1901.

NOTICE IS HEREBY GIVEN that Harriet T. Skinner, of Citrus, Inyo Co., California, has filed notice of intention to make proof on her desert-land claim No. 875 for the E½ of SE¼ sec. 9, Tp. 14 S., R. 35 E., M. D. M., before the Register and Receiver at Independence, Cal., on MONDAY, the 30th day of September, 1901.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Finlay McIver, Max M. Skinner, J. V. Skinner, Charles A. Skinner, all of Citrus Inyo Co., Cal.

S. W. AUSTIN, Register.

JOHN J. MCLEAN, Observer.

*Record beginning March 6th 1898.

Wm. F. Matlack is in town from Big Pine.

D. Holland returned from the new northern mining camps yesterday.

W. H. Uhlmeyer proved up on his desert land claim near Big Pine last Saturday.

R. S. Carrasco, in the absence of J. C. Roeper, is major domo at the local meat market.

After a short vacation F. E. Densmore, Receiver U. S. Land Office, is again at his desk.

Dr. C. E. Turner and Attorney Ben Yandell left for Bishop last Tuesday, via C. & C. R. R.

J. C. Crocker on Saturday last brought his family from the Monache country to their home at Big Pine.

The Misses McBride, who have been visiting Mr. and Mrs. Baxter, returned to their home at Reno by Tuesday's train.

C. L. Newhall, of Fresno, General Superintendent or Inspector of this division of U. S. Forest Reserves, is registered at the Norman House.

Messrs. Reynolds & Bastian, with a press of ten tons daily capacity, have gone into the business of baling hay. Address them at Citrus.

Misses. Nellie, Clara and Irene Reynolds, accompanied by Miss Mary Mulholland, have returned from a three weeks' camping trip on Kern river.

The bar room building of the Independence Hotel has been repaired. It was the first structure erected after the big fire in '85 and needed new underpinning.

Geo. Montgomery and Julian Eibeshutz set out last week for the mountains, prospecting for bear track. Upon finding one they will make tracks for home.

Chas. Peterson and Matthew McDonald were in Independence on Wednesday from Fish Springs. Mr. Peterson, who is an old Comstocker, is mining on "Poverty Hill," with very fair success.

In a late number of that paper C. W. Craig announces his resignation as business manager of the Redlands Citrograph. Reckon that C. W. is tired of managing and slinging type at the same time.

On the Mairs ranch the haying crew have completed stacking about 400 tons, grass and alfalfa. If this ratio of increase prevails all over the valley there ought to be enough baled and shipped to the needy freighting teams, north and south.

Monday next will be Labor Day and a legal holiday. This country is so far away from all such affairs that it becomes irksome to read about the long-drawn-out capital-labor troubles elsewhere. But get your flags ready, anyhow.

A casualty of the late storms in the so-called "desert" region was the death of Mrs. Layton, an aged lady, wife of Robt. C. Layton, at Ballarat. In a violent wind storm the walls of their 'dobe house were shaken to the foundation. In an effort to escape Mr. Layton pulled his wife out the door just at the moment the roof fell over and crushed her to death. Mr. Layton was not seriously hurt.

The remains of Jeremiah Fitzgerald, the unfortunate victim of the Darwin Wash cloudburst, were discovered on the 15th instant at a point about five miles from his home and well out into Panamint Valley. He was buried were found, necessarily. Jerry came to Inyo from Tuolumne, and has been about Darwin for many years. He was a native of Ireland, aged 60 years.

It is calculated that, in course of time, when the sardine boxes that have been taken up on the creeks become oxydized and disintregated, good prospects of float or stream tin may then be discovered. The bottles which held bait are not so easily reduced to original elements, but on account of their inexpensive mining may in the future be converted to commercial value. Railroad ties, for instance.

At their ball, on Tuesday evening last, the local lodge of Rebekahs gave a social that held good until long past the midnight hour. On the 20th prox. the ladies will entertain the general public on the occasion of the anniversary of the organization of the Order. The date has been merged into "Orphans' Day," the proceeds of entertainments throughout the State going to the I. O. O. F. Orphan Asylum at Gilroy, the full charge of which has been assumed by the California Grand Lodge of Rebekah.

Heavy Land and Water Deal.

Articles of incorporation of the William Penn Colonial Association, of California, were filed in the office of the County Clerk. The purposes of the Association are stated as follows:
